B. Miss Gloria Berson, Mr. John Whalen and Mr. Andrew Petruska, the classroom teachers, shared their observations of the program from the classroom point of view with the area chairmen. They agreed upon the need for a C.E.P. "class" every day, the classroom time for the pilot program was insufficient.

C. Mr. Bagley will be unable to offer his services during the last two weeks in June.

D. The General Chairman has received word from the State that funds are available for only the five chairmen through next year.

E. Mr. Bosco reported on the C.E.P. Stamps which will be put on the student's work-role sheets by the businesses at the time of their "observing". We presented three styles, and a stamp with the letters "CEP" in red and blue on a white background was agreed upon.

F. It was suggested that each school be provided with a list of the dates on which students from that school can be sent out to the stations. These numbers can be applied to any month in any year. If an observation date falls on a weekend or holiday, the student will go out on the next specified date.

The meeting was adjourned at 4:30 p.m.

Joseph B. Geraci
General Chairman

New Britain Herald June 7, 1972

Helping students look to the future

Stanley Forum and New Britain School system members planning a program to help students select careers are: Seated, from left: Gregory Frey, Joseph Geraci, Peter Bosco and John Macensky, New Britain school system, and standing, from left, Alfred Millard and Robert MacBain, Stanley industrial relations department; Joseph T. Lawlor, chairman, Gerald Cooper and Peter Grieco, Hardware division, and Lance Bagley, school system.

SW explains possible careers to ninth graders

A special education committee of the Stanley Forum is working with representatives of the New Britain School system on a project aimed at providing ninth grade students greater insight into career opportunities in industry and better understanding of the workings of the business system in America.

The pilot program has three phases. In phase one, various careers are described and discussed in the classroom by teachers, assisted by representatives of the Stanley Works.

In phase two, students visit the Stanley Works to observe people working in certain jobs.

In phase three, representatives from Stanley meet with participating students to evaluate the program and to discuss how the business system operates.

The first group of participating students visited the Stanley Works last month. Three of them spent half a day learning about industrial journalism and four others participated in an orientation on transcribing and printing.

Joseph T. Lawlor, chairman of the committee, said that New Britain school system representatives involved in the project have expressed belief that the career exploration program will be of major value to the students.

STANLEY WORLD

VOL. 36, NO. 5 THE STANLEY WORKS, NEW BRITAIN, CONN., U.S.A. MAY, 1972

Stanley Forum helping students select careers

A special education committee comprised of members of The Stanley Forum is working with representatives of the New Britain school system on a project aimed at providing ninth-grade students a greater insight into career opportunities in industry, and a better understanding of the workings of the business system in America.

The pilot program has three phases. In phase one, various careers will be described and discussed in the classroom by teachers assisted by representatives of The Stanley Works. In the second phase, students will visit The Stanley Works to observe people working in certain jobs. It is planned to have students become involved in the actual work whenever such participation is practical. In phase three, representatives from Stanley will meet with participating students to evaluate the

Stanley Forum careers project

(Continued from page 1)

program and to discuss how our business system operates.

The first group of participating students visited The Stanley Works this month. Three youngsters spent half a day learning about industrial journalism, and four others participated in an orientation on transcribing and printing.

Joseph T. Lawlor, Stanley Hardware Division, and chairman of The Stanley Forum education committee, said that New Britain school system representatives involved in the project have expressed the belief that the career exploration program will be of major value to the students, their teachers, and guidance counsellors. The group indicated that the project can help the ninth graders realize the relationships between subjects they study and eventual careers. It is also expected that the experience will help the students decide what type of high school studies program would be of most interest and use to them.

PLANNERS – Participants in planning the special project being conducted by the Stanley Forum and members of the New Britain school system are, seated left to right: Gregory Frey, Joseph Geraci, Peter Boscoe, and John Macensky, New Britain school system. Standing: Alfred Millard and Robert MacBain, industrial relations department, The Stanley Works; Joseph Lawlor, Gerald Cooper, and Peter Grieco, Stanley Hardware Division; Lance Bagley, school system.

Organizers, directors of CEP

A Career Exploration Program involving educators and city groups has been launched here. Organizers and directors include, seated from left: Peter Kummer, Lane Bagley, Arthur Kevorkian, Gregory Frey and John Macensky; and standing from left: Gerald Cooper of the Stanley Forum, Joseph Geraci, chairman; Joseph Lawlor and Peter Bosco.

(Herald photo)

New education approach:

Community becomes the classroom

City educators along with various community agencies including business and industrial groups have joined to launch a Career Exploration Program in the city, according to Joseph B. Geraci, general chairman.

CEP was launched yesterday in the school administration building on Hillside place.

Program aims

Among the aims of the program are:

a) Cooperate with business and industrial organizations to develop learning modules. These modules will assist in the development of an in-school instructional program.

b) Involve various community agencies in addition to business and industrial organizations to provide the student with the opportunity to observe work-role techniques.

c) Incorporate the in-school program so as to develop those work-role teaching techniques that will individualize the learning process.

The thrust of CEP is to meet the geunine needs and interests of the student by providing him with authentic work-role experiences. In this manner he is able to explore and nurture his interests, as an individual at his own level and pace.

In essence, this program is shaking away many of the loose timbers of traditional education. Students will be allowed to explore interests and search for knowledge outside the confines of the classroom. In effect, the community will become his classroom.

The program organizers consist of 5 discipline chairmen: John Macensky, social studies; Peter Bosco, special areas; Lane Bagley, communication; Gregory Frey, guidance; and Peter Kummer, math and science.

Directing the program is Geraci as chairman. The board directors consists of: Dr. Thomas R. Bowman, superintendent of schools; Arthur H. Kevorkian, director of vocational education; Donald G. Paris, director of guidance; Donald W. Friday, principal of Slade Junior High School; Thomas P. Cabelus, principal of Nathan Hale Junior High School; John F. Smith, principal of Roosevelt Junior High School, and Francis M. Kelly, principal of Washington Junior High School.

'Work role observation' program to be launched in junior high schools

By DAVID P. FERGUSON

A junior high school program designed to let students "get out and explore" the diversity of the New Britain business community is scheduled to be launched in September.

The project is an attempt to meet increased educational demands with decreased budgetary resources and, according to Arthur H. Kevorkian, director of vocational education, is one of the first such programs in the country.

It also marks the first time that teachers are being allowed to formulate a curriculum and guide its implementation.

Pursue Interest

The program, dubbed "Work Role Observation," will enable junior high school students to pursue their areas of interest outside the classroom.

"The community will provide the raw material and we'll provide the students," said Joseph B. Geraci, program chairman. "The community, in essence, will become the classroom."

Geraci, who is also a life science teacher at Slade Junior High School, is overseeing the work of five teacher committees formulating units of study in communications, mathematics and sciences, social studies, guidance and special areas into which 15 subject "clusters" will be organized.

The groups have been working since January under a state grant and will complete preparation for the program with a pilot experiment in May.

"It's not really work," Geraci said. "It's something I've been wanting to do for a long time."

The program originated last December with the submission to the School Board of a Chrager Exploration Program which outlined the need for such a project and the objectives it should strive to achieve.

Response Overwhelming

Since that time, nearly 2,000 letters have been sent to city businesses seeking their cooperation in the program. Geraci describes the response as "overwhelming" and notes that no negative reactions have been received.

JOSEPH B. GERACI
Program Chairman

Two of the firms contacted, Stanley Works and the New Britain Herald, have agreed to participate in the May pilot program.

"We hope that the program will being home to the students the importance of the courses they are taking," said Lindsley Wellman, Herald general manager. "Kids learn so much about true academics in the classroom but they don't get a chance to get out and see the importance of what they are learning until after high school. I hope the program will put some meaning behind the courses they are taking."

Checks and Balances

A series of checks and balances between the schools and the businesses will be used to prevent misuse of the student's released time.

"But I don't think this will be much of a problem," Geraci said. "The students who will be going out will be the ones who have shown an interest in what they will be doing.

"I think people will be surprised by the change of student attitude because of the program — they can't help but be interested."

Nevertheless, he admitted "we'll take it easy at first — we don't want the program to fall apart."

The teacher committees are still working to answer many questions about the implementation of the project, including how the students will be prepared for the program, how long they will be allowed to remain out of school, and how the program itself will be evaluated.

"But I think the program will be a benefit to the individual and to the business community," Geraci said. "The student will be allowed to expand outside the classroom. I think we in the schools can do a better job with the help of the community."

Memo 1

C A R E E R S E X P L O R A T I O N

February 3, 1972

To: Committee in Special Areas
From: Chariman of Special Areas Committee

Subject: Personnel list in Special Areas

1. At this time it would be of benefit to all concerned if each member of the committee drew up a list of faculty members of their respective schools who are teaching some Special Area subject.

2. This list of teachers will be invaluable for purposes of reference and resource. These teachers should be thought of as an extension of our committee. Should the occasion arise when and if some of them contribute a significant piece of work or research they should be considered for some hourly compenstation (within limits of course). Feel free to call upon them frequently concerning our work. In effect you are our contact man in your school.

3. Please send me your lists by Wed. (2-9) showing school, chairman, list of teachers and teaching area. Care should be taken that eve y teacher is accounted for.

4. A combined list will than be dittoed and distributed. A copy should then be kept in your personal committee file for quick reference purposes.

Peter L. Bosco
Nathan Hale

Memo 2

C A R E E R S E X P L O R A T I O N

February 16, 1972

To: Committee in Special Areas
From: Chairman of Special Areas Committee

Subject: Meeting Feb. 24, 1972

1. A Special Areas Committee Meeting will be held on Thursday, February 24, 1972 at 2 p.m. Remember there is 1:30 dismissal on Thursdays. Please remember to tell your principals that you must leave the building as they do not receive these meeting notices. The second floor conference room will be used in the Administration Building.

2. The agenda for the meeting will be as follows:

   (a) Review of "Possible CEP Objectives" (enclosed) as approved by the CEP Chairmen prefaced by, "With Work-Role Observation as the focal point in CEP, it is hoped that the following objectives are realized..."

   (b) Your ideas (and those of others you've contacted) of how you picture CEP will be working (use your imagination because that's all we have at this point).

   (c) Clerical matters so far

   (d) Setting of an all-day meeting (possibly) Monday, February 28

   (e) Questions and comments

Memo 3

C A R E E R S E X P L O R A T I O N

February 29, 1972

To: Committee in Special Areas
From: Chairman of Special Areas Committee

Subject: Meeting notes of Feb. 28, 1972

1. A full-day meeting was held at the Admin. Building on Monday, Feb. 28, 1972. Members present were Mr. Edward Dolbeare and Mr. Peter L. Bosco.

2. The first part of the meeting was used to study materials made available by Mr. J. Geraci, General Chairman and Mr. Art Kevorkian. The remainder of the day was used to begin tying in specific job roles within each cluster to a committee that might become known as the "parent" or "sponsor" of the job roles.

3. Once this work has been completed, then the Special Areas Committee could begin concentrating on units of study in those areas for which it will be responsible.

4. The next meeting for the Special Areas Committee is scheduled for Monday, March 6---all day.

Memo 4

C A R E E R S E X P L O R A T I O N

March 7, 1972

To: Committee in Special Areas
From: Chairman of Special Areas Committee

Subject: Meeting notes of March 6, 1972

1. A full-day meeting was held at the Admin Building on Monday, March 6, 1972. Members present were Messrs. Edward Dolbeare, John Fuller, Hohn Ringrose and Peter L. Bosco.

2. The Committee for the most part divided in half and worked on two separate projects. Messrs. Dolbeare and Bosco continued their breaking-down of job clusters and assigning specific job-roles under the jurisdiction of one of the standing CEP committees. Messrs. Fuller and Ringrose concentrated on discovering job locations through use of directories, etc. and specifying proposed observation roles.

3. The Committee combined informally at various times during the day to exchange ideas, thoughts and discoveries encountered while working in pairs.

4. Mr. Fuller reported that the faculty at Slade questioned the CEP philosophy and the role that job-observations could play not only for vocational but for future avocational interests. We must educate for leisure activities as well as for work roles.

5. Mr. Ringrose brought in some written materials concerning vocations that are already being used by one Special Ed. teacher in his school. The committee voted to have this teacher join some of the committee meetings as a resource person. That teacher is Mrs. Thorne.

6. Mr. Dolbeare reported on a faculty meeting he conducted in his school. Many questions arose for which we have no answers at this point. Interest was stimulated however.

7. Mr. Bosco turned over to Mr. Ringrose sheets prpared by teachers at Nathan Hale concerning job locations and possible job roles. These will be used as resource materials in the area of job-role development.

8. The next Special Areas Committee meeting will be held on Thursday, March 16 at 2 o'clock at Roosevelt J.H.

Memo 5

C A R E E R S E X P L O R A T I O N

March 21, 1972

To: Committee in Special Areas
From: Chairman of Special Areas Committee

Subject: Meeting notes of March 16, 1972 (at 2:30 p.m.)

Present: Mrs. Shirley Thorne, Mr. John Ringrose, Mr. Edward Dolbeare, Mr. Peter L. Bosco

1. Mrs. Shirley Thorne, Special Ed. teacher at Roosevelt, served as a staff resource person at this meeting. Her contributions were enlightening for those present. Mrs. Thorne introduced the committee to materials which may be very useful in developing our CEP curriculum. Some of the materials discussed were the Follet Vocational Reading Series, Fearon Publications and the Turner-Livingston Series. The inter-related use of these materials was demonstrated. The committee has obtained samplings of these materials.

2. The discussion continued on a critical level concerning work and goals set thus far by the committee. Mrs. Thorne cautioned the committee, based on her experience, that we should not attempt too complex or rigorous approaches in our CEP developments lest we lose sight of our basic objectives---a point well taken.

3. The meeting adjourned about 4 p.m.

Peter L. Bosco
Nathan Hale

Mrs. Shirley Thorne

Memo 6

C A R E E R S E X P L O R A T I O N

March 22, 1972

To: Committee in Special Areas
From: Chairman of Special Areas Committee

Subject: Meeting notes of March 21, 1972 (all day meeting at Slade)

Present: Mr. John Fuller, Mr. John Ringrose, Mr. Edward Dolbeare, Mr. Peter L. Bosco

1. A comprehensive review of our work was made during the morning hours of the meeting. It was generally felt that we needed more concrete types of input to augment our curriculum development work thus far.

2. Three items of potential importance were worked out as a starting point in our more tangible approach. These were: (a) the catalog or guidance handbook which will contain all work-role locations and specification, (b) the work-role observation sheet which will be carried by the student and later filed in his student CEP notebook and (c) the daily master CEP master log where summary information is kept on students who are on observation assignments. This material was later presented at the general meeting for discussion.

3. In addition to the above, it was felt by the committee that we needed some outside consultation at this time. As an alternative to this it was decided that perhaps one member of the committee could attend the national convention of American Industrial Arts Association at Dallas on March 27 through30. The theme at this convocation will be Career Education. It was unanimously decided to propose at the general meeting to send Mr. John Fuller contingent on his being able to receive at least some reimbursement for expenses.

4. The next meetings involving Special Areas Committee are:

April 4 Entire (24) Committee at Slade 3 pm
April 5 All day meeting at Admin. Blgd.

Memo 7

C A R E E R S E X P L O R A T I O N

To: Committees in Special Areas and Guidance
From: Chairman of Special Areas Committee

Subject: Joint Guidance and Special Areas Committee Meeting April 5, 1972 (all day meeting at Slade)

Present: Mr. Greg Frey and Mrs. C. Kania (Guidance), Messrs. J. Fuller, J. Ringrose, E. Dolbeare and P.L. Bosco

1. The newly created Work-Role sheet and related forms were used as a basis for developing further procedures which will be proposed at the next general meeting.

2. Among the procedures developed at the joint meeting were pre-observation activities, observation procedures, and post-observation procedures. Also discussed was the eminent use of some type of cluster-activity period to be used on a regular meeting basis.

3. The cluster-activity period would serve as pre-and-post observation sessions in a mainly student-directed lesson. Such things as CEP notebook maintenance, seminar-type discussions and presentations of observation exchanges, futrue group and individual observation planning, exchange and review of pertinent literature and publications, utilization of outside resourse persons and other related activities have been suggested at this time.

4. Mr. E. Dolbeare is engaged in the meantime on a logistic coding procedure which will provide easy access to and maintenance of the eventual CEP catalog.

5. Plans for the presentation of tapes recorded at the convention in Dallas which was attended by Mr. John Fuller had to be postponed to a later date.

6. The next Special Areas meeting is scheduled for April 14 at the Admin. Bldg.---all day.

Peter L. Bosco
Nathan Hale

Mrs. C. Kania

Memo 8

C A R E E R S E X P L O R A T I O N

To: Committee in Special Areas
From: Chairman of Special Areas Committee

Subject: Meeting notes of April 14, 1972 (all day meeting at Admin. Bldg.)
Present: Messrs. J. Fuller, J. Ringrose, E. Dolbeare, and P.L.Bosco

1. The committee reviewed its position relative to work accomplished and work which still lay ahead. During the course of the day the following individuals made unscheduled appearances but offered valuable comments and observations for future planning. They were: Messers. Art Kevorkian, Don Paris, and Nick Klym (high school PIC liason). Mr. Klym offered futrue aid in choosing potentially good work-role locations with which he is familar.

2. Messrs. Ed Dolbeare and John Fuller began work on the cluster folde s which contained returned letters from prospective participating companies. Some problems were discovered. First, three categories of "returns" were evident: letters sent out but not returned, letters sent out but negative reply, and letters sent out returning with positive reply but more info required. It was decided that immediate follow-through must be made in all categories including personal visits. Another problem was found to be that of indefinite committee assignment as to handling of correspondence. More than one committee might or might not handle some pending correspondence thus causing confusion, etc. This will be rectified at the Chairmen's meeting of April 17 where more definite assignment can be made.

3. Messrs. John Ringrose and P. Bosco continued work on the flow chart which would serve as a guide to the final procedure write-up. Considerations in setting Work-Role procedure are the restrictions as set forth in the original proposal to the State Dept. of Ed.,and any other anticipated problems concerning scheduling, pre-observation, observation, and post-observation procedures. It is hoped that this may be presented to the main body on its next meeting April 25.

4. The next committee meeting is scheduled for Thursday, April 20 at 2 p.m. Admin. Bldg.

Memo 10

C A R E E R S E X P L O R A T I O N

To: Committee in Special Areas

From: Chairman of Special Areas Committee

Subject: Meeting notes of May 4, 1972 (all day in field)

Present: Messrs. J. Ringrose, E. Dolbeare, P.L. Bosco

1. Short review meeting held on position of committee status thus far at the administration building. This was followed by work in the field.

2. Contact was made with the Stanley Works through Mr. Joseph Lawlor. Mr. A. Stohmal was assigned as liaison man for factory contacts during our morning visit.

3. Mr. Stohmal directed the group to Dept. 54 and its Blanking Operations. Mr. Mario Bucchi, Department Foreman, cordiall cordially assisted in outlining a job-role sheet for a job-observation station there.

4. It was later decided after discussions with Messrs. Lawlor and Stohmal to use the Stanley job description correspondence as a "menu" where ever possible to select jobs of interest to the Committee. They in turn would develop single or a cluster of observation areas (if necessary) to make up single observation stations. The sheets would be sent to Stanley where they would see that they were properly filled out by responsible foreman.

5. Messrs. Ringrose and Dolbeare proceeded to Dept. 23 in the afternoon hours for as many observation stations as could be enlisted from Mr. D. Rizza, General Foreman. Mr. Rizza has been most receptive.

6. Mr. Bosco proceeded to the Fafnir Bearing Co. where he met with Mr. VanLoan, that company's contract agent. A future meeting will be held with other company officials in about one week.

7. An additional all day meeting is being requested in May because of the volume of work before the Committee. The day requested is Tuesday, May 30.

8. The next all day meeting is scheduled for May 15. Other afternoon meetings will have to be scheduled for this month. Information to follow.

Memo 11

C A R E E R S E X P L O R A T I O N

To: Committee in Special Areas

From: Chairman of Special Areas Committee

Subject: Meeting notes of May 15, 1972 all day meeting

Present: Messrs. E. Dolbeare, J. Fuller, P.L. Bosco

1. The committee met at the Administration Building and reviewed committee progress thus far, the correspondence folders and set a work schedule for the remainder of the day.

2. Contacts were made and meetings were held at the following concerns: Metropolitan Life Insurance Co., The New Britain Machine Co., The Fafnir Bearing Co., The Stanley Works, and Packy's Restaurant. A number of observation stations were procured for CEP.

3. Further work remains with all the above except the Fafnir Bearing Co., and Packy's Restaurant.

4. The Stanley Works has in their possession a number of Catalog blanks pre-wiitten by us with job titles obtained from their "Job-specs correspondence" now in our "Stanley" file. When these forms are completed and retruned we shall have onlisted a large number of stations from the Stanley Works. This does not preclude contacts made by the Math Committee with the Stanley Data Processing Center.

5. Inquiries were made concerning the purchase of quantities of validating rubber stamps for the Work-Role sheets. The cost is prohibitive when the large quantities are considered. An alternate ay of suggestion has been a postagestamp type of thing. This, among other methods of validation will be explored.

6. The next committee meeting will be Thursday, May 18 at 2 pm. More calls will be made.

Peter L. Bosco
Nathan Hale

Memo 12

C A R E E R S E X P L O R A T I O N

To: Committee in Special Areas

From: Chairman of Special Areas Committee

Subject: Meeting notes of May 18, 1972--afternoon meeting (2pm)

1. The main purpose of the meeting was again to procure more observation stations from area business. Among those places contacted were Puzzio's Barber Shop, UAW Local 133, Park Fashions, and Hitchock Printing (repeat call).

2. Mr. George Walker of New Britain Machine was contacted as earlier agreed upon but could not be reached.

3. Validation stamping was investigated. It appears that a postage-stamp type of validation is the most economical. Hitchcock Printers was contacted. They have agreed to submitted a base price by letter if an initial order of 2000 is made. Sketches of the disign will also be forthcoming.

4. Also discussed with the General Chairman and Mr. Kevorkian was a non-conflicting method of student assignment to job-observation stations. Many stations with a limit of one student could create duplications if some simple procedure is not instituted. It was suggested that a number system corresponding to the days of a calendar could be assigned to each of the Junior High Schools. A school could send observers only on days prescribed for that school.

5. The next meeting is set for May 22 at 3 pm. Although the chairmen will be attending a separate meeting at the same time, Special Areas members could come in and pick up their outside calls and proceed with their work.

6. Forthcoming meetings: May 22 (3pm), May 25 All JHS (1:30), May 30 all day

To: Committee in Special Areas
From: Chairman of Special Areas Committee

Subject: Meeting notes of May 30, 1972--all day meeting

Present: Messrs. J. Ringrose, E. Dolbeare, P. L. Bosco

1. The cluster folders were culled for correspondence. Notations were made where necessary.

2. The CEP Stamp was drawn for submittance to the Hitchcock Printing Co. for pricing. In addition, cancellation rubber stamps will be ordered for each of the junior high schools.

3. A discussion was pursued relative to classroom inputs to CEP program. It was agreed that indicies for each of the disciplines under the Special Areas Committee would be a helpful tool for each of the classroom teachers. Such information as type of jobs available, locations available for observation and other helpful information be made available for teachers to relay to students.

4. Calls were made to line up and confirm appointments for the day. Then each of the committeemen proceeded to make personal calls to area prospective work role stations.

5. A procedure was established whereby committeemen could come to the Admin. Bldg. any free afternoon to pursue more outside calls available on the "call sheet" as designated at meeting.

6. The remaining meetings are scheduled for June 7 (all day), followed by June 12 (3 p.m.) meeting . . plus any individual calls made.

Nathan Hale

cc: all chairmen

SPECIAL NOTE !!!

The Chairman should have all our timesheets as of yesterday. In addition to this, he wishes an estimate of projected time through June 15. Coming meetings are listed in #6 above, plus any other calls you anticipate you will be making. Add to this a mileage sheet and send all information to the General Chairman immediately so that payrolls may be figured out.
Also don't forget the substitute information including names, dates, etc.

Memo 15

C A R E E R E X P L O R A T I O N

From: Chairman Special Areas Committee
To: Committee in Special Areas

Subject: Meeting notes of June 7, 1972 - all day meeting

Present: Messrs. J. Ringrose, E. Delbeare, P. L. Bosco

1. The final all day meeting was held at the administration building. Progress reports were made concerning the further enlisting of observation stations. Cluster folders were checked for new candidates and sheets inserted for places covered by the committee that did not have letters in the folders.

2. The Hitchcock Printing Co. has yet to submit a price of the validation glue-stamp. We have been instructed by the General Chairman to submit the job to another company if no response comes very shortly. Eight rubber stamps have been ordered at Tab's Printing Co., two for each school. They will be used as cancellation stamps bearing the name of the junior high school. The price was quoted as $4.00 each.

3. The Committee disbursed for the remainder of the day making calls at prospective locations. Among some of the new entrants are Hjorpe Hdwe., American Bazaar, Martin Rosol's, N. B. Museum of Art and others. The Stanley Works advised us that all catalog sheets would be sent to us by the end of next week.

4. The final afternoon meeting will be held Monday, June 12, at the Admin. Bldg. at 3 p.m. This meeting will be used to complete unfinished paperwork, to collect all time and mileage sheets and to outline any individual calls that might be made prior to the closing.

From: Chairman Special Areas Committee
To: Committee in Special Areas

Subject: Meeting notes of June 12, 1972, 3:00 p.m. meeting

Present: Messrs. J. Ringrose, E. Dolbeare, P. L. Bosco

1. The final committee meeting was held this day. Three purchases were discussed: art work for the CEP stamp at Gray Advertising, CEP stamp order increase from five to ten thousand at Hitchcock Printers, and eight cancelation rubber stamps at Tab's Printing Co. It was advised that pre-billing be requested in order to meet budget time schedule.

2. Those present at the meeting felt that calls for observation stations were still incomplete so that calls will be made individually to the locations pending. Time sheets will be kept at the Chairman's desk where any additional hours can be added when necessary. This should also include any mileage.

3. Should any questions arise during the closing out period, contact Mr. Kevorkian's office where any one of the chairmen may be working at various hours.

4. I wish to take this opportunity to extend my personal thanks to those members of the committee who worked so faithfully and energetically during the development of the CEP program - a job well done!

P. O. Bosco

cc: All chairmen

February 17, 1972

Career Exploratory Program
Communications Committee

The first meeting of the Communications Committee was held at the Administration Building at 3:00 p.m. February 16, 1972, with all members attending.

Members Present:

Lance Bagley, Roosevelt
Gloria Berson, Washington
Joan Lang, Slade
Harry Oslund, Nathan Hale

Items Discussed:

It was decided by the members that the Communications Committee would meet the first and third Wednesdays after school at the Administration Building. It was also decided that the first and third Fridays of each month would be set aside as workshop days and that the last Friday of February, the 25th, would be the first workshop day.

The chairman, Lance Bagley, discussed the meeting held with other committee chairmen regarding possible aims and purposes of the overall Career Exploratory Program. Each member was given a copy of said aims and purposes for future reference.

After discussion of the overall objectives of the program with General Chairman, Joseph Geraci, members agreed that the first item on the agenda would be to research the resource material available in order to set up a Communications Program which would successfully bridge the gap between the elementary and high school PIC Program.

The meeting adjourned at 4:15 p.m.

cc: General Chairman, Joseph Geraci, Slade
Committee Chairmen, Peter Bosco, Nathan Hale

March 1, 1972

Career Exploratory Program
Communication Committee
Meeting

A meeting of the Communication Committee was held at the Administration building at 3:00 p.m. March 1, 1972, with the following people in attendance:

Lance Bagley, Roosevelt
Gloria Berson, Washington
Joan Lang, Slade
Harry Oslund, Nathan Hale

The format of the meeting can be divided into three areas.

1. A review of our work to date.

We reviewed the work that each of us has done thus far on our projected units. One unit is to be dealing with Mass Media - Content and Production. The other unit deals with job awareness.

2. We discussed what our work would be at the next full day work-shop, March 3, 1972.

3. We discussed with C.E.P. Committee Chairman, Joseph Geraci, the units so far developed by our committee. It was agreed that we were working in the right direction.

We adjourned at 4:00 p.m.

Respectfully submitted,

Harry Oslund

cc: General Chairman, Joseph Geraci, Slade

April 6, 1972

Career Exploratory Program
Communications Committee
Meeting

A meeting of the Communications Committee was held at the Administration Building at 3:00 p.m. April 5, 1972, with the following members in attendance:

Lance Bagley, Roosevelt
Gloria Berson, Washington
Joan Lang, Slade

A rather lengthy discussion took place concerning re-evaluation of the Communications Committee's role in the Career Exploratory Program.

Most of our time thus far has been spent developing units of study, i.e. curricula change. A couple are as follows:

a) Job and You - interpersonal relations and communications terminology within the business world.

b) Mass Media/Content and Production - communications and terminology dealing with content and production of various facilities including radio, television, newspapers, magazines, etc.

During the General Meeting of April 4, 1972, held at Slade, a new program format was developed in the form of a work-role sheet which was to be completed by the student, employer, with work-role areas and clusters defined by committee members.

It was noted by this committee, however, that the Catalog form, which was to have been a composite of three forms made up initially by the Science, Social Studies and Special Areas committees, was not the one voted on at the General Meeting of April 4. The section submitted by the Science Committee had been eliminated altogether and another, completely new section substituted.

This committee has directed its energies toward complementing and supplementing work-role observations in areas of reading, verbiage, filling out forms, etc. as well as setting up work-role stations for the various areas of communication. It is now felt that our role in effectively aiding the student with in-class instruction has been greatly minimized, if not eliminated altogether. We strongly feel that unless this career program is implemented in the classroom, it will lose its effectiveness and eventually fail.

The chairman reported on his March 24 visit to the Stanley Works and stressed that the Industrial Relations Dept. would be

the area to contact for future dealings in the area of Communications. We hope to visit this facility soon.

The chairman is to contact Mr. Wellman at the New Britain Herald in the hopes of touring this facility this Friday, April 7, when we will meet for our fourth workshop day. It is our hope that we can gain considerable information regarding the possibilities for students in the work-role observation station of a newspaper with its broad base in the area of communication.

The meeting adjourned at 5:00 p.m.

Respectfully submitted,

Joan Lang

April 27, 1972

CAREER EXPLORATORY PROGRAM
Communications Committee Meeting

The Communications Committee members met with members of the Stanley Forum at the Stanley Works on April 27 at 2:00 p.m. The following members were in attendance:

Lance Bagley, Roosevelt
Gloria Berson, Washington
Joan Lang, Slade

Mr. Joseph Lawlor, Mr. Gerald Cooper and Mr. Alfred Millard discussed with the members Stanley Work's role in CEP. Mr. Lawlor stressed the fact that the CEP is very much in keeping with the goal of the Stanley Forum to acquaint the student with the business in democracy as we know it.

The same cooperation we experienced at the New Britain Herald. was evident at Stanley Works. We were given a tour of the Duplicatin facilities, mail room and trascription center by Mr. Ken Ranks, General Office Manager. Many of the machines in Duplicating were similar, on a smaller scale, to those already seen at the Herald.

A pilot program, involving 9th graders, was set up in the area of Communications for May 16-17. Four students (at 3 work-role stations) will report to Mr. Ken Ranks on May 16 from 8:00-12:00 p.m. Two will be assigned to Duplicating and one each to the mail room and transcription center. On the 17th, the students will reverse work-role stations.

Although Mr. Fisher in Industrial Journalism was not available today, he left word that he would accept three students to work with him on the moring of May 16 from 8:00-12:00 p.m. It is hoped that we will see him at another time.

Mr. Lawlor, Mr. Cooper and Mr. Millard hope that after the students have been at their work-role stations, they can be observed on closed-circuit TV in a "rap session" with members of the Stanley Forum to see what kinds of comments and opinions they may have concerning their work-role experiance. The men also agreed to come to the schools to serve as resource people when the time came. The meeting ended at 4:30 p.m.

Respectfully submitted,

Joan Lang

CAREER EXPLORATORY PROGRAM
4th WORKSHOP DAY - COMMUNICATIONS COMMITTEE
ADMINISTRATION BLDG. - APRIL 7, 1972

The Communications Committee met today with the hopes of touring the New Britain Herald facilities but were informed by Lance Bagley, chairman, that due to a previous commitment, Mr. Wellman was not able to see us today. He did suggest several dates during the week of April 17, however, and it was decided that the committee would visit the Herald on April 21, our next workshop day. In the meantime, we will set up the worksheets so that specifications for various jobs in the Communications cluster can be filled in at that time.

The chairman discussed with the committee the flow chart made up by the Guidance Committee suggesting procedure the student would follow from the initial Guidance Session to acquaint the student with the whole idea of career education, to the final cluster seminar after the student has returned from the work-role station. All agreed it was helpful.

Having received only two replies to the queries sent out to local businesses concerning their participation in the Career Exploratory Program, the suggestion was made that a follow-up phone call should be made. With no special marking on the envelope, many businesses might throw out the request as junk mail without ever opening it. Personal contact was felt to be the best approach. This committee plans to start contacting those businesses involved in Communications.

Most of the day was spent going through the fifteen clusters, selecting those areas pertinent to Communications and setting up work-sheets which we will be taking to the employer for job specifications.

The committee discussed the change of emphasis in CEP from a school-based program to an employer-based program with Mr. Devorkian and Mr. Geraci and were informed that curriculum change is absolutely necessary if the program is to succeed. Businesses expect the teacher to prepare the students who come to them. The program worksheet is important to be sure in helping to set up an effective program. This committee feels that it's not a substitute for the whole program.

Respectfully submitted,

Joan Lang

April 17, 1972

CAREER EXPLORATORY PROGRAM
Communications Committee
Meeting

A meeting of the Communications Committee was held at Washington Junior High School at 3:00 p.m. on April 17, 1972, with the following members in attendance:

Lance Bagley, Roosevelt
Harry Oslund, Nathan Hale
Gloria Berson, Washington

The committee reviewed the "Desk-Top Career Kit" and the SRA "widening Occupational Roles" kit to determine whether these tools would be of use to us. We found that these kits contained a great deal of material with respect to job descriptions and vocabulary required in classroom pre-instruction for almost any job. It was decided to use these kits in our lesson plan preparations.

Harry Oslund reported on his discussions with John Whelan of the Nathan Hale Junior High School faculty. Mr. Whelan, who is planning a "Media" course at Nathan Hale for the coming school year, indicated his interest and willingness to cooperate with this committee with respect to filling us in on the course he is preparing. He will share with us the resources he discovers and we will supply him with any information he can use.

The committee discussed the requirements of Mr. Fisher at Stanley Works with whom it will meet on Wednesday, April 19, 1972, and those of Mr. Wellman at the New Britain Herald with whom it will meet on Friday, April 21, 1972. After the latter meeting we will immediately develop a concrete outline for presentation in the classroom in the pilot operation. This unit will be based on a variety of publications from the standpoint of the editor and the subclassifications under his dominion.

A rough outline was discussed with emphasis on the deductive approach, i.e. the editor as the focal point and all operations emanating from his domain.

The meeting adjourned at 4:15 p.m.

Respectfully submitted,

Gloria L. Berson

CAREER EXPLORATORY PROGRAM
5TH WORKSHOP DAY - COMMUNICATIONS COMMITTEE
APRIL 21, 1972

The Communications Committee met today at the Administration Building and left almost immediately to meet with Mr. Wallman of the New Britain Herald.

We discussed the CEP program with Mr. Wellman and our hope in setting up a pilot program which would involve the Herald in the area of Communications. Mr. Wellman was not only cooperative, he was enthusiastic. He agreed that youngsters should be allowed to observe different occupations and where the Herald was concerned, his support was complete.

After giving the members a tour of the Herald and all its functions, we reassembled in his office for a planned program of what the Herald could do in cooperation with the Communications Committee. It was agreed that four (4) students (9th grade) would report to the Herald for a week's observation of reporting, advertising, and compositing (with printing and circulation added)

The students would be expected to report to the Herald whenever the reporter did (7:30 a.m.) and accompany him on his rounds for the day, watching and observing carefully his techniques. Two days would be spent with the reporter, two with the advertising man (also out in the field) and the last day to see just how the newspaper was put together. Dates of the pilot program run consecutively from May 15-23. Mr. Wellmen will evaluate the performance of those who are involved in the pilot.

The remainder of the day (from 1:00 to 7:30 p.m.) was spent at Gloria Berson's home setting up the total unit on the newspaper. An Introduction to theNewspaper, sections on Reporting with Classroom activities, copy editing and advertising were put together by the members. Transparencies will also accompany the unit to give a visual sample of the newspaper in general from the reporter's story to the actual delivery by the newsboy.

Today was the most worthwhile day the Communications Committee has had. We really feel that we have a sense of direction and accomplishment.

Respectfully submitted,

Joan Lang

CAREER EXPLORATORY PROGRAM
6TH WORKSHOP DAY - COMMUNICATIONS COMMITTEE
APRIL 28, 1972

Three members of the Communications Committee, Lance Bagley, Gloria Berson and Joan Lang, met today at the Administration Building in order to complete the typing and compilation of the Newspaper-Unit which will serve as the basis for the in-school instruction preceding the pilot program scheduled to begin the week of May 15, 1972, at the New Britain Herald.

The unit consists of an Introduction to the Newspaper, Introduction to Reporting, Editing, and Advertising, with varied teacher and student activities in each of the latter three categories.

In addition, there are several handouts to be given to the students along with a variety of materials for display in the classroom. These include six-level tape (computerized) which carries every news story, paste-up sheets, A.P. and U.P.I. wire sheets, and the special Herald supplement on the "new" process. The final project of the unit will be the publication of a newspaper for "Classroom, U.S.A."

The unit will be presented to Dr. Bowman and the Jr. High School principals at a meeting with the Committee Chairman of the CEP on Tuesday, May 2, 1972.

Respectfully submitted

CAREER EXPLORATION PROGRAM
7TH WORKSHOP DAY-COMMUNICATIONS COMMITTEE
MAY 5, 1972

Members of the Communications Committee met today at the Administration Bldg. to begin compiling materials for the new unit on Radio and TV Broadcasting. It was our hope that at least two of the members would visit some radio and TV facilities today, but we were unable to set up a meeting on such short notice. However, Gloria Berson and Joan Lang will visit Channel 30 on May 19, 1972 to see what CEP work-role stations can be set up. Hopefully, some radio stations will be visited on that day also.

Most of the day was spent going through occupational briefs to locate radio-TV related work roles, such as broadcaster, public relations man, actor-actress, news photographer, TV directors, writers, advertising men, etc. Many of the work-role stations are the same as those required for a newspaper.

The radio-TV unit will follow the same format as the newspaper unit. Actually, there will be two units in one, since radio is largely aural and TV visual. There will be a short history of both media, with the body of the unit devoted to teacher and student activities in the development of a radio and TV show. The final project of the unit will be the actual presentation of a show in both media.

Mr. Geraci approved Thursday, May 25, 1972 as a workshop day for the Communications Committee in order to complete this unit so that it may be given to 9th grade English teachers for use in the classroom next fall.

This committee ran off additional copies of the newspaper unit, complete with handouts, for distribution to the 9th grade English teachers.

Respectfully submitted,

Joan Lang

CAREER EXPLORATORY PROGRAM
8TH WORKSHOP DAY - COMMUNICATIONS COMMITTEE
MAY 19, 1972

Members of the Communications Committee met today at the Administration Building. First on the agenda was a discussion with Gloria Berson of her classroom teaching of the newspaper unit. She brought along copies of the newspapers made up by her classes, the final project of the unit. On Monday, May 22, she will meet with the CEP Committee Chairmen to brief them on classroom procedure. She will also make a presentation to secondary teachers at a special CEP meeting to be held at Slade Jr. High on May 25, 1972. A student from the pilot program will also be on hand.

We worked most of the morning compiling information for the radio and TV unit. In the afternoon, Gloria Berson and Joan Lang visited WTIC Broadcast House for a tour of the radio and TV facilities. Mrs. Ripple, the tour guide, was most pleasant and made the tour both informative and enjoyable.

Although we were not seeking work-role stations because of a Hartford based operation, the accessibility of WTIC via Route I-84 should not be discounted. At any rate, we acquainted various personnel with the CEP program in general, and the area of Communications in particular.

We visited various studios and watched several programs in progress, the Public Relations Dept., Art Dept., Commercial Library, Record Library, Projection Room, Computer Room and News Room. John Ferguson of the News Room (where the radio and TV facilities come together) was most helpful and gave us several visual aids for the unit, including teletype material on the national, state and local levels.

As teachers, we now feel that we can bring a great deal more to the classroom instruction on the Radio-TV unit.

Respectfully submitted,

Joan Lang

CAREER EXPLORATORY PROGRAM
9TH WORKSHOP DAY - COMMUNICATIONS COMMITTEE
JUNE 2, 1972

Three members of the Committee, Lance Bagley, Gloria Berson and Joan Lang, met today at the Administration Building in order to complete the Radio and TV Broadcasting Unit. After a few hours of writing up, typing and compiling materials to accompany the unit, it was realized that the unit could not be completed today. Although this is our last workshop day, this committee will meet again after school on June 12 and 13 to finish the unit.

The "rap session" with members of the Stanley Forum will take place on June 5. Gloria Berson, who taught the newspaper unit in the classroom, will attend with those students who took part in the pilot program at Stanley Works. Students who participated in the Herald pilot have been invited to attend also.

Miss Berson was asked to work for the Communications Committee , CEP, until the end of June to contact various businesses regarding work-role stations in the area of communications. It is hoped that WTIC will make its facilities available to us.

Respectfully submitted,

Joan Lang

MINUTES OF THE MATH & SCIENCE COMMITTEE OF C.E.P. 2/29/72

The first meeting was held at the Administration Building on Feb. 22, 1972, at 3:00 p.m.

Members present: Peter Kummer, Paul Cormier, Rose Berlani, Judy Bradlau, Bud Phelps, Henri Quarti

Discussion:
a) transportation record and other forms.
b) hourly wage rules
c) basic aim and philosophy of the program; ditto passed out to members
d) unit of study format; a sample was passed out.
e) a list of possible observation stations was formulated
f) a tentative schedule was set up for the month of March.

Full days: March 13 and 20.
Afternoons: Feb. 29, March 14 and 21.

The meeting was adjourned at 4:00 p.m.

* * * *

MINUTES OF THE SCIENCE AND MATH COMMITTEE OF C.E.P.

Feb. 29, 1972

The committee met at the Administration Building at 3:00 p.m.

Bob Galati of Slade will replace Judy Bradlau on the committee.

We set up the schedule for the March meetings:

March 13 and March 20 will be full day meetings.

March 14 and March 21 will be afternoon meetings at 3:00 p.m.

The C.E.P. committees will be setting up the units of study to be used by the teachers and students in preparation for the work-role observations. To set up the study units, the committee members will be visiting various businesses which will be contacted by mail informing them of the program.

For the first full day meeting on March 13, the committee members are asked to come prepared with a format for the study unit.

We also went through the reference material which has been obtained for use by the committees.

The meeting was adjourned at 5:00 p.m.

Peter Kummer
Chairman

MINUTES OF THE SCIENCE & MATH COMMITTEE OF C.E.P.

March 13, 1972

The full committee met at 8:00 a.m. at the Administration Building. Since this was our first all day meeting, we began by reviewing the basic aims and philosophy of the Career Exploratory Program. We made additions to the possible observation stations list.

The committee members came prepared with ideas for the unit of study format that we would use. We decided that two separate sheets would be needed. The one which would be kept in the Guidance Office catalog would include:

1) Job descriptions
2) What to look for: a) Duties; b) Responsibilities
   c) Background d) Advantages; Disadvantages
3) Places to make observations.

The other, the student would take with him to the work-role observation and would fill out. We thought that this one should be very simple in structure.

Copies of these forms would be sent to the other committees for comment. We also spent some time going over the reference material that was made available to the committee. We looked through and discussed the 15 cluster lists and picked out those areas that were most closely related to science and math.

The meeting was adjourned at 2:30 p.m.

MINUTES OF TH SCIENCE & MATH COMMITTEE OF C.E.P.

March 14, 1972

The committee met at the Administration Building at 3:00 p.m.

Members present: Paul Cormier, Bud Phelps, Bob Galati, Henri Guarti, Bill Ackerman, Peter Kummer

The chairman reviewed the discussion which was held with the representatives of the Stanley Works the previous week.

Members of the committee asked if letters to the various businesses had been sent out asking for their participation in the program. It was found that the letters had not been sent out to any extent yet. It was thought that this should be done so that we could get to work on making observations and writing up the units of study.

We finalized the two forms which we developed for use by the Guidance Office and the student making a work-role observation.

The meeting was adjourned at 4:00 p.m.

* * * *

MINUTES OF THE MATH & SCIENCE COMMITTEE OF C.E.P.

March 20,1972

The full committee met at the Administration Building at 8:00 A.M.

We obtained the lists of various local employers and businesses from the C.E.P. secretary.

The major part of the day was used to send out the letters that describe the C.E.P. program and questionnaires asking if the businesses are willing to participate in the program and what kind of work-role stations are available. About 1,000 letters were addressed and sent out today.

We also set up the schedule for the April meetings:

April 12 and April 24 will be full day meetings
April 18 will be an afternoon meeting at 3:00 p.m.

The meeting was adjourned at 2:30 p.m.

MINUTES OF THE MATH AND SCIENCE COMMITTEE OF C.E.P.

April 12, 1972

The full committee met at the Administration Building at 8:00 a.m.

The committee began by going over the questionnaires that had been returned to us by the various businesses which we had contacted by letter. We noted those which pertained to our committee for future reference.

We also outlined the type of questions to be asked and what kinds of things to look for at the New Britain National Bank for our observation today. We proceeded to the bank and were greeted by Mr. William Gombatz, Executive Vice-President. He introduced us to Mr. Moore of Personnel who took us around to possible observation stations where we were able to talk to department heads at length about the kinds of things we want to do in the Career Exploration Program. We found out such things as the number of students that could be sent to each department, the days that observations could be made, and the length of the observation to get a good idea of each work-role. Mr. Moore also said that he would send to our committee the job specifications for such work-role observations as teller and any other information that might be of help to us.

Upon returning to the Administration Building, we discussed the day's activities. We discussed how to go about writing up the catalog sheets for the work-role observations. The committee also took the positive response questionnaires that were received and divided them up among the members who would make personal contacts as most businesses required more information.

Because many committee members had questions in regard to teacher responsibilities, courses of study, and other things. Mr. Geraci and Mr. Keverkian were asked to sit in on our discussion and to answer some of the questions.

The meeting was adjourned at 3:30 p.m.

Peter Kummer,
Chairman

MINUTES OF THE MATH & SCIENCE COMMITTEE OF C.E.P.

April 18, 1972

The committee met at the Administration Building at 3:00 p.m.

Members present: Paul Cormier, Bud Phelps, Bob Galati
Henri Quarti, Bill Ackerman, Pete Kummer

The committee again went through the cluster folders to see if more questionnaires had been returned. Again, those positive responses were noted and contacts will be made.

The members reported on what progress they had made in contacting the businesses. They were reminded of the full day meeting next Monday, and that about half of the day should be used in talking to various businesses and half of the day should be used to work on the catalog forms that the students will use before making their observations.

The committee members were reminded to bring their pay work schedules next week so that the total hours could be given to the general chairman.

The meeting was adjourned at 4:00 p.m.

* * * *

MINUTES OF THE SCIENCE AND MATH COMMITTEE OF C.E.P.

April 24, 1972

The full committee met at 8:00 a.m. at the Administration building.

We outlined the activities of the day. We first went through the 15 cluster folders to see if new letters had been received. Those in our area were noted and will be contacted.

The major part of the day was spent in visiting various businesses.

Mrs. Berlani went to the Grove Hill Clinic to talk to all the people there who had responded to our questionnaire. She also visited Dr. Ross, the veterinarian.

Mr. Galati and Mr. Phelps visited various local banks and the Henry Goldsmith Co.

Mr. Ackerman and Mr. Cormier visited Conn. Natural Gas, various dentists, Winthrop Market, and the John Boyle Co. Mr. Quarti visited the City Dept. of Engineering, Dr. Fletcher and the Guida-Siebert Dairy. The remainder of the day was spent in writing up the work-role sheets which would become a part of the Guidance catalog.

Peter Kummer, Chairman

MINUTES OF THE SCIENCE AND MATH COMMITTEE OF C.E.P.

May 1, 1972

The full committee met at the Administration Building at 8:00 a.m.

We again went through the 15 job cluster folders and noted the recent responses.

The major part of the day was spent in visiting various businesses.

Mr. Berlani spoke to the business manager at the Grove Hill Clinic and to a representative at the Children's Library and Museum.

Mr. Galati and Mr. Phelps spoke at the New Britain Savings Bank, Four Seasons Sport Shop, and Putnam, Coffin and Burr.

Mr. Cormier and Mr. Ackerman went to Adkins Printers and the D.S.O. Manufacturing Co.

Mr. Quarti worked on writing up the work-role sheets from the information that had been gathered through the visits to the businesses.

The remainder of the day was spent on writing up the work-role sheets on the information that was gathered today. This was done as committee members returned from their appointments.

* * * *

May 9, 1972

The meeting began at 3:00 P.M. at the Administration Building.

Members present: Rose Berlani, Bill Ackerman, Henry Quarti
Bud Phelps, Peter Kummer

We again went through the 15 cluster folders to see if new letters had been received. We also went over the lists that were used for the original mailing to the area employers and noted some who had not as yet responded. An effort will be made on Friday to contact some of these places.

We set up some appointments for Friday. The Data Processing Center at Stanley Works (Mr. Valerio), New Britain General Hospital Personnel Dept. (Miss Mary Meany), Dr. Herrax, and others will be contacted.

The meeting was adjourned at 4:00 p.m.

Peter Kummer
Chairman

MINUTES OF THE SCIENCE AND MATH COMMITTEE OF C.E.P.

May 12, 1972

The committee met at 8:00 a.m. at the Administration Building.

We went through the 15 cluster folders to see if new letters had been received. We also looked through the lists of employers to find those who had not responded to the first letter yet. We noted some and these will be contacted personally today and in the future.

Mr. Ackerman, Mr. Cormier and Mr. Quarti spent the day contacting various businesses and writing up the guidance catalog sheets.

The rest of the committee met with Mr. Valerio and other officials at the Stanley Works Data Processing Center. We spent the morning reviewing the two observation stations that have been set up there and filling out the guidance catalog sheets for those stations.

Afternoon meetings had been set up with the Visiting Nurse Association, Dr. Herrax, New Britain General Hospital, and others.

I met with Miss Mary Meany of the Personnel Dept. at New Britain General Hospital. We discussed the program in general terms and she suggested that a meeting be set up with their department heads and our committee chairman. A tentative meeting has been set for May 31 in the afternoon.

Peter Kummer, Chairman

MINUTES OF THE SCIENCE AND MATH COMMITTEE OF C.E.P.

May 22, 1972

The committee met at 8:00 a.m. at the administration building.

We went through the 15 cluster folders and lists of employers to see where new contacts could be made for observation stations. We spent some time writing up the Guidance Catalog work-role sheets from the information that has been gathered since the last full day meeting.

We also compiled the substitute list which is to be turned into the general chairman.

Some of the places that were visited today were: Hirsch, Kaestle, & Boos, architects; Dakillo Photographers; New Britain Memorial Hospital, where 10 stations were set up; and the Visiting Nurses Association.

The meeting was adjourned at 2:30 p.m.

Peter Kummer, Chairman

MINUTES OF THE SCIENCE AND MATH COMMITTEE OF C.E.P.

June 5, 1972

The Committee met at 8:00 a.m. at the Administration building.

Present were: R. Berlani H. Quarti

R. Galati P. Kummer

S. Phelps

Committee members entered sheets into 15 cluster folders for the various employers who had been contacted and had not returned letters.

Much of the time today was spent in filling out the work-role observation sheets for the Guidance catalog.

The rest of the time was spent in visiting various employers such as: New Britqin General Hospital; Ciarcia Insurance; Abraham Bell, accountant; Arrow Drug; Twin City Pharmacy, New Britain National Bank; and the Federal Savings Bank.

As this is our last meeting, I would like to thank the Math and Science Committee members for all the work that they have done and for the fine job in completing our part of the C.E.P. program.

The meeting was adjourned at 2:30 p.m.

Peter Kummer
Chairman

The committee decided to meet during regular school hours on the following days: Tuesday, February 29; Wednesday, March 8; Wednesday, March 22. A notice will be sent to the principals of each junior high notifying them of these dates so that substitutes can be obtained in time.

Various forms such as the Travel Expense Voucher and the Work Schedule for Pay Purposes were distributed and the hourly wage rules were explained.

The committee then reviewed the basic aim of C.E.P. which is to give students the opportunity to observe the functions and procedures of various occupations. This aim will be accomplished through group effort between educators and businessmen. The educators will formulate and provide detailed units of study, while the employers will provide specific functions and procedures of the designated vocation.

The committee also examined samples of work-role units of study in use by the PIC Program. It was suggested that for the next meeting the committee members encourage other staff members from their schools to attend and offer ideas they may have about the role of the social studies in C.E.P. Each member of the committee was asked to compile lists of possible job observations stations related to the social studies.

The first meeting during regular school hours of the Social Studies Committee was held on Tuesday, February 29, 1972. The next two meetings to be held during regular school hours will be Wednesday March 8 and Wednesday, March 22. The correction of an error in dates was noted and will be made.

The committee worked on defining its role within the context of the entire porgram. In so doing, it decided that local government (public service) and its observation stations were clenrly within the Social Studies framework and should be completed first. The committee then began working on this project.

Lists of other clusters and observation stations, that are clearly within the Social Studies framework, were compiled.

The committee also prepared the Social Studies form of the Work-Role Units of Study sheet. In reviewing the provided sample copy, the committee made several changes, although it kept the basic form of the sheet the same.

Finally, the committee discussed those clusters and observation stations that might be shared with other committees. It was decided that the Social Studies Committee might eventually meet with each of the other commettees to prepare units of study on these overlapping observation stations.

Arrangements are being made to allow the Socail Studies Committe to visit the New Britain City Hall and other observation stations so that the committee members may gather first-hand information and knowledge. Also, individual job specifications are being gathered to aid the committee in its preparation of the Work-Role Unit of Study sheets.

The second meeting during regular school hours of the Social Studies Committee was held on Wednesday, March 8, 1972. The committe decided upon the dates for the meetings during regular school hours for the remainder of the school year. These dates will be submitted for approval.

A complete list of observation stations was prepared to be submitted to the general chairman. This list contains "general" observation stations. Many of these observation stations can be broken down into several work-role units. This will be done at a later date.

A study of the available materials and information in the Social Studies field was made. The committee worked on preparing work-role units of study for several observation stations. The committee also began preparations for future Social Studies meetings.

A discussion of the 3-hour session that Stanley Works is preparing for ninth graders was held. It was decided that an aptitude test of some sort should be taken by all students who will participate in this work-role program. This point will be raised by the Social Studies Committee at a furure meeting with the Committee Chairmen.

A letter requesting permission to visit various City Hall office was written to Mr. Ben Sisti. The committee felt that first-hand observation of the operation would facilitate the listing of job-role observation stations and the accompanying student Work-Role sheet.

The committee then reviewed the proposal made by Peter Bosco at the last general CEP meeting, March 21, at Slade. He suggested a standard form to be used by all departments. This committee decided to retain the basic format of Mr. Bosco's system but suggested that a detachable Student I.D. Card be included. This card would be filla in by the student up to the double line, (see attached copies), and then turned in to the proper authority upon arrival at his observatio station. These cards would be authorized and time in and out noted. The company would then retain this card for its records. The committ felt that this would be a good double check on the students and also would eliminate the need for special CEP stamps which would have to be distributed to too many people.

The Master Log also proposed by Mr. Bosco's committee was reviev and ammended. It was decided to add another date column which would be divided into Out and In columns. This would refer to the student Work-Role sheet.

The committee also revised the Student Work-Role Sheet and re-worded the final evaluation question to read "Was this observation of value to you? Why or why not?"

Next on the agenda came a review of some of the letters which have been sent to the various firms and companies in this area. Each work station was requested to send in a list of possible observation stations for the junior high school students.

The next discussion revolved around the central aim of CEP. The question was posed whether the CEP should be designed to fit into the existing curriculum or whether a new curriculum should be established to fit into the CEP idea. The prevailing opinion was that time will not permit the formation of new curricula by this coming September.

The suggestion was then made that CEP evaluation and weekly cluster discussion be incorporated into the Group Guidance classes now in existence in each of the junior high schools. Although this would remove the operation from the classroom teacher, it would help to organize the system until the program is established. This would also solve the problem of overlapping clusters by making one department responsible for all observation stations.

Respectfully submitted,
Jo Sahadi

Roger Carlone	Washington
Jo Sahadi	Nathan Hale

The first order of business today was the examination of replies from various local services and businesses to determine how many employers are willing to participate in C.E.P. A discussion of locatio and housing of prepared catalog sheets and the problem of teacher and pupil scheduling then followed.

A suggestion was made to send work-role sheets to each employer and to request them to fill in information regarding qualification and background necessary, responsibilites and duties, and special points of interest for each work observation station they plan to make available for our use. This would necessitate changes in the present work-role sheet. This committee felt that the form would have more value if more specific requirements were clearly defined such as - education required tools or special equipment needed, etc.

It was further suggested to send simplified forms to employers rather than include the top portion of the existing catalog sheet. Mr. Geraci came in and approved this suggestion.

The committee then constructed a sample of a work-role catalog sheet which included these new proposals. Mr. Geraci then suggested that teaching units be prepared for each cluster and that employers be personally contacted. A list of those firms which have expressed inte est in the program was compiled. The list included those firms which the committee felt could best fit into the social studies areas.

Two form letters were then devised. One to those employers who have expressed a desire to participate in the program, and one to thos who have expressed some questions concerning the purpose and practices of C.E.P. and their role in it. These letters were sent to Mr. Geraci and adopted for use by all other committees.

The next item on the agenda was to be the construction of a unit on local government to accompany the social studies emphasis and conce with City Hall.

The committee decided, after extensive discussion, that it is impossible to construct any type of unit until we know where and how suc a unit can be used. The discussion once again centered on the questio of how student and teacher scheduling will be determined for next term, how student interest in C.E.P. is to be gauged and evaluated, and what is to be the relationship between the classroom teacher and C.E.P.

The committee felt that until some decisions are made and definit proposals suggested, it is literally impossible to make any meaningful contributions in terms of units.

Respectfully submitted,

Jo Sahadi

Since plans for today's meeting of the Social Studies committee of the Career Exploration Program included a visit to the New Britain City Hall, the meeting opened with making appropriate preparations.

The objectives of our visit to the City Hall included:

1. To familiarize each department head with our program, answer any questions he may have, and begin to work-out details for establishing specific work-observation stations.
2. To familiarize ourselves with the facility.
3. To familiarize ourselves with the operations of each public service department.
4. To gather data for our units of study on public service which we are preparing.
5. To gather information for the Program's "Catalogue Sheet concerning each work-observation station.

We discussed our presentation to each department head, our approa and decided upon the best methods of gathering data. (To facilitate this, we had previously prepared a letter to be left with each department head requesting specific information. This letter was approved b the general chairman and adopted for use by the entire program).

While at the New Britain City Hall, we visited five city departments: 1) City Clerk, 2) Registrar of Voters, 3) City Plan Office, 4) The Corporation Counsel, 5) Finance Office

Upon our return to the Education Building, we began making preparations for another visit to the City Hall to see those departments tha could not receive us today. We also began making preparations to gather information from the Police and Fire Departments.

A sample unit of study was also begun. The committee intends to complete it and prepare sample copies of it tomorrow. This unit of study will be presented to the entire group of committee members at ou next general meeting.

After a brief meeting at Walnut Hill, the Social Studies Committee spent the morning investigating possible work observation stations at City Hall. The information obtained during this visit was later compiled into the catalog pages and used in the formation of study units to accompany each station. The following departments were visited:

Human Relations Council

The director of this council felt that the nature of the work handled by his department deals with concerns that are too confidential to be observed by junior high school students.

Health Department

The Health Department has many facets. Some of the things handled by this office are checks on air and water pollution, analysis of tests submitted by city doctors, premarital blood tests, investigation of child abuse complaints, and T.B. and V.D. Clinics. The work stations within this department are doctors, housing investigators, medical stones, clerk typists, clinic workers, and public health nurses.

Our committee was then advised by Mrs. Dorothy Partika of the Health Department's Clinic who said that although the medical records on file in her clinic are classified information and therefore no observation stations would be available to us, she would be willing to come into the schools and address any group of students who express an interest in learning more about this aspect of the Health Department.

The director of the Health Department Laboratory was also unwilling to accept students in observation roles due to the possibility of accidental exposure to communicable diseases and the element of danger present in the specialized equipment and machinery used by the lab staff. He will, however, fill out the catalog forms describing the work of his department. The lab will be listed in the social studies Public Service Unit as a position with no observation stations available.

Parking Tickets

This commission is affiliated with the police department and operates under the jurisdiction of the Department of Finance.

They are happy to cooperate in our program and will fill in the information requested on the catalog pages. These forms will then be forwarded to Mr. Geraci.

Parks and Recreation

This department is very willing to accept numbers of students. There are five parks including the Hungerford Greenhouses. Points of observation include the planning and maintenance of various sports areas, seeding and turf upkeep, park superintendents, recreation directors, agronomist duties and clerical workers. This department will also forward catalog forms to Mr. Geraci.

Public Works Department

Duties of this department include the maintenance of incineration plants, city streets and plowing. There is a clerica staff of civil service workers as well as mechanics and other garage workers.

Public Welfare Department

The director of the Welfare office felt that his department would be among those unable to accept any student observers. He did give the committee information to be included in the Public Service Unit.

The Welfare Department is funded by State and Federal Agencies. The local Welfare Department is bound by law to assist all qualified cases which are not listed in the categorical state program. The state categories are Aid to Dependent Children, Aid to the Aging, Aid to the Disabled, and Aid to the Blin The state establishes standards of eligibility for all local departments of public welfare.

The most usual type of aid dispensed by the local department is aid to families on atemporary basis. This covers families hit by long hospital stays or long periods of unemployment. Among the long range programs is the Aid to Dependent Children. This continues until the youngest child in the family reaches age eighteen.

The local department is administered by a board of six directors appointed by the mayor. Public Welfare also covers medical aid, clothing allowances, housing and shelter, and the investigation of the mentally incompetent.

All positions in this office are civil service classifications. Preferred background of personnel should be in the areas of social work or psychology. People with BS or BA Degrees and experience are given highest consideration.

The next meeting of the Social Studies Committee will be Wednesday, May 10 at 3:00 at the Hill. The next regularly scheduled all day meeting will be May 17 at the Hill.

Our meeting today began with a short conference and assignment of special duties for each member. We then began our tasks.

Jo Sahadi completed the work-role catalogue sheets for each of the observation stations at the Police Station and continued to work on the Police Unit of Study.

Helen Giuffrida reviewed the cluster folders to find any new responses that have been received since our last meeting and compiled a list of businesses for the Social Studies Committee to visit personally She also compiled a list of businesses that have not yet responded to our original letter. The committee plans to review this list and contact as many as possible.

John Macensky and Roger Carlone went to the New Britain Herald and Stanley Works and took pictures of our students participating at these places in our "pilot program". They also made arrangements for an interview at the New Britain Memorial Home. Their visit to the Post Master of the New Britain Post Office was successful. The Post Master agreed to participate in the program and also to provide films, tapes, etc. for a unit of study.

Jo Sahadi and Helen Giuffrida also visited a law firm that has agreed to provide 4 observation stations. They collected data for the catalog sheets and units of study also.

The committee is also working on compiling more catalog sheets and is preparing units of study for each of the observation stations it arranges.

Our activities today consisted of visiting businesses and working on our units of study and catalogue sheets.

Among the places visited were:

Army Recruiter
Navy Recruiter
Air Force Recruiter
Connecticut Employment Service
New Britain City Hall
a legal firm
New Britain School Admin.

Appointments were made at several other places for a later date.

Our units of study are well under way. We are finding that a unit is best approached by describing and clarifying each job observation station. In this way, the student will have a specific idea in mind of what each job includes before he gets there. Hopefully, with this previous knowledge of the job, the student's observation will be keener and therefore will be more beneficial. He will be able to spend time analyzing the job itself, how it fits into the rest of the business, how it fits into society, and how interested he is in that particular line of work. We hope to provide an adequate unit of study for each observation station, without burdening the student with an overwhelming presentation of a job in which he is merely showing an interest.

The main difficulty we are having in arranging observation static and gathering information for our catalogue sheets is that each busine wants to set-up its stations and procedures for visitation in its own way. In other words, there is very little uniformity in: start time, end time, number of days, number of hours each day, particular days of the week or month, etc. This is leading to a good deal of confusion and, in some cases, will even necessitate making arrangements before each student's observation.

Our meeting ended with making a schedule and arrangements for our next all-day meeting.

Respectfully submitted,

Helen Giuffrida

Today's meeting was the last regular meeting of the Social Studies Committee during the school day.

John Macensky and Roger Carlone went to address a session of the Funeral Directors meeting held at New Britain Memorial Home. The Directors had requested more information about the Careers Program. They suggested that rather than have junior high school students come to the funeral homes they would instead come to the schools to speak with any students interested in learning more about the profession.

Helen Giuffrida interviewed Donald Friday to ascertain observation stations for students within the school department, while Jo Sahadi sorted out specifications which pertained to the social studies from the job specifications sent the committee from the Civil Service Commission.

The rest of the day was spent in writing catalog pages and units of study for each observation station listed by the Social Studies Committee.

The next committee meeting will be Tuesday, June 13 at 2:45 at the Hill.

From: Chairman of Guidance Committee

An organization meeting of the Guidance Committee was held Wednesday, February 16, 1972, at the Administration Building.

Items Discussed were:

I. Explanation and Distribution of wage forms and travel expense vouchers
II. Discussion of the areas chairmen meetings to date
III. Distribution of sheets concerning aim and purpose of CEP program
IV. Distribution of monthly schedules of released days: Feb. 23; March 1, 15; April 5, 19; May 3, 17: June 7
V. A discussion was held together with J. Geraci as to what role the Guidance Committee will play in the CEP. This will be continued at our next meeting.

The meeting was adjourned at 4:00 p.m.

Greg Frey
Roosevelt Junior High

* * * *

Career Exploration Program

An all day meeting of the Guidance Committee was held on Wednesday, May 3, 1972 at the administration building. Those in attendance were: Greg Frey, Chairman, Charlotte Kania, Arlene Wolenski

The morning session was held with the intention of starting the Career Exploration Catalog. This was accomplished by dividing a notebook into 15 sections based on the 15 job clusters. All the CEP work-role sheets that have been returned were then separated into these 15 clusters and each one was given its appropriate DOT code. The sheets were then put into the catalog from lowest number to highest based on the DOTS. More and more work-role sheets are returned, this will become a bigger and bigger job.

The afternoon session was spent on ordering vocational materials for the media centers which will be located in each junior high school next year. Some of the materials ordered include: Career Kits - job descriptions; College and Occupational view-decks; Filmstrip kits; DuKane automatic sound filmstrip projectors; Earphones. Many more materials will be ordered in the future.

Greg Frey
Roosevelt Junior High

To: Career Exploration Program Committee Chairman

From: Guidance Chairman

The first meeting of the Guidance Committee on released time was held at the Administration building on February 23, 1972.

Members present were: Greg Frey, Chairman
Dorothy Wojtusik
Charlotte Kania
Dick Soloman

The first part of the meeting was devoted to studying the materials which J. Geraci, the General Chairman, had left for us. Of these materials, the 15 job cluster units were given most attention. Art Kevorkian emphasized that all the various committees should use these same 15 clusters in order to have a unified program.

The remainder of the day was spent separating the 9th Grade Career day choices, areas in which students have expressed an interest into the various job clusters. It was felt that since the students have already expressed an interest in these areas these might become a starting point in the work-role observations.

Greg Frey
Roosevelt Junior High

The first part of the session was spent on reviewing the progress of the program thus far. This was done primarily for the benefit of Arlene Belmonzi who has replaced Dick Salemme from Washington Jr. High.

As one of the roles of Guidance in CEP will be to function as a media center - disseminating information on occupations for the teachers' benefit, a list of materials already on hand in all the Guidance Offices was drawn up as well as a list of some of the things that we would like to see in the Guidance Offices. Some of the items that all the schools have now, are: (1) - the 3d edition of the D.O.T.'s to be used for the cataloging of work role stations. (2) - the Guidance Chronicle's Occupational Briefs. (3) Guidance Chronicle's books on (a) Student Aids, (b) Guide to College Majors, (c) College Facts, (d) Career Index.

Some possible equipment for the Guidance Centers might include the Career Exploration Kits from Carrera, Largo, Florida, portable filing cabinets for Occupational Briefs, which would allow these briefs to be used in the classroom teacher, filmstrip kits on different job observations, and tapes of jobs. Other types of vocational equipment will be studied at a later date.

In the afternoon session we were joined by Don Paris, Director of Guidance, and Art Hovorkian, Director of the PIC Program. In this session, the role of Guidance in CEP was examined. In addition to providing vocational information for the classroom teachers, the Guidance Office will be in charge of the finished CEP Catalog of work role stations with all its ramifications. Also, the Guidance Department will become an ongoing process. Because of these new responsibilities the Committee feels that some of the present responsibilities the Guidance people now have should be eliminated. These will be elaborated on at a later date.

For the rest of this school year, the Guidance Committee will be making community contacts, as time permits.

Respectfully submitted,

Gregory Frey

CAREER EXPLORATION PROGRAM

An all day meeting of the Guidance Committee was held at the Administration Building on April 19, 1972, with the following members in attendance:

Greg Frey - Roosevelt
Arlene Walenski - Washington
Charlotte Kania - Nathan Hale

The majority of the morning session was spent on drafting a proposal on the role and duties of Guidance in the C.E.P. This proposal is to be presented to the C.E.P. Board of Directors by the General Chairman at the same time that the entire C.E.P. is explained. This proposal was drawn up with the assistance of Mr. Donald Paris, Director of Guidance, and meets with his approval.

The afternoon session was spent looking through catalogs containing vocational information. Also Mr. Boyle was asked to furnish us with any information he may have regarding vocational tapes or other vocational material which would be appropriate for the C.E.P.

Greg Frey
Chairman Guidance Committee

cc: Joseph Geraci
Donald Paris
C.E.P. Chairmen
Guidance Committee

ABSTRACT OF THE CAREER EXPLORATION PROGRAM

The Career Exploration Program for the New Britain Junior High Schools had its beginning at a general staff meeting, February, 1972, at Slade Junior High School. At this meeting, the idea of a career education program was presented to the staff by Mr. Arthur Kevorkian, Director of Vocational Education, and Dr. Thomas Bowman, Superintendent of Schools. Within two weeks, a committee of 24 teachers was brought together to create the curriculum and all related inputs.

The group of 24 was representative of 5 areas of discipline: Math and Science, Communications, Social Studies, Guidance and Special Areas (which includes school subjects not covered by other committees). Each sub-committee consisted of 4 members, one of which was the chairman. The Math and Science Committee included 8 members with one chairman in charge. An over-all General Chairman was elected to oversee the entire operational progress of the program.

Meetings and work sessions were held regularly since the general committee's inception in February and ran steadfastly through June, the date the project became complete. A variety of meetings were necessary to develop various aspects of the program; general committee meetings, sub-committee meetings, school faculty meetings, meetings with prospective community agencies and other business participants, meetings and discussions with students, meetings and discussions with educators outside the community as well as state, regional and even national conferences. Ideas began to develop, rapidly becoming material reality. The foundation was laid and the details began to take refinement.

The contributions came from three main sources: The school, the student, and the community. Without the conserted effort of all these sources, the program and its procedures could never have been devised. The school inputs were those tangible and intangible ingredients supplied basically by the Committee, supported by the Board of Directors of the program as well as the school facilities-at-large.

The students themselves made very real contributions through in-class and individual discussions dealing with the anticipated program. More tangibly, those students involved in the pilot project in May served as true critics of the proposed program.

Finally, the community itself with its myriad businesses, industries, institutions and civic agencies served as the

backbone in the actual procurement of on-the-job observation posts, the real meat of the entire program. Many of the area businesses not only offered observation stations but aided in the development of many of the ideas of the program.

The conclusions that were arrived at by the Committees are as follows:

We had to set up a format for the work-role observations that the students would be making.
The Guidance Department in each school would maintain a catalog of all the work-role observation sheets compiled by the various committees.
The Guidance Department in each school would be the hub of the Career Exploration Program serving as a resource center and for making appointments for the student's observations as well as counseling the students on careers.
All of the junior high staff should be kept informed of developments in the Career Exploration Program.
Personal contacts with area employers is the best way to obtain work-role stations.
An informational pamphlet should be developed about the Career Exploration Program and distributed to the schools and the various businesses in the community.
As much written and audio-visual material as possible should be obtained for reference in the schools.
Some committees felt that units of study had to be developed to tie in with the Career Exploration Program.
The community should be educated and informed of the Career Exploration Program through news releases as much as possible.
Students should be free to select as many work-role observations as their genuine interests are determined by teachers and counselors.
That the Career Exploration Program should be totally integrated into the curriculum.
That students and teachers should work on a one-to-one basis as much as possible in preparation for a work-role observation.
That time should be set aside during the school day for Career Exploration discussions, speakers, and individual work.
That the schools should generate about 2/3 of the input and the business community about 1/3 of the input.
That the students could make their observations during the school day and it would be up to them to get to their appointments on time.
That all the junior high school staff and students and the business community have input into the program.
That the students have an I.D. card that they would take with them.
That the student have a form similar to the Guidance Catalog Sheet that he would fill out at the observation station and that he could use as a base for his report to the teacher/class back at school.

Students would not have to make up missed work as a result of being out on an observation.
A pilot program was developed and evaluated and this showed that the program could be very effective.
That communications between the school and the community be an on-going thing in order to refine and perfect the program more and more.
Copies of the catalog forms should be made available and provided for the area businesses who are participating in the program to see what the schools are working on.

The stage has been arranged, the props have been set in place, the "producers and directors" stand in the wings in anticipation of the cast (the students) that will walk across the stage setting this innovative educational concept into motion.

DESCRIPTIVE NOTE: 74P.

ABSTRACT: THIS INTERIM REPORT DESCRIBES THE PROGRESS OF THE FIRST OF A THREE-YEAR PROJECT BY THE BUFFALO, NEW YORK SCHOOL SYSTEM TO DEVELOP A K-12 CAREER EDUCATION PROGRAM. BASED ON A MODEL OF CAREER EDUCATION AS A DEVELOPMENTAL PROCESS, AND USING A COUNSELOR/TEACHER TEAM APPROACH, THE PROGRAM INCLUDED THREE JUNIOR HIGH SCHOOLS AND NINE ELEMENTARY SCHOOLS. THE TECHNIQUES USED WERE COUNSELING, GAMES AND ROLE PLAYING, FIELD TRIPS AND CLASS PRESENTATIONS. IN ADDITION, A SCHOOL EMPLOYMENT SERVICE WAS CREATED. THE RESULTS OF THE EVALUATION, OBTAINED BY PRE-POST TEST INSTRUMENTS, SHOWED A DEFINITE INCREASE IN OCCUPATIONAL KNOWLEDGE. INCLUDED IN THE APPENDIX ARE A SAMPLE CAREER EDUCATION GAME, AN OUTLINE OF THE GUIDANCE PROGRAM, A LIST OF INSTRUCTIONAL MATERIALS, AND A K-9 RESOURCE GUIDE. (NJ)

APPENDICES 21

INTRODUCTION

In recent years community organizations have been voicing strong concerns about the lack of career education (guidance) within the school program. Particularly poor minority groups have felt short-changed in terms of the very real needs of their children in this area as opposed to some of the built-in career orientation accessable to middle class children, i.e., home and community role models and the school itself as a representation and extention of middle class life. But in essence all students have been to some degree neglected in the area of career education.

Admittedly school counselors and school teachers have placed career education (guidance) on a very low rung of their ladder of priorities.. Administrators and building principals have also not felt the need to develop and implement career education in the schools. This has not been by design on the part of educators, but more akin to a sin of omission. Most of us in education become comfortable with our established pattern of teaching/counseling and the standard operating procedures fostered by our own systems. There is also a tendency among educators to stereotype career programs as a narrow type of education that involves imparting information about occupations to those students who " we presume" will not attend post high school programs.

With the community focusing on the issue, the Buffalo Guidance Department decided to review various nationwide career programs and to develop one of our own. Our guidance philosophy and orientation necessitated that we seek out programs that were based upon developmental learning theory and ones in which the school counselor was a central figure.

We found a very appropriate model in the Developmental Career Guidance Project of Detroit, Michigan. Dr. George Leonard and Dr. James Woodruff of the Counselor Education Department, Wayne State University, were in the midst of developing a K-12 program for Detroit's inner city. Their program contained the flow concept of elementary schools feeding into a junior high school which in turn fed a senior high school. A project counselor was assigned to each school along with a counselor aide. The latter were community residents who assisted the counselors develop the project. The counselors acted as resource people to teachers, helped teachers organize field trips, brought role models into the schools from the world of work and, at the high school level, developed cooperative programs with business and industry.

Although the DCG project had a decidedly black orientation due to their pilot schools' population, we felt that the educational philosophy was sound and much of what was being done in Detroit's inner city in terms of career education could be adapted to Buffalo.

With the assistance of the State Bureau of Guidance in Albany, New York, and several consultants from the Counselor Education De-

partment at State University of New York at Buffalo, we began a similar project at three schools in Buffalo's inner city. Through that project entitled Project Open Door to the World of Work our personnel developed a K-9 Career Resource Guide (see attached copy), provided seven counselors and six counselor aides to one inner city elementary school, one junior high school and one senior high school. The program was successful in many areas, but weak at the K-6 level. The project was limited in terms of only serving three schools in one sector of the city. Our evaluation also left much to be desired since the evaluation instruments were developed and administered by our own Board of Education. Interviews, testimonials and a likert scale were the basis for our evaluation.

In the spring of 1972 we applied for and received a Commissioner's Grant to develop a career education program. With the assistance and support of Buffalo's Department of Vocational Education and the Division of Vocational Education in Albany, our proposal was reviewed and funded for a three year period. Through this grant we could expand our project city wide, focus more on the K-6 program and contract a third party evaluator.

A GUIDANCE MODEL

Our first year model has developed into what we consider a functional approach to education with a decided career emphasis. We have tried to help students to become familiar with the values of a work oriented society, to integrate these values into their personal value systems, and to implement these values into their lives in such a way that work becomes possible, meaningful and satisfying to each individual (Hoyt, Evans, Mackin and Mangum).

The school counselors role in career education is a pivotal one because implementation of any school based career education program involves the restructuring of the schools' curriculum, cooperation between academic and vocational education, and the redevelopment of many administrative policies (Marland 1972; Bottoms 1972).

The school counselors role in assisting students in the developmental process complimented his role as career education counselor for as a person learns and grows, his knowledge and skills also grows, and he can perform a wider variety of tasks. This developmental process particularly as it relates to careers, has been discussed by Super (1953, 1963) and others.

More specifically recent research and literature have cited three major developmental components of a career education program: skills development, attitudes and information. The first includes psychomotor skills and interpersonal skills, the second includes areas such as punctuality, cooperativeness, responsibility and the worth and dignity of work while the third includes information about the self, data about job requirements, sources of information about jobs and, lastly, a general information base provided typically by regular school subjects (Brown, Feit, and Forestandi 1973).

Utilizing the above components we have attempted to develop a counselor role based on the 3C model discussed by Lundquist and Chamley (1971) and fully developed by Brown and Srebalus (1972). The 3C model has three basic premises. First it is assumed that the counselor's activities can be subsumed under three general topics, counseling, consultation and coordination. Second it is postulated that no ideal role exists for the school counselor, but his expertise, personality and a variety of environmental factors are the determinants of his role. Third, the model assumes that the counselor's functioning will be a natural outgrowth of the basic needs of the students he serves.

The first C, counseling, can be defined as a process which involves the counselor in providing direct assistance to a student. Consultation, the second C, is a less intense process in which a student is helped indirectly usually through a third party such as a parent or teacher. Coordination, the third C, is the least intense of the three and usually involves the marshalling of all available resources in a concerted effort to assist a large number of students.

The flexibility of the 3C model allows for adaptation in the elementary, middle or secondary schools and also allows the counselor the freedom to determine the allocation of his time and efforts based upon the needs of the participants in the programs within the school and community. What usually happens in developing this model, as was the case with most of our project personnel, the counselor engages in a variety of activities in the initial stages of the program, but coordination processes occupy a major share of his time. However, as the program matures and other members of the staff develop more skills in the area of career education, the counselor will be able to engage in the more intense activities of consultation and counseling.

This has been an excellent model for us this year. Counselors seem very confortable with it. It has also been very compatible with our basic vocational guidance approach i.e., John Holland's personal orientation theory (see evaluation).

GOALS AND OBJECTIVES OF THE PROJECT

Two parallel objectives are sought for each child in the project:

(1) An ever more mature appreciation of the personal and social implications of becoming a worker.

(2) An increased understanding of the specific tasks required for gaining and maintaining employment.

I have included the more specific objectives of our program in the section entitled Results and Accomplishments.

PROJECT DESIGN

The Career Education Project is designed to establish Career Education Resource Centers at West Hertel Middle School, Southside Junior High School and Clinton Junior High School. Each Career Education Resource Center will serve three feeder schools based on the United States Office of Education center-satellite concept. The project patterned in accordance to the New York State Plan for Occupational Education, as outlined on page 9 of the Statement of Policy and Proposed Action by the Regents of the University of the State of New York, proposes to ensure the development of students so that by age 9, the student understands the concept of work; by age 12, the student is familiar with the broad families of occupations; by age 15, the student is able to assess his own potential and to participate in making informed decisions regarding his immediate educational and occupational goals.

A Career Education Advisory Committee consisting of central office administrators who direct education programs will be established to plan career education activities, organize in-service education, provide direction and support, coordinate project activities with secondary career education programs and assess progress toward desired project goals.

Career Education teams consisting of teachers of industrial arts, home economics, business education, art and music, and counselors will be established in each Career Education Resource Center. These teams served as consultants to teachers to incorporate field trips and assist students and teachers in the utilization of materials and equipment available in the Career Education Resource Centers. They also developed a systematic program to provide information and counseling which assisted young people to take full advantage of the strong diversified career education opportunities available in the Buffalo Schools at the secondary level and post-secondary educational programs available in the Buffalo community.

A continuous developmental career education program, instituted at the kindergarten level, which incorporated world of work concepts and attitudes into the regular instructional program and strengthened and integrated exploratory and pre-vocational programs formed the basis for hopefully better informed career decisions at the end of the 8th or 9th grade. More informed student decisions result in

greater student retention and satisfaction at the secondary level. Students, with continuing career counseling, will be ready for post secondary education or entrance into the labor market upon graduation.

The Career Education Advisory Commitee assisted the project supervisor to plan pre-service and in-service activities with the career education practitioners in the schools.

Consultants from business and industry, adult education and manpower agencies and post-secondary educational institutions will assist the administrators, practitioners and students to broaden the base for career education and plan appropriate activities regarding world of work attitudes, requirements and opportunities.

Instructional Staff

Project personnel sponsored by federal funds are as follows:

Supervisor of Special Guidance Projects (1)
Stenographer (1)

Career Education Counselors	(12)
Counselor Aides	(2)
	14

Instructional staff attending in-service through federal funding are as follows:

Special area teachers at the sixth grade through ninth grade levels	(15)
Selected grade level teachers Kindergarten through sixth grade level	(45)
Project staff	(14)
	74

IMPLEMENTATION OF THE PROJECT

To simplify the major section of the interim report I am dividing it into two sections, elementary (K-6) and early secondary (5-8 - 7-9). At each level I will discuss two major categories: methods and/or techniques and materials and/or instruments used to implement the project. I will also indicate under methods and/or techniques which ones are predominately counseling, consultation or coordination in keeping with the model described in the introduction.

Elementary Program - Kindergarten through Sixth Grade

As I have indicated earlier, this was our weakest level in the state funded project. In comparison we feel we have really made great strides in developing a model K-6 program under the Commissioner's Grant.

Our main thrust in the career program at this level was to simply expose children to the various aspects of the world of work. The major focus was to provide the child with developmental experiences which would create an awareness of the self, the family, the peer group, the immediate school community, the value and diversity of work roles within groups, the interdependence of workers, pride and appreciation of work well done and introduction to the decision-making process.

Methods and/or Techniques - (a composite of nine elementary schools)

I. Counseling C[1]

A. Group Counseling - All nine elementary counselors have met regularly with small groups of students (6-10) for the purpose of discussing values in society, the meaning of work and work roles at

at home, school and in the community. These sessions were ongoing with students and counselors meeting usually once or twice a week for eight to ten weeks per group.

A unique innovation in group work as it applies to career education was the use of value clarification/career exploration games. Activities such as Building a Society Game, Building a City Game, Career Square Puzzle Game, Value-Career Hierarchy, and Career "Card" Game have helped set the group focus on career orientation and were action oriented and appealing to children (see appendices).

Another group technique used by several counselors was the role playing of careers using hats which depicted a career. The counselor showed each of several hats to groups of children and the students discussed the job connected with each hat. Each youngster then selected a number which corresponded with the number on the hat. He then placed the hat on his head and role played the career. The counselor summarized the content and the process at the end of each group meeting.

Number of Groups	Number of Students
60	420

B. Individual Counseling - Referrals to counselors on an individual basis came from administration, teachers, parents or on a self-referral basis. The nature of most of the referrals was not directly career oriented per se, but rather directly associated with either a school adjustment problem, i.e., underachiever, or peer group social problem. Indirectly these areas are most important in the development of the whole child in terms of positive growth and goal achievement.

Over and above the effect of the counselor in working with the child in a one to one situation was the tremendous success achieved when the counselor worked closely with the teacher in our behavioral modification program (see section on consultation).

The individual and group counseling approach most often used by project personnel was based on Dr. William Glasser's Reality Therapy. It is rather an eclectic approach which emphasizes establishing a relationship with the counselee, positive reinforcement, reality testing and contracting. We feel it is one of the best approaches to school counseling and fosters many of the concepts of career education.

Number of Students Counseled Individually - 3,600

C. Group Guidance - Although group guidance is not technically considered counseling, it is a counseling tool which offers direct counselor contact with students. It has also been an indespensable part of our career education project.

One mistake we made with our state pilot project in career education was the overemphasis of the counselor role as resource person or "consultant" to teachers. This created some resistance and alienation

among teachers who viewed the counselor as a person who was willing to give advice and provide resources, but unwilling to work with classroom size groups of students.

In the Career Education Project the counselors have taken a more active role in terms of actually demonstrating career education materials in the classroom and in fact, implementing their own on-going group guidance programs on career awareness. Teachers have appreciated this "activist" role on the part of the counselors and in return have become more involved in using our materials and resources. Usually after a class demonstration by the counselor, most teachers continued to use the materials on their own.

The content or subject matter that counselors addressed themselves to in their classroom presentations were as follows: explanation of the school employment service, growth and development, values, the meaning of work and attitudes towards work (see listing of materials in appendicies).

Number of Group Demonstrations	Number of Students Involved
50	1150

No. of Ongoing Group Guidance Programs	No. of Students Involved
27	700

II. Consultation (C^2)

The foundation for establishing a working relationship with teachers in the project was established early in the school year with a ten week in-service on behavioral modification (see first quarter report). After the in-service counselors and teachers consulted on strategies to change childrens behavior by using behavioral modification techniques such as positive reinforcement, contracting and reward systems.

Some of the school based programs which were a direct result of this consultation process were as follows:

School Employment Service - Counselors and teachers worked together in creating job titles, application forms, job requirements, interviewing and selection teams, on-the-job counseling program and reward system. At the K-3 level all student jobs were contained within the classroom, i.e., taking attendance, venetian blind adjustor, window adjustor, chair straightener, material distributor, etc. At the 4-6 level jobs were more school oriented, i.e., audio-visual assistant, attendance card carrier, safety patrol, guidance monitor, etc.

A few elementary school counselors worked closely with the students and eventually the entire process was taken over by student committees. Through this program students received real life experiences in the processes involved in applying for a job, getting a job, retaining a job and attaining rewards for a job well done.

Types of Jobs	Number of Students Involved
classroom	415
school based	373

12

N.B. Classroom jobs were much easier to monitor. The 4-6 school employment service should begin on a small scale and be expanded gradually.

Token Economy Store

This strategy has been pilot tested at one school and may be expanded to other schools next year. It involved the counselor organizing a toy store and token system with the teachers. Students worked in the classroom for the tokens and when enough were saved, cashed them in for an article or toy from the store. This procedure, of course, enhanced the concept that we all work for rewards and the better our work is the more rewards we get.

Interestingly enough the token economy store did not perpetuate crass materialism as our own society sometimes does, but through the conscious efforts of teachers and the counselors created pride in schoolwork and a need on the part of students for social rewards. The counselor in particular always included a social reward with the material reward, i.e., "nice work Jimmy" or "we're really proud of your work." As a result many students saved their tokens to go bowling with the counselor on Saturday morning or to go on a field trip with their teachers.

Number of Students Involved	Number of Teachers Involved
62	11

Curriculum Development

Counselors and teachers consulted during in-service sessions and on a weekly basis to devise ways of incorporating career materials into exisiting courses of study and syllabi. Our approach was one of attempted integration of career experiences and activities into the exisiting curriculum rather than fostering the unit approach, although the teacher could choose either.

Our efforts in this area were not as successful as we had hoped, but we intend to increase teacher involvement next year (see section on recommendation). This first year the counselors have held school based in-services on the use of instructional materials purchased through the project. They demonstrated the materials in the classroom and set up the organization for distribution of the materials to teachers on request. Many teachers made use of the materials but usually not on a systematic basis.

A listing of resource materials is included in the appendices. The Kindle Scholastic Series on self-concept and the Science Research Associates material on career education were used by most teachers. Feedback from teachers indicated our selection of resource materials was most appropriate for the K-6 level.

Number of Teachers Using Material	Number of Students Exposed to Materials
72	- 1,590

III. Coordination (C^3)

As the research indicated (see section on Model P.3)most of the counselor time this year was spent in coordinating school and community activities which revolved around career orientation and awareness. This role was at times frustrating for the counselor for it placed him in the position of being a quasi administrator. But if the research holds true, this role will diminish in the second year when teachers and staff become more involved and gain expertise in the area of career development.

Project counselors coordinated all activities in the following areas:

Field Trips - Over 150 field trips were scheduled among the nine elementary schools. These included walking trips in the school community, trips in teachers' and counselors' automobiles and bus trips. For the most part the trips were academically planned by counselors and teachers around units of study being taught at the time, i.e., after completeing a unit on transportation, students visited the Port Authority or airport.

Resource People(Role Models) - Counselors coordinated role model presentations to classroom groups or small groups composed of students interested in special areas of the world of work. The latter groups of students were surveyed by counselors and teachers in order to assess areas of interest. The resource people from the world of work interacted with student groups by explaining their jobs, discussing their preparation for the job and most important, talking freely about their life style and values as regards work, leisure time, family role, etc. We found that the most successful role models in terms of interaction with students were the ones most child-like and open about their job role, family role, values, etc.

We invited as many female role models and minority group role models as possible to talk with students. Role stereotyping in these areas, particularly the former, is quite pronounced as our evaluation indicates. (see evaluation)

We sought role model contacts in a variety of ways. Chamber of Commerce and National Allience of Businessmen speaker lists were two sources. By sending form letters to the students homes requesting participation, many parents and relatives offered their services as resource people. Contacts were made through teachers' spouses, friends, relatives, and by counselors phoning or writing to individual businesses, industries and agencies.

A total of approximately 6,300 students interacted with ninety two (92) role models from sixty one different areas of the world of work. We had at least one representative from each of the fifteen job families as defined by the U.S. Office of Education. Like the field trips, role model presentations were scheduled in conjunction with career subject matter being taught by the teacher or counselor.

Materials and Instruments Used

During the first year, counselors and teachers used a variety of packaged materials published by such companies as Science Research Associates, Scholastic Incorporated, and Guidance Associates. Our own Career Resource Guide (K-9) was also used. We were very selective in our choice of materials and avoided those which depicted career education too narrowly or emphasized only one or two aspects of careers or career clusters. Our materials related to career development as a life process with many variables affecting the student as he attempts to assess himself, his surroundings, set tentative goals and make decisions. They focused on both the emotional and intellectual side of man and emphasized career development as a balance between process (making your way through life) and content (the knowledge and skills that assist you on that career path).

In assessing the use of the materials I would say that the short (15-20 minute) film strips with accompanying record or tape was our most effective resource, especially if used with small groups followed by a discussion period. The content of the film strip or film held student interest only if it took into account values, decision making and personal life styles of the role models depicted in the film strip or film.

Our own K-9 Career Resurce Guide served as a reference for teachers, but we were somewhat disappointed in its effectiveness. At least we learned a great deal about teacher involvement as it relates to teacher input. I will discuss that issue further at the end of the report.

Counselors also experimented with devising their own games, activities, form letters, surveys, etc. Copies of these appear in the appendices. I have already referred to the successes some counselors had in using value clarification games and devising games and activities oriented towards career awareness.

Good use was made of our SONY video tape machine. Presentations by role models were taped and replayed to other classes. Field trips were taped for the same purpose and the machine was also used to tape sessions of the school employment processes, presentations by resource people and career role playing by students.

In summary I am pleased with the development of our project at the K-6 level. Teachers are cooperative and school staff at this level are very much child oriented. The self-contained classrooms and continuous progress education programs provide a perfect forum for our developmental career program.

Early Secondary Program - Seventh Grade through Ninth Grade (Please make note that one of our secondary schools, West Hertel is a middle school 5th - 8th grade).

Two distinct types of programs have emerged in developing the 3C model at the early secondary school level. Although the two programs emphasize exploration of the world of work, one is very programatic and counseling (C^1) oriented with consultation (C^2) second in priority and coordination (C^3) last, while the other program (at two schools) has a C^3, C^2, C^1 priority listing. Both have their strengths and weaknesses and offer a variety of approaches to the counselors. Fortunately the working relationships between the counselors is such that each can adapt or reject portions of the others program based upon their own counseling style, feasability within their particular school setting or a number of other factors. In fact, the same can be said for the elementary school counselors in terms of their working relationship.

Methods and Techniques - Counseling (C^1)

In this model the counselor worked directly with three types of student groups.

For two or three days a week he met with six to eight eighth grade students for the entire day or seven forty-one minute periods. This day long process involved working with the students using several career exploratory instruments (see appendices). The process is based upon the vocational theory of Dr. John Holland, which also happens to be the basis for our evaluation procedures (see evaluation). This particular developmental process was actually used by Dr. Paul Munson at East Aurora High School with some success. As one of our consultants, Dr. Munson encouraged us to adapt the approach to the junior high level and our counselor has done so with great success.

The activities center on three major categories - career classification techniques, self-knowledge, awareness and evaluation and positive attitudinal concepts towards work and workers (see appendices).

Number of Students Processed - 315 8th Graders

Small group discussions were held with ninth grade students on topics such as high school ahead, decision making, self identity, positive self-image, awareness of the fifteen career clusters including structure and level within the career groups, in addition to the concept of life style as influenced by career choice.

N umber of Students Involved - 215 ninth Graders

The third grouping (class size) which emphasized a guidance approach, as opposed to small group counseling, centered on local vocational school awareness. A film depicting vocational school offerings was shown to eighth and ninth grade classes. The counselor led discussions on entrance requirements, skills, and abilities necessary for success and career goals.

Number of Students Involved - 750 eighth and ninth Graders

This was followed up by the counselor organizing small groups (5-6) of students who had made tentative decisions to apply for a particular vocational school. It was indeed a very sound developmental approach to decision-making.

Number of Students Involved - 245 eighth and ninth graders

Individual counseling took place as a result of student participation in one of the above groups, teacher referral or contact with counselor on field trips, role model presentations, etc.

Number of Students Seen - 100

Consultation (C^2)

Consultation took place primarily with special area teachers i.e., industrial arts, art, home economics, and business. Classroom programs included:

	No. of Students
Art - Career Field of Commercial Art	50
I.A.- Careers in Manufacturing and Industry	250
Eng.- Careers related to subject	130
Hist.- " " " "	130
Math - " " " "	130
Science - " " "	130
	820

Coordination (C^3)

Nine resource people presented to over one thousand five hundred fifty (1,550) students in large group presentations and six major field trips were scheduled to area businesses, industries and institutions for over two hundred and six (206) students.

In model #2 which involved two early secondary schools, the counselors approaches were quite different. Their major thrust was to achieve total school involvement through coordination (C^3) and consultation (C^2).

Field Trips

Over three thousand (3000) students were involved in field trips to thirty different institutions. Field trips were based on student surveys and units of study taught by subject matter teachers.

Role Models

Forty six (46) role models representing the fifteen (15) job families spoke to over one thousand three hundred and eighty (1380) students in grades five through nine.

Career Week

A rather unique career week was held involving not only a key note speaker and representatives from the world of work, but also direct

teacher and student participation.

Teachers used educational materials and resources provided by the counselor in their classrooms. Students interviewed community world of work representatives and actually role modeled the job of their choice throughout the week.

It is interesting to note that many students modeled the job of their parents even though some members of the teaching staff thought it demeaning. I guess we have our work cut out for us in terms of breaking down attitudes about the dignity of all work much less race and sex stereotyping.

Number of Students Involved	Number of Teachers Involved
700	20

Articulation Program

Both counselors coordinated articulation programs for their respective incoming fifth/seventh graders and outgoing eighth/ninth graders. It was arranged for project feeder school counselors to bring their graduates to the project center schools and spend a day with a "big brother" going through the day on the latter's schedule. Graduates of the center schools had the opportunity to visit the area high schools in the same manner.

In both schools use was made of peer group guidance by having older students "rap" with the incoming students on their perceptions of their school, careers they were preparing for and a variety of other topics.

Number of Students Involved	Number of Teachers Involved
475	12

Public Relations

Through interschool memos from the career centers, letters to parents, and articles in school newspapers, counselors publicized career events such as role model presentations, career week, field trips, articulation programs and upcoming group guidance programs.

Consultation (C^2) - School Employment Service

Continuing developmentally with the school employment program, counselors consulted with administration and faculty on instituting the program and creating in-school jobs for students. Similar to the elementary level, students were required to make applications and be interviewed for jobs such as switchboard operator, main office messenger, library aide, A.V. aide, cafeteria food handler, counseling office aide, etc.

Number of Students Involved	Number of Staff Involved
79	34

Spanish Career Information Program

Spanish speaking pupils in the project feeder schools were presented vocational high school data via filmstrips and prepared (translated) scripts regarding vocational offerings in Buffalo.

The center school project counselor, Spanish teacher and feeder (elementary) school project counselor worked together in developing this program.

Number of Students Involved	Number of Teachers Involved
60	1

Production Line

To develop the concepts of production and distribution and the interdependence of workers, counselors at both schools worked closely with the industrial art teachers. Students worked in teams and decided on products to be made and assigned work roles, i.e., promotion, manufacturing, sales, etc. Sixth grade elementary students teamed with seventh grade junior high school students in the project schools to make trivets, book ends and other products.

Counselors assisted by video taping the production line at work, purchasing needed materials, handling intraschool communications and arranging for the teams to present at Buffalo's Main Place Mall and the New York State Industrial Arts Convention in Niagara Falls, New York.

Number of Students Involved	Number of Teachers Involved
150	6

Behavioral Modification Program

Continuing at the secondary level with the concept of positive reinforcement and a reward system, counselors and teachers purchased or procured items such as typewriters, gift certificates, cases of soft drinks, dinner coupons, etc. Students worked for these rewards in their academic and special subject areas.

Number of Students Involved	Number of Awards
400	30

Curriculum Planning

At in-services, faculty meetings and on a weekly basis, counselors consulted with teachers on integrating career activites and resource materials in their classrooms. Teachers used resource materials from the career guidance centers to supplement their classwork.

We have plans to improve this area of endeavor next year (see concluding section).

Number of Students Involved	Number of Teachers Involved
1,000	20

Counseling (C^1) - Small Group Counseling

Counselors made use of career education games (see elementary counseling).

Number of Students	Number of Games
30	5

Counselors met with small groups to discuss decisions concerning high school (academic and/or vocational) courses of study.

Number of Students	Number of Groups
128	13

Large Group Guidance

This activity usually preceded or followed a field trip by the class. The counselor would prepare students by going over, verbally and with a data sheet distributed to the students, what the student should look for, be aware of, etc. After the field trip, the counselor and/or teacher would discuss with the students their perceptions of the trip.

Number of Students	Number of Classes
450	15

The answer, if there is one, as to what role the counselor should play in career education probably lies somewhere between the two models described in the preceding section. Effective consultation (C^2) with staff is the key element. The working relationship between teachers and counselors is crucial to the success of the project. This relationship is best effected by, first, the teacher observing the counselor as an active person who not only espouses developmental learning theory and career education, but is highly visible coordinating activities (C^3) and counseling children (C^1). The latter behavior on the part of the counselor encourages the teacher to participate in the development of the project and consult (C^2) with the counselor about planning and implementing career activities.

Materials and Instruments Used

Both models used a variety of materials and instruments to implement their programs. Copies are attached in the appendices, but I would like to describe a few outstanding examples.

Self Rating Instrument

Students fill out forms on their assessment of their own personality, abilities, interests and values. After these are completed, group counseling takes place whereby students interact with each other concerning their self surveys. The counselor role is to lead the group by using techniques such as clarification, summarizing, and in general assisting students to explore values.

Positive Adjective Check List (Peer Rating Instrument)

Students sitting opposite each other in a group had to check off several positive adjectives which described the person across the table. Students then interacted in terms of agreement or disagreement with the assessment by their peer.

Choosing Your Career

This introductory filmstrip shows people working at a variety of jobs in the six different job classifications as described in John Holland's theory of personal orientation. After the filmstrip, the counselor processes the activity with discussions of personality as it relates to job preference.

Building a Society (City)

These value clarification games force students to come to a consensus as a group on ranking jobs in order of value to society (city), value to survival and value in terms of status and personal preference.

We have found that if we tie in career education (content materials) with action oriented or dialogue types of activities as described above, students attention, interest and retention of learning seems to be of a higher degree than didactic methods of instruction.

RESULTS AND ACCOMPLISHMENTS OF THE PROJECT

A summary listing of project accomplishments are as follows:

1. The establishment of three career guidance centers at our early secondary schools.

2. The establishment of career education satellites in three schools under each center.

3. The establishment of an educational advisory committee and vocational advisory committee (see appendices).

4. The establishment of career education teams at the center schools.

5. The implementation of fifteen weeks (four hours per week) of staff in-service on topics such as behavioral modification, career education, learning disabilities and self concept and ego development.

6. The incorporation of world of work concepts into regualr instructional programs by demonstrating career education materials and providing same to teachers.

7. Through field trips, role models, group guidance and group counseling, career weeks, school employment services, behavioral modification programs, simulated work experience programs, instructional materials, and role playing sessions, counselors and teachers helped students to understand the concept of work, appreciate the value of work and the worker, develop an awareness of his own abilities, interests and aptitudes in relation to various occupations and increased students' knowledge of diversified career education opportunities.

Most of the above has been difficult to measure, but our evaluation has indicated positive growth in the area of job knowledge (see evaluation).

The development of the counselor/teacher team approach has been a most important accomplishment. Together it is hoped that they will be able to provide an expanded curriculum to students in the area of career development.

RECOMMENDATIONS

I believe I have drawn several conclusions and implications as I have completed each section of this report. In this concluding section I will discuss our recommendations for next year and a few project developments already in process for the 1973-74 school year.

It has been strongly recommended by the staff that we involve teachers, at all levels, in writing curriculum. The problem this year in attempting to use the previously developed K-9 career resource guide was one of lack of teacher involvement. The feedback from teachers was that the guide was good but it was not theirs. They did not plan it or write it and since they were not a part of this very important process, felt no real concern or desire to implement the guide.

I have allocated over half of our in-service funds next year for curriculum writing and implementation. Teachers will be able to write their own lesson plans, activities, units of study, etc. They will test them out in the classroom and, if successful, we will help them develop a project guide K-9. This guide will be inexpensive (paper bound, duplicated, limited number) and will be replete with tested out classroom activities that really work. Teachers names will be printed on activities that they devised and they will have opportunities (in-services) to share their materials with their colleagues from other project schools. Although we are partial to the integrated approach to career education, those teachers wishing to experiment with the unit approach will not be discouraged.

The above approach will be pilot tested this summer by one of our elementary schools and next fall by one of our center schools.

One of our elementary teams, composed of the building principal, guidance counselor, librarian and six teachers, one for each grade level (K-6), will attend a summer workshop for six weeks, five hours per day. They will develop a K-6 career education school program with a heavy curriculum emphasis. They will also receive a one thousand dollar ($1,000) mini grant for supplies and materials. This project team competed against several other city schools for acceptance at the workshop.

At the junior high level a project counselor, industrial arts teacher and academic teacher will actually teach a forty week pilot class in career exploration/value clarification next fall. This will be an experimental course in Buffalo and, if successful, will probably become a standard elective throughout the city (see appendices).

Our evaluation will be more extensive next year. Our third party evaluator is going to include a longitudinal study involving cross comparisons of grade levels, pre and post testing at two levels and on-site ibterviews with people familiar with the project.

In summary then I feel our first year of project development has been very successful except for two areas where I feel we could do more, that is in developing instructional units and integrating world of work concepts into the regular instructional programs.

In closing I would like to again thank the personnel at the federal and state levels who have assisted and supported us in our first year of project development.

Evaluation Report

of

Career Education Project

for

Buffalo Public School System

In early autumn of 1972 the Career Education Project was begun in twelve of the Buffalo Public Schools. The major purpose of this Project was "to provide students with experience and knowledge that will serve as a basis upon which appropriate educational and occupational choices can be made at future major decision points." Two objectives were sought for each child: 1) "an ever more mature appreciation of the personal and social implications of becoming a worker and 2) an increased understanding of the specific tasks required for gaining and maintaining employment." Herein is contained the third party evaluator's report of this Career Education Project. This report covers the period from November 1972 through April 1973.

Rationale for Evaluation

Most project evaluations are empirical and hence their usefulness lies in the analysis of the actual data gathered. For the evaluation of the Career Education Project we decided to make the evaluation somewhat theoretically based; that is, to collect empirical data in the usual manner, but to be guided in what data to collect by a theory of vocational choice or development. Such an approach has the merits of normal empirical studies plus the advantages of adding to knowledge about the theory and of multiplying the usefulness of the data collected by studying not only its prima facie content; but studying the theoretical

concepts generated from the data. For example, in Holland's theory of vocational choice (the theory employed in this study) there is a concept called "homogeneity" which refers to the clarity or degree of differentiation of a person's vocational choice. Empirically, data are collected on each of Holland's six vocational interest factors; then in addition to being able to examine a person's vocational interests, we can study the person's degree of homogeneity because homogeneity is operationally defined by subtracting a person's lowest interest score from his highest interest score and comparing the result with normative table of homogeneity scores. Hence, by gathering data on only six factors of vocational interest, we are able to study other variables of importance because of the theory behind the data collected.

In conducting the evaluation we attempted to accomplish three general objectives. First, we wanted to evaluate any changes in pupils' knowledge of occupational and vocational information. Secondly, we hoped to assess the clarity, consistency, and reality of the pupils vocational interests. Thirdly, we wanted to generate information that would be useful to the teachers and counselors in conducting the program. Finally it should be pointed out that the current evaluation was of a Project ending in the spring of 1973, it was planned to provide a basis for continuing the evaluation in subsequent years. Hence some of the information generated will be more useful when related to future data.

A Theory of Vocational Choice

The theory used as a basis for much of the data collection was Holland's Theory of Vocational Choice (Holland, 1959; 1966). Holland's theory was chosen for several reasons; it is the only theory of vocational choice for

which has been developed an easily administered interest inventory enabling concepts in the theory to be measured; it has been widely used in research (tho mostly with high school seniors and college students), and it is a basically simple one which can be applied and understood by students, teachers, and counselors. Indeed since the evaluation of this Project began, some counselors at the junior high school level begun to institute programs designed to enhance vocational development based on Holland's theory.

Holland's theory has been adequately outlined in many sources (e.g., Holland, 1959, 1966,) so we will only summarize it briefly here by saying that Holland states that there are six general types of people and a corresponding six types of work environments. Each person bears varying degrees of resemblence to the six types of people and people working at a particular job tend to have personalities which resemble each other more than they resemble people working in other jobs. Thus each occupation, because of the similarity of the people in it, can be classified into one of the six basic types. The types are:

1) Realistic - outdoor, mechanical, tradionally masculine people; e.g., farmer, forester, TV repairman;

2) Investigative - scientific, logical, intellectual people, e.g., chemist, arithmetic teacher.;

3) Artistic - creative, fine arts type people; e.g., musician, journalist, interior decorator;

4) Social - gregarious people interested in helping others; e.g., teachers, social workers;

5) Enterprising - status, success, and power oriented people; e.g., politician, salesman, lawyer;

6) Conventional - focused, structured, conservative followers; e.g., bank clerks, civil servants.

A person's dominant personality type or area of vocational interest Holland calls one's "high point code" and a person's secondary personality type or area of vocational interest is called his "secondary code." Hence a woman who mainly wants to be a kindergarten teacher (Social occupation) but who also likes to write short stories and poetry (Artistic activities) has a Social high point code and an Artistic secondary code. [Through research conducted over the last 14 years Holland has classified nearly all common occupations into one of his six types.]

Some of the above types are closely related to each other both logically and empirically as verified by correlational studies. Two types closely related to each other are called "consistent." The consistent types are as follows: Realistic is consistent with Convential and Investigative; Investigative is consistent with Realistic and Artistic; Artistic is consistent with Investigative and Social; Social is consistent with Artistic and Enterprising; Enterprising is consistent with Social and Conventional; and Conventional is consistent with Enterprising and Realistic. According to the theory people are consistent if their high point code and secondary code are consistent.

Another concept used in the theory is homogeneity; that is, the degree to which a person's interests are homogeneous or clearly specified as opposed to having heterogeneous or diffuse and unclear interests. The more clearly a person's interest fits into one interest category to the relative exclusion of the other the more homogeneous that person is.

Procedures and Method of Evaluation

A pretest - posttest approach to evaluation was employed meaning that each subject serves as his own control. This approach was chosen over the experimental group-control group design because of the practical and ethical difficulties of randomly assigning some subjects to treatment groups and

having to exclude others. Additionally our approach enabled us to assess changes in pupils over the five month interval during which the students were studied. Although such a brief time interval may reduce the extent of the changes that occur and as a result the time between pre and post testing will be increased in next year's evaluation.

Subjects

The pupils in the Career Education Project whose progress was evaluated. were the ninth graders at Clinton and Southside Junior High Schools, the eighth graders at West Hertel Middle School, fifth graders at Public Schools 6, 33 and 51, and the fourth graders at Public Schools 4, 28, 37, 41, 60 and 79.

Random samples of subjects were selected from each school. Below appears in Table I a list of the number of pupils at each school together with the number pretested and the number posttested.

Table I

School	Number of Pupils	Number Pretested	Number Posttested
Southside	1379	78	69
Clinton	783	86	76
West Hertel	1209	100	93
P.S. 41	365	35	24
P.S. 28	628	40	36
P.S. 4	699	38	25
P.S. 37	909	39	23
P.S. 51	420	45	41
P.S. 60	685	40	36
P.S. 33	471	48	34
P.S. 6	714	44	37
P.S. 79	341	39	34
Total Jr. Hi.	3371	264	238
Total Elem.	5232	368	290
Grand Total	8603	632	528

Eighty percent of the elementary schoolers pretested were posttested and 90 percent of the junior high pupils pretested were posttested.

Instrumentation

At both the elementary and junior high school levels it was decided to evaluate two general areas - knowledge about occupations or job awareness and occupational or vocational interests. Accordingly four separate instruments were developed in consultation with some of the counselors in the Project.

At the junior high level we constructed a 52 item test of knowledge about jobs. Eighteen of the 52 items dealt with students; knowledge of the data-people-things, framework for viewing occupations and ten items dealt with career ladder and job family notions. The remaining questions dealt with general occupational knowledge. At the elementary level we constructed a simple 25 item three response multiple choice test of job knowledge. Both tests were constructed to be of low item difficulty so that in addition to serving as a mechanism for evaluation, the pupils could have a sense of accomplishment since they would probably know the correct answers.

Occupational interest questionnaires similar to each other in format were developed for the elementary and junior high school level. These questionnaires consisted of four lists of 12 jobs each (three lists at the elementary level). Two of the twelve jobs in each list were from each of Holland's six vocational categories. Pupils were instructed to place an "L" beside the four jobs they would like to work at the most and a "D" besides the four jobs they would least like to work at. In addition subjects were asked to pick the four jobs out of each list which they felt they had the most ability to perform and to pick the two jobs out of each list that the students' felt were the most important and valuable to society. Scores on each of Holland's six factors were tabulated on the interest measures,

the ability measures, and the value to society measures. The interest scores were the ones of major concern in the evaluation of the Project.

All instruments were administered in the schools by the teachers and guidance counselors. Directions were read aloud at the elementary level. All scoring and data analysis was carried out by the third party evaluators. Initial testing was conducted in November 1972 and the final testing was completed during April 1973.

Results of Evaluation

Both initial and final testing revealed the interesting conclusion that the dominant high point code at all three junior high schools and at eight of the nine elementary schools was Social. Though when examined by sex, junior high school boys had highest interest scores on the Realistic scale with Enterprising ranking second; while girls were highest on Social followed by Artistic. The above observation points out the necessity of examining the data for boys and girls separately when possible. In addition to examining overall pre-post test differences and differences by sex, differences among the schools at each level were tested.

Junior High Level Results

The clearest and most positive result of the evaluation of the Project at the junior high school level was the increase in occupational knowledge that took place. The mean posttest knowledge scores increased at a statistically significant level ($p \leq .01$) overall, for both sexes, and for subjects at each school. The mean for the various groups on the occupational knowledge test are detailed in Table 2 below.

Table 2

Occupational Knowledge Pre and Post Test Means

Group	Pretest Means	Posttest Means
Overall	35.7	39.7
Boys	31.9	38.0
Girls	38.1	40.2
West Hertel	38.3	43.0
Southside	37.7	42.4
Clinton	29.0	31.2

It is interesting to note that though all subgroups means increased, the most dramatic increase was in the mean for boys. However a significance test (ANOVA) of the comparative increase in boys and girls' scores indicates that if we were to conclude that boys' mean increased significantly more than the girls' mean we might be wrong 11 percent of the time. Hence it is probably safer to state the general conclusion that all subgroups increased their knowledge of occupations as tested by our questionnaire.

Turning to the results of the analysis of the interest questionnaire, the conclusions are as one might expect, much less clear. Data examined include pre-post differences on each of Holland's six scales of vocational interest, ability, and value to society, In addition changes in consistency and homogeneity were examined as were the relationships among parents' occupation and childrens' occupational interests.

Changes in Vocational Interest Scores

The pre and posttest means on the vocational interest scales are given in Tables 3 through 8 below.

Table 3

Realistic Mean Scores

	Pretest Mean	Posttest Mean	
Overall	10.3	10.0	
Boys	13.4	12.9	
Girls	8.3	8.2	
West Hertel	10.5	10.2	**
Southside	9.9	10.8	**
Clinton	10.3	9.1	**

(** $p \leq .01$)

As can be seen from Table 3 the Realistic interest scores for the total group stayed about the same from pre to post testing. As is usually the case on the Realistic scale; boys evidence a much greater interest in Realistic occupations than do girls though their relative degree of interest did not change.

West Hertel School students followed the pattern of no change but a fairly curious phenomenon occurred at the other two schools. Pupils at Southside showed a statistically significant increased interest in Realistic occupations while students at Clinton demonstrated a significant decline in interest in Realistic occupations. Further examination of the data showed that while both sexes' interest in Realistic occupations declined at Clinton, it was mainly the girls whose Realistic scores increased at Southside.

Table 4

Investigative Mean Scores

Group	Pretest Mean	Post test Mean
Overall	11.7	11.1*
Boys	12.2	11.5
Girls	11.2	10.6
West Hertel	12.4	13.1 **
Southside	11.9	10.7 **
Clinton	10.7	9.2 **

*($p \leq .10$) **($p \leq .01$)

The effect of the Project on investigative mean scores (see Table 4) was fairly prominent and interesting. First there was a significant decline for both sexes in interest that was statistically significant for pupils at both Southside and Clinton. Interestingly enough however, interest in investigative occupations rose at West Hertel. Although both boys and girls at West Hertel increased their investigative scores, most of the increase occurred among the girls. The boys at West Hertel started out with and wound up with a mean investigative score much much higher than any other subgroup. Perhaps some of their interest rubbed off on the girls.

Table 5

Artistic Mean Scores

Group	Pretest Mean	Post test Mean
Overall	10.6	11.0*
Boys	9.3	9.9
Girls	11.4	11.8
West Hertel	10.9	11.2
Southside	9.5	10.5
Clinton	10.7	11.3

*($p \leq .07$)

The results of the analysis on the Artistic mean scores (see Table 5) were clear, simple, and unique. The total group and every subgroup examined evidenced an increased interest in Artistic occupations from the pretesting

Table 7

Enterprising Mean Scores

Group	Pretest Mean	Posttest Means
Overall	10.2	9.9
Boys	11.7	11.6
Girls	9.1	8.5
West Hertel	9.8	9.7
Southside	11.0	10.4
Clinton	9.6	9.8

Interpretation of the results of analyzing changes in Enterprising scores is the simplest of any of the scales - no subgroup nor the total group changed (see Table 7). In general there were slight decreases, but none approached statistical significance.The Project apparently had little effect on interest in Enterprising occupations for any of the subgroups participating in the program. It is interesting to note that for the subjects as a whole interest scores on the Enterprising scale were lower than any other scale.

Scores on the Conventional scale (see Table 8) tended to decrease overall and at each school. There was however a statistically sex effect in that girls scores decreased significantly while scores for the boys increased slightly. Most of the increase in the mean Conventional score

Table 8

Conventional Mean Scores

Group	Pretest Mean	Posttest Means
Overall	10.6	9.9
Boys	8.4	8.8 *
Girls	11.8	10.8 *
West Hertel	8.7	8.6
Southside	12.1	11.4
Clinton	10.9	10.1

*($p \leq .05$)

for boys came about because the boys at West Hertel, whose Conventional score mean started out one-half a standard deviation lower than boys at the other schools, greatly increased their scores. However girls at every school clearly showed decreased interest in Conventional occupations perhaps as a result of the Project teaching girls that there are many vocational opportunities open to them other than secretarial work.

Changes in Self-perceived Ability Scores

In table 9 are shown the pre and post test means on the six ability scales corresponding to the six interest scales. Two factors (Sex and School)

Table 9

Pre and Post-test Ability Score Means

	Realistic	Investigative	Artistic*	Social	Enterprising	Conventional
Pretest Mean	2.58	2.59	2.38	3.22	2.33	2.55
Posttest Mean	2.47	2.45	2.55	3.08	2.17	2.30

*($p \leq .10$) **($p \leq .05$)

analyses of variance were conducted on each scale. While means on five of the six scales decreased, the only statistically significant decline was in Conventional ability scores, which might reflect pupils learning that more skill is required to perform certain Conventional jobs than the students thought at the beginning of the Project.

The only ability scale on which pupils felt they had more ability at the end of the Project than at the beginning was the Artistic scale. Such a finding may reflect pupils learning that some of the more unorthodox occupations aren't as out of reach as they might have first thought.

There were only two other significant results of analyzing the ability scales. First, there was a significant sex effect on the Realistic scale

($p \leq .05$)where the mean for boys declined from 3.60 to 3.22 while the mean for girls rose from 1.93 to 2.01. The Realistic occupations are ones traditionally performed by men and perhaps during the Project girls began to see that they might have some talent at these jobs and boys, though still perceiving themselves as having more skill at these jobs than girls do, may discover that the societal folklore about Realistic jobs is one thing and the actual competencies required may be another.

Second, there was a significant interaction effect on the Investigative ability scale which occurred because boys at Southside, whose perceived ability in Investigative occupations was lowest on the pretest, showed an increase in their perceived Investigative abilities while boys at the other two schools had lower mean Investigative ability scores. For girls a similar result occurred. Girls at West Hertel had a higher mean Investigative ability score while girls at the other two schools showed a decrease on the same scale. Like the Southside boys, the West Hertel girls began the Project with the lowest mean Investigative ability score.

Finally it is worth noting that on both pre and post tests, pupils felt they had more ability in Social occupations than many of the other categories of occupation and pupils felt they had about equal ability to perform jobs in each of the other five categories.

Changes in Perceptions of the Value to Society of Occupations

We were curious to see how important certain vocations were to society in the eyes of the students and to see if pupils changed their attitudes toward the value of occupations during the Project. The results of the data designed to answer these questions are presented in Table 10. Statistical analyses (two factor analysis of variance) of these data yielded three significant results.

Table 10

	Realistic**	Investigative	Artistic*	Social	Enterprising	Conventional
Pretest	1.03	2.82	.33	2.01	1.33	.44
Posttest	.81	2.66	.43	1194	1.19	.35

**($p \leq .01$) *($p \leq .07$)

First, it is interesting and somewhat predictable to note that pupils clearly felt that Investigative occupations, which tend to be science or technology oriented, were of the greatest value to society. Social occupations were a distant second, Enterprising a distant third and Realistic a distant fourth. Just as clearly, pupils viewed Artistic and Conventional vocations as having least value for society. However it should be pointed out that, in the case of each job category, pupils felt the occupations were of less value at the conclusion of the project than they thought at the beginning - with one exception. Artistic occupations were the only jobs that, during the Project, pupils came to see as more important to society than they did at the start of the Project. This finding is especially interesting when we recall that of the six interest, ability and value to society categories, in each case the Artistic scores were the only ones that increased while all other decreased. The Project clearly had a positive effect on students' ideas about themselves in relation to Artistic occupations.

Secondly, as was mentioned above, mean scores on all the "value to society" scales declined; but the largest and only statistically significant decrease was in the Realistic category. During the course of the Project pupils came to view Realistic occupations as less valuable to the nation than the students originally viewed them.

Thirdly, there were significant school and interaction effects ($p \leq .06$) on the Investigative scale. Further examination of the data indicated that both significant effects were brought about by the girls at West Hertel who, during the Project, came to view investigative jobs as much more important to society than they felt at the Project's beginning while all other subgroups viewed Investigative occupations as slightly less valuable than they did at the start of the Project.

Analysis of Homogeneity and Consistency Scores

The mean homogeneity score for the total group (homogeneity according to Holland reflects the clarity or specificity of one's vocational choices and is related to job satisfaction and success) increased from 17.18 on the pretest to 17.30 on the posttest, a difference that was not statistically significant. In the analysis of variance of the homogeneity scores by sex and school, one statistically significant result ($p \leq .05$) appeared - produced by the boys at West Hertel and Clinton Junior High. That is, boys at Southside had slightly increased homogeneity scores but the boys at West Hertel had a posttest homogeneity mean ($\bar{x}$=16.12) of over one-half a standard deviation lower than the pretest mean ($\bar{x}$=19.62), while the boys at Clinton had an even greater increase in homogeneity during the Project from a pretest mean of 15.32 to a posttest mean of 21.11. Clinton boys had the lowest pretest homogeneity mean and the highest posttest homogeneity mean of any of the subgroups. While West Hertel boys began the Project with the highest mean homogeneity score and wound up with the second lowest homogeneity mean. Apparently something happened at West Hertel to make the boys, but not the girls, much less certain about their vocational choices and something occurred at Clinton to make only the boys much more clear in their vocational interests.

Table 11

Pre and Post test Consistency Percentaged by Sex and School

Group	Pretest Percent Consistent	Posttest Percent Consistent
Overall	42	40
Boys	46	41
Girls	40	40
West Hertel	51	51
Southside	36	28
Clinton	38	41

The percentage of consistent pupils (subjects whose two highest vocational interest scales are highly related as mentioned earlier) on the pre and post tests is shown in Table 11. The three findings apparent from this table are: 1) a minority of about 40% of the pupils are and were consistent, 2) during the time the project was conducted there was little or no change in the consistency of pupils' vocational interests and 3) students at West Hertel began with and maintained higher levels of vocational choice consistency than students at the other schools.

Relationship of Parents' Jobs to Children's Choices

It is interesting to note that of the boys pretested in the Project evaluation, 83 percent of them have fathers whose jobs are Realistic while the mothers' jobs are mostly Social (64%) and Realistic (30%). Forty one percent of the boys scored highest on the interest scale that matched their fathers' job and 21 percent scored highest on a category that matched their mothers' job.

For the girls 71 percent of their mothers were in Social occupations, 19 percent were in Realistic jobs, and 10 percent were in Conventional jobs. Ninety six percent of the girls' fathers were employed in realistic occupations. Only five percent of the girls scored highest on an interest category that matched their fathers' occupation and 29 percent scored highest on a category

that matched their mothers' job. In general it would appear that junior high school students are not unduly influenced in the vocational interests by their parental role model; though the same sexed parent, expectedly, has more influence than the opposite sexed one.

Results for Elementary School Pupils

For elementary school students, as was the case with the junior high pupils, there was a statistically significant increase in mean occupational knowledge scores During the Project (see Table 12). Sex was unrelated to the increase in knowledge scores but school was a factor in that pupils at schools 28, 60, and 6 had significantly larger increases in posttest knowledge scores compared to pretest scores; students at schools 33 and 37 showed decreases in knowledge scores especially the school 33 students

Table 12

Knowledge Pre and Post Test Scores

Group	Pretest Mean	Posttest Mean	
Overall	15.5	17.2**	
Boys	15.5	17.5	
Girls	15.5	16.9	
P.S. 41	14.8	15.0	
P.S. 28	13.8	17.8	
P.S. 4	14.3	16.2	
P.S. 37	16.5	15.9	*
P.S. 51	16.6	17.1	
P.S. 60	17.6	21.1	
P.S. 33	17.1	14.8	
P.S. 6	12.3	16.8	
P.S. 79	16.4	18.5	

*($p \leq .05$) **($p \leq .01$)

who scores declined by almost one standard deviation; and students at the remaining schools showed moderate increases in mean knowledge scores. In general then, pupils knowledge about occupations improved significantly during the Project, with the surprising exception of students at school 33

where the drop of 14 pupils (out of 48) from pre to post testing must have influenced the results on the posttest knowledge test.

Changes in Occupational Interest Scores

In Table 13 are presented the data on the Realistic occupational interest scale. Overall there was no change in Realistic interests during the project however when the data were examined by sex a statistically significant result occurred indicating that boys decreased their interest in Realistic occupations

Table 13

Mean Realistic Interest Scores

Group	Pretest Mean	Post test Mean
Overall	7.7	7.5
Boys	11.7	10.9 **
Girls	3.9	4.3
P. S. 41	7.0	6.4
P.S. 28	7.6	8.8
P.S. 4	8.3	7.3
P.S. 37	6.0	6.1
P.S. 51	8.2	7.6
P.S. 60	8.0	7.4
P.S. 33	9.1	8.3
P.S. 6	5.5	6.0
P.S. 79	8.7	8.8

**($p \leq .01$)

while girls increased their interest. Of course boys still, even at the end of the Project, evidenced a much higher interest in Realistic occupations, but the Project apparently did introduce some interest in Realistic jobs for girls while perhaps getting some boys to see beyond the masculine stereotype associated with Realistic vocations. Examination of the data by school indicates that only at school 28 did pupils show a large increased interest in Realistic jobs while highly decreased interest was in evidence at schools 4 and 33. No ther school effects were statistically significant.

Table 14

Mean Investigative Interest Scores

Group	Pretest Mean	Posttest Mean
Overall	8.1	7.9
Boys	9.3	9.4
Girls	7.0	6.5
P.S. 41	7.2	7.0
P.S. 28	7.9	9.1
P.S. 4	8.8	8.4
P.S. 37	6.4	5.8
P.S. 51	8.7	8.5
P.S. 60	10.2	9.5
P.S. 33	8.1	7.0
P.S. 6	7.5	7.8
P.S. 79	7.3	7.0

Analysis of changes in investigative scores turned up no statistically significant results. Overall there was a slight decrease in posttest scores from pretest scores mostly because the girls' scores were lower. Investigative scores of pupils at school 28 seemed to increase quite a bit and scores at schools 33, 37 and 60 appeared to decrease; but not significantly. We may conclude that the the elementary level the Project had little impact on pupils' interest in Investigative occupations.

Table 15

Mean Artistic Interest Scores

Group	Pretest Mean	Posttest Mean
Overall	9.3	9.5
Boys	7.7	8.7 *

P.S. 37	10.4	15.2 *
P.S. 51	919	9.1
P.S. 60	8.0	9.3
P.S. 33	8.6	9.2
P.S. 6	10.1	10.2
P.S. 79	9.4	9.4

*($p \leq .02$)

While both initially and at the time of posttesting, girls scored higher on the Artistic scale, there was a statistically significant change in Artistic scores as a function of sex. The boys clearly showed an increased interest in Artistic occupations and the girls's evidenced a decreased interest in such jobs. Since many Artistic jobs tend to be stereotyped feminine, this result may be another example of the Career Education Project beginning to break down sexual stereotyping in pupils' views of jobs.

Additionally pupils at school 28 and 51 had decreased Artistic scores while students at schools 37 and 60, especially at school 37 where a tremendous increase occurred, showed increased interest in Artistic occupations during the duration of the study. Something very stimulating to interest in Artistic occupations must have taken place at school 37.

Table 16

Mean Social Interest Scores

Group	Pretest Mean	Posttest Mean	
Overall	10.6	10.7	
Boys	8.3	9.2	**
Girls	12.8	12.2	
P.S. 41	11.4	11.1	
P.S. 28	11.0	10.3	
P.S. 4	10.2	11.4	
P.S. 37	13.2	14.8	*
P.S. 51	9.2	10.6	
P.S. 60	10.5	9.5	
P.S. 33	9.7	9.5	
P.S. 6	11.3	11.4	
P.S. 79	10.4	9.8	

**($p \leq .01$) *($p \leq .03$)

As at the junior high school, Social interest scores at the elementary level were the highest of any category. Analysis of these scores showed statistically significant sex and school effects. The sex effects come

about for the same reason they did on the Investigative and Artistic scales, because mean increased and women decreased their interest in Social jobs during the Project.

The significant school effects occurred because pupils at schools 28 and 60 lost some interest in Social jobs while pupils at schools 28, 4, and 37 showed an increased interest in Social occupations. As occurred on the Artistic scale, pupils at school 37 began and ended the Project with much higher Social scores than pupils at any of the schools.

Table 17

Mean Enterprising Interest Scores

Group	Pretest Mean	Post test Mean
Overall	7.7	8.6 **
Boys	9.1	9.1 **
Girls	6.4	8.1
P.S. 41	7.7	7.6
P.S. 28	7.9	8.3
P.S. 4	7.9	8.6
P.S. 37	7.9	9.7
P.S. 51	7.1	7.8
P.S. 60	7.4	9.3
P.S. 33	8.4	8.7
P.S. 6	7.2	8.6
P.S. 79	7.8	8.7

** ($p \leq .01$)

The changes in pupils interest in Enterprising occupations during the time the Project was conducted were clear and unlike those changes occurring on any other scale. There was a statistically significant increase in Enterprising interest for the total group and Enterprising interest increased at every school; however scrutiny of the significant sex effect revealed that it was the girls in whom the changes took place while the boys' interest in Enterprising occupations remained unchanged. Such a finding may be another instance of the Project breaking down occupational sex stereotypes

since Enterprising jobs tend to have been traditionally held by males.

Table 18

Mean Conventional Interest Scores

Group	Pretest Mean	Posttest Mean
Overall	8.3	7.9
Boys	6.5	6.5
Girls	9.9	9.3
P.S. 41	10.0	8.7
P.S. 28	8.3	8.4
P.S. 4	7.4	7.7
P.S. 37	8.0	9.3
P.S. 51	8.1	7.4
P.S. 60	7.9	7.3
P.S. 33	7.7	7.2
P.S. 6	9.1	8.5
P.S. 79	8.3	7.6

Analysis of changes in Conventional interest scores during the Project's existence revealed no statistically significant changes for any of the subgroups. Overall there was a slight decline in Conventional scores mostly because the girls' scores declined. The only noticeable changes in interest in Conventional occupations at individual schools occurred at school 41 where the interest decreased quite a bit and at school 37 where interest scores increased. No changes were statistically significant however.

Summarizing changes in occupational interest at the elementary school level, we should note that sex seems to be an important factor in two ways. First on both the pretest and the posttest there were large differences in mean interest scores between the sexes on all six occupational categories, boys scoring clearly higher on the Realistic, Investigative, and Enterprising scales and girls' scoring much higher on Artistic, Social, and Conventional scales. Secondly, on four of the six scales there were significant differences between the sexes on the amount and direction of change that occurred, boys increased and girls' declined on the Artistic and Social scales while the opposite occurred on the Realistic and Enterprising scale.

Looking at the changes by school we find that pupils at school 41 showed no significant change on any occupational interest category except Conventional where they evidenced a clear decrease in interest Conventional jobs. Pupils at school 28 showed significantly increased interest in Realistic and Investigative occupations but on the Artistic and Social scales their scores decreased significantly. At school 4, pupils increased their interest only in Social jobs and decreased their interest only in Realistic jobs.

Pupils at school 37 evidenced large significant increases in vocational interest on the Artistic, Social, Enterprising, and Conventional categories and remained unchanged on the others. Pupils at school 51 showed little change on any scale except Social where their interest increased. At school 60, pupils seemed to change from pretesting to posttesting more than pupils at any other school though school 37 was a close second. Students at school 60 changed a lot on every scale, increasing their interest in Artistic and Enterprising occupations and decreasing their interest in other four occupational categories.

Except for increases on the Enterprising scale (which occurred at all schools) by pupils at schools 6 and 79 and for a decrease on the Investigative scale by students at school 33, pupils at schools 33, 6, and 79 changed their vocational interests very little during the project insofar as we were able to measure them.

Changes in "Value to Society" Scales

Analysis of pupils responses about which occupations were of greatest value to society (see Table 19) indicated that there were no differences between boys and girls in their views about the importance of the occupation to the nation. Both sexes felt that Investigative occupations were of most value to society and that Artistic jobs were of least value.

Table 19

Pre and Posttest "Value to Society" Mean on the Six Scales

	Realistic**	Investigative**	Artistic	Social	Enterprising**	Conventional **
Pretest Mean	1.24	1.49	.24	1.42	.78	.80
Posttest Mean	1.65	1.92	.23	1.37	1.13	.63

**($p \leq .01$)

The Project apparently had some effect on the pupils's attitudes about the importance of various occupations since on three of the six scales (Realistic, Investigative, and Enterprising) pupils had a statistically significantly higher post-test mean than they did pretest mean and on the Conventional scale they had a significantly lower mean on the posttest. It is interesting to note that the three occupational categories which students came to view as more important to society than they did initially are the same ones that the boys, but not the girls, showed significantly increased interest in - this despite there being no sex differences on the "Value to Society" Scale.

After examination of the data by school only one finding worth commenting on stood out. On the three scales which pupils felt the occupations were more valuable to society at the conclusion of the evaluation than they did at the beginning, students at eight of the nine schools felt the occupations had increased social value. In each case (scale) it was the students at school 37 who viewed the jobs as having less value to society on the posttest than on the pretest. Pursuing this further, it turns out that the pupils' at school 37 had greatly lower posttest means (compared to pretest mean) on every one of the six scales. No other school had more than two posttest mean lower than pretest means. Perhaps in some

unknown way, the fact that only 23 of the 39 pretested pupils at school 37 were posttested related to this finding.

Changes in Homogeneity and Consistency

Analysis of changes in homogeneity scores from pre to posttesting resulted in a sex effect and no overall or school effects (see Table 20).

Table 20

Mean Homogeneity Scores

Group	Pretest	Posttest
Overall	14.57	14.52
Boys	13.96	15.11 **
Girls	15.13	13.99

**($p \leq .01$)

Thus we have the relatively unique occurrence of the boys clearly becoming more homogeneous or focused about their vocational choices and the girls becoming less homogeneous. It would be interesting to discover why this phenomenon occurred but the explanation is not known at this time.

The percentage of pupils whose two highest vocational interest categories were consistent with each other are shown by sex and school in Table 21. The data demonstrated only that there is a higher percentage of consistent

Table 21

Percentage of Consistent Pupils

Group	Pretest Percent	Posttest Percent
Overall	55	55
Boys	54	52
Girls	55	58
P.S. 41	42	56
P.S. 28	58	55
P.S. 4	52	80
P.S. 37	73	65
P.S. 51	61	40
P.S. 60	55	47
P.S. 33	59	69
P.S. 6	43	57
P.S. 79	50	44

pupils at the elementary level than at the junior high level (55% to 40%) and that there is quite a lot of variation among the schools in changes in consistency. Pupils at schools 41, 4, 33 and 6 seemed to grow more consistent during the Project while pupils at schools 37, 51, 60 and 79 became less consistent. Apparently the Project has little effect on consistency of occupational choices as Holland defines consistency.

Summary and Conclusions

A number of specific conclusions could be reached by attending to the data on each individual school on each separate scale; however at a general level three major conclusions can be noted. First, the Career Education Project certainly seemed to help increase the occupational knowledge of its participants of both sexes and at both the elementary and junior high school levels. This is the most clear and relevant conclusion reached in the evaluation of the Project.

Second, clear sexual differences on various aspects of vocational choice emerge from the evaluation. The correlation (Spearman's rho) between the sexes on the vocational interest scales was -.70 at the junior high school level and -.77 at the elementary level. Boys at both levels are most interested in Realistic jobs and least interested in Conventional ones while girls are most interested in Social occupations and least concerned with Realistic jobs. It is interesting to point out that the sexes are each consistent in their interest patterns from elementary to junior high. The correlation between mean on the six interest scales for boys at the two levels was 1.00 and for the girls it was .94.

Further sex differences are illustrated by the interesting fact that the correlation between vocational interest scores and "value to society" scores for boys was .69 for elementary and .60 for junior high; but for girls the respective correlations were 0.40 and .04. This indicates that while boys tend to be interested in jobs that both they and the girls see as valuable to society, the girls tend to be most interested in occupations that are not viewed as being very important to the society. Such a finding certainly provides the teachers and counselors in the Project with a goal for the coming year of increasing girls's perceptions of the worth of their vocational interests.

Another finding, however bodes well for the girls. The finding empirically is that the correlation between the boys vocational interests on the pretest and their self-rated abilities on the occupations in the interest scales was .26. The same correlation for posttest data for boys dropped to -.03. Comparable data for girls were .32 on the pretest and .60 on the posttest. What this indicates is that at the start of the Project both sexes felt they had about equal abilities to perform the jobs they were interested in; but by the end of the Project, the boys felt that any relationship between their skills and interests was negligible. Meanwhile the girls came to feel that they had interest in occupations which they also had skill and ability. This result probably is a sign that both sexes are reassessing, in a more realistic way, their vocational interests and skills, and it also probably mean that they, because of occupational sex stereotyping, entered the Career Education Project at very different places, i.e.,boys overly optimistic and girls overly pessimistic about their vocational alternatives.

Third and finally, the Project seems to have the very positive effect of breaking down some occupational myths and stereotypes. For example, Artistic occupations, which tend to be less practical and financially rewarding and are viewed by especially the lower and middle classes as "artsy," were ones in which students, at the start of the Project, had little interest, felt they had little ability in, and thought were of least value to society. Yet, especially at the junior high level, the Artistic occupations were the only ones in which students had significantly increased interest and perceived ability and also felt were more valuable to society by the end of the Project. Many students probably started the Project

knowing very little about Artistic occupations and as they learned more about such jobs they began to change their views somewhat.

As another example, junior high boys began the Project most interested in Realistic and Investigative occupations; and the Realistic and Investigative job categories were the only ones on which they clearly showed less interest at the end of the project than at the beginning. They also began the Project least interested in Artistic and Conventional jobs and Artistic and Conventional were the only categories on ehich they showed clearly more interest at the conclusions of the Project than at the start of it. Similar results, the direction of change being inversely related to initial level of interest, occurred at the elementary level.

This third general conclusion is probably a function of the first; i.e., it probably results from the increase in vocational knowledge that seemed to take place during the Career Education Project.

Career Education Project

Create A Society Activity

This activity is based upon the following premise:

You and other members of your group will be transported to an island in one years time, and you have to make certain decisions before you leave.

1. Members of the group must decide which jobs will be necessary on the island.

2. Members must decide who will handle each of these tasks, assuming that the individual can be completely trained before they leave for the island and that each individual is employed at only one task.

Decisions as to reward for work, leadership, mode of decision making, rules for the society, etc., can also be explored.

A variation could be to have group members decide what jobs they would like to have and the task would be to creat and examine a society based on these "desired" jobs.

Find attached a work sheet used with a group who created their own society. The sheet is used to examine certain relations between the selected jobs based upon the values of the group members.

	Important	Hours each Day	Days each week	Hardest Job	Best Job	Pay $ per hr
Carpenter						
Blacksmith						
Cook						
Weaver						
Farmer						
Fisherman						
Doctor						

Choosing Your Career

1) It is necessary that a close examination of yourself and your daily life - your courses, your goals, activities and your role as a citizen of the community - will reveal certain patterns of interest and talent which should be used as guidelines in choosing and preparing for a career.

2) You need self-evaluation
classification of information
exposure to career possibilities
in order to begin a systematic method for approaching the question of a career choice for the future.

3) It is important for you to understand that it is never to soon to begin thinking about your future vacation and that, in fact, the sooner you begin to analyze your own goals, interests, and potential, the sooner you will be equipped to face the possibilities of the future and make an intelligent career selection.

4) Note there are six general vocational and personality classifications:

Classifications

(1) Realistic - people who work with things such as in mechanics, construction, electronics.

(2) Intellectual - being interested in ideas investigating the "hows" and "whys" of something.

(3) Social - being involved with people by helping or caring for them or advising them.

(4) Enterprising - dealing with people, being persuasive such as in sales work or as a lawyer.

(5) Conventional - working in an orderly and systematic way such as in office or general business area.

(6) Artistic - activities that require imagination, ability to visualize and improvise.

NOTE - Most jobs are combinations of interests relating to "people", "things", and "ideas".

Careers-(Work) - What's It All About

Ideas to consider about your own career growth and development:

1.) The world of work is big. There are many opportunities for everyone and nearly everyone works.

2.) People have their own very personal reasons for choosing the work they do.

3.) People need information about careers in order to make a choice.

4.) There are many decisions involved in making a choice. Each person should look at all the angles possible so he can make a choice that is best for him.

Examples:

a) Knowing oneself in relation to ability, interest, aptitudes, personality and temperament.
b) attitude toward others and work itself
c) education and type of training required
d) knowledge of entry jobs and ladder approach to advancement opportunities
e) availability of jobs
f) understanding of your values in relation to your job:

Examples: Security, creativity, variety, Independence, associations, esthetics, altruism.

5.) Planning toward a goal is important. Things don't usually "just happen"!

6.) Some type of training is a part of practically all careers and there are many types of training available: technical, vocational, trade, college, apprenticeship, correspondence, on-the-job training or any specific learning for a purpose.

7.) Work is an individual effort which produces something for the organization and satisfaction and prestige for the worker if his effort is well channeled.

8.) Work produces material reward whereby one can become independent and self supporting.

9.) Work allows one to have money to enjoy time off on weekends, holidays and vacations.

10.) Work is a big part of everyone's life and influences total life style; therefore the decision about what kind of work should be carefully made.

Section III

In the blanks after each question, write the number of the job that is the best answer to the question.

1. Which job would you earn the most money? _____ Social Worker

2. Which job would require the most speaking skill? _____ Cartoon Writer and Drawer

3. At which job would you have the most contact with poor people? _____ Biology Professor

4. Which job would require mathematical skill? _____ Sanitation Worker

5. Which job would require the most years of college? _____ Bus Driver

6. At which job would you have the least contact with people? _____ Radio Disc Jockey

7. Which job would require the most creative ability? _____ Corporation Executive

8. At which job would you most likely work for the city? _____ Dental Hygenist

9. Which job would require driving skill and contact with people? _____ Engineer

10. Whoih job would require a two year college education? _____ Policeman

Section IV

Workers in some jobs spend most of their time working people, in other jobs workers work mainly with things (like tools, machines, cloth, etc.) and in still other jobs workers work mostly with ideas (like books, language, numbers, etc.)

Below is a list of 18 jobs. Fill in the blanks with a P or I or T depending on whether you think that job deasl mostly with people or ideas or things.

People = P
Ideas = I
Things = T

_____ Kindergaten Teacher

_____ Auto Mechanics

_____ Airline Stewardess

_____ Salesman

_____ Welder

_____ Bartender

_____ Weather Observer

_____ Guidance Counselor

_____ Minister or Priest

_____ Sewing Machine Operator

_____ Butcher

_____ Writer

_____ Historian

_____ Computer Programmer

_____ Cement Truck Driver

_____ Poet

_____ Factory Worker

_____ Auditor

Rating Yourself On Attitudes

DO YOU:	Often	Seldom	Never
1. Have to be the boss when you work on a Committee or in a group?	☐	☐	☐
2. Let others do all the work?	☐	☐	☐
3. Volunteer to help out when help is needed?	☐	☐	☐
4. Try to be on time for classes and club meetings, etc.?	☐	☐	☐
5. Try to get by doing as little as possible?	☐	☐	☐
6. Make uncomplimentary remarks about others?	☐	☐	☐
7. Try to think of better ways of doing a job?	☐	☐	☐
8. Think that most success is due to luck?	☐	☐	☐
9. Resent it when someone gives you a suggestion?	☐	☐	☐
10. Get real satisfaction from a job well done?	☐	☐	☐
11. Tackle your problems honestly?	☐	☐	☐
12. Try to run away from problems?	☐	☐	☐

Note: These ideas on your present attitudes can be a reflection of your future thoughts and ways in your work on career area.

V. a.) What five positive adjectives describe you best:

_____ _____ _____

_____ _____

b.) What is one negative quality you have that you would wish to change for a more positive one? _____

VI. What positive attitude do you feel is most important in dealing with other people in work situations?

_____

VII. What career or job did you feel you were interested in doing before you participated in this career planning session?

_____

VIII. What career area or job do you feel now interests you? Check one.

a. Exactly the same as before. ☐

b. Not the same job but in a similar career area. ☐

c. Undecided because there may be two or three areas or clusters that interest you. ☐

In an effort to help you gain a more thorough understanding of yourself, it is helpful for you to identify your values, or what you think is important in relation to your job and career choice.

	Most Important	Somewhat Important	Least Important
1. Creativity: "Work which permits one to invent new things, design new products or develop a new idea."			
2. Management: "Work which permits one to plan and lay out work for others to do."			
3. Achievement: "Work which gives one a feeling of accomplishment in doing a job well."			
4. Surroundings: "Work which is carried out under pleasant conditions - not too hot or too cold, noisy, dirty, etc."			
5. Supervisory Relations: "Work which is carried out under a supervisor who is fair and with whom one can get along."			
6. Way of Life: "Permits one to live the kind of life he chooses and to be the type of person he wishes to be."			
7. Security: "Work which provides one with the certainty of having a job even in hard time."			
8. Associates: "Work which brings one into contact with fellow workers whom he likes."			
9. Esthetics: "Work which permits one to make beautiful things and to contribute beauty to the world."			
10. Prestige: "Work which gives one standing in the eyes of others and evokes respect."			
11. Independence: "Work which permits one to work in his own way, as fast or as slowly as he wishes."			

	Most Important	Somewhat Important	Least Important
12. Variety: "Work that provides an opportunity to do different types of jobs."			
13. Economic Returns: "Work which pays well and enables one to have the things he wants."			
14. Altruism: "Work which enables one to contribute to the welfare of others."			
15. Intellectual Stimulation: "Work which provides opportunity for independent thinking and for learning how and why things work."

TITLE: CAREER EDUCATION. A GUIDE TO THE 1972-1973 PILOT PROJECT.

DESCRIPTOR: *CAREER EDUCATION; *CAREER AWARENESS; *OCCUPATIONAL GUIDANCE; *ELEMENTARY SECONDARY EDUCATION; *OCCUPATIONAL CLUSTERS; INDIVIDUALIZED INSTRUCTION; LEARNING LABORATORIES; PILOT PROJECTS

IDENTIFIER: RHODE ISLAND

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 45P.

ABSTRACT: A PILOT PROGRAM TO TEST THE IDEA THAT A CAREER-ORIENTED, LEARNER CENTERED PROGRAM IS SUPERIOR TO THE TRADITIONAL SUBJECT-MATTER-CENTERED APPROACH IS DESCRIBED IN THIS GUIDE. THE PILOT PROGRAM FOR IMPLEMENTING A CAREER DEVELOPMENT PROGRAM WAS DESIGNED FOR K-12 STUDENTS IN THE EAST PROVIDENCE, RHODE ISLAND SCHOOL DISTRICT. IN ADDITION, A WORKSHOP FOR ORIENTING TEACHERS TO CAREER EDUCATION WAS CONDUCTED PRIOR TO PLANNING THE IMPLEMENTATION. THE PROPOSED PROGRAM WAS DEVELOPED FOR TWO MAJOR COMPONENTS, THE ELEMENTARY COMPONENT AND THE SECONDARY COMPONENT. INCLUDED WITH THE PROGRAM DESCRIPTION ARE SAMPLE ACTIVITIES FOR STUDENTS, A LISTING OF AUDIOVISUAL AIDS AND MATERIALS, AND A LISTING OF SAMPLE COMMUNITY RESOURCES. (VA)

PREFACE

The Career Education Program scheduled to begin in our schools this September initiates a process that could possibly revolutionize education throughout this state.

As we envision this project, students and teachers will be engaged in an educational process that can be distinguished from the present program in a number of ways:

- the focal point of instruction will be the learner; his needs, interests, and skills.

- the variety of instructional techniques utilized provides and encourages a greater degree of individualization. Essentially, we are customizing education, so to speak, for each and every student.

- the teacher assumes a more flexible role, that of facilitator of activities, guidance counselor, resource person, technician, and manager of school and community resources.

- nearly everything that is learned is in terms of the occupational goal of the student.

- the acquisition of decision-making skills, as a segment of this process, is an integral part of the curriculum.

- the physical organization of the project schools will change gradually as the career concept begins to take hold.

- the culmination of a student's educational experience will have provided him with sufficient skills to enter the world of work with ease and confidence.

The success of this program will be insured by the continual support and cooperation of the parents of these students as well as the active interest of the business and professional communities in East Providence.

EDWARD R. MARTIN
Superintendent of Schools
East Providence, Rhode Island

THE NEED FOR A NEW CONCEPT OF EDUCATION BECOMES EVIDENT

According to the United States Office of Education, a staggering total of 2.5 million students leave the formal educational system each year without adequate preparation for careers. Something must be done to insure that these lives and the futures of many others do not end up without direction and purpose. A way must be found to provide these youngsters with the opportunity to enjoy the useful and fulfilling life to which they are entitled. To this end the United States Commissioner of Education, Dr. Sidney P. Marland, Jr., has spoken out vigorously for a new emphasis on what he calls "career education". Along with the wide interest aroused by the term - and more particularly the whole concept it labels - came a barrage of questions seeking a clearer definition of career education and a more elaborate explanation of its implications. This brochure is an attempt to explain this exciting concept.

Very early in the year 1972 your school department became alerted to the possibility of a pilot project that was to be financed in the State of Rhode Island. Subsequently the East Providence School Department applied for and received a grant of over $155,868 to finance a pilot career education program in five of our schools:

East Providence High School
Central Junior High
Riverside Junior High
Orchard Street
Grove Avenue

In an attempt to alleviate some of the problems wrought by today's ever-changing society which inevitably has its effect on our youth, the career education program has as its objectives:

1. To make all educational subject matter more meaningful and relevant to the individual through restructuring and focusing it around a career development theme.

2. To provide all students the guidance, counseling, and instruction needed to develop their self-awareness and self-direction; to expand their occupational awareness and aspirations; and to develop appropriate attitudes about the personal and social significance of work.

3. To assure the opportunity for all students to gain a basic, marketable skill before they leave school.

4. To prepare all students completing secondary school with the knowledge and skills necessary to pursue further education or enter the labor market.

5. To offer services for placing every student in the next step in his development whether it be employment or further education.

6. To provide an educational system which utilizes and coordinates its activities with all community resources.

7. To increase the educational and occupational options available to all students through a flexible educational system which facilitiates entry into the world of work and re-entry into the educational system.

Career education will be a K-12 educational adventure. It is organized in such a manner so that students from kindergarten through grade six will, through a variety of career-oriented material and activities including the introduction of innovative methods of instruction, focus on <u>career awareness</u>.

Junior high school students will, through the use of varied techniques and newly acquired audio-visual material, explore the world of work and become acquainted with a large variety of occupations in which they could possibly develop an interest. This exploration will start with parental occupations and eventually permeate the area of community employment opportunities. Students in the senior high school years will concentrate on one or two occupations within a given cluster and hopefully gain entry-level skills so that they could acquire gainful employment in one specific occupation if they chose to leave the educational system.

Further, the program will encourage greater interaction between student and teacher. An increase in the guidance function of the teacher will be evident while at the same time a de-emphasis of the subject-matter-centered classroom will be accomplished. The way is clear for a greater humanization of the schools through the individualization of instruction by gradually eliminating the lock-step, structured program that has entrapped our youngsters for so long.

CAREER DEVELOPMENT LEVELS

THE GOALS OF CAREER EDUCATION

Since career education is basically an experiment and a type of research, the students in the program will be called the experimental group. There will be a comparable number of students who are not in the program whose activities will be monitored throughout the program year so that a comparison can be made at the beginning and at the end of the program. The students who are not in the program, yet whose initial levels of achievement are similar to those in the experimental group, will be called the control group.

To test the idea that a career-oriented, learner-centered program is superior to the traditional subject-matter-centered approach both the experimental and control groups will be tested at the beginning and at the end of the school year. The New England Resource Center for Occupational Education has contracted with the State Department of Education to perform a third party evaluation.

Project Objectives

At the end of the first year of the program it is hoped that the following project objectives will have been achieved: Students in the project environment will have a more positive attitude toward school and the world of work than students in the control group.

a) The experimental group will exhibit a statistically higher rate of attendance than the control group.

b) Documentation will show that the experimental group experiences significantly fewer disciplinary incidents than the control group. (A disciplinary incident is any behavior that requires either detention, removal from class, or explusion from school.)

c) The project students will indicate a significantly greater positive change in attitude towards school than the control group. A standardized instrument will be administered as a pre-post measure to document change.

d) Students in the experimental group will be more aware of the priority of work in their life.

Given the increased time devoted to non-traditional academic pursuits, the two groups will <u>not</u> differ significantly on standardized achievement tests.

a) The project students will not score significantly different from the control group on a reading subtest.

b) The project students will not score significantly different from the control group on a mathematics subtest.

The experimental group will show significantly greater growth in their ability to use problem solving techniques in making decisions than will the control group.

a) Observation techniques, combined with a problem solving task, will be developed and used with a representative sample of youngsters from both groups.

b) A standardized instrument will be sought to measure this difference as well.

c) A recording system will be implemented to document the decisions and the decision-making process.

Students in the experimental group will exhibit a significantly greater knowledge of career information than those in the control group.

a) An instrument will be developed to assess career knowledge. The instrument will have varied forms corresponding to the different age groups within the project.

Students in the experimental group will make career decisions at the end of the program that are significantly more congruent with their profile than the control group.

a) The Ohio Vocational Interest Survey (OVIS) will be used to measure career decisions. Correlations will be computed between career-choice level and student characteristics.

Students in the experimental group will make career decisions that are more independent of socio-economic, racial, and sex characteristics than the control group.

a) The correlation between "traditional" careers and stereotypic personal characteristics will be significantly lower in the experimental group (i.e., girls will not be hesitant to indicate interest in traditionally "male" careers).

THE CHANGING ROLE OF THE TEACHER
The Summer Workshop

A teacher workshop designed to explore many techniques and materials for the delivery of a career education program was held during the summer of 1972. A survey of the latest educational methods was conducted. Experts in various fields that have application to career education worked with the teachers.

In addition:

1. Teachers met and talked with people who have successfully established alternate learning projects.

2. Teachers had the opportunity to learn about contingency contracting and its application to career education.

3. Teachers had the opportunity to view multi-media presentations and to plan similar programs of their own.

4. Teachers became familiar with the fifteen occupational clusters that encompass more than twenty thousand types of employment identified by the United States Department of Labor in the Dictionary of Occupational Titles.

5. Teachers had the opportunity to survey a multitude of guidance and subject matter materials. Then they selected those items needed for the career education program.

6. Teachers were given the opportunity to become thoroughly familiar with the latest audio-visual materials purchased for the project, including the Video-Rover II which is a portable TV camera and video-recorder. In addition they received instruction in making their own slides, filmstrips and transparencies.

7. Teachers were instructed in the use and administration of the "Self-Directed Search", a guidance experience that the student undergoes on his own that will provide a base for discussion of career direction for the individual.

As a result of intensive training, the teacher will assume a new role as counselor and manager of school and community resources. The

teacher will now be responsible for employing an individualized, career approach using all available means. An additional duty will be the refocusing of classes in the basic subject areas: math, science, language arts, and social studies; in such a way that these disciplines are presented in terms of the student's career interests, thus for that student school will become more relevant.

THE CHANGING TECHNIQUES OF INSTRUCTION

Career Clusters

In a career education program, each student is helped to develop a very broad awareness of the full range of career options in the world of work. At the same time he is helped to develop his own self-awareness, to become cognizant of his own strengths and weaknesses, his aptitudes and capabilities, and his interests and needs so that he can make a realistic consideration of himself in relation to the many career options available in the world of work. In addition, he is helped to practice and develop logical direction-setting and decision-making skills which will be useful to him throughout his lifetime in considering alternative career possibilities.

After becoming aware of the full range of career options in the world of work, each student is provided with opportunities to explore in considerable depth those kinds of careers which he feels are of most interest to him and most suited to his needs and capabilities. He has a chance, through realistic exploratory experiences, to test himself against the activities and requirements typical of a number of career areas of his choice.

He is then in a position to make a rational choice of an appropriate career goal. Needless to say, this thorough and systematic approach to career possibilities is far better for the individual than the currently prevalent practices, which make career selection more a matter of happenstance than a rational activity.

Once a student has established for himself a tentative career goal, he is helped to plan an appropriate educational path to that goal, and he is provided with those educational programs and work experiences which will enable him to achieve the goal. For a given student, depending upon the nature of his particular career goal, the educational path may involve going through a four-year college, going to a two-year college, or going through job preparation experiences at the secondary-school level which will enable him to go directly to work when he leaves high school.

The problems of delivering this type of comprehensive career education are compounded by the complexity of the American economy and the diversity of the American labor force. The Dictionary of Occupational Titles, for example, lists more than twenty thousand individual jobs. Obviously, dealing with each of these individual jobs would be administratively impossible when designing and implementing a career awareness program or when providing other aspects of career education. The only feasible solution seems to be to group these jobs into a series of manageable clusters. While it is not possible to deal with twenty thousand separate jobs, it is feasible to deal with 15 or 20 broad career clusters.

Any scheme which is developed for clustering jobs for career education purposes should meet four basic requirements:

1. The cluster scheme should be such that it encompasses all the jobs in the Dictionary of Occupational Titles. In other words, after the cluster scheme has been established, it should be possible to fit each and every job in the Dictionary of Occupational Titles into one of the career clusters which have been designated.

2. Each cluster should include jobs at all levels, from entry-level through skilled jobs, technical jobs, and professional jobs, that is to say, each cluster should contain a logical career ladder of jobs requiring increasing levels of education.

3. Each cluster should be related to an identifiable group of employers. For example, if we have a cluster in the health occupations, it is possible to identify within the community a group of potential employers, such as hospital administrators, private physicians, and dentists, who could relate to this particular cluster. Similarly, if we have a cluster in the construction occupations, it is possible to identify in a given community various construction contractors and construction firms who could relate to this career cluster.

4. The clusters should be enduring over time. That is, each cluster should represent a continuing societal function which will be carried on throughout the foreseeable future. For example, it can be assumed that for the foreseeable future our society will be manufacturing things, constructing things, transporting things and providing health services for the people. Therefore, clusters in the manufacturing occupations, the construction occupations, the transportation occupations, and the health occupations are likely to be enduring over time. Although individual jobs within these clusters may be phased out due to technological change, other new and emerging jobs will appear in each cluster to take the place of those phased out. If an individual has had well-rounded training in the common core of a particular cluster, his flexibility for moving to another job within that cluster will be facilitated, should his present job disappear as a result of technological change. Having mastered the common

core of the cluster, he would be able, with a minimum amount of retraining, to move to another type of merging job within that same cluster. This will provide individuals with the flexibility needed to cope with the changing nature of our economy and our labor force.

The United States Office of Education has developed a cluster scheme which, it is believed, meets the four requirements specified above. This cluster scheme consists of 15 career clusters, which are:

Construction Occupations
Manufacturing Occupations
Transportation Occupations
Agri-Business and Natural Resources Occupations
Marine Science Occupations
Environmental Occupations
Business and Office Occupations
Marketing and Distribution Occupations
Communications and Media Occupations
Hospitality and Recreation Occupations
Personal Service Occupations
Public Services Occupations
Health Occupations
Consumer and Homemaking Occupations
Fine Arts and Humanities Occupations

THE ELEMENTARY COMPONENT

The Grove Avenue School

The elementary component of the Career Education Project will be housed in the Grove Avenue School. Approximately two hundred students were selected for participation in this project from kindergarten through grade five.

There are five classroom teachers plus a career awareness coordinator that were especially trained to deliver a career-oriented curriculum to their students. The school-within-a-school concept will be evident here as the west wing of the school has been set aside primarily for use of the career education student.

Plans have been developed by these teachers to change from a traditional subject-matter-centered program to an entirely different atmosphere which will reflect a learner-centered approach.

This change will be most noticed in the career education classroom. (See model classroom on page 18.) No longer will there be six rows of five desks each. A set of five study carrels per classroom will be used to provide a place for individual work with either cassette-recorder, filmstrip viewer, slide viewer, or programmed instruction. There will be "activity centers" at which children will be engaged with manipulative materials, math materials, science projects, art work, creative writing or library materials. Many of these activities will be going on simultaneously. Through its bulletin boards

the classroom will reflect an emphasis on the world of work. Children will use pictures from magazines, advertisements and posters reflecting their own feelings about occupational life.

Career Awareness The focus of the career education project in the elementary school will be on career awareness, an awareness of the world of work: the kinds of work people do, the tools they use, the skills involved. This concept, while drawing the attention of the student to a wealth of occupational information by the development of definitions of work and play, by the exploration of many occupational goals, by simulated work experiences and by exposure to occupational situations, will still encompass all the basic subject areas. As this sense of direction is applied to the traditional program of studies, an added dimension of increased motivation and stimulation will result. Learning must be purposeful for everyone. It is with this consideration under the career education concept that studies would be framed in terms and objectives that the child could clearly see and feel as being of personal importance to him.

Although decision-making as a goal for primary grade children will not be emphasized, hopefully the individualization of instruction will serve as a foundation for the acquisition of decision-making skills by promoting a greater freedom of choice of activities that will meet his

own needs. The child will also be charged with the concurrent responsibility of seeing these activities through to completion.

Some of the benefits that will hopefully evolve from the individualization of the student's program will be:

1. A greater personal interaction between teacher and child.
2. A self-concept on the part of the child that will bring about self-confidence as he learns to manage some of his own activities.
3. A relaxed atmosphere for both teacher and child, thus reducing anxiety and promoting learning.
4. An awareness on the part of the child of the dignity of all types of work.

<u>An Individualized Program: Reading</u> The teaching of reading in the elementary grades will undergo significant change, with improvement in the overall effectiveness of instruction the desired goal. Although the group leader (teacher) will be responsible for the progress of the students assigned to her homeroom, the new approach to reading instruction will be characterized by a great degree of flexibility, individualization, and a concerted team effort by all teachers (regardless of grade level) to meet the needs of each child at the student's own pace. This will mean frequent diagnosing of pupil problems, frequent evaluation of skills mastery, comprehensive record-keeping on the progress of each child, and constant planning to insure for him the greatest possible measure of success.

This individualized approach will allow the student to receive instruction in basic reading skills in small, frequently-changing groups with others having needs common to his; it will provide a wider choice

of reading materials at his own level of competence; and, perhaps, most beneficial of all will be the realization that in this type of program he is in competition with no one but himself.

Some highlights of the reading program will be:

1. Small-group instruction, constantly changing (ad hoc) as needs change.
2. Basic skills instruction given by the group leader (teacher) who can best fulfill the child's specific needs.
3. Use of newly-adopted systematic instructional materials for diagnosing needs and teaching word attack skills.
4. Use of newly-adopted basic readers for beginning reading instruction.
5. Use of specific books relating to career awareness.
6. Use of individualized materials which will provide for a wide range of reading levels in each classroom.
7. A wider use of tape recorders, filmstrips, film loops, records, and other audio-visual materials.
8. Encouragement of creativity: dramatics, role-playing, story writing, poetry writing, etc.
9. Development of research skills.
10. Detailed anecdotal record of child's progress.

GRADE FOUR MODEL CLASSROOM CAREER EDUCATION

INDIVIDUALIZATION: The Contract Technique

A vital tool of today's economy is the contract. This agreement entered into by two individuals or groups of individuals has proven its worth as a useful tool in almost every sphere of economic activity. Now this tool will be adopted in this program to educational activity. Using a contract similar to the one illustrated (page 21), the elementary teacher will, after the youngster has been exposed to a number of career clusters and expressed an interest in some of them make an agreement to perform an activity in a certain subject area.

Some sample activities on the elementary level are shown here.

AREA: Language Arts

CLUSTER: Transportation

Activity: You and two of your classmates are to interview a truck driver using the cassette tape recorder. Together make a list of questions such as:

"Do you make a good salary?"
"Do you work long or short hours?"
"Do you get a paid vacation?"
"Do you like your job?"
"Is there any special training needed?"

After this interview return to your room and make arrangements to let the class hear your recording.

AREA: Math

CLUSTER: Marine Science

Activity: Get a map of Narragansett Bay and plan according to the scale of miles an underground cable that must connect to a point on Long Island, New York.

AREA: Science

CLUSTER: Environmental

Activity: Interview a fireman from a station close to your school or home. Use the cassette recorder for the interview. Write a list of questions and ask your group leader to check them over. Ask the fireman what you can do to stress fire safety in the home. Based on this interview you and another student will prepare a report for the class.

THE SECONDARY COMPONENT

Central Junior High School The Central Junior High School teaching team consists of six teachers that were especially trained to deliver a career-oriented program to the one hundred-twenty students selected for the project. There are two classes of thirty students each on the eighth grade level and a similar number in the ninth grade.

The physical plan for the program is based on the school-within-a-school philosophy. Four classrooms have been set aside for exclusive use by project students. In addition one room, centrally located, will serve as the media center. The location of these rooms provides easy access to the home economics, library and industrial arts areas of the building. Further, provisions for easy access to the street where buses could be waiting to take students on field trips has also been incorporated into this plan. If necessary the auditorium-audio-visual center is close by for any large group assembly of the project students.

The first two weeks of the school year will find each of the classes meeting with their teacher-group leader for the entire school day. During this period students will be encouraged to create their own world of work environment through bulletin board displays and classroom decoration. Introduction to the cluster concept will take place at this time. Individualized methods of instruction will be explained and discussed. The idea of the contract technique will be explored

as a close relationship between each student and his group leader is engendered.

It is during this time that the pre-program testing will be administered. Attitudes toward school and the world of work will be measured as will the student's knowledge of careers and occupations. Additional tests will measure levels of achievement in the basic skills.

Much of the new audio-visual material will be examined and its use explained. The school-within-a-school concept will be defined to each of the program participants.

Riverside Junior High School The Riverside Junior High teaching team for this program consists of a guidance counselor and eight teachers that were also trained in the summer workshop to deliver to career-oriented program to the one hundred eighty students selected for the project. There are two classes of thirty students on each grade level; seventh, eighth and ninth.

The physical plan for the program is identical to the other schools in the project in that it is based on the school-within-a-school concept. Six classrooms, all in the same second floor wing of the school, have been set aside for the exclusive use of the project students. One room containing twenty-five cubicles, or study carrels, will be used for individual study with either cassette-recorder, filmstrip viewer, slide viewer, programmed instruction or reading assignments. A smaller centrally-located room has been designated as a teacher planning area.

The first two weeks of the school year will find each of the classes meeting with their teacher-group leader for the entire school day. During this period students will be encouraged to create a classroom atmosphere, which through room decoration and bulletin board displays, reflects a world of work interest. The cluster concept, individualized techniques of instruction, and the idea of student-teacher contracting will be explored. The fostering of a close student-teacher relationship will be a primary goal during this period. Pre-program testing will take place.

Orchard Street School The Orchard Street School has a career education staff of three teachers who will work with thirty students in the sixth grade and two classes of thirty students each in the seventh grade.

Here again the school-within-a-school concept will prevail. The seventh grade classrooms are back-to-back in the front west wing of the school. Plans have been formulated for team teaching and individual instruction. Each of the career education classrooms has five study carrels in it which will also serve somewhat as a room divider.

The first two weeks of the school year will chiefly be used to explain various aspects of the career education program including student-teacher contracting, the cluster concept and the individualization of instruction. The junior high school years are primarily a time for the exploration of occupational options, however, decision-making will now become an integal part of this program.

East Providence Senior High School Approximately three hundred students will comprise the career education program at the Senior High School. There are eleven teachers and a guidance counselor from this school that participated in the summer workshop for the purpose of adapting their skills to the world of work approach. Again, the school-within-a-school philosophy will permeate the physical arrangements that have been made. A centrally-located resource center has been developed. In the very next room will be the media center containing thirty individual study stations where students can, use many of the audio-visual materials available to them. The use of the resource and media center is based on the limits imposed by the student teacher contract (illustrated on page 21). Project students during the first two weeks of school will meet with their teacher-group leader for the entire school day. A close relationship will hopefully evolve as discussions and explanations will center on:

- the mechanics of the career education program
- the cluster concept
- the student-teacher contract
- the individualized instruction
- familiarization with audio-visual materials
- how to best create an atmosphere that shows an interest in the many occupational options

Subsequent to the two-week orientation period project students will then begin the process of student-teacher contracting during a period each day set aside for this activity. Students will contract with their group leaders to do an activity based on a cluster in which the

student has developed an interest. When the activity is completed each subject teacher will report student progress to the group leader through the Individual Activity Feedback Form (illustrated on page 20). Then the responsibility of each teacher-group leader is to monitor the student's progress in each subject area based on the original contract.

Sample Activities for Secondary Students

AREA: Language

CLUSTER: Environment (Demographic and Population Trend Survey)

Activity: Conduct a survey of at least twenty-five people in your immediate neighborhood to determine: (a) occupation; (b) length of time at present address; (d) number of people in family; (e) average age of head of household. Organize this information into a report and provide supplementary tables.

AREA: Language

CLUSTER: Environment (Public Awareness Development)

Activity: Write and record a two-minute public service message, suitable for television, outlining the need for the preservation of forested areas within the State of Rhode Island.

AREA: Science

CLUSTER: Marine Biology

Activity: Take several water samples from local fresh and salt water sources. Make a comparison of the samples. Identify some of the pollutants and suggest their sources.

AREA: Science

CLUSTER: Construction

Activity: Write or interview a glass manufacturer. Find out what materials make plate glass stronger than regular window glass.

Decision Making at the Secondary Level

Pertinent observations on the topic of decision making have been made by Gelatt, Varenhorst, and Carey in the introduction to Deciding: A Leader's Guide:

> "Young people of the 1970's view life individually and uniquely. As they live the present and approach the future, they are developing a variety of life styles that provide additional alternatives for the planning of their lives. Although many students want to plan for themselves and their future, others prefer not to think ahead to college or careers.
>
> Whatever the attitude of a young person, his options exist in increased numbers. The greater the number of opportunities, the better a person's chance to find personal satisfaction. However, more options make the task of deciding among them more difficult. More values are in conflict, more variables have to be considered, and a greater amount of information is needed. Forced to choose without adequate information based on objective data or personal experience, without a feeling of future consequences, without sufficient skill of practice in the process of deciding, a person may choose unwisely.
>
> Thus, the process of decision making is vitally important. Decision making is practiced by everyone each day of his life. Because it is a common act, it receives little attention until a person is faced with an important decision that has long-term consequences. Despite its pervasiveness and its importance to people and society, decision making at present has no systematic, formal place in any educational program. Generally, American society has not provided the means by which people can learn a conscious process for making decisions. Although school counseling attempts to help students learn how to make personally satisfying decisions, a major portion of time spent in counseling students involves developing information or supplying it to students. Obtaining information is only one segment of the decision-making process. Not only do many students not know how to use the information, but they lack knowledge of the other parts of the process."[1]

---

[1] H. B. Gelatt, Barbara Varenhorst, and Richard Carey, "Deciding: A Leader's Guide," (New York College Entrance Examination Board, 1972), p. 1.

For these reasons this decision making program which has been developed and field-tested is considered a vital part of the career education program. Some sample topics that will be discussed as part of the decision making component include:

I. Values

1. Values in decision making
2. Recognizing personal values
3. What do I value
4. Identifying present American values
5. Using values in making decisions
6. Stating clear personal objectives

II. Information

1. Identifying alternatives
2. Do you know all the laternatives
3. Acceptable and unacceptable alternatives
4. Practice in seeking sources of information
5. Options - A decision making game

III. Strategy

1. The role of values in risk-taking
2. Personality and risk-taking
3. Self-rating on risk-taking
4. Choosing a job: An experiment
5. Identifying strategies

COOPERATIVE STATEWIDE PLANNING
FOR HEALTH MANPOWER DATA IN OKLAHOMA

Vivian S. Smith, Ph.D.

published by

OKLAHOMA REGIONAL MEDICAL PROGRAM

SUMMARY

The development of an interagency statewide cooperative effort to provide suitable health manpower needs data for planning regions and the state of Oklahoma as a whole is described.

As a result of the cooperative effort, the Interagency Task Force for Health Manpower Data has evolved as a viable entity. Groups represented are identified within the framework of organizational patterns in Oklahoma.

Problems, potentials, and challenges to health manpower educational planners are discussed, particularly in terms of relating production to needs and program categories to job titles.

COOPERATIVE STATEWIDE PLANNING FOR HEALTH MANPOWER DATA IN OKLAHOMA

Vivian S. Smith, Ph.D.*

August 1973

The health manpower shortage of the sixties is giving way in the seventies to a growing concern that the output of many new training programs, considered along with increased enrollment in existing programs, may result in an oversupply in some occupations. Difficulty of planning is compounded by the need to assess required numbers of varied kinds of health workers as factors which are dependent upon the organization of the system within which care is delivered. For instance, we have no way of knowing to what degree increased utilization of medical care facilities would follow enactment of national health insurance legislation, how much of a shift in needs for certain kinds of health manpower would occur if patterns of payment favored out-patient and home care as much as they now favor hospital care, and how the factors of physician and patient acceptance will finally affect the degree to which physician assistants may be used in any given part of the country. These questions, and innumerable others which have a bearing on health care needs, are shrouded in controversy. Solutions which are acceptable in one locality may be unworkable in another, and health care patterns which were formerly determined totally by providers are now increasingly subject to thoughtful examination by consumers. There is a desperate need for unbiased presentation of all of the options.

Within the context of this highly fluid situation, and aggravated by the sudden sharp decline in federal support for health manpower education, decisions must be made at the state level about allocation of increasingly scarce resources for education and training programs. Data gathered at the national level represent sampling techniques which are not accurate enough for local needs, and are often out of date by the time they are in print. State professional associations and licensure agencies may have excellent current data, but value to planners is limited because the data are prepared from the standpoint of a particular professional group.

Identification of a single state agency which has sustained capability and responsibility for development of comprehensive health manpower information is generally elusive, and possibly less desirable than it might seem. Despite the difficulties involved in development of an interagency cooperative effort, the potential benefits are enormous. An opportunity is created for education of all parties concerning the complexities of health care needs as they affect manpower needs, and concerning each agency's differing

* Adjunct Associate Professor, College of Health and Allied Health Professions, University of Oklahoma Health Sciences Center, Oklahoma City.
Health Sciences Center representative, Oklahoma Interagency Task Force for Health Manpower Data.

responsibilities in relation to the manpower picture. Furthermore, a framework is provided for a continuum of useful activity. The following account describes an approach which is being used in the state of Oklahoma.

Background Factors

Colleges and vocational schools in Oklahoma have moved to develop additional and more diverse training programs for health care personnel as a way both of meeting community and state needs and of providing additional opportunities for students. The efforts to meet needs have included increased size of medical school classes and plans for development of a college of osteopathic medicine, increased numbers of programs to train nurses and allied health workers, and increased training of entry-level (aide) workers. The latter is being done primarily with Manpower Development and Training Act funds, and with funds of varied origin which support programs aimed at disadvantaged students. Federal grants at every level have encouraged the confusing proliferation. Agencies and schools have sometimes planned programs with little knowledge of what was being done elsewhere. At the higher education level, the fact that federal grant mechanisms are geared to dealing with individual institutions has complicated the job of coordinating programs statewide.

Entities with responsibilities for health manpower planning in Oklahoma are:

1. State Regents for Higher Education
2. State Department of Vocational and Technical Education
3. Governor's Manpower Planning Agency
4. State Health Planning Commission
5. Areawide Health Planning Agencies
6. Employment Security Commission
7. Oklahoma Regional Medical Program
8. Oklahoma Council for Health Careers
9. University of Oklahoma Health Sciences Center.

For a description of the function of each, see Appendix I.

An interest in manpower data-gathering is not limited to the above groups, and is generally an important function of licensure agencies and professional associations. Organizational entities associated with a particular profession, however, are of greatest value as information sources about that profession.

The Oklahoma Interagency Task Force for Health Manpower Data

A common thread of interest in health manpower data, for very varied reasons, unites the broad-function agencies we have listed above. Each had something to gain by cooperating with the others. Mutual concern has resulted in the origin and development of the Interagency Task Force for Health Manpower Data.

A survey of Oklahoma health manpower needs was done in the summer of 1970 under joint auspices of the State Department of Vocational and Technical Education and

the Employment Security Commission. Emphasis was on vocational-level occupations. Data appeared in print in two forms, one published by the Employment Security Commission as Health Manpower Needs In Oklahoma 1971, 1972, and 1975, and the other published by the Occupational Training Information System (OTIS) of the State Department of Vocational and Technical Education as Supplement I, OTIS Cycle 3 Report, Health Manpower Needs in Oklahoma, 1971-72. Employment Security Commission data were based on a survey of hospitals, nursing homes, and government agencies. The OTIS publication included added information from a sample survey of doctors' offices. Subsequent OTIS publications (Cycle 4 and Cycle 5) have involved very limited additional data-gathering. As vocational-technical instruments, their emphasis has been on data concerning technical-level occupations.

A separate and distinct effort, called Professional Manpower Information System (PROMIS), was under development in 1971-72 by the State Regents for Higher Education to provide valid data for program planning and resource allocation in higher education. Decisions relating to support for programs to train health care personnel have become extraordinarily difficult in the face of increasing competition for funds.

As a neutral person who was respected by the staff members in all of the agencies, the author has functioned more or less as an independent liaison representative who moved freely among the parties. Initial effort centered simply on persuading the Regents and Vo-Tech staffs to make OTIS and PROMIS compatible. The result, arrived at in direct dialogue between staff members of the two agencies, was most encouraging. The Regents staff agreed to use OTIS data for health manpower needs, provided that OTIS categories were expanded to include jobs requiring baccalaureate and professional levels of education. With the two key education groups in agreement, there was a sound basis for a broad effort to which everyone might contribute, -- a new and improved health manpower needs survey.

A preliminary meeting in August, 1972, called by the Oklahoma Council for Health Careers, OTIS staff, and the State Health Planning Staff, was followed by the organization in October, 1972, of the Interagency Task Force for Health Manpower Data. Task Force meetings are informal, open, and arranged by staff of the State Health Planning Commission. (Entities represented on the Task Force were listed on page 2.) Agendas of meetings are prepared by the State Health Planning staff in cooperation with those having the most business to be considered. Meetings are called as needed; there is no chairman and the structure of the group is inherently flexible. Tensions which were apparent a year ago have faded away. There are disagreements, but they are constructively expressed and handled. With emphasis placed on agency representation, the framework permits easy substitution or supplement by individuals with specific interests or capabilities. The State Department of Education was not represented on the 1972-73 Task Force. It will be a natural addition if its health manpower planning activities are increased as a result of implementation of career education concepts developed through the U.S. Office of Education.

It must be emphasized that the Task Force is not a policy-making body, but only one which addresses itself to the need for adequate data for use by policy-makers and planners. Therefore, its basic function is service.

The 1973 Survey and Its Development

Result of the 1973 Oklahoma health manpower needs survey, and a narrative describing its history, are published as an OTIS report, Health Manpower Needs in Oklahoma, 1973. Survey instruments, job descriptions, and projection methods are contained therein and need not be repeated here. Starting with the premise that a completely new comprehensive set of job categories and job descriptions was needed, along with a comprehensive list of kinds of places to be surveyed, Task Force members worked to make the survey something we could all defend. Responsibilities assumed were as follows:

1. Job Categories and Job Descriptions

   Assembled and monitored by Health Sciences Center representative, with much outside cooperation.

2. Categories of Places to be Surveyed

   Assembled and monitored by Employment Security Commission, and supplemented by Health Sciences Center representative.

3. Employer Needs Survey

   Performed by staff of the Research and Planning Division of the Oklahoma Employment Security Commission, with voluntary assistance at no cost provided by areawide health planners, Manpower Planning staff, State Health Planning staff, Health Sciences Center staff, State Health Department staff, and Oklahoma Regional Medical Program staff.

4. Training for Survey Interviewers

   Arranged and conducted by Research and Planning Division of the Oklahoma Employment Security Commission, with assistance of certain Task Force representatives.

5. Supply Data

   Assembled by staff of State Department of Vocational and Technical Education in cooperation with State Regents for Higher Education. Assistance provided by Oklahoma Council for Health Careers staff and Health Sciences Center representative. Checked at Task Force meetings.

6. Funding

   Some funds from operating budgets of Employment Security Commission and State Department of Vocational and Technical Education. Essential additional funds from the Oklahoma Regional Medical Program and from three HS/EA (Health Services Educational Activities) projects funded in eastern and central parts of the state

by the Regional Medical Program. Total from these sources was $19,000, the only clearly identifiable cash contribution to the survey costs.

7. Publication

An OTIS publication of the State Department of Vocational and Technical Education. The 1973 list of job titles appears in Appendix II.

Discussion of Survey Approach

Development of a health manpower needs survey provided an extraordinarily effective focus for promoting communication among agencies represented on the Task Force. Negotiation of an original proposed list of 85 job categories down to the final 66 required an examination of the diversity of categories. This was educational, particularly to those Task Force members with no in-depth experience in the health field.

Lengthy discussion was associated with a decision to omit educational requirements from job descriptions. Later, problems encountered in connection with the absence of educational requirements from some job descriptions (e.g.- nursing categories) have provided an insight into reasons why some changes may have to be made before the next survey. All aspects of the survey were carefully scrutinized, from sampling techniques (in the few instances where coverage was not 100 percent) to projection methods.

Limitations of a survey of the type conducted are understood. At present, plans call for annual updating including modification in methodology and job categories as necessary. The fact that a survey is not a study is recognized. A well-executed survey, however, provides data from which needs may be justified and studies may be designed. Also, most important is the potential for developing state-by-state current survey data which may be combined to form a national data base.

Problems and Priorities

One major problem area has been delineated more clearly than ever. This is the inadequate distinction between job titles and educational program titles. Job titles in the health field have become inordinately numerous, in connection with increased fragmentation of specialty services and the appearance of lesser trained assistant and aide categories, so that even health professionals are not fully aware of the services performed by some kinds of workers in areas removed from their own functions. A one to one ratio of job titles and educational programs has been the national trend, and the exasperation of thoughtful planners is epitomized in the title of Kinsinger's recent article, "What this Country Doesn't Need is a Left Carotid Artery Technician". Some of the blame for this rests squarely on the widespread over-use of the term "innovative". Grantsmanship is linked to being "innovative", and somehow a modification in a training program for a recognized type of worker is not nearly as noticeably "innovative" as creating

a new kind of worker and, of course, a new training program with a new and different-sounding name. We should have a moratorium on the use of the word "innovative".

The diverse factors affecting needed numbers of different kinds of health workers must be considered for planning purposes, in the context of the fact that products of programs may be two or more years away. Some specialty workers (e.g.- medical laboratory personnel) are used in relatively large numbers. Others are not. Epidemiologists, for instance, are essential members of the public health portion of our system, yet the numbers of epidemiologists needed are relatively small if we exclude from this category the community health workers of varying backgrounds who may perform epidemiological functions, such as venereal disease investigation. Some jobs, such as that of the physician assistant, are still emerging, and there is no valid way of determining numbers to be used. Emergence of the physician assistant category is further complicated by problems of physician acceptance, reimbursement patterns, fears of malpractice, community acceptance, variations in training standards, and credentialing.

At institutional, community, state, and national levels, educational planners seek approaches which take cognizance of employer and public needs, student desires for career choices, and the purse of the taxpayer. Resources are the key determinant. We cannot afford the luxury of an excessive amount of specialty programming. In terms of human resources, we must build in every possible safeguard of individual versatility and adaptability as length of training increases. Although job opportunities in the health field are inherently specialized, job satisfaction is greater for individuals who function in situations which allow variety of performance. The challenge to educators is to produce people who can fill jobs competently while offering additional dimensions as a result of having gone the lengthy educational route.

Change is the most constant feature of modern life; its most dramatic evidences have come with advancement of knowledge in the health field. We need health personnel who are versatile and, above all, adaptable.

Appendix I

Agencies at the state government level in Oklahoma with responsibilities broadly related to planning for health manpower production are:

1. Oklahoma State Regents for Higher Education

Constitutional authority is vested here for program coordination and resource allocation to all state-supported institutions of higher education. Recent implementation of program budgeting will permit closer focusing on funds channeled to specific educational programs, including those producing health manpower.

2. Oklahoma State Department of Vocational Technical Education

Authority here centers on planning and implementation of training programs in a network of area vocational-technical schools. Programs are both secondary (in cooperation with area high schools) and post-secondary. Some support is provided for technical programs in junior colleges, subject to approval by the Oklahoma State Regents for Higher Education. The Research, Planning, and Evaluation Division of Vo-Tech publishes the annual OTIS (Occupational Training and Information System) reports containing demand and forecast data for technical occupations, including those in the health field. Employer surveys for the OTIS publication are done by the Oklahoma Employment Security Commission, through a contractual arrangement.

3. Oklahoma State Health Planning Commission

This agency is responsible for the development and maintenance of state comprehensive plans for health services, health facilities, and health manpower. Health manpower data are coordinated from other sources, with little primary data collection done by the Commission.

A recent legislative action placed the state comprehensive health planning agency in a new organizational framework, the impact of which remains to be assessed. The agency is now the State Health Planning Commission, with the Director responsible to three Commissioners. The Commissioners are the heads of the three largest agencies in the state which are employers of health manpower, – the State Health Department, State Department of Mental Health, and State Department of Public Welfare.

4. Governor's Office of Manpower Planning and Coordination

This office is responsible for coordinating plans for the multiplicity of technical manpower programs, to insure that area and local plans provide for an equitable distribution of state and federal resources. Coordination of entry level health manpower training program plans is part of the total effort.

5. Oklahoma Employment Security Commission

The Research and Planning Division does employer need surveys and forecasts, wage and salary surveys, profiles based on census data, etc.. Data collection from employers for use in the OTIS publication is done by this agency.

The following agencies are not a part of state government, but nevertheless play important generalized roles in relation to health manpower planning.

1. Oklahoma Regional Medical Program

Staff activity in manpower development has focused on liaison among state agencies and among educational institutions. In addition, specific support has been given to three HS/EA (Health Services Education Activities) projects, which represent the Regional Medical Program approach to the concept of Area Health Education Centers. Partial support is provided for the Oklahoma Council for Health Careers. The Manpower and Education Committee of ORMP articulated a firm commitment to the need for improved health manpower data, and laid the groundwork for subsequent invaluable financial support from ORMP for current efforts. The author as an ORMP staff member from September 1970 through January 1972, with responsibility for health manpower education program liaison, became aware of some of the potentials described in this report.

2. Areawide Health Planning Agencies

The areawide agencies are multicounty community organizations which function within the state's standard planning regions, and are responsible for area plans for health services, facilities, and manpower. About two thirds of Oklahoma is served by organized areawide health planning agencies. Although these agencies are not subsidiaries of the State Health Planning Commission, their organization and operation plans must be approved by it. Part of the responsibility of areawide staffs is data-gathering, and they have excellent working knowledge of health care facilities and educational institutions in their localities.

3. Oklahoma Council for Health Careers

As a responsible non-profit agency supported by a broad-based consortium, the Council functions primarily in recruitment, counseling, and placement. Recent efforts have emphasized alleviation of maldistribution problems. The Council produces a number of useful publications designed to serve counselors and prospective students in health careers programs, and coordinates the state MEDIHC program.

4. University of Oklahoma Health Sciences Center

As the one educational institution in the state which has as its primary mission the education of a broad spectrum of categories of health care professionals, the Center is a reservoir of information and service for use by planners. The diversity of its programs makes attunement to health manpower needs mandatory.

Appendix II

Occupational Titles on 1973 Oklahoma Health Manpower Survey List

Physician, M.D. or D.O.
Physician Assistant, Registered
Medical Assistant (Office)
Medical Secretary
Nurse, Registered (Includes Supervisors)
Public Health Nurse
Nurse Anesthetist
Nurse Educator
Licensed Practical Nurse
Nurse Aide – Orderly
Dentist
Dental Hygienist
Dental Laboratory Technician
Dental Assistant (Office)
Chiropractor
Podiatrist
Optometrist
Optician
Optical Technician
Audiologist
Speech Pathologist (Speech Therapist)
Health Educator (Public Health Educator)
Pharmacist
Pharmacy Assistant
Physical Therapist
Physical Therapy Assistant
Occupational Therapist
Occupational Therapy Assistant
Rehabilitation Counselor (Clinical)
Recreation Therapist
Music Therapist
Respiratory Therapist, Registered (Inhalation Therapist)
Respiratory Therapy Technician (Inhalation Therapy Technician)
Radiologic Technologist, Registered
Radiation Therapy Technologist
Nuclear Medicine Technologist
Medical Records Administrator, Registered

Medical Records Technician
Ward Clerk
Clinical Dietitian, Registered
Clinical Dietetic Technician
Dietary Aide
Hospital Food Service Supervisor
Cytotechnologist
Medical Technologist, Registered
Medical Laboratory Technician (Medical Laboratory Assistant)
Surgical Technician
Electroencephalograph Technician
Electrocardiograph Technican
Emergency Medical Technician
Hospital Administrator (and Assistants)
Nursing Home Administrator (and Assistants)
Community Health Worker
Epidemiologist
Biostatistican
Community Mental Health Technician
Psychiatric Technician (Psychiatric Aide)
Clinical Psychologist
Clinical Social Worker, Registered
Social Work Assistant (Case Aide)
Biomedical Instrumentation Specialist
Biomedical Equipment Technician
Sanitarian
Environmental Health Technician
Health Planner

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 235P.

ABSTRACT: THE SECOND INTERIM REPORT DESCRIBES THE ACTIVITIES UNDERTAKEN DURING THE TIME PERIOD OF JULY 1, 1972 TO JUNE 30, 1973 OF THE NEW OPPORTUNITIES FOR WORK (NOW) PROGRAM IN LEWISTON, MAINE. THE GENERAL GOAL OF THE NOW PROGRAM IS TO INTEGRATE CAREER EDUCATION ACTIVITIES INTO THE ENTIRE CURRICULUM IN GRADES K-12. DURING THE SECOND YEAR OF THE NOW PROGRAM, ELEVEN MAJOR GOALS WERE PROPOSED. THIS REPORTING PERIOD CONCENTRATED ITS CAREER EDUCATION IMPLEMENTATION EFFORTS AT THE ELEMENTARY AND SENIOR HIGH SCHOOL LEVELS. THE MAJOR ACCOMPLISHMENTS DURING THE SECOND YEAR OF THE NOW PROGRAM INCLUDED THE PROVISION OF INSERVIDE TRAINING FOR LEADERS AND TRAINERS OF VOCATIONAL EXPLORATION GROUP, DEVELOPMENT OF A FILM LIBRARY SERVICE AND HUMAN RESOURCES DIRECTORY, AND FURTHER EXPANSION OF CURRICULUM DEVELOPMENT EFFORTS. A THIRD PARTY EVALUATION OF THE PROJECT ACCOMPLISHMENTS BY EACH MAJOR GOAL IS INCLUDED. (VA)

REPORT SUMMARY

A. Time Period Covered

This second Interium Report of the NOW Program covers the period from July 1, 1972 to June 30, 1973.

B. Goals and Objectives

Basically, the goals and objectives of the NOW Program remain unchanged; however, the emphasis of this year's involvement was to be directed in the area of curriculum development and change to formally include career education activities into the classroom.

Regarding this as our priority goal, the NOW Program staff in conjunction with our third party evaluation team, developed 11 sub-objectives that would align Program activities in this direction. These sub-objectives are discussed in length in the body of the report.

C. Procedures Followed

The NOW Program Staff maintained a team approach to implementation for the second action year with the variation of each member accepting areas of responsibility. These areas are geographic within the city. The three Pupil Personnel Members had a near equal teacher and student load, a similar variety of socio-economic areas, and similar facility characteristics. The rationale being to provide each member the opportunity to plan and implement career education in the various environments of public education. The learning levels varied slightly, one member was responsible for the high school and two elementary schools, the other two for a junior high and four elementary schools each. The procedures utilized by NOW Staff in their various schools were through follow-up of first year activities, direct contact with principals, attendance at teachers' meetings, and most commonly by one to one teacher contact as the year progressed. Small teacher groups, by departments and/or grade level contacts were another common procedure for planning and implementing activities. The most demanding requests were for use of equipment and career education

materials. This resulted from the distribution of a resource guide to each member of the school department staff. One other procedure that generated high interest and teacher involvement was the distribution of a weekly one page newsletter to all school department staff. This letter was informational in respect to what was happening, planned for the future, and those (teachers, administrators, and community people and places) involved.

Another procedure of significant success was in-service training sessions for teachers and students in the use of audio-visual equipment and materials.

The program staff increased the amount of involvement of administrators through more frequent visits and communications relating to the career education going-on in their schools; where as in the past administrative contacts were basically through the Program Coordinator.

A procedure quite unique to the Lewiston School Department was established this year by the Program. Teachers were permitted release time for planning and in-service training activities. In some instances the NOW Program provided substitutes.

The Regional schools were provided directories of NOW Program services, staff and their availability, resources availability, and notices of and invitations to workshops and in-service training programs. As is pointed out in the body of this report, Regional involvement was limited by staffing problems.

Basically, the noticable advancement of the Program should be attributed to the increased involvement of school personnel through these procedures.

D. Results and Accomplishments

The introduction and implementation of Vocational Exploration Group training has proven to be a very useful and effective procedure relative to the development, expansion and personalization of jobs. The Vocational Exploration Group specifically seeks the understanding of man-job relationships among job functions, job demands, and job satisfactions. The program involved 5 phases--inclusion, job inventory, job personalization, expansion, next step.

Curriculum development, although progress was somewhat slowed down by an administrative delay regarding the hiring of an activities writer, progressed remarkably well during the year. Specifically, NOW Program staff personnel were asked to participate in and assist groups of teachers relative to the introduction of career education activities into the Program of Studies to be followed during the 1973-74 school year in Lewiston Schools.

Dissemination activities have increased during the year to include a weekly newsletter regarding NOW Program and individual teacher accomplishments relative to the introduction of career education in the classroom. Other activities engaged in by NOW staff personnel included presentations and participation at local, state, regional, and national conventions and workshops. It should also be mentioned that NOW Program staff and Lewiston's teachers provided Dr. Edward Johnson, the author of a Career Education Curriculum Guide for the State of Maine, with a great deal of information and activities included in the guide. Career information guides were also produced and distributed throughout Lewiston's region. These guides included a film library service guide, field trip guidelines, material and equipment list, and a human resources directory.

Additional programs initiated and implemented by the NOW Program during the year included three career days, the STARS Program, and a Rent-A-Kid Program.

The terms Career Education and NOW Program have become a part of each Lewiston school. NOW staff and teacher involvement and evaluation of this fact indeed indicate that career education has been very meaningful and relevant to the students in Lewiston.

E. Evaluation

The NOW Program has developed many areas of evaluation. Through distribution of forms to teachers, students, resource people in the community and through analysis of program activities. The third party evaluation team is very active in program planning, implementation, and follow-up. Their report included in the body of this report is conclusive but does not emphasize their total

involvement. They have proven to be a very vital part of the program. The evaluation conducted by representatives of the United States Office of Education, Regional Office, State Department of Education, and Lewiston Model Cities is another vital part of evaluation. It is a consensus of opinion of all NOW Program staff members, that these visits should be more frequent. With sincere sympathy to each member for the work loads they carry it is felt that a more clear and concise knowledge of program accomplishments could be presented at more frequent meetings.

F. Conclusions and Recommendations

The ultimate conclusion of the program staff drawn from a majority of the teachers and other personnel of the Lewiston School Department, students, parents, and community people involved, is that the career education program NOW is one of the most dynamic and worthwhile pilot programs ever to be implemented in the schools. The resons obvious to the staff in drawing this conclusion are the ease of conceptualization of program goals, the relativeness of the concept to each person, and the common frustrations most people have experienced by the absence of career awareness, information, and preparation in their education.

Section F in the body of this report will relate to conclusions and program continuance after federal funding is terminated. The problems of the local school system and some of the implications are surfacing as a result of Program NOW implementation. There are also recommendations for continuation of federal funding. This fact is an expression of the concerns shared by program staff and school officials and have to receive immediate attention if career education is to become a part of the education.

A. PROBLEM AREA

Implementation of curriculum change relative to organized inclusion of related career education activities and information has been the major problem area confronted by the NOW Program during its second year of operation. As stated in the NOW Program proposal, "Lewiston, Maine city schools are in the initial stages of tremendous change. Traditionally the system has been an academically oriented school system within an industrialized city. For years the system has stressed college preparatory curriculum when the majority of its graduates and a large number of young people who did not make it to the completion of the 12th grade, found themselves seeking employment in the basic industries of textiles and shoe manufacture." Today, more than ever, a more diversified work force is needed and the schools are constantly being pressured by local industry, parents, and students to update and make the school curriculum more relevant to current employment needs of the community. The NOW Program staff feels that implementation of career education through activities relating to awareness, orientation, and actual work experience will enhance the school curriculum and help satisfy the demands made by the community.

Specific problem areas encountered during the year are included in this section of the report.

A major problem area confronted during the year involved the hiring of a mobile resource coordinator and an activities writer for the NOW Program. Resulting from local and state teacher organizations involvement relative to negotiations for teacher contracts,

the Lewiston School System refused to act on any request from any department concerning the hiring of any additional personnel. It was not until April 1973 that the NOW Program was permitted to hire the above mentioned personnel.

The fact that the mobile resource coordinator was not hired until April 1973 delayed the NOW Program's purchase of a mobile resource van. The combination of these two factors partially accounted for the free film library established in the fall of 1972 to have been temporarily discontinued in Janurary 1973. The free film library faced problems when films were made available, but throught the lack of an effective pick-up and delivery service, the films did not receive expected utilization. The program basically relied upon individual teacher response relative to the picking up and returning of films along with a check sheet type review of the film viewed. The responses received were less than what was determined to justify continuance of the service at that time.

During the fall of 1972 the NOW Program's initial attempt to bring Dr. Calvin J. Daane to Lewiston to conduct Vocational Exploration Group training sessions in Lewiston failed. Training sessions were scheduled to have been conducted November 27, 1972 through December 2, 1972; however, five days prior to the training to have been conducted, the NOW Program Director was directed by the Superintendent of Schools to cancel the Vocational Exploration Group training program immediately. The immediate cancellation resulted from a misunderstanding and a basic lack of information not having been provided to the principals of the schools that were to

have been involved with the Vocational Exploration Group training. In addition to the fact that the principals claimed they were poorly informed of the program, they also interpreted the initial proposal to read, "The curriculum would be changed as a result of conducting the proposal." The principals concerned felt that they would also be protecting the NOW Program staff by refusing to accept the proposal on the grounds that any curriculum change must be approved by the Lewiston Board of Education. Basically, the situation pointed out a definite need for the NOW Program staff to exercise stronger and more thorough lines of communications with teachers and school administrators prior to implementation of any new techniques which could affect or change current school policies. The initial Vocational Exploration Group proposal is attached. (See Attachment 1.)

The Vocational Exploration Group Proposal was rewritten, resubmitted, and successfully conducted February 26, 1973 to March 2, 1973. The second proposal is attached. (See Attachment 2.) The training received via Vocational Exploration Groups will be discussed in the Results and Accomplishments section of this report.

The second action year of the NOW Program was to concentrate efforts at the senior high school and the elementary schools in Lewiston. It was felt that considering the effort spent with the junior high schools during the first action year of the program that the junior high schools should have been able to carry on career education activities involving minimal NOW Program input. Having resulted from demands of both junior high schools in Lewiston for development of additional career education materials and programs,

second action year plans were revised to include more NOW staff involvement at the junior high school level. Basically, as a result of reshifting the program's intended emphasis regarding second action year activities, the concentrated efforts to have been directed at the senior high school and the elementary schools of Lewiston were lessened.

The STARS Program (Student Tutors in Achievement of Reading Skills) operated successfully, but not without scheduling and administrative difficulties. Several of the STARS expressed a great deal of dissatisfaction relative to the assignment of tutees. A few of the reasons having caused this dissatisfaction resulted from a lack of tutee motivation, poor and irregular tutee attendance, a mismatching of tutors and their assigned tutees, etc. Other problems encountered by the STARS Program resulted from not having exercised more rigid control measures regarding reporting procedures that should have been adhered to by the STARS. A copy of the STARS Proposal and a final yearly report on the STARS Program are attached (See Attachments 3. and 4. respectively)

The writing of learning activity packages and the development of a K-12 Career Education Guide were greatly curtailed by the fact that the additional NOW staff member charged with writing responsibilities was not hired until April 6, 1973. Throughout the second action year, the momentum of career education activities generated by the existing NOW Program staff made it next to impossible to develop complete learning activity packages during the school year. It is anticipated that the development of learning activity packages will be conducted throughout the summer months by the NOW Program's

recently hired activities writer and hopefully dissemination activities will be conducted in the fall.

The Cooperative Education facet of the NOW Program has been directly hindered by the existing lack of rationale and understanding between the United States Office of Education and the United States Department of Labor. Specifically, as a result of interpretation of the Davis-Bacon Act regarding wage determinations associated with federally funded construction projects, a Cooperative Education student was released from his work station. The Davis-Bacon Act specifies that the only persons eligible to receive sub-minimum Davis-Bacon wage determinations are bona fide trainees. The Portland, Maine area office of the United States Department of Labor has interpreted bona fide trainees to include only those apprentices that are registered with the Maine State apprenticeship councel. This would be acceptable providing the Maine Apprenticeship Councel would accept students as apprentices; however, business establishments in Maine are limited to the hiring of one liscensed apprentice for every five liscenced men employed. Since many of the local contractors, via sub-contracting procedures for federally funded construction projects employ between fifteen to twenty-five persons, there is very little chance for a student in a school learning situation to be employed on a school-business cooperative agreement. The basic conflict of policy arises that the United States Department of Labor has already recognized that students in bona fide school vocational programs are exempt from hazardous employment restrictions, the question that arises is, why are they recognized as bona fide trainees under one section of the United

Stated Department of Labor, but not on another, specifically as bona fide trainees with regard to the Davis-Bacon Act.

Efforts at the high school have been far from satisfactory. These problems revolve primarily around existing conditions such as: vocational programs having been filled to capacity, thus not enabling any flexibility relative to the provision of short, intensive training programs for those students about to leave school; the curriculum has been virtually locked-in and fixed so as not to allow a great deal of flexibility relative to special scheduling for students requiring special course offerings; and the departmentalization of academic vs. vocational vs. industrial arts vs. general curriculum has virtually set barriers between departments that, at this time, have been difficult to penetrate relative to the cooperation needed to implement career education activities at the high school level. A few of these problems should begin to be resolved during the coming year due to the recent hiring of an additional assistant principal at the high school charged with the responsibility of curriculum development.

Regarding the utilization of field trips and guest speakers, the current evaluation procedures, via check sheet type forms have been unsatisfactory. Field trip guidelines with check sheet forms are attached. (See Attachment 5.) The NOW Program staff has discussed this problem with the Program's third party evaluation team; however, no real satisfactory solution has been developed for this problem at the writing of this report.

The fact remains that as long as implementation, dissemination, materials, and equipment are provided by the NOW Program, career

education, per se, will be utilized by teachers in the local school system. It would be somewhat doubtful what might be done in the area of career education by a small percentage of Lewiston's teachers should the NOW Program not be available to offer its services. It is felt that this small percentage of the above mentioned teachers view the NOW Program and career education in general as a current "fad" and sort of a "grab bag" for free learning materials and sometimes simply a diversion from the daily classroom routine. Basically, this has been a problem of attitude and has provided many moments of frustration for the NOW Program staff. Attempts have been and are continuously being made to crack this attitude barrier that seems to exist in the percentage of the aforementioned teachers. It should be noted and recognized however, that it has been through the many positive contacts that the NOW Program staff has had with many teachers in the school system that has enabled the persistance of career education activities to continue in the school system as is reflected in the Results and Accomplishments section of this Interim Report.

B. GOALS AND OBJECTIVES

The main objectives of the NOW Program remain basically unchanged. The objectives relate very closely to Grant Venn's 1970 Focal Points as they relate to career education in the curriculum. The Program objectives include:

1. To establish an effective pupil personnel service with the basic function of orientating elementary and secondary level students to the wide range of work opportunities abailable.
2. To strengthen and extend vocational education opportunities in the local area by providing work experience through cooperative education activities.
3. To provide an "Open Door" policy to vocational programs which encourage students to enter occupational education offerings at any age or without previous experience.
4. To provide intensive and specific job entry training for students not previously enrolled in vocational programs just prior to their leaving school.
5. To provide intensive occupational guidance, counseling, and initial placement services for those individuals about to leave and/or those who have left school.

In reality, the general goal of the NOW Program is to integrate career education activities into the entire curriculum of Lewiston's School System in grades K- 12. Via the inclusion of organized career education activities into the entire school curriculum it is anticipated that the curriculum will become so relevant to the total

education of our youth that it will serve as a model to be followed by other cities and towns throughout the State of Maine.

Specific goals were established prior to the commencement of the 1972-73 academic year by the NOW Program staff and the NOW Program's third party evaluation team. These goals are as follows:

1. The major goal is to expand implementation of the NOW Program at all learning levels in Lewiston schools. To be accomplished by individual efforts and also team approaches by staff utilizing workshop techniques when possible through department heads, curriculum groups, learning level groups, and interest groups.
2. Regional implementation will be conducted through initial exposure of the Program to superintendents and continual communication until the mobile van is available for regional use. Services will be offered for staff participation in workshops/conference type activities and invitations will be extended to the regional schools to visit NOW activities.
3. Curriculum development will be through the development of learning packages for specific and general career areas as the year progresses. Each teacher involved with the NOW Program will be encouraged to help in this aspect.
4. The purchase and utilization of a mobile van. The van will be stocked with information, materials, and equipment for the purposes of distribution both locally and regionally.
5. The Cooperative Education Program will be expanded from 18

students participating in 1971-72 to 40 students in 1972-73. This will be accomplished utilizing current staff.

6. Intensive training programs will be established for school leavers. This goal is currently under study as minor success was difficult to attain during the first year. Facilities and staff overloads at present virtually demand that this goal be met on an individual basis and outside the school facility. The program staff will, where possible, place students/leavers, in job situations that provide such training.
7. Placement services will be expanded through closer working relation between NOW staff and Guidance Departments, Principals, Department Heads, and teachers at the junior and senior high schools. Part-time work placement services for 13-14-15 year olds will be conducted through a joint staff effort with the Community Coordinated Child Care Agency. (Rent-A-Kid)
8. Resource centers and/or information centers will be established in each school in Lewiston. These centers will be maintained jointly by NOW staff and school staff.
9. The Pupil Personnel Services staff of the NOW Program will be assigned to specific schools, the goal being to have a staff member identified by teachers as part of their school. In line with this, a staff member will be housed at the elementary level to make the program services more assessable (geographically) to Lewiston teachers.
10. To reach the goal to research, develop, and provide media

materials and information for teachers, a paraprofessional will be hired.

11. To maintain and conduct resource centers including the mobile van, a resourc center coordinator will be hired.

C. PROJECT DESIGN AND PROCEDURES

The primary function of this project is to orientate and coordinate initial training of elementary and secondary level students to the wide range of work opportunities. In carrying out this function, the following needs as developed at a National Conference on Guidance, Counseling and Placement (5) will be addressed.

Needs of students:

1. Each member of our society needs throughout his lifetime guidance, counseling, and placement assistance.
2. Handicapped and disadvantaged persons have special needs and programs must be structured with the necessary flexibility to meet these needs from grade K throughout the individual's life span.
3. Generally, children in elementary school (K-6) tend to have unrealistic concepts of the world of work. They are unable to perceive of themselves in a productive society. Therefore, there is need for educational activities which will develop a positive attitude toward the world of work; a positive self-concept; and a need to begin the development of skills essential in the process of decision-making by developing an approach to sequential educational-decision-making for career development that would be carried through to the adult life stage. The point at which many decisions are made is relatively unimportant. Of basic importance is adequate preparation to make decision, willingness to made decisions, and acceptance of responsibility for the consequences of decisions

More specifically, these needs are:

a. The need to be recognized and accepted as an individual.

b. The need for opportunities to broaden one's identity with a variety of role models and the significance of each in the community as a whole.

c. The need to experience success.

d. The need for concrete type activities that satisfy the chold's natural curiosity.

e. The need to learn how to make decisions and later the ingredients for the process.

f. The need for improved occupational exposure via textbooks, curriculum, and media.

4. During the early adolescent years (junior high school 7-9) pupils are beginning to learn to relate to the adult world. Present educational practices do not provide for sufficient training or information with which pupils may project themselves into the adult world. Therefore, an adolescent person needs information and exposure which would include educational vocational, and personal-social information. Specifically:

a. The need for experiences to explore possible occupational avenues or means-end awareness.

b. The need for prescriptions for movements from where they are to where they may arrive.

c. The need to see relevance--i.e. direct relationship with immediate occupational goals and personal future.

d. The need to relate to broad occupational areas and all factors which pertain to work.

e. The need to recognize the need to explore the question "why work?" and the relationship, if any, between work and self-fulfillment, and work and social acceptability.

f. The need to be retained in the system and to be provided with employment assistance.

5. During the later adolescent years (high school 10-12) individuals are confronted with the necessity of making decisions which will permit them to make the transition from adolescence to adulthood. Consequently, individuals need skills and knowledge in assessing their capabilities, and specific information for decision making. More specifically:

   a. The need for opportunities for self-enhancement or humanization--i.e. the implementation and articulation of self-image vis-a-vis, the socialization process.

   b. The need to recognize and enhance the contextual variables which impinge upon a decision making continuum.

   c. The need for actual support for the notion that change or indicision is not tantamount to failure.

   d. The need for an open system which will allow for the opportunity for reexamination of career goals.

To implement the needs as expressed on the previous pages it is concluded that the following sub-objectives should be attained.

Pupil, Student, and People Sub-Objectives:

1. To develop an awareness of individual differences and a knowledge of the positive relationships between individual characteristics and career development.

2. To develop self-understanding and self-acceptance.

3. To develop a positive self-image which will promote self-esteem motivation for achievement consistent with individual potential.
4. To develop an awareness and understanding of the place of work in the lives of people.
5. To develop an awareness and understanding of the increasing array of educational and career opportunities available.
6. To develop ability to make decisions and plans based upon factual information, relationships, and inferences.
7. To make educational and career decisions and plans appropriate to the individual's level of maturity and development.
8. To pursue successfully a self-planned and self-directed career.

Process (program) Sub-Objectives:

1. To develop a public awareness of the nature and process of career development.
2. To help teachers and other educators conceptualize career development as a continuous process from early childhood to retirement.
3. To train and retrain counselors, teachers, and administrators in theory and practice of education to facilitate career development.
4. To help assess and develop curricular programs and activities to maximize opportunities for career development experiences at all age levels.
5. To encourage and assist in the development of curricular materials appropriate to the career development needs of all

age levels.

6. To encourage and assist teachers in the integration of career development experiences in the regular curricular offerings.
7. To help parents and other members of the community to recognize and provide for out-of-school experiences to facilitate the career development of children and youth.
8. To involve children and youth actively in decision-making experiences appropriate to their level of maturity.
9. To develop systematic and planned vocational guidance, counseling, and placement assistance, for all age levels, that will assure timely assistance in the career development process.
10. To develop more extensive and improved ways of facilitating the career development of culturally different and educationally disadvantaged groups, including poverty groups and the handicapped.
11. To develop a team approach involving education, business, industry, labor, community, and family in the support and implementation of career development, guidance, and placement activities.
12. To establish through the senior high school guidance facilites an active and effective placement program for students to be assisted in obtaining jobs or continued vocational education opportunities.
13. To provide special programs with flexible scheduling at various times and months of the year for intensive short time, skill training for entry into specific jobs.

14. To evaluate continuously the effectiveness of program provisions in facilitating career development and to utilize evaluative feedback, including follow-up of individuals for developing new programs and modifying existing programs.

Program Provisions and Implementation Plan:

A. Personnel and Training

1. Provide three qualified vocational guidance, counseling, and placement personnel to assure adequate assistance at all age levels. A placement officer from the Department of Employment Security will be a closely linked part of the project staff as he works with the guidance staff member of this project which will be housed at Lewiston High School in placing students in jobs.

2. Develop in-service education programs for teachers, counselors, and administrators (1) to help them conceptualize career development as an integral part of their work, and (2) to improve their knowledge and skills with respect to techniques and materials to facilitate career development.

3. Develop simulated and real work experiences for teachers and counselors which will bring them in closer contact with the realities of the world of work.

4. Define functions and responsibilities for paraprofessionals and support personnel, and develop short term intensive training programs for the preparation of such personnel.

B. Program Content and Procedures.

1. Introduce in the curriculum appropriate experiences to provide career exploration, decision-making, and reality test-

ing for all elementary and secondary school students, as well as for vocational and technical education students at secondary and post-secondary levels.

2. Develop, distribute, and interpret educational media to facilitate career development experiences at all age levels.
3. Provide appropriate and sufficient vocational counseling assistance for all students, and for out-of-school youths and adults considering pursuit of vocational or technical education.
4. Provide group guidance activities specifically designed to maximize opportunities for career exploration and reality testing of career decisions, and, as needed for seeking and obtaining employment.
5. Expand and encourage the use of simulated and real work situations for career exploration and reality testing.
6. Teach decision-making skills through opportunities for and guidance in, actual participation in making educational, career, and social decisions appropriate to the individual's level of maturity.
7. Create motivation through active participation and interactions of children and youth in relating educational experiences to career exploration and decisions--make education relevant to career-life situations.
8. Develop a curriculum and procedures, including vocational counseling, that will make it easier and more rewarding for out-of-school youth and adults to reenter the educational program to acquire new technical skills directly related to employment.

9. To develop and support a program of job placement which will appropriately involve the project senior high guidance person and other education personnel (particularly counselors) in all placement action.

10. Examine the pliability and validity of test data for selection and placement in vocational curriculums and job situations. The significance of other variables, such as interests, personality, social and instructional factors should be considered in this process.

11. Institute a continuous follow-up of school leavers (graduates and dropouts) to provide information for the evaluation of program content and procedures in terms of external criteria and to provide futher appropriate assistance to individuals as needed.

12. Incorporate as many laboratory type activities as feasible to enable the student to achieve visable and concrete success as opposed to abstract and delayed symbols of success. This procedure will be investigated as a means of improving the motivation of many "hard to reach" youth.

The program design for second action year has been toward achieving the proposal design. Efforts have continually been aimed at meeting each of the goals and objectives of the original proposal. One Project objective that has not been possible to meet is: "To provide intensive and specific job entry training for students not previously enrolled in vocational programs just prior to their leaving school." The reasons are very basic. Our current high school facility is over crowded and the staff is utilized completely during the school day.

This is especially true of the vocational programs. The attitude of the NOW staff was to change the program design to compensate for this situation by increasing the emphasis of another program goal; "To provide intensive occupational guidance, counseling, and initial placement services for those individuals about to leave school." The success of this effort was noticable. However, additional findings resulted from this involvement. This is the case that exists at the high school relative to student employment assistance. It was discovered that several members of the high school staff were providing employment assistance yet there is no apparent communication or organization between the staff. Each member appears to act independently. The students generally seem to be unaware of such services, and have had to take the initiative to find out where to go and who to contact for assistance. The NOW Program staff and a member of the high school guidance department are currently conducting a study of the situation. To date information has been gathered from the principal, director of guidance, both assistant principals, and the vocational education department head. This summer a proposal will be developed and submitted to the principal for his consideration. The intent of such a proposal will be to organize the service, make it available to the student body as a definite part of the high school offerings and tie the service to the Maine Employment Security Commission Office in Lewiston, Maine.

The design utilized to meet the goals of the entire program are infered in the Evaluation Report (See Body of the Report, Section E.) The specific design was to provide NOW Program services to a definite population of students through assigning NOW staff members to specific

schools. This would establish a tronger communications system in that each administrator, teacher, and other school personnel would have one NOW staff member to work with specifically. The staff assignments were made by the coordinator after reviewing each member's background, observed attributes and desires, and after total staff discussions and planning of the design. One pupil personnel service member was assigned to the high school and two elementary schools, the other two a junior high and four lementary schools each. This breakdown gave each a nearly equal teacher load, student load, and socio-economic population. The assignment arrangement would also provide the opportunity to maintain a team effort in that each member was involved at similar educational levels. In so doing, assurances were established that in the event a staff member should leave the program a total void would not be created in a specific area. Also in the event that only a portion of the staff is retained by the school system to carry on career education at the termination of federal funding each member would be aware of the implementation aspects at all levels.

The design was developed to provide the opportunity for in-service career education workshops for teaching and other school staff. Difficulties were anticipated at the junior and senior high school level. Due primarily to the fact that the administrations and staffs of these three schools would be involved in preparing to move to new facilities--the high school to a completely new structure, eighth and ninth grades of the two junior highs to the current high school and sixth and seventh grades to an intermediate school (formally a junior high school). The program was successful in conducting several workshops dealing with career information, materials, equipment, and

in-service training for teachers at after school sessions and in one instance by providing substitute teachers. The after school sessions were conducted for groups made up from departments generally. However, several were groups with common interests in career education. Elementary workshops were conducted in a similar manner with the exception of one full workshop day being conducted early in the year. This workshop time was provided to the NOW staff by the Elementary School Supervisor.

The design or plan for involving regional schools in career education consisted of a preliminary meetings before the school year started, of each superintendent of the regional school systems by the coordinator of the NOW Program. At this meeting an indepth explanation of the program would be given, bibliographies of materials, equipment, and services would be presented for each member of the school's staff, and copies of the original proposal presented to administrators and department heads. In each bibliography there is a section with names, telephone numbers, and the location of each NOW staff member. At this meeting it was pointed out that services would be provided initially by their requesting services of us, that as the program progressed particular offerings in career education would be made. It was also strongly pointed out that we, as a staff or part there of, would be available to their systems for teacher and staff workshop presentations or community activities.

Cooperative Education would be expanded to forty students. This would be a 100 percent increase over the first action year. This expansion could be built into the design as a result of findings during the first action year. Basically, the Coordinator of Cooperative

Education had developed the program sufficiently, the community employers were very receptive to the initial year, and student demands indicated a very high interest in the program. It has also been favorably accepted by the high school administration and teaching staff. The Cooperative Ed. Program proceeded very satisfactorily throughout the year. Forty-three students were enrolled each in a career cluster compatible with his or her career abilities and goals. In several instances students pursued their education who had indicated tendencies toward dropping out of school. This aspect is not a primary goal of the NOW Program but is one that all educators are confronting daily.

The design was specifically concerned with development of hands-on experiences for students at all learning levels. To assure this tools, equipment and supplies would be obtained. Paraprofessionals would be engaged where necessary and strong emphasis would be toward utilizing teacher talents where possible. Commercially produced kits, games, and learning packages that involve hand-on activities would be purchased. The NOW Program was very successful in this segment of activities. Particularly at the elementary level where "mini-courses" such as knitting, woodworking, art, sewing, etc., were conducted. Section D Body of the Report contains a list and description of each of these activities. A very pleasing aspect of these activities is that they were conducted by existing staff in most cases. The design of the program is to utilize the existing staff when ever possible, thereby encouraging continuances of career education activities after federal funding ceases.

Generally, the design of the NOW Program for the second action

year has been effective. The permanent staff of the Lewiston School Department has accepted career education and are placing strong demands on the NOW staff to increase and expand services. The administration is highly interested in career education becoming a permanent part of the on-going curriculum. The community in general is beginning to notice the impact of career education. Students are a strong source of public relations through visits to community resources, and many citizens have been asked to come to the schools to share their career experiences with students. It has been a gratifying year in relation to the impact that the NOW Program has made regionally, statewide, and nationally. The NOW staff has made several presentations on career education to a variety of groups from many learning areas. This information has been included in Section D of this Report.

D. ACCOMPLISHMENTS AND RESULTS

Vocational Exploration Group

Students can be helped to make wise personal decisions concerning their roles as members of the world of careers and service. To assist secondary students in making these choices, NOW staff contacted Dr. Calvin J. Daane, Studies for Urban Man, Tempe, Arizona, Professor of Education at the University of Arizona, in the spring of 1972 for information about inservice training for leaders and trainers of Vocational Exploration Groups. (See Attachment 1.)

Initial planning took place during the summer to bring Dr. Daane to Lewiston. Contacts with the Superintendent of Schools in Lewiston about the proposal were made. The reaction received was encouraging. The date for training was confirmed for the last week in November. Four days before Dr. Daane's arrival, however, two administrators in Lewiston expressed serious objections to the training because of a sentence in the proposal stating: "The training program (and subsequent leading of Vocational Exploration Groups) can be designed to become an elective in the secondary school curriculum." The principals interpreted "can" as "will" and felt threatened, thinking NOW staff was dictating curriculum change that was the responsibility of administration. A meeting of the respective principals and NOW staff clarified the intent, and VEG training was rescheduled for February 1973 during school vacation week.

Dr. Daane and Dr. Murray Simon, VEG Consultant for New England States, arrived in Lewiston on February 25. The training was con-

ducted by Dr. Daane, who with his associates, had developed VEG P ogram, a process of aiding both youth and adults in small groups (5 people) toward job choices which are realistic and self-satisfying.

The goals of the VEG training in Lewiston were 1. to increase the involvement of teachers and counselors in career education activities, 2. to increase the understanding of career education activities by teachers and counselors. The teachers and counselors were employed by Lewiston and regional school systems. It was hoped that guidance services for students would be increased beyond the present status by training both counselors and classroom teachers in small group process involving job exploration.

Trained leaders conduct groups of students primarily in grades 8-12 in their exploration of job personalization and tentative job choice. The goal of the Group is for each member to understand the man-job relationship and to apply the understanding to himself and his own situation.

Twenty-four teachers and counselors including NOW staff, were trained to conduct VEG and 78 students and 31 adults experienced the process during the week. Three NOW counselors were trained as trainers. Research was conducted: pre and post test of employability perceptions and perceptions of social alienation (social distance and believability) were administered to leaders and group members during the week. (See Attachment #2.) The same instruments were administered to a control group. Results of the surveys indicated that 95.04 percent, less than 5 percent, and no respondent felt positively, neutral and negative respectively toward the VEG

experience. An evaluation by the third partyteam (Dr. Clyde Folsom and Dr. Thomas Skaggs, University of Maine in Orono is included in Section E. Evaluation.

The Maine State Department of Education and Cultural Services granted 3 credits toward recertification for the three trainers and 1 recertification credit for the twenty-one leaders who completed the training. Leaders certificates and trainer certificates were issued by Studies for Urban Man.

Since the February training was completed, students in the various schools represented by leaders have been involved in VEG experience. Students volunteer for the program from study hall and activity periods. Some teachers who are leaders conduct groups in their classrooms during the school day. Some students remain after school or return in the evening for the short (2-hour) VEG program. At least 28 additional groups of junior-senior high school students (5 per group) have been conducted in Lewiston since February. Thirty-three Lewiston teachers have experienced the VEG process in workshops.

NOW staff members have conducted VEG Demonstrationsin Freeport, Waterville and Cumberland, Maine. The NOW staff has been accepted to participate in the New England Personnel and Guidance Conference at Hyannis, Massachusetts in October where they will conduct VEG.

Shortly after school opens in Maine for the 1973-74 term, plans are being developed for contacting all VEG leaders in Lewiston and Lewiston Region to obtain information relative to the utilization of VEG kits on loan to leaders and the conduct of groups in regional schools.

Student Tutors in Achievement of Reading Skills (STARS)

An original exploratory "hands on" experience for high school students was implemented in September, 1972 and continued throughout the 1972-73 school year.

The objectives of the STARS project were 1. to help secondary school students who aspire toward social service careers or leisure time activities to assess themselves in light of their interest, ability, and personal characteristics relative to future plans, namely teaching; and 2. to help children in the intermediate and junior high school grades gain the self-confidence required for success in increased reading skills.

Procedures for conduct of the research involved recruitment and training of 15 secondary student volunteers as tutors in reading. A control group was selected for statistical comparison of change in tentative career choice.

Selection and tutoring of 15 intermediate and junior high school students who were identified by a standardized reading test as poor readers to receive individual reading assistance each week for the remainder of the school year. A control group was selected for statistical comparison of change in reading achievement.

The secondary school students were administered the Strong Vocational Interest Blank in pre and post sessions. The intermediate and junior high students were administered SRA Reading Achievement Tests in pre and post sessions.

The experimental group of STARS received 18 hours of intensive training conducted by Literacy Volunteers of the Pine Tree State, Inc., September 25 to 29, 1972. Basic reading skills and techniques

were emphasized. STARS control group received no training. Subsequent to the training STARS Experimental Group (Tutors) were matched with an intermediate or junior high tutee to teach reading in a one-to-one relationship weekly in the school the tutee attended.

NOW Program arranged transportation for STARS from Lewiston High School to the tutee's school during the school day.

Findings of the first year of the STARS Project are summarized:

Fourteen STARS were matched with tutees.

The STARS tutored a total of 217 hours during 284 sessions. (See Attachment 4) Three STARS were matched with new tutees when tutees transferred from Lewiston. Nine tutees increased in reading achievement totaling 114 months (growth range +4 to +36 months). Four tutees decreased reading achievement totaling 17 months (range -1 to -11 months).

Seven students in the control group of tutees increased their reading achievement totaling 120 months (range +11 to +35 months). Six decreased reading achievement totaling 24 months (range -1 to 10 months).

No significant differences existed between the two groups of identified poor readers in acquisition of reading skills.

Questionnaires administered to STARS and classroom teachers who utilized STARS (See Attachment 4) disclosed the following data:

STARS (12 responded) A large majority indicated that they enjoyed the training and the tutor-tutee relationship were helped by the experience, know more about the teaching-learning process and liked to tutor. Ten STARS expressed a desire to continue tutoring during the 1973-74 school year if school scheduling does not

preclude the activity.

Classroom Teachers (N=14) All teachers indicated that STARS conducted themselves professionally and that they would use a trained tutor again. Most teachers expressed highly favorable comments about the STARS' adequacy to tutor and to establish rapport in the preparation of lessons, etc. A few teachers were less favorable regarding the STARS' regular attendance and promptness in arriving.

Most teachers observed behavioral changes in the tutee in such areas as acquisition of reading skills, transfer of reading skills, increased general academic achievement, and increased self-concept. A few teachers reported no change in the tutee in academic achievement, personal growth, or attitude toward school.

STARS Strong Vocational Interest Blank Scores, Experimental and Control Groups. Pre and post are in process of being compared for change in career choice and for testing the significance of change in career choice. The findings will be reported at a later date.

Problems. During the term of the STARS Project, several serious problems were encountered. 1. "Too many cooks spoil the broth" is an apt adage in this experimental venture. The "matching" of each STAR with an appropriate tutee was accomplished at each of the two elementary and two junior highs by teachers assigned by the principal to select tutees and be responsible for tutoring sessions. In a few instances, the teachers selected tutees whose behavioral problems, attitude, and or aptitude held little promise for success on the part of the tutee or STAR. 2. STARS academic schedules and after school activities (several STARS obtained part-time jobs dur-

ing the school year) occasionally interfered with the tutoring schedule. 3. Transportation sometimes posed problems. Cabs were scheduled to deliver STARS to and from schools, and occasionally the cab was late, resulting in a shorter tutoring session and some STAR and tutee frustration.

Evaluation. The STARS project is considered a success because it provided the opportunity for 14 high school students to experience an important aspect of a teaching career. Ten of the 14 STARS expressed a desire to tutor this fall (2 graduated, but they expressed much satisfaction from the experience and said they would repeat it if they were still in school). All 14 teachers reported they would use a STAR this fall if they project continues.

Although no significant statistical difference was found between the experimental and control groups of tutees in the measured achievement of reading, the tutees and their classroom teachers stated that the tutoring sessions and relationship of tutor-tutee had a beneficial influence on most of the tutees. This, alone, constitutes justification for the project, for if 14 elementary and junior high school students in academic difficulty can experience a pleasant one-to-one learning relationship one or more times a week in a school setting, voluntatily, a successful step has been taken.

In conclusion, plans are in progress for continuing the STARS Project for one more year. Extreme caution will be exercised to reduce the problems listed above and to achieve both goals of the STARS Project to a higher degree.

Field Trips

The NOW Program was very active relative to the sponsoring of field trips in an effort to enrich career education activities in Lewiston's area schools. The primary function of each field trip was to supplement existing classroom instruction with a relationship to careers involved relative to the area of study. Many of the field trips were process and product oriented; however, resulting from diligent field trip preparation and follow-up, career exploration/orientation activities (in conjunction with the process/product) generally prevailed. The NOW Program staff developed guidelines relative to organization, conduct and follow-up of field trips. (See Attachment 5)

In-Service Training and Workshops

Throughout the second year the NOW Program staff involvement in workshops and in-service training activities increased significantly. At the local level, NOW Program staff were constantly conducting workshops relative to the use of materials and equipment for use by classroom teachers; however, relating to other than Lewiston School System presentations, the NOW Program was very active in attendance, participation, and presentations at the state, regional and national levels.

Of major significance, via NOW Program participation and input includes the development of a State Career Education Guide for grades K-12 and the NOW Program attendance and presentation at the American Personnel and Guidance Association National Convention conducted in Atlanta, Georgia. Details relative to the impact of these activities are discussed separately in this report.

Film Library Service

During the summer of 1972 the NOW staff comprised a listing of free films relative to career education and ordered these free films to be used by the Lewiston School System during the fall of 1972. The two major reasons for NOW coordination of this free film service were (1) to reach the largest, appropriate audience possible and (2) to reduce the cost to provide the most economic service possible. The free film list was distributed by NOW to the teachers at the beginning of the school year, September 1972, so that the teachers could make appropriate plans to include the films within their course content. The film list contained a brief discription of film content and the date that the film would be available to the school system. (See Attachment 6)

Play School

Playschool was part of the 9th grade Home Economics Child Care Program taught by Mrs. Celia Treworgy. The playschool was operated four times a year the last two weeks of each academic quarter. Prior to the actual playschool experience the students had the opportunity to visit various kindergartens, nursery and day care centers throughout the community. Various resource persons were also utilized in the classroom such as day care supervisors and a person from the Maine Department of Health and Welfare who trains day care aides. The NOW Program provided furniture for play school, help in obtaining resource people, and arranging visits to centers outside the school setting.

Delta Dart

Curriculum Development. Regarding progress made in the area of curriculum development, a NOW staff member and 2 teachers from Coburn School developed a unit of instruction on careers related to air travel and transportation for the 3rd grade class. The unit of instruction includes representatives from or field trips to the following agencies: Trans World Airways, Inc., United States Air Force, Lewiston School Art Department, Portland International Jet Port, and the Portland Weather Station. Equipment and materials supplied by the NOW Program included: video tape recording system, films and cameras (35mm and Kodak Instamatic), tapes, a class prepared simulated airport and material from Bowmar (Man Has Wings.)

The entire 3rd grade class participated in a Delta Dart Project. This was sponsored by the Educational Division of the Civil Air Patrol, the Federal Aviation Administration, the Hobby Industry Association of America, the National Aerospace Education Association, the National Associates of State Aviation Officials, and Aero Products Research, Inc. The Delta Dart Project involved each member of the class in the making of a model airplane, flying the airplane, and submitting flight data and findings to: Dr. Marian Wagstaff, Chairman, Secondary Education, School of Education, California State College at Los Angeles, 5151 State College Drive, Los Angeles California 90032.

The Delta Dart Program goals and guidelines are available in the Teacher's Guide for Delta Dart Educational Studies sponsored by the Education Division of the Civil Air Patrol of the Federal Aviation Administration, the Hobby Industry Asso. of America, the National Aerospace Education Asso., the National Asso. of State Aviation Officials and Aero Products Research, Inc.

Proposed New Course Offerings

At Lewiston High School, a member of the NOW staff and two teachers developed and proposed three new course offerings hopefully to be offered as part of the 1973-74 academic year.

The course offerings are not strictly career oriented, but a great deal of career information will be offered as part of the courses relating to possible career areas, levels of required training relative to specific jobs, and general exposure to jobs created via the subject to be taught. The three course titles are: Anatomy and Physiology, Environmental Studies, and Advanced Biology. Specific course descriptions follow.

Anatomy and Physiology

Course Description: Anatomy and Physiology is designed for those students either currently taking the Health Occupations Program or interested in becoming a L.P.N., Medical Secretary, or any other related medical career. Career information is provided throughout the course to inform students of those careers available in the field of medicine upon completion of high school.

Course Length: 18 weeks.

Prerequisite: Biology

Environmental Studies

Course Description: Environmental Studies is a course for those students interested in the environment and careers which are focused on the improvement of the environment. The course will include projects dealing with careers in the areas of noise, air, solid, and water pollution.

Course Length: 36 weeks.

Prerequisite: none.

Advanced Biology

Course Description: Advanced Biology is an advanced placement course for those students considering a career in the medical field, to include career information, as a Doctor of Medicine, Doctor of Dentistry, or a closely related field such as a career in nursing.

Course Length: 36 weeks.

Prerequisite: Biology, Chemistry, and teacher approval.

NOW Gram

During the month of October, a weekly newsletter was developed by the NOW Program staff. The purpose of this newsletter was two-fold:

1. To inform all principals and teachers of NOW Program activities related to career education, and
2. To provide positive public relations for the NOW Program and for the teachers involved with NOW Program activities in their classrooms.

The weekly newletter proved to be very successful relative to the above mentioned goals. As a matter of fact, teachers began to compete with each other for NOW Program acitivites to be conducted in their classrooms sometimes simply because they would want to see their name and classmentioned in the newsletter. School administrators looked forward to receiving the newsletters so they would have current printed information relative to NOW Program involvement within their respective schools.

The newsletter was officially called CAREER EDUCATION NOW. Copies of the newsletters disseminated during the 1972-73 academic year are attached. (See Attachment 7)

Classroom Involvement/Activities

During the year, the NOW Program became very active relative to classroom involvement. The services offered and conducted by the NOW Program staff included demonstrations of equipment and materials, instructional techniques relative to field trip preparation and follow-up, development and utilization of classroom, student oriented, activities emphasizing career education, etc.

All in all, it can safely be said that all schools in the Lewiston Public School System were positively influenced by the NOW Program.

A large number of Lewiston's teachers requested and received NOW Program in-put relative to their classroom presentations which included 10 elementary schools, 2 junior high schools and one senior high school.

Human Resources Directory

Since the inception of the NOW Program, many teachers requested the NOW staff to arrange for guest speakers to come into the classroom to discuss careers in related subject matter areas. The increasing number of requests led NOW staff to compile a comprehensive listing of persons willing to assist students in the exploration and pursuit of their career and educational activities. The directory serves as a reference source for the NOW staff in identifying people in local businesses, industries, materials, professions and services for an actively oriented career development program. How we developed the directory follows:

The Lewiston-Auburn Chamber of Commerce Directory was used as the initial source from which to build the listing. In January of 1972 letters were sent to more than 200 selected clubs and organizations in the Greater Lewiston area. The letter explained the objectives of the NOW Program and the part a resource person might play--the contribution he might make to students. A form was enclosed for completion and return in a stamped, addressed envelope.

Approximately 50 persons responded within a two-month period. Since that time more than 150 guests have been added to the list by telephone contact from the telephone yellow pages, newspaper articles, or through conversations with people who knew someone with the expertise teachers requested. Upon receipt of the resource person's agreement to meet with students, a card file was developed by NOW staff. The card contains the name, address, business address, telephone number, interest area, grade level preferred, source of the person's name, and date of agreement.

Teachers were informed of the availability of speakers by topic, not by name. (See Attachment 8)

Teachers request a speaker by topic. A NOW staff member identifies an appropriate resource person, contacts him, (usually by phone, sometimes by letter) and establishes time, date and classroom to be served. The teacher is then notified, and NOW staff sends a confirmation letter to the resource person. Teachers use prepared field trip guidelines to help students develop questions to ask resource persons during an orientation session held prior to the visitor's appearance in the classroom.

Some of the visitors are taped, video-taped, and pictures are taken for follow-up activities in the classroom which are or can be shared with other classrooms. Thank-you letters are written by students and NOW staff send a thank-you letter to the resource person, and enclose an evaluation form to be completed and returned. (See Attachment 8) Teachers complete and return to NOW staff a teacher evaluation sheet. (See Attachment 8)

During the first two years of the NOW Program more than 200 resource persons met with students in classrooms. Only rarely had dissatisfaction been reported by teachers, students, or resource persons in instances where the guest's contribution was perhaps too sophisticated for the developmental level of the students. NOW staff consider the human resources directory a great success in bringing together the workers and students in a sharing of career information. Recommendation: A clerical staff member be assigned to receive teacher requests, make the arrangements and keep accurate records, thus relieving NOW counselors for other professional activities.

Rent-A-Kid

In September 1972 final planning took place to implement Rent-A-Kid at the beginning of October. In conjunction with a representative of 4-C (Community Coordinated Child Care Program, a Model Cities funded agency dealing with children and youth) plans were made to find a location for an office and telephone, obtain a secretary, and set up files, provide publicity to prospective employers, and to obtain those students wishing to participate in Rent-A-Kid.

Rent-A-Kid is a non-profit program which acts as a clearing house, matching temporary jobs with youths ages 13, 14 and 15 who are interested and looking for work. The employment may be a one-time service after school, on weekends, or during school vacations. (See Attachment 9)

An office was obtained which was part of the 4-C complex but away from the main office area of the 4-C program. A secretary, (a participant of the Neighborhood Youth Corps Program dealing with youths 16 and 17 who are out of school and also out of work. NYC provides counseling, education and referrals to work stations similar to Rent-A-Kid) was obatined to begin manning the office the first of October. due to the nature of the NYC Program the secretary was to be on duty from 11 a.m. to 4 p.m. daily and would be paid by the funding of NYC (the duties of the secretary are outlines in Attachment 9).

At the outset of the Rent-A-Kid Program, NOW helped provide equipment necessary for the office, advertisement on local radio stations, and recruitment of employers and prospective student employees.

In October 1972, Rent-A-Kid made its initial impact in the community. Approximately 75 students were enrolled for prospective employment from the two public junior high schools and one parochial junior high school. During the fall months, student employees did odd-job work such as raking lawns, mowing lawns, painting, babysitting, light housework, etc. In October and November 52 students had been placed in some type of employment and others had been contacted about prospective employment but rejected the employment for various reasons. Employers seemed very satisfied with the work performed for them. During the Christmas vacation period 15 students performed part-time duties throughout the community.

In the latter part of November and the month of December, the Rent-A-Kid Program had some difficulty with having the NYC secretary present in the office so the Rent-A-Kid office was moved to a more convenient location relative to the 4-C setup in January and the services of the NYC secretary were terminated. Location of the Rent-A-Kid office in the centralized 4-C office complex made it relatively easy for the phasing out of NOW assistance though one member of the staff sill maintained an advisory role.

Rent-A-Kid continued to be a service offered to the community with basic control of the program being the responsibility of the 4-C Agency until June 1973 when Model Cities funding of the 4-C program was terminated. With the termination of the 4-C Program, another agency was needed to sponsor Rent-A-Kid and the Jewish Community Center was the agency which willingly accepted the responsibility of Rent-A-Kid, where the program is currently located.

Spring found Rent-A-Kid with 102 students who were potentially active for placement and those placed for employment were averaging between $1.60 and $1.80 per hour for services performed. Rent-A-Kid was averaging approximately 12 placements per week and had, at the end of April, obtained six full-time summer placements for the students. During the April vacation week, 23 placements occurred.

The NOW Program is proud to see the accomplishments of Rent-A-Kid and to have been an initiating force in the program. Also, NOW is proud to have worked closely with 4-C in setting up and implementing the program with an agency which was felt to be more permanent than NOW which is funded only for the three year period.

Career Days

As part of the total on-going NOW Program in career education, a one-day Career Education Day was held in the two junior high schools---Montello Junior High on February 13, 1973 and Jordan Junior High on February 14, 1973. Ninth grade students and teachers participated. On May 9, 1973 a Career Education Day was held at Frye Elementary School for all students and teachers in grades K-6.

At the 9th grade level the purpose of the program was two-fold: (1) as an in-service experience in career education for the staff, and (2) to provide greater career awareness and exploratory experienc for the students.

Objectives of the program were: (1) more teachers will become aware of career education concepts by planning and implementing a Career Education Day, (2) teachers will integrate career education components into their regular class for the one day, (3) as a result of the program teachers will integrate career education components into other phases of their curriculum during the school year, (4) the teachers will become aware of the available career education resources, (5) students will become more aware of various career opportunities.

The activities for planning, implementation, and evaluation of the program included:

1. A meeting was held between the NOW counselors and the Junior High School principals to establish format and dates.

2. An in-service meeting on career education was held with the school staff relative to objectives of career education, the ways teachers could integrate career education components and activites

into their classrooms, career education resources available from the NOW Program--career kits, audio-visual materials, sample lesson plans.

3. The teachers completed a brief outline of their objectives and activities and evaluation procedures they intended to follow.

4. The teachers completed a survey form indicating resource material and equipment they would need.

5. A Career Education Day was held at which time the teachers and students explored careers through films, filmstrips, kits, interview tapes, and in one classroom, students demonstrated practical application of job knowledge and skills by setting up a restaurant where they prepared and served finger foods. NOW Staff were available to assist where needed.

6. A survey of teachers and students was conducted upon completion of the program to determine their attitude toward career education activities and the program.

A summary of the evaluations follows:

1. Both students and teachers expressed positive comments about the experience.
2. The vast majority of the students indicated an increased knowledge about careers.
3. A large number of the students indicated a need for more information and experiences.
4. Teachers felt a course in career education should be offered 9th grade students as an elective.
5. Teachers expressed an interest and willingness to include career education activities within their curriculum.

In February 1973 planning for a career day at Frye Elementary School began by contacting the Lewiston Auburn Chamber of Commerce to ascertain the possibilities of having its members participate in a Career Day. The Lewiston-Auburn Chamber of Commerce was more than willing to participate and planning was initiated through cooperation of the Chamber's Education Committee. The Chamber members were surveyed and 23 members indicated they were willing to participate. NOW Program and Frye School Staff enlisted seven other agencies to also participate for Career Day. A total of 30 business or agencies offered their assistance by opening their doors for the student groups while others offered to make presentations at the school. On May 9, 1973 the 320 member student body of Frye School and the 30 businesses or agencies cooperated in providing a successful career education experience for all.

Participating Agencies

Lewiston Fire Department
Beal's Laundry
Lewiston Police Department
Regional Blood Bank
Bellegarde Custom Kitchens
Marcotte Chevrolet
Roak the Florist
Maine Camper Products
Philips Elmet
Seltzer-Rydholm
Robert Pacios (CPA)
Neo-Craft Sign Co.
Cable Vision
Grant & Grant Caterers
Geiger Bros.
St. Mary's General Hospital
Central Maine Power Company
Sam's Italian Shop
Central Maine General Hospital
Lewiston High School Vocational Dept
First National Store
Dr. George Bournakel
Holiday Inn
Hillcrest Poultry
Country Kitchen Bakery
New England Telephone Company
E.A.B. Recording Studios

Staff Development Cooperatives

Relative to curriculum development activities NOW Program staff members have begun to concentrate their efforts on specific career education programs to be implemented in the classroom involving hands-on activities. With regard to NOW Program activities geared in this direction, Frye Elementary School in Lewiston and Washburn Elementary School in Auburn have joined forces due to their joint receipt of a federal grant supporting Staff Development Cooperatives (SDC). The primary function of SDC was to study, plan and implement curriculum changes in each school's respective school system. The NOW Program, through the efforts of one of the Program's Pupil Personnel Services persons, has been involved with the SDC staff relative to the planning and implementation of career education activities within the design of the SDC Program. Emphasis, relative to NOW Program activities, is currently scheduled to be conducted at the Frye Elementary School in Lewiston utilizing as many student hands-on learning activities as possible. Through the utilization of career oriented mini-courses, it is expected that many careers will be explored as a result of NOW Program input into the SDC Program. (See Attachment 10)

American Personnel and Guidance Association Convention at Atlanta

The 1973 convention program was developed around the theme, "Proactivity: The Now Imperative." The format and nature of the programs were oriented toward workshops, current and future counseling problems, student programs, research, and major social concerns. From the 250 content sessions, NOW Staff members studied the program as a group and predominantly selected to attend, individually, sessions covering themes related to career education and a few programs with potential for integration into career education.

The following sessions represent a sample of the programs that seemed pertinent to NOW Staff needs and, therefore, were attended by a member of the Lewiston group.

Field Trip to Cobb County Occupational and Career Development Project: The purpose of this program is to give counselors an understanding of the role of the counselor in career development program for grades 1 through 12. The major emphasis in the program will be on opportunities to talk with counselors and teachers actually involved in such a program, one which is in its third year of development. Participants will have opportunities to visit classrooms and talk with students. The Cobb County Occupational and Career Development Project is considered by many persons working with career education to be one of the outstanding projects of its type in the country. The project staff has been called on by school systems in almost every state in the continental U.S. to hold training sessions for personnel in those systems regarding implementation of career education programs. It is a pilot project operating in a cluster of schools which together comprise grades 1 through 12 with more than 5,000 students. It is now in its 3rd year of operation, making it one of the oldest

projects in the country aimed at creating a developmental program of career development. Many ideas have been tried; many have been discarded; what remains is a tested model that can be generalized to the remainder of the school system. The Cobb County Occupational and Career Development Program, is one of orientation and information at the elementary level, information and exploration at the middle school level, and exploration and preparation at the secondary level. This is all built around a career development these, which includes the student's evaluation of self-characteristics, exploration of broad occupational areas, introduction to the economic and social values of work, introduction to psychological and sociological meaning of work, explanation of educational avenues, and development of the student's process of decision making based on the foregoing items. A unit approach is the structural framework for implementing orientation, information, and exploration activities through regular classes. Six elements are incorporated into all units on all grade levels; hands-on acitivities, subject matter tie-ins to the activities, role-playing, field trips, resource people, and introduction to occupations in the community that are relevant to the unit. This type of unit gives the student learning by doing (concrete to abstract) experiences, enable the teacher to point out the relationship and interdependence of the academic disciplines to one another and to various work roles in the community, and give the teacher a vehicle by which she can incorporate career awareness activities into the existing curriculum. At the junior high level there are career exploration programs built around simulated or real work experiences. Preparation programs in high school include both work-study and cluster

approaches. Educational or job placement services are available to students leaving school.

Field Based Process Consultation Teams--A design for Inservice Training. For the past several years we have been involved with inservice training programs for counselors as participants and also as leader-consultants. This experience has shown that the typical one-day inservice programs are not adequate to meet the needs of individual counselors and do not contribute to the development of ongoing programs. Generally, the goals and content of these programs are decided on by top administrators in school districts, and the programs are treated as isolated events rather than as a developmental process of individual skill-building or program development. We would like to present an alternate proposal for the inservice training of counselors. This model is specifically designed to help the inservice team assess their own needs, both individually and as a group. In this model, the leader-consultants are viewed as resource people rather than as experts to respond to or provide input relative to the specified needs of the inservice team. The model is designed to demonstrate how the inservice counselors can evaluate and plan follow-up activities to the inservice program and generalize the model to other planning or inservice groups within their districts. Accordingly, our program will include a presentation discussing the rationale and a working description of the process consultation model, a presentation describing how the model has been specifically applied to inservice training for counselors, a presentation describing the evaluation and follow-up method of the model, reactions toward the model by two pupil personnel service directors and opportunities for audience discussion of any of the issues presented.

Career Development: Georgia's Commitment to Action. Career education is more than an idea in Georgia. Counselors, educators, community and business leaders at all levels of educational involvement are translating the needs and philosophies of career development into a personal commitment to programs and ideas that offer students a wider base of experiences for self-understanding and career clarification. The proposed program intends to relate how such a commitment became a reality, how career education operates in Georgia, and how individuals can become involved in the process of facilitating the career development of all students. Georgia's concept of career education includes an organized, comprehensive instructional program at all grade levels designed to facilitate career development through awareness and orientation, exploration, decision-making, preparation, and placement experiences. After an overview of the underlying concepts of the state-wide effort, individuals involved in various phases of career education will present a short summary of their program and how it can be implemented. During the second phase of the program suggested for the following day, travel will be arranged for participants to visit any of the career education programs operating in the Atlanta area in order to interact with students, teachers, administrators, and businesses involved in career education. This outreach effort emphasizes member participation in the on-going process of career education.

An Effective Functioning Inschool Suspension Program. The high school dropout rate and the student who experiences difficuly are areas of everincreasing concerns. Due to a myriad of reasons such as higher sophistication level of today's students, unnecessary

curriculum requirements and materials, irrelevant school demands, and incompetent school personnel. It seems that school administrations are not as concerned with the unsuccessful student as with the successful one, and therefore, programs which speak to the needs of the former are punitive in nature. The suspension model developed by a group of educators, is designed to intervene in the life style of students potentially and actually experiencing difficulties with school and offer alternatives and vehicles for change.

Experiential On-The-Job Counselor Supervision in Employment Counseling. Much has been written about the supervision of practicum students in counselor education, but there is little material available about supervising a trained counselor on-the-job. The kind of supervision presented in this program is designed to help the counselor increase his effectiveness in helping his clients. The supervisor does this by providing instant replay to the counselor on how he is functioning as a facilitator in actual counseling interviews. The two methods used and demonstrated in this program are co-counseling and videotaping of actual counseling interviews. The supervisor as a co-counselor responds to the feelings of both the counselor and counselee as well as responding to his own feelings about the particular situation. A videotaped interview is played back to the counselor immediately upon the conclusion of the interview. The counselee is invited to watch the playback and interact with the counselor and supervisor. The development and implementation of a counseling supervisory role and function in the Florida State Employment Service will be presented and discussed.

Evaluating Career Education Programs. The Career Exploration

Programs, planned on a pilot basis for the 1970-71 and 1971-72 school years, were an attempt in Ohio to help all students in grades 9 and 10 to make better career decisions. In order to accomplish this goal, students in selected schools were provided with extensive exploratory experiences in segments of the world of work. The findings presented in this paper resulted from an attempt to determine to what extent the concept of Career Exploration Programs was successful in helping a student to learn more about himself and the world of work so that he can make wise career decisions. The specific objectives of the evaluation of the Career Exploration Programs were: (a) to help the student to develop more appropriate career interest patterns based upon knowledge of himself and the world of work, (b) to help the student to develop more appropriate educational and vocational plans and goals based upon knowledge of himself and the world of work, (c) to help the student develop a positive self-image of himself as a person and as a potential worker, and (d) to provide a program that will be considered worthwhile by the parents of the students in the program. The proposed program will focus on the presentation of techniques used and data obtained from the study. In addition, suggestions for future career education programs and evaluations will be discussed.

Contemporary Curriculum for Career Development Project, Knox County, Tennessee. Career development as a viable concept has recently gained high visibility both in writings and in statements by prominent public officials. As a result of these acitivites, legislation has provided monies for various pilot and demonstration

programs. This presentation will describe an exemplary program in career development covering grades K through 12. Special emphasis will be on curriculum reform and will offer teachers various strategies for incorporating career information and experience into their course work. An introductory sound-on-slide presentation will be offered as well as a presentation by the Knox County representatives. Questions and reactions from the audience will be solicited.

Career Education Learning Activities--A "Line Production" In-service Experience. The way people are organized in any enterprise to perform a specific job task is often called the human side of the enterprise. As a content program, 3 participants (representing a local school district and a university) will present and demonstrate how one school system created an experience for teachers and counselors resulting in the development of career education learning activities for social studies curriculums in grades 3 through 9. Presentations and visuals will demonstrate how 29 selected teachers, counselors, supervisors, and administrators spent a two-week work session to develop and improve learning activities using a "line production" approach. The human side of the enterprise provided an environment for strengthening interpersonal relationships and for developing and accepting concepts appropriate for the introduction of careers to boys and girls in the school. By using a social studies curriculum (grades 3 through 9), through classroom teacher creativeness, along with counseling resources as a team, the line production service activity followed these steps: (a) developing and accepting concepts appropriate for the introduction of career learnings to pupils in grades 3 through 9; (b) preparing learning

and behavioral objectives consistent with accpeted concepts; (c) creating career education learning activities to be used in social studies curriculums; and (d) evaluating student learning and behavioral outcomes. Through this line production inservice work, teachers and counselors developed curriculum guides, identified resource materials, and found new ways for teachers and counselors to work together in providing career education learning activities for pupils.

Job Placement: A Function of the Counselor? The principals will include such points in their presentation as the complexity of a job placement program within a high school and the importance of involving the vocational education teachers and coordinators in a team placement effort. The counselors will talk about their work with individual students in helping them prepare for the work world. Essential in the counselors' work with students is helping them to form positive attitudes toward work itself. Counselors give assistance to students in their decision to acquire additional skill training or education beyond high school. The state department representative will discuss plans which the state department has developed for expanding the job placement program throughout the state. The session will examine all the aspects of feasibility of conducting a job placement center within the counseling office of a secondary school. It will deal with the necessity or desirability of such a service, the obstacles and challenges, and the design of a school job placement office. Alternatives will be considered. The background for this program session will come from a student job placement program, entitled Developing, Operating, and Evaluating a

Local Job Placement Program, which has been developed in two of the Atlanta Public Schools during the 1972-73 school year. The program is funded through the Georgia State Department of Education (Office of Adult and Vocational Education of the State Board for Vocational Education). The participants on the panel will include those people who have been instrumental in the establishment of the Job Placement Program at Archer and O'Keefe High Schools in Atlanta.

Student, Counselor, and Computer: The DAT Career Planning Report. Specialists in guidance have noted the importance of starting career planning and exploration early and in ways which are likely to prove helpful in future decision making. The DAT Career Planning Report is the result of integrating an understanding of the student and information about occupations to produce messages which the student and his advisors will find valuable. The report reflects the knowledge of counseling experts applied to the student's aptitudes as revealed by the Differential Aptitude Tests, to his aspirations, to his school subject and occupational interests. This report should serve as a guide for the student, his parents and counselors, as they discuss and refine career plans. The panel will talk about the underlying rationale of the DAT Career Planning Report, the sophisticated planning and programing needed to produce messages easily understood to the student, and will evaluate reports of actual students.

Middle-Junior High School Counselor Workshop. In spite of the fact that one of the prime goals of education is to help students make well considered and well informed decisions and with the full realization that our society is offering increasing numbers of

options that are constantly changing, little has been done to help students learn how to make decisions. The need for developing skilled decision makers is evident at all levels of education. Perhaps a key point to introduce decision-making skills or to deal with these skills is when a student is in the middle school years. This program session will describe and demonstrate a decision-making curriculum that is currently being used by middle school students in a variety of schools across the country. The session will feature audience participation and interaction through a series of group exercises, discussions, and games. Participants in this session will learn firsthand how the program can be most effectively implemented in schools, become aware of the overall potential and implications for introducing decision-making into the curriculum, and gain insight into the teaching techniques that can be used to attain program objectives.

Child Drama--An Ego-Building Process. The program will consist of a presentation and dialogue, illustrated or highlighted by films, introducing child drama as an ego-building process. This is an activity of interest to school counselors and other guidance or psychological services personnel who work with children because of its potential as a self-concept enhancing process. The basis and scope of child drama and the structural model developed by Dorothy Heathcote, Newcastle University, England, will be explained by the presenters who have studied with Mrs. Heathcote. The Films, Improvised Drama--Part I and Three Looms Waiting, made by the British Broadcasting Company, illustrate the way a drama develops spontaneously with children and show a number of diverse groups engaged in

improvisations. The audience will be encouraged to discuss the use of this form of drama in schools or other institutions.

An Innovative Approach to Decentralizing and Individualizing Pupil Services. To provide comprehensive counseling services to all students in the 10th largest school system in the United States is the basic goal of the ESEA Title III Project. Awarded the Educational Pacesetter Award by the President's National Advisory Council on Supplementary Centers and Services in April of 1972, this project involves six major components: (a) the cluster plan for organizing pupil services; (b) a system-wide, task-oriented approach to group counseling; (c) parent understanding through learning and shared experience; (d) the career satellite program; (e) the school registrar program; and (f) evening walk-in counseling centers. This convention program will review each component of the project and discuss the implications for providing effective comprehensive counseling services.

Peer Counseling: A Training Program for Junior High Students. This program will present the specific training and research procedures being used at Pattonville Heights Junior High. Students are being trained with a Carkhuff model modified for junior high peer counselors in group settings. The goals of the program are to train junior high students to become competent in facilitative communicative skills that can be used in a peer group sounseling experience with students as leaders. The program will explain the rationale, philosophy, and procedures of a peer group training program for improving the effective communication skills of junior high students and explain the mechanics of setting up an operational

training program. Then a demonstration group training process using members of the audience as group participants will be presented. The procedures and effect of the training process through the use of videotape excerpts of actual groups in operation will be demonstrated. Finally, future plans for using trained students in leadership and counseling foles within the school systems will be explained, and the program will be opened up to questions from the audience Through this program it is felt that a dimension of counseling can be demonstrated that will enable professional counselors to increase the range of their impact by training students to be more effective in interpersonal communication.

Career Education: A Plot? Career education is the catch phrase today. All sorts of discussions are being shared across the country regarding the definitions, merits, and potentials of this new thrust in American education. Assuming that the waters will settle and models will be worked out, what does all this mean to blacks in this country? While career education could be the best thing to happen to the disadvantaged student, it is also possible for career education to have serious negative effects on future generations of black youngsters. Is career education potentially good for blacks, or is it a plot? What are the kinds of models which are appearing? Which models are being suggested for blacks and other disadvantaged students? Is career education another tracking device? With most areas selecting vocational education personnel, how can one be sure that the result will be anything other than a kind of new vocational education for blacks? These are some of the questions which the panel will deal with as they try to present a hard hitting analysis

of career education. Each person is skilled in areas which make their participation strategic in "the other side of the coin."

The American Personnel and Guidance Association Convention was a valuable experience since it provided an opportunity for NOW Staff to gain much information from others as well as permitting NOW Staff to share their career education activities with others across the nation.

Dr. Edward G. Johnson

Dr. Edward G. Johnson, Associate Professor of Education, University of Maine at Orono, and Coordinator, State of Maine Career Education Guide Project.

During the 1972-73 school year several visits were made by Dr. Johnson to Lewiston for conferences with members of NOW Staff and teachers who were actively involved in the NOW Program. The primary purpose of his visits was to obtain information regarding career activities in Lewiston--innovative and creative examples of the integration of a career focus into the curriculum--which he could use in preparing a guide on career education activities in Maine for the State Department of Education. The guide was developed to be distributed to schools in Maine.

NOW Staff complied with Dr. Johnson's request and shared descriptions of career activities as well as introducing him to Lewiston teachers who had demonstrated a high degree of visible involvement.

Using Dr. Johnson's format as a guide, Lewiston educators described their classroom activities. This follows. In June 1973, the completed guide, Maine Curriculum Guide for Career Education K-12, was distributed. NOW Program was pleased to observe 21 out of the 79 programs in Maine printed in the guide were credited to Lewiston educators actively involved in the NOW Program.

Career Education in the Classroom

1. What career related activities have you integrated into your regular classroom curriculum (or plan to or would like to)?
2. What would you hope the students would learn as a result of the integration of a career component into your subject area?
3. What procedures did you follow which contributed to helping students reach #2 (field trips, visitor, discussions, role-playing, career materials, etc.)?
4. What resources were used (or would be used)?
5. What materials were used (or would be used)?
6. What procedures did you use (or would you use) to evaluate whether the students had learned the items in #2?

In other words, describe the program. Mr. Johnson will take the information provided and place it in the form to be used in the Guide.

Cooperative Education

During its second year of operation, the Cooperative Education facet of the NOW Program was very successful.

During the student selection of studies activities conducted in April 1972, a total of 83 students filled out applications and were interviewed for potentially 20 open slots in the Cooperative Education Program. These 20 slots combined with a total of 13 continuing students would accommodate an anticipated enrollment of 33 students for the 1972-73 academic year. As it turned out, the enrollment totaled 42 students (13 continuing and 29 new) of which 23 students were scheduled to graduate in June. Upon completion of the school year in June, 1973, 83% of the seniors having graduated remained with their work station sponsors as full-time employees. Relative to the students not having graduated, 74% remained with their work station sponsors as full-time summer help, 16% were in the process of changing their jobs, on their own, for better pay and/or advancement, and 10% did not complete the academic year. The students having continued their employment through the summer with their work station sponsors are expected to be participants in next year's Cooperative Education Program.

Regarding the enrollment of 43 students, it should be noted that 28 different occupations were pursued throughout the year. Of the 28 different occupations having been pursued, 11 occupations supplemented course offerings provided by the high school curriculum and 17 occupations provided students, on an individual basis a new course offering in which to pursue their selected career objective.

E. EVALUATION

Project NOW Interview Evaluation Report
July 1973

Introduction

Dr. Charles Ryan of the University of Maine at Orono, a member of the original third party evaluation team for the Project NOW, was forced to resign from the project in the summer of 1972 because of increased demands on his time at the state level. Therefore, the third party evaluation team for 1972-73 consisted of Dr. Clyde Folsom and Dr. C. Thomas Skaggs, University of Maine at Orono.

The evaluation team was engaged in a number of activities during the year in an attempt to assess the effectiveness and impact of Project NOW on the teachers and students constituting the project's target audience. Evaluation team activities included the following: on-site visits to Lewiston schools involved in NOW activities; interviews with teachers, counselors, and school administrators concerning their impressions of the NOW Program; consultation with the NOW Coordinator and staff concerning program implementation, goal setting, research methodology, tests and measurements, and the establishment of behavioral objectives for the program; statistical analyses of data; writing evaluation reports; and presenting recommendations for improved program functioning. In order to present a systematic report of the evaluation team's findings, the goals established for the project during the 1972-73 school year will be reviewed and an evaluation of how effectively each goal was achieved will be discussed. Following the discussion of these general impressions relating to project goals, specific evaluation activities and their results are presented. Finally, recommendations of the evaluation team are reported.

Goals for 1972-73

In October 1972, the third party evaluation team was presented with a list of eleven (11) goals for the 1972-73 academic year. The list of goals was furnished by the Project NOW Coordinator, Mr. Lynn Markee, and was as follows:

1. The major goal is to expand implementation of the NOW Program at all learning levels in Lewiston schools. To be accomplished by individual efforts and also team approaches by staff utilizing workshop techniques when possible through department heads, curriculum groups, learning level groups and interest groups.

2. Regional implementation will be conducted through initial exposure of the program to Superintendents and continual communications will be extended to the regional schools to visit NOW activities.

3. Curriculum development will be via the development of learning packages for specific and general career areas as the year progresses. Each teacher involved with the NOW Program will be encouraged to help in this aspect, e.g. STARS Program, play school, language arts career exploration.

4. The purchase and utilization of a mobile van. The van will be stocked with information, materials and equipment for the purposes of distribution of some locally and regionally.

5. The Cooperative Education Program will be expanded from 18 student participants in 1971-72 to 40 students in 1972-73. This will be accomplished utilizing current staff.

6. Intensive training programs will be established for school leavers. This goal is currently under study as minor success was difficult to attain during the first year. Facilities and staff overloads at present virtually demand that this goal be met on an individual basis and outside the school facility. The program staff will, where possible, place students/leavers, in job situation that provide such training.

7. Placement services will be expanded through closer working relations between NOW staff and guidance departments, principals, department heads, and teachers at the junior and senior high schools. Part-time work placement services for 13, 14, 15 year olds will be conducted through a joint staff effort with Community Coordinated Child Care Agency (Rent-A-Kid).

8. Resource centers and/or information centers will be established in each school in Lewiston. These centers will be maintained jointly by NOW staff and school staff.

9. The Pupil Personnel Services staff of the NOW Program will be assigned to specific schools, the goal being to have a member identified by teachers as a part of their school. In line with this, a staff member will be housed at the elementary level to make the program services more assessable (geographically) to Lewiston teachers.

10. To reach the goal to research, develop, and provide media materials and information for teachers, a paraprofessional will be hired.

11. To maintain and conduct resource centers including the mobile van, a resource center coordinator will be hired.

Evaluation of Achievement of Goals

1. "The major goal is to expand implementation of the NOW Program at all learning levels in Lewiston schools..."

The evaluation data relative to the accomplishment of this goal were gathered primarily via interview techniques. Individuals interviewed by the evaluation team included school principals, teachers, guidance counselors, and members of the NOW staff.

In general, the goal as stated was achieved. Whereas the NOW Project addressed itself primarily to the Lewiston junior high schools during the 1971-72 academic year the primary target audience for the project in 1972-73 was at the elementary level. In addition, the project made significant inroads at Lewiston High School during 1972-73 as shown by increasing teacher participation in NOW Programs, increasing demand for NOW materials from school teachers, and improving levels of cooperation between NOW staff and high school faculty. Teachers at the elementary levels seemed generally favorable toward the NOW Project. The demand for NOW materials, teacher participation in NOW workshops, and consultation with NOW staff members were relatively great at the elementary level and suggest that the project staff had made a significant impact at that level during 1972-73.

The attempts to expand implementation of the NOW Program at all learning levels in Lewiston schools had some negative results. Because a great deal of effort had been made to provide service to

the Lewiston junior high schools during 1971-72 school year, several junior high school teachers and at least one junior high school principal felt that they had been neglected by the NOW staff during the 1972-73 school year. This situation resulted in some hostility toward the NOW Project on the part of the school principal mentioned above and a lack of cooperation between his administration and the NOW staff.

It is doubtful that the loss of maintenance of the NOW Program at the junior high level could have been avoided. Because there was no increase in the number of individuals serving in the NOW staff until April of 1973, it was impossible for the existing staff to increase service at the elementary levels without a loss of service at the junior high and high schools. Because each level has now been served by a concerted effort on the part of the NOW staff, the 1973-74 school year should be one in which the demands of teachers and students at all educational levels become more equalized and stable.

It is also important to mention that the NOW staff became much more active during 1972-73 in departmental meetings, faculty meetings, and in sponsoring teacher workshops. NOW staff members made sincere efforts to provide materials and lend assistance to teachers whenever requests were received. None of the teachers interviewed during the year by the evaluation team had negative comments to make concerning the NOW counselors. To the contrary, most teachers were high in their praises of the NOW staff and the benefits they had received from the total project. In summary, it seems that at this point in time, Project NOW had made "friends" with a significant number of teachers, counselors, and school administrators at all educational levels in Lewiston. Thus, the existence of "satisfied users" at each educational level should make the continued future expansion of the program easier for the NOW staff than it has been for the past two years.

2. "Regional implementation will be conducted through initial exposure of the program..."

Sincere efforts have been made to achieve this goal. In addition to newspaper coverage and special bulletins, the Project

Coordinator has extended direct invitations to superintendents and teachers in the region to visit the NOW facilities and participate in their activities. Although the response of other school systems in the region has not been as great as it could have been, this does not appear to be the fault of the Project Coordinator. And some successshas been achieved. For example, teacher and counselor participants in the Daane Workshop included invividuals from schools outside the Lewiston system and there will be in all probability a similar situation in the special workshop in career education being sponsored by the NOW staff during the summer of 1973.

There is little doubt that with the arrival of the mobile van other schools within the region will become more involved with the project. Whereas exposure to the program until now has necessarily forced schools to send representatives to Lewiston, the mobile van will make possible the visitation of NOW staff to outlying schools. That situation should result in increased participation in the program by schools within the region.

3. "Curriculum development will be through the development of learning packages..."

The accomplishment of this goal was handicapped by the lack of an Activities Package Writer until April of 1973. Because of a local political situation involving the hiring of paraprofessionals, it was not until early April that Mrs. Karen McMahon was hired for the primary purpose of writing learning packages. Since that time Mrs. McMahon has been involved in this task during a large part of each working day. Thus, it seems safe to assume that this goal will be largely accomplished during the next year.

The STARS Program, play school, and language arts career exploration have all been implemented. An attempt was made by the evaluation team and NOW staff members to carefully examine the success of the STARS program using a pre-post, experimental research design. The results of that study are discussed in detail later in this report. The play school, implemented at Montello Junior High School appears to have been a successful project. It has stimulated interest on the part of students in the school and seems to provide a work experience in child care that is valuable for the students

participating. Although implemented, the evaluation team has very limited knowledge of the language arts career exploration project.

4. "The purchase and utilization of a mobile van..."

Several problems have delayed the accomplishment of this goal. Production problems at Ford Motor Company caused the delivery of the van to be delayed until August or September of 1973. Thus, the van is not yet in the possession of the project staff.

In addition to delivery problems on the van, the same local political situation mentioned earlier delayed the hiring of the paraprofessional to drive the van. Finally, in April 1973, Mr. Donald Gay joined the NOW staff as the Mobile Resources Coordinator. Thus, the van and the paraprofessional to coordinate its use will be ready when the public schools open in September of 1973.

5. "The Cooperative Education Program will be expanded from 18 student participants..."

This goal was successfully achieved. At the close of school in June, 1973 a total of 42 students were participating in the Cooperative Education Program.

The evaluators' impressions of the Cooperative Education Program are extremely positive. The work stations are of excellent quality and the cooperation between the Coordinator and the Cooperative Education Program and employers is outstanding. Mr. Read appears to have established an excellent relationship with the students in the Cooperative Education Program and the problems inherent to the program are minimal. In many ways, the Cooperative Education Program in Lewiston is a model program and represents one of the strongest offerings in the entire NOW Project.

6. "Intensive training programs will be established for school leavers..."

This goal was not accomplished. In addition to this being a goal for 1972-73 it was included as an objective in the original proposal submitted to the federal government. The fact that this objective has not been achieved in the two years that Project NOW has been in existance is a serious concern to the third party evaluators. Since school leavers largely represent a group of individuals who are about to seek entry level positions in the job

market, it seems imperative that the Project NOW staff assist such individuals in that process. The basic purpose of Project NOW is to present students with new understandings and greater opportunities for work. Unless such a project includes special programs for school leavers, it seem doubtful that the project is accomplishing all that it was meant to.

7. "Placement services will be expanded..."

The Rent-A-Kid program was initiated by the NOW staff early in the fall of 1972. The program was effective in placing students in part-time work positions after school and on weekends. The third party evaluation team questioned the feasibility of administering the Rent-A-Kid program as part of Project NOW, however, and communicated this concern to the NOW coordinator. The Rent-A-Kid program, which was initially established in cooperation with the Community Coordinated Child Care Agency, was later turned over to that agency by the NOW staff. Thus, the Rent-A-Kid program continues to function and to serve as a placement service to junior and senior high school students but is no longer affiliated with Project NOW. The Rent-A-Kid program, because of cuts in the Model Cities budget, has recently been taken over by the Jewish Community Center and is administered by that organization.

The evaluation team felt that transferring the administration of the Rent-A-Kid to an agency other than Project NOW was an important move for the NOW staff. Because of the demands placed upon the NOW staff by school personnel in Lewiston, it was felt that staff time could be used more effectively in other programs. However, by assisting in the initial organization of the Rent-A-Kid program, the NOW staff was able to provide a community and school service that offers limited vocational experience for youth.

8. "Resource centers and/or information centers will be established..."

Montello and Jordan Junior High Schools and Lewiston High School have resource centers that are almost entirely functional. Information centers have in reality become only bulletin boards. The resource/information center concept has been implemented in approximately 75% of the Lewiston elementary schools. Unfortunately,

however, this goal has not been satisfactorily accomplished.

Part of the reason for failing to achieve this goal has been the lack of a Mobile Unit Coordinator. As mentioned earlier in this report, that individual was not hired until April of 1973. Because the resource and/or information centers are to be the responsibility of the Mobile Unit Coordinator, this goal should be achieved during the 1973-74 academic year.

9. "The Pupil Personnel Services staff of the NOW Program will be assigned to specific schools..."

This goal has been achieved. NOW counselors have been assigned to schools as was projected in the above goal and are readily assessible to teaching and administrative staff in the Lewiston schools at the various grade levels. Because of the limitations imposed by the size of the NOW staff, it was impossible to assign a counselor to each school in the Lewiston system.

10. "To reach the goal to research, develop, and provide media materials..."

This goal was accomplished only to the extent that the regular NOW staff was able to fulfill the function during 1972-73. Because the paraprofessional who is to have this function was finally hired in April 1973, the goal should be more satisfactorily accomplished during the coming academic year.

11. "To maintain and conduct resource centers including the mobile van..."

The paraprofessional mentioned in the above goal was hired in April of 1973.

The Daane Workshop

The Daane Workshop was a relatively expensive and large undertaking for the NOW staff during the 1972-73 school year. Because of this, it seems reasonable to include a detailed report of the evaluation of the Daane Project in this report.

On April 26, 1973 a member of the third party evaluation team visited the Lewiston-Auburn school systems for the purpose of obtaining subjective data relative to the Daane workshop. Opinion data were gathered via unstructured interviews between the evaluator

and a number of Lewiston-Auburn faculty members who had participated in the Daane Program. During the course of each interview, an attempt was made to assess the following factors: 1. the participant's level of satisfaction with the workshop, 2. the participant's commitment to implementing Vocational Exploration Groups with students, 3. participant's perceptions of the problems or negative aspects inherent in the Daane approach, 4. the participant's general attitudes toward the NOW Project and staff, and 5. the extent to which participants felt other teachers in the Lewiston-Auburn school system should be trained as leaders of Vocational Exploration Groups. It should be noted that the evaluator's assessments were based on interviews held with only nine individuals. Of those nine, two were trained as trainers and were members of the NOW staff, two were practicing counselors in the Lewiston-Auburn systems, four were teachers, and one was a school principal who had not personally participated in the Daane workshop. Only to the extent that these individuals were representative of other faculty and administrators associated with the project does the evaluator's impressions accurately reflect the existing attitudes and opinions within the Lewiston-Auburn school systems toward the Daane project.

Generally, each participant reported a high level of satisfaction with the workshop. Each felt that involvement in the program had resulted in personal growth and an increased awareness of the world of work. Without exception, the participants agreed that Vocational Exploration Groups would serve as valuable vehicles for initiating vocational thought and planning among groups of students.

Teachers who had participated in the workshop seemed to respond with a greater degree of enthusiasm than did the two practicing school counselors who were interviewed. Although the counselors were enthusiastic about the Daane program, their professional training had included course work in vocational counseling, educational and occupational information, and other courses dealing with the world of work. Because of this, the uniqueness of the Daane materials was probably greater for teachers than it was for counselors, thus resulting in greater enthusiasm among those participants who were classroom teachers.

The reported levels of satisfaction among participants varied greatly. One participant described it as the most meaningful professional activity she had ever experienced while another participant showed some skepticism about the intensity of training required by Dr. Daane for trainers as opposed to that required for leaders of Vocational Exploration Groups. Again, however, it must be stressed that in general the participants reported very high levels of satisfaction with their experience in the Daane workshop.

Of the eight individuals who had actually participated in the Daane workshop, five had already implemented Vocational Exploration Groups with students. Two of the remaining three were to lead Vocational Exploration Groups the week following the evaluator's visit, and the other participant was planning to become involved with such groups early in the fall of 1973. The participant who had no plans for involvement in Vocational Exploration Groups during the current academic year was a practicing school counselor. He was unable to become involved in such groups at that time because of the pressures of his regular work load. All participants reported future plans for further implementation of Vocational Exploration Groups with students.

Those who had led Vocational Exploration Groups reported that the students involved had been very enthusiastic in their response to the experience. Students involved had reported an increased awareness of themselves in relation to the world of work and had asked for similar experiences in the future, In addition, students who had participated had apparently talked with other students about their experience. The result of this has been for numerous students to ask their teachers for opportunities to participate in Vocational Exploration Groups. Thus, it would appear that student demand will eventually prompt other teachers to request training as Vocational Exploration Group Leaders so they can respond to the needs of their students.

Nearly all participants reported that the two-hour block of time needed for a Vocational Exploration Group created scheduling conflicts for students. The need for the two-hour block of time combined with the necessity of working with only five students in

each Vocational Exploration Group necessitates that several leaders be available to handle a classroom size groups of students at one time. Thus, the schedules of teachers and students need to be juggled and additional teacher coverage needs to be found for those teachers who serve as leaders of Vocational Exploration Groups. Although this problem can be handled through appropriate administrative channels, it would seem to be a serious deterrent to the large scale implementation of such programs within the present structure of the schools.

One alternative plan for offering the Vocational Exploration Groups would seem to pose fewer scheduling and administrative problems. That plan allows for scheduling five, fifty-minute periods for completion of a Vocational Exploration Group over a period of several days. Utilization of this plan eliminates the problems of adjusting teacher - student schedules and permits such programs to be offered during regular classroom periods. Even under this plan, however, the problem of finding enough VEG leaders to work with a classroom-size group of students remains. Of the few VEG leaders who had tried this alternate plan, some felt that it was not as effective as utilizing a two-hour block of time. The evaluator felt that if the VEG program is to be implemented on a large enough scale to involve a significant number of students, the plan of utilizing five, fifty-minute periods has the better chance of success. In those schools where Project NOW has minimal support from teaching and administrative staff, the probability of receiving adequate cooperation in implementing VEG programs over two-hour blocks of time does not seem encouraging.

One other problem that was reported by a participant dealt with the necessity of leaders reading verbatim the entire VEG program when leading such groups with students. The individual teacher involved felt that such a practice detracted from the effectiveness of the program and that it caused student participants to lose interest. Her complaint seemed legitimate to the evaluator. The reading of materials probably does result in both a lack of leader spontaneity and in disinterest on the part of the participants. However, if the success of the Daane program is dependent upon the verbatim reading of materials to participants, all leaders should adhere to those instructions.

If, on the other hand, the individual who stated this concern misunderstood instructions and a verbatim reading is not necessary, the VEG trainers on the NOW staff should clarify the instructions for all teachers in the Lewiston-Auburn schools who were trained as VEG leaders.

The present physical facility at Lewiston High School makes it difficult to implement the Vocational Exploration Groups in that building. The lack of space there as well as stationary furniture in the classroom makes it very difficult to schedule and implement VEG programs. Hopefully, with the completion of the new high school facility these problems will be minimized during the 1973-74 academic year.

In order for the VEG concept to be utilized to its fullest possible potential many more teachers need to be trained as leaders. The principal at the Walton School in Auburn is already planning a full-day workshop in the fall of 1973 for the purpose of training his teachers as VEG leaders. He reported that teachers at that school have indicated a desire for such training and that every possible attempt will be made to provide them with the workshop as early as possible in the fall. In addition, he seemed committed to the idea of making whatever scheduling changes are necessary for insuring that all students in the Walton School are involved in Vocational Exploration Groups next year.

Hopefully, other school administrators in the Lewiston-Auburn schools will initiate workshops of a nature similar to that planned by the principal at the Walton School. Those teachers interviewed who had already participated in the Daane project were unanimous in stating that other teachers should have similar experiences. Utilizing a one-day workshop in each school next fall for this purpose would seem to be a feasible plan for achieving the maximum effectiveness possible for the VEG concept.

In summary, the subjective data gathered via the unstructured interviews suggest that the Daane workshop was a valuable experience for the participants. Although some administrative problems need to be worked out if the VEG concept is to achieve maximum effectiveness with students, these problems appear to be minor when consideration is given to the benefits to be accrued for students when Vocational

Exploration Groups are implemented in the schools.

Evaluation of Field Trips

A large number of requests for field trips, many from elementary teachers, were received by members of the NOW staff during 1972-73. Because of the amount of time involved in the planning, implementing, and follow-up of such activities, the evaluation team made recommendations to the project staff that an evaluation be done to assess the effectiveness of field trips, especially among elementary school children.

The NOW staff indicated that the purpose of sponsoring field trips to business and industries in the Lewiston area was to broaden the students' vocational awareness and to provide more accurate knowledge about specific occupations. Thus, any evaluation of the field trip activities would have to focus on changes in the knowledge of occupations prior to and following a field trip experience. It was decided, therefore, to utilize a pre-post experimental design on a group of third grade students in an effort to get a reading on the effectiveness of the field trip experience.

One of the most serious difficulties in assessing change in occupational knowledge among young elementary school children is the severe limitations imposed by their reading and vocabulary skills. In an effort to avoid problems that could arise from such limitations, the evaluation team and NOW staff decided not to use a non-verbal pre and post test measure. It was felt that an analysis of pre and post field trip, student drawing of an occupation would provide a less contaminated, more accurate reflection of changes in occupational knowledge resulting from the field trip experience than would a verbal measure. In essence, a post field trip drawing which included more detail and which more accurately reflected conditions within the occupation would be considered evidence of positive gain resulting from the field trip. In order to implement the study, the following procedures were utilized.

Mr. Roy Bagley, NOW Counselor, visited a third grade class prior to a field trip. He instructed the students to draw a picture of the occupations they would be studying on the field trip. He then

collected the drawings without permitting the students' teacher to view them. Following the field trip experience, he once again visited the classroom and asked them to draw a picture of the occupation they had visited. Once again, he collected the drawings without showing the classroom teacher what the students had drawn. Then, after pairing each student's drawings (pre and post) on the basis of the student's name and after coding them in order to know which drawings were pre and post field trip drawings, he instructed three teachers to sort the drawings. The three teachers involved were the elementary art teacher, a junior high school teacher, and the students' third grade classroom teacher. The teachers' sortings were to be done independently and were to be based on the amount of detail and accuracy reflected in the student's two drawings. The drawings with the least detail were to be placed in one pile and the drawings with the greatest and more accurate detail was to be placed in the other. A total of 28 students were involved in the experiment.

Following each teacher's sorting of the drawings, Mr. Bagley checked them for accuracy. When a post test drawing was seen as reflecting less accuracy and detail then a pre test drawing it was assigned a negative (-) weight. When a post test drawing was given an accurate sorting, it was give a positive (+) weight. After the results of each teacher's sortings were recorded, the data were mailed to the evaluation team for analysis. The Sign Test (Downie and Heath, 1954, 208-209) was utilized in statistically analyzing the data. Results were as follows:

	Pre	Post	No Difference
Classroom teacher (CRT)	5(-)	20(+)	3
Elem. Art Teacher (EAT)	13(-)	10(+)	5
Junior High Teacher (JHT)	11(-)	10(+)	7

Formulae: $m=np$ $\quad z=\frac{x-m}{sd}$

$sd=\sqrt{npq}$

m = mean of the distribution
n = number of scores in the distribution
q = p = probability of a "+" or "-" occurring by chance
o = standard deviation of the distribution
z = standard score
x = number of "+"

CRT: $m = (25)\ (.5) = 12.5$

$sd = \sqrt{(25)\ (.5)\ (.5)} = 2.5$

$z = \frac{19.5 - 12.5}{2.5} = 2.8$

Significant at or beyond .005

EAT: $m = (23)\ (.5) = 11.5$

$sd = \sqrt{(23)\ (.5)\ (.5)} = 2.4$

$z = \frac{12.5 - 11.5}{2.4} = .42$

Not significant

JHT: $m = (21)\ (.5) = 10.5$

$sd = \sqrt{(21)\ (.5)\ (.5)} = 2.3$

$z = \frac{10.5 - 10.5}{2.3} = 0$

Not significant

The results show no significant differences between the sorting of drawings done by either the junior high school teacher or elementary school teacher. The sortings of the students' classroom teacher are statistically significant, however, and in the direction supportive of the field trip concept.

It is impossible to know why the classroom teacher was better able to discriminate between the pre and post test drawings of her students than were the other two teachers. However, the fact that she had accompanied the students on the field trip and had led the students in the study of the occupation may have caused her to be more aware of what truly existed in the occupation than were the other two teachers. In other words, the lack of significant differences in the sortings of the art teacher and junior high teacher may have been as much a reflection of their ignorance of the occupation as it was a lack of true differences between the students' drawings.

The results do offer some support for the continuation of field trip activities among elementary school children. At the same time, however, the results do contain some rather contradictory and confusing elements and should therefore be interpreted with caution. Other, similar studies at different grade levels may be necessary before the effectiveness of the field trip activities is established.

Evaluation of VEG Program Data

The evaluation of the VEG project is based on data gathered from participants and control subeects via instruments developed by Calvin Daane, originator of the VEG program. In addition, the analyses performed to date are those prescribed by Daane.

In all analyses reported in this paper a treatment group vs control groups comparison format was employed. Analyses were made via the z-statistic. Control group data for the adult participants was not available at the time of writing and is therefore not included.

Employability Perceptions Inventory

One of the instruments involved in data gathering was the Employability Perceptions Inventory and is reported by it's author as being useful to estimate the degree to which one perceives himself as being employable. The instrument is composed of three scales: Job Personalization, Movement Toward Job Personalization and Self Recognition of Work Potential and Aspiration. High scores on Job Personalization suggest a greater understanding of man's relationship to work and its critical links to job functioning, job demands and job satisfaction. Low scores on the set of questions making up the second scale reportedly indicate movement in the direction of job personalization. High scores on the third scale, Self Recognition of Work Potential and Aspiration, suggest greater potential and aspiration for work entry.

Some validity and reliability data for each of the scales is reported by the author. This data, however, is limited in its usefulness. The third party evaluators are very skeptical about the psychometric properties of the EPI and feel that decisions about the practical utility of the results that follow should be made in that context.

A comparison of EPI per post scores of the adults involved in the VEG indicates that they were significantly more aware of man's relationship to work after completion of the program than when they began. Similar results were obtained when EPI-Series I post-scores of students attending the VEG program were compared with those of a control group. That is, students who participated in the VEG exhibited a greater degree of a job personalization on the EPI than those

students who did not participate. (See Table 1)

The objectives of the VEG program suggest the hypothesis that participants will exhibit greater movement toward job personalization than non-participants and will therefore earn lower scores on EPI-Series II.

Since adequate control group data for the adult experimental group was not available at this writing, pre post scores were compared. There was no evidence to suggest that this treatment group had made a significant shift toward job personalization as a result of the VEG program.

A comparison of the post VEG Series II score of the student treatment group with Series II scores of the control students did support the hypothesis, however. VEG scores significantly lower on Series II than did the control students and are therefore, defined as indicating a greater movement toward job personalization. (See Table I)

Analysis of the results of EPI-Series III indicate that the adults in the VEG program felt much more confident of their work potential and entry aspirations after completion of the training than prior to their experience. A comparison of VEG student participants with their control group resulted in no significant differences. (See Table I)

The Alienation Perception scale developed for use in conjunction with the VEG program, contains two scales; Social Distance and Believability. The S.D. scale reportedly measures one's affective predisposition toward work symbols, such as job interview, potential employer, etc. The Believability scale was designed to measure positive attitudes of social trust toward other persons and the world of work.

Adequate control group data was not available at this writing for the adult treatment group. Therefore, no analyses were made for that group.

Analysis of treatment-control scores for the students indicate that those students who did not participate in the project earned more desirable scores than the students participating in the VEG. The control group exhibited greater feelings of comfort and safety with social others during interaction (Social Distance). (See Table 1) They also had more positive attitudes toward work related topics

(Believability). These results may come from several sources, but the most likely is a combination of lack of understanding the manner in which the instrument is to be completed and problems inherent within the instrument. Additional analysis at a later time may better explain the unexpected results.

In general, the data tend to support the success of the VEG's. However, in view of the suspect nature of the instrumentation, additional evaluation data should be gathered from those adjults and students involved in the program.

Evaluation of STARS Program

Unfortunately, due to influences beyond the control of the project staff, was misplaced and not found in time for inclusion in this report. A written discussion of the results will follow at a later date.

Summary

It is the opinion of the evaluation team that the NOW Project is making significant progress in the attainment of its objectives. We feel that NOW efforts would be enhanced by an intensive planning session involving project staff and evaluation personnel. During the session the original proposal would be discussed with possible formal revisions being developed. Also, specific activities for the 1973-74 year and appropriate evaluation techniques would result. It is recommended that this effort occur prior to the opening of next school year and early enough for implementation of the outcomes.

Table I.

Employability Perceptions Inventory

Series I

Adults: Pre $\overline{X}$ = 3.9, Post $\overline{X}$ - 4.7, $s_{\overline{D}}$ = .3; n = 31; z=2.67 ($\alpha \leq .01$)

F. CONCLUSIONS, IMPLICATIONS AND RECOMMENDATIONS

Conclusions of significance related to the second action year of the NOW Program are drawn from the following facts:

The increase in requests for involvement from teachers, students, business and industrial people, and other educational systems and institutions, (local, state, and national) over last year permits the conclusion that the program has won their confidence. The Program phylosophy is generating high interest from business and industrial people. They are naturally concerned with the career information provided through the school system and the NOW Program is providing them the opportunity to express their ideas and offer their input to education. Other educational systems and institutions administrators are recognizing youth's need of career education and are looking to pilot programs such as NOW for the experti e to implement programs of their own. These include higher education institutions as well as public and private schools. It can be concluded that the increase in teacher and student involvement with the NOW Program and career education is a result of the variety of ways utilized by NOW to present information. These involve equipment, materials, supplies, people, and places that have been available but previously not organized and utilized. Through training programs on equipment use, development of guides for field trips and using outside resource people, systematizing methods of delivery and retrieval of equipment, materials, and supplies, and through communications teachers and students have become more organized and are sharing more education. As a result, the NOW Program is being continually sought after as well as seeking new involvement.

The development of the NOW Staff into a functional team as well as the individual contribution each team member makes to the program has definitely been a factor in the success of the second action year. This development is still going on. The conclusion arrived at in this respect is that development of a new program or concept can only materialize as fast as a staff can develop. In this case the staff was not specifically career education oriented and the process of development was slowed. Second action year progress was much greater and points out the need for higher education taking on the task of providing training in career education for future and current public school educators. The NOW Program has become involved with this situation through the State R.C.U. Coordinator and his associates at the University of Maine and the State Department. The implications are that this will happen. There is currently one course being offered at the University of Maine in career education. There are also implications that educators in public schools are expressing the above desire to higher education.

There are other implications that are expressed by the citizens in general. Parents, businessmen and others connected or aware of the career education program are feeding back the fact that students do benefit from the inclusion of career education in the curriculum. They also express agreement that it should begin in the kindergarten grade. Students express the relevance that career education provides to the subject matter and learning.

One of the stronger implications relating to the NOW Program is that the school administrators see it as a vital part of the curriculum. Excepting the Superintendent and Vocational Director, the

administrators basically see the program as valuable at their particular schools and age groups and have indicated so. This fact implies that their attitudes may be selfish but it also implies that there is not enough inter-level communications. An aim of the NOW Program will be to establish this inter-level communications during the third action year and through the development of a Career Education Guide for kindergarten through 12th grade.

The recommendations for the future of the program are to encourage the United States Office of Education to continue the funding of this program and similar programs in each state. The funds made available should not be for a maximum period of three years, rather to a period commencerative with the school department's ability to effectively implant career education into the on-going curriculum. Lewiston being the first program in the state has confronted problems that should not be encountered by ensueing programs and will not have progressed to a point that will satisfy the Board of Education in their consideration for continuing the program or parts thereof after federal funding is discontinued. The recommendation is for a serious review by the United States Office of Education of each "first-go-around projects" to ascertain if an additional year of funding would be desirable. There is a strong feeling in Lewiston that the program should continue, however, Lewiston is currently expanding the high school facility which includes an increase in enrollment from regional schools, an increase in the number of teachers to handle the enrollment and adding to the curriculum areas offered. Consequently, Lewiston is in the process of redesigning the entire school system. This will place great demands on all city groups and the

city government to make decisions based on basic needs. The NOW Program and career education will be included in the considerations, however, the possibilities of the school department taking over the entire staff and program is an unknown fact. The entire staff has been and will continue (with emphasis) to expose and sell the program to the decision makers. The Superintendent of Schools has asked the Director and Coordinator of the Program to submit to him a recommendation for the future existance of the NOW Program. This is currently being developed. The initial recommendations will be to retain the entire staff and program. A secondary recommendation will identify each critical phase of the program and the staffing required to carry out each phase.

Attachment 1

Vocational Exploration Groups

"The primary function of this project is to orientate and coordinate initial training of elementary and secondary level students to the wide range of work opportunities." (Proposal p.24) "During early adolescent years (junior high school 7-9)... an adolescent person needs information and exposure which would include educational, vocational, and personal-social information." (Proposal p.26) "During the later adolescent years (high school 10-12) individuals...need skills and knowledge in assessing their capabilities, and specific information for decision-making." (Proposal p.27)

Introduction to Vocational Exploration Groups

The goal of vocational exploration is the development, expansion and personalization of jobs for group members. The process is a highly structured examination of self in relation to the world of work. It helps members use the group to gain an expanded awareness of jobs, to increase the quantity of jobs each would consider appropriate for him in career planning.

The Vocational Exploration Group seeks understanding of man-job relationships among job function, job demands, and job satisfactions. The program involved 5 phases--inclusion, job inventory, job personalization, expansion, next step.

Research

During August-October 1971, 850 employment service applicants from local offices, high schools and work training programs participated in the group process. It was conducted by counselors, in-

terviewers, and coaches in 10 states with randomly assigned groups for control. Groups were given tests for employability perceptions, perceptions of social alienation (Rokeach) immediately following the experience one month later.

Experimental groups obtained twice the number of jobs during the month and showed more holding power in work training programs. All experimental groups (156) showed higher mean scores on all test variables. Employability perceptions lingered during the month and some of the reduction in alienation were also maintained. The one month later response was 85%. 195 trainers and leaders gave their attitudes and impressions on the effectiveness and functionability of program. There was 95% response with 85% positive reply.

Procedures

A training program will be conducted to implement a model for training professional and paraprofessionals to lead vocational exploration groups of secondary school students. The professions will include NOW Staff, teachers, and counselors, including the 10 regions feeding into the new comprehensive high school. This will provide group guidance to reach more students preparing for the world of work. Group guidance and counseling is preventative and can serve to decrease counseling on a one-to-one basis.

The paraprofessionals will include high school students who will serve as leaders of their peers throughout the school year.

The training program (and subsequent leading of vocational exploration groups) can be designed to become an elective in the secondary school curriculum: 1 credit for the voluntary partici-

pation of students on a regularly scheduled basis during the school day. Meetings will be held four times weekly during the school semester. Unique to the vocational exploration program has been the development of curriculum and instructional approaches particularly suited to the training of curriculum and instructional approaches particularly suited to the training of paraprofessionals. VEG is projected to become a major component of the expanded guidance services to the secondary students of the Lewiston area.

A detailed description of training components and instructional approaches follows.

Training

The training program for VEG is based upon a pyramid model. Leaders are prepared by trainers who have also been leaders. Roy Bagley, Hazel Guyler and Vincent Wills will be trained as trainers. The training is experiential--trainees learn by doing. Skills are acquired through group interaction, participative exercises developed for this program; by role playing; by observation and helping other to learn, and by actually conducting a group with "Live" members.

Activities are structured and varied. The group begins with inclusion activities (not sensitivity training) to reduce the fear of exploration, then examines the world of work via a twofold matrix of job functions (data, people, or things) and job preparation (training on the job, special skill training, or college). Next, the group shares information they have about jobs, and uses graphic materials to acquire additional job information. Following that, job demands, job satisfiers and training needs are explored by recalling past experiences and by studying job information books. The members then expand

their choices by relating one job to several others. Finally the group focused on an individual plan for each member, encompassing the occupational goal and the next step toward it. At intervals during the sequence, the members fill out a job inventory which clarifies their vocational choices and the man-job relationship underlying it. Throughout, carefully designed visual aids are employed to enhance the exploration process. The short sequence which is designed for completion in a single meeting takes about two hours with a break. The extended sequence, which is more suitable for five separate meetings, is composed of five 45-minute phases.

Phase 1. Leaders Can Become Trainers

VEG trainees of leaders go through leader training, acquire field experience with the program and then co-train a second leader group with the help of a consultant. Trainers use a specially prepared programmed manual designed to bring about the acquisition of skills through a sequence of practice tasks. Trainers are certified to conduct repeated leader training within their institution.

Phase 2. On Site Training

Programs are conducted for both leaders and trainers at the requesting institution. Training is done in groups of two to six by consultants who travel to the site. Leader training is two days (will lead five separate 45-minute meetings.) Trainer preparation is five days and includes the preparation of two leader groups.

Lewiston Responsibilities

1. Selection of trainees:

3 trainers (Bagley, Guyler, Wills)

21 Leaders (teachers and counselors in Lewiston area)

120 secondary students

2. Rooms:

Monday (1) Tuesday (3) Wednesday (2)

Thursday (6) Friday (2) Saturday (3)

Dr. Calvin J. Daane Responsibilities

Trainer, six leader kits, loan of trainer packet for each trainer (3).

Evaluation: A follow-up study will be designed to survey the post-high school educational and occupational activities of high school seniors who have participated in VEG experiences. Comments and reactions of studetns in the initial VEG this fall will be elicited during the interviews immediately following the activities.

Value of materials received by NOW: 18 leader Kits @ $165 equals $2970.00 (following training).

Attachment 2

Vocational Exploration Groups

Final Copy

Introduction to Vocational Exploration Groups

The goal of vocational exploration is the development, expansion and personalization of jobs for group members. The process is a highly structured examination of self in relation to the world of work. It helps members use the group to gain an expanded awareness of jobs, to increase the quantity of jobs each would consider appropriate for him in career planning.

The Vocational Exploration Group seeks understanding of man-job relationships among job functions, job demands, and job satisfactions. The program involves 5 phases--inclusion, job inventory, job personalization, expansion, next step.

Research

During August-October 1971, 850 employment service applicants from local offices, high schools, and work training programs participated in the group process. It was conducted by counselors, interviewers, and coaches in 10 states with randomly assigned groups for control. Groups were given tests for employability perceptions, perceptions of social alientation (Rokeach) immediately following the experience one month later.

Experimental groups obtained twice the number of jobs during the month and showed more holding power in work training programs. All experimental groups (156) showed higher mean scores on all test variables. Exmployability perceptions lingered during the month and

some of the reduction in alienation were also maintained. The one month later response was 85%. 195 trainers and leaders gave their attitudes and impressions on the effectiveness and functionability of the program. There was 95% response with 85% positive reply.

Training

The training program for VEG is based upon a pyramid model. Leaders are prepared by trainers who have also been leaders. Leader training is experiential--leaders learn by doing. Skills are acquired through group interaction, participative exercises developed for this program; by role playing; by observation and helping others to learn, and by actually conducting a group with "live" members.

Activities are structured and varied. The group begins with inclusion activities (not sensitivity training) to reduce the fear of exploration, then examines the world of work via a twofold matrix of job functions (data, people, or things) and job preparation (training on the job, special skill training, or college.) Next, the group shares information they have about jobs, and uses graphic materials to acquire additional job information. Following that, job demands, job satisfiers and training needs are explored by recalling past experiences and by studying job information books. The members then expand their choices by relating one job to several others. Finally, the group focuses on an individual plan for each member, encompassing the occupational goal and the next step toward it.

At intervals during the sequence, the members fill out a job inventory which clarifies their vocational choices and the man-job relationship underlying it. Throughout, carefully designed visual

aides are employed to enhance the exploration process. The short sequence which is designed for completion in a single meeting takes about 2 hours, with a break. The extended sequence, which is more suitable for 5 separate meetings, is composed of five 45-minute phases.

Attitude Toward Group Experience

DIRECTIONS: Circle one number for each question

1. I enjoyed the group.	Yes	5	4	3	2	1 No
2. The group helped me.	Yes	5	4	3	2	1 No
3. I have more idea about jobs NOW.	Yes	5	4	3	2	1 No
4. It is important for a person to learn about jobs and what they can give to a worker.	Yes	5	4	3	2	1 No
5. I would like to do more of this with the group.	Yes	5	4	3	2	1 No

Comments about the group experience:

Appendix B

Name_____

EMPLOYABILITY PERCEPTIONS INVENTORY

Directions: This is a survey of how people look at the world of work. I am going to read some statements to you and I want you to answer Yes, No, or Don't Know to each statement. This is a sample of what the questions will be like:

	Yes	No	Don't Know
Mechanics work with tools and machines.	___	___	___

Please answer Yes, No, or Don't Know. Do you understand what I want you to do?

			Yes	No	Don't Know
I.	1.	Jobs demand more skills than interest.	___	___	___
	2.	Most people could do three or more jobs and would like them equally well.	___	___	___
	3.	There is one right job for a worker.	___	___	___
	4.	Gaining friends and teamwork are reasons why people work.	___	___	___
	5.	Some jobs give no real satisfaction.	___	___	___
	6.	Good pay will make a worker happy.	___	___	___
	7.	Except for skills, jobs make similar demands on workers.	___	___	___
II.	8.	Nurses work with people; bookkeepers work more with things.	___	___	___
	9.	All workers need supervision to be more distant.	___	___	___
	10.	Cab drivers and cabinet makers gain craftwork satisfaction.	___	___	___
	11.	Plumbers work more with things; airline pilots more with people			
	12.	Grocery clerks need interests and skills in numbers; personal relationship are more important for court reporters.	___	___	___
	13.	Close supervision is a worker satisfaction.	___	___	___

III. Directions: Following are some statements. Mark the box on each that indicates how true the statement is for you. Mark as follows: 5 - VERY SURE; 4 - SURE; 3 - FAIRLY SURE; 2 - UNCERTAIN; 1 - DON"T KNOW

	5 Very Sure	4 Sure	3 Fairly Sure	2 Uncertain	1 Don't Know
EXAMPLE: I know what job I want.					
14. I know what interests and skills are demanded by the jobs I want.					
15. I can name three jobs for which I have interests and skills.					
16. For the job I want, I can name three skills required.					
17. I know three jobs I would want that require more training.					
18. People I know would agree with my choice of a job.					
19. Of the jobs that I want which would require more training, I know which one I would like most and which I would like least.					

Put an X in the box that is the closest to how sure you are that the statement is true for you.

Age_____ Sex: M F

SERIES I

Directions: Imagine that you are talking with each of the persons described below. While you are talking we want you to record two observations (Imagine the two of you are standing in an empty room):

1. The approximate distance from you that the person is standing.
2. How much you believe of what he is saying.

For No. 1 above: Mark an X along the line at the point which shows how far away the person is standing from you.
For No. 2 above: Circle the number which best represents the amount you believe of what he is saying.

Do this one for practice:

(you)
High 7 6 5 4 3 2 1 - Low

BEGIN! Mark each item with an X and a circle. Turn your paper over when you complete the final item.

1. A friend who is telling you about his/her last interview job.

(you)
High 7 6 5 4 3 2 1 Low

2. A former fellow worker who is now employed.

(you)
High 7 6 5 4 3 2 1 Low

3. A potential employer who is interviewing you for a job.

(you)
High 7 6 5 4 3 2 1 Low

4. A close friend talking about your favorite topic.

(you)
High 7 6 5 4 3 2 1 Low

5. Same close friend discussing with you the world of work.

(you)
High 7 6 5 4 3 2 1 Low

CONTRACT

Between Literacy Volunteers of the Pine Tree State, Inc. and the Lewiston NOW STARS Program

August 28, 1972

Literacy Volunteers of the Pine Tree State, Inc., Agrees to:

1. Provide a workshop of five sessions to train 15 or fewer senior high school students and one or more faculty advisors to tutor inadequate readers.

2. Schedule sessions as follows:

Monday, September 25	7:55 to 11:30 a.m.
Tuesday, September 26	12:00 to 3:30 p.m.
Wednesday, September 27	7:55 to 11:30 a.m.
Thursday, September 28	12:00 to 3:30 p.m.
Friday, September 29	7:55 to 11:30 a.m.

3. Provide the following:

Screen	17 Bridging & Blending booklets
Projector	1 Textbook collection for display during workshop
Cassette Recorder	2 or more qualified Literacy Volunteers resource persons to run the workshop
Slides and Tapes	
Pertinent Hand-out Materials	
17 Teaching Guides	

4. Provide a special session and the necessary READ tests to train reading specialists to give the READ test.

5. Evaluate the workshop with Mrs. Hazel Guyler and such other persons as she may designate after the workshop has been completed.

NOW STARS agrees to:

1. Register 15 or fewer qualified senior high students for the workshop and two faculty advisors.

2. Set up the schedule for the workshops.

3. Provide the place for the workshop along with textbook materials for the trainees' kits and snacks for one break during each session

4. Provide such rooms and meals as may be necessary for the Lit. Vol. personnel according with our per diem rate.

5. Provide mileage at 10¢ per mile for the Lit. Vol. Personnel.

6. Provide a fee of $500.00 payable to Literacy Volunteers of the Pine Tree State, Inc.

Part I. Statistical Data

Project Title: STUDENT TUTORS IN ACHIEVEMENT OF READING SKILLS

Project Director: Mrs. Hazel M. Guyler

NOW Coordinator: Lynn W. Markee

Vocational Director: Kenneth C. Jordan

Project Dates: Beginning September 25, 1972 Ending June 15, 1973

Number and Grade Level of Participants:

Experimental		Control		
Group A		Group B		
Grades 10-11	15	Grades 10-11	15	(Tutors)
Group C		Group D		
Grades 4-6	7	Grades 4-6	7	
Grades 7-9	8	Grades 7-9	8	(Tutees)

Budget Total: $650.00 (See Attached Contract)

Part II. Narrative

A. Need. One of the major needs of Lewiston, Maine schools is "to build a bridge between school and earning a living." Lewiston youths need to be helped to make wise and realistic educational and career decisions. A vehicle is needed to assist and give direction to secondary school youth and to help them become acquainted and involved in meaningful and realistic career experiences prior to graduation from high school.

A second major need of some Lewiston students is increased success in educational achievement, particularly in reading.

The project will train selected secondary students to become tutors to teach selected poor readers currently enrolled in the intermediate and junior high schools in Lewiston.

B. Research. Research discloses that many persons made unwise career choices during secondary school years. Yet, today many complete higher education programs, enter careers, and remain dissatisfied with their career choice.

Research also reveals that many students fail to achieve reading

skills in the elementary grades, skills they never seem to master, and which influence success in personal, academic, social, and career endeavors throughout life. A striking example of this fact is that in Lewiston 81 students have dropped out of school between June 1971 and June 1972. These are not just statistics--they are people, human beings who lack the basic skills for success. Success for many of these "school leavers" probably depends in part on reading and writing.

The intent of STARS is to attempt to change the curricular learning opportunities and experiences for thirty Lewiston students during the 1972-73 school year. It is anticipated that fifteen secondary school students will increase their knowledge of self in relation to a social service career or leisure activities, and that 15 elementary school and junior high school students will increase their basic skills in reading at the completion of the project.

The project is original. A serious review of the literature failed to disclose training secondary school students as tutors of basic reading skills, although many adult professionals and paraprofessionals have been trained to work in school systems. The training will be conducted by a team of professional, experienced teachers who are members of Literacy Volunteers of the Pine Tree State, Inc., headed by Mrs. Agnes T. Beckwith (A.B., Mt. Holyoke; Ed.M., Harvard University). Although the Literacy Volunteers of America have trained college students in New York, Massachusetts, and Connecticut, Lewiston, Maine will be the first school system in the United States where secondary school students will have been trained to serve as tutors of basic reading skills.

C. Objectives. The specific behavioral objectives of the project are: 1) to elp selected secondary school students who aspire toward careers or leisure activities in light of their interests, abilities, and personal characteristics relative to future plans, namely teaching; 2) to help selected students in the intermediate and junior high school grades gain success and self-confidence in basic reading skills.

D. Procedures. 1) Sample: Four groups of fifteen students will comprise the sample.

Group A. Fifteen Lewiston High School sophomores and juniors will be carefully selected from volunteer applicants to be trained as tutors in reading.

Group B. An equated reference group of fifteen Lewiston High School students who volunteer but who will not receive the training, will be drawn for statistical comparison of change in tentative career choice in the social services.

Selection of Groups A and B will be based on the following criteria: 1) stated interest, 2) social maturity, 3) personal preparation, 4) academic preparation.

Recommendation of the students will be the joint responsibility of the school principal, academic department heads, guidance counselors and teachers.

Group C. Fifteen intermediate and junior high school students will be selected to receive individual reading assistance in one or two one-hour sessions each week during the 1972-73 school year.

Group D. An equated reference group will be drawn, matched by age, sex, current grade in school, and reading achievement level. This group will not receive the tutoring assistance.

Selection of Groups C and D will be based on reading achievement as measured by a standardized reading test which has been selected and administered by the Lewiston School Department Director of Elementary Reading. Students who are reading two or more grades below the national achievement level will be considered poor readers and qualify for the tutoring assistance. Selection will be the joint responsibility of the Director of Elementary Reading, elementary school principals and classroom teachers. Two or more members of Lewiston School Department faculty will be trained who may be used to assist in the supervision of tutors if needed to serve in this capacity.

2. Training in reading. An intensive training program will be conducted on five consecutive days during the week of September 25 to 29, 1972 for Group A by the Literacy Volunteers of the Pine Tree State, Inc. Training sessions will be held for 3-1/2 hours Monday, Wednesday, and Friday mornings and Tuesday and Thursday afternoons.

Basic reading skills and techniques will be emphasized. The

special training program has been designed for the developmental level of secondary school students for utilization appropriate to the developmental level of Group A.

3. Tutoring. Subsequent to the training, Group A (Tutors) will train one or two one-hour sessions a week in a one-to-one relationship with Group C students (tutees). Compatible time and place will be arranged. Close supervision of the relationship will be maintained by the Director of Elementary Reading and qualified reading teachers to insure that beneficial results for both tutor and tutee ensue. Changes deemed necessary to the positive psychological growth of tutor and tutee will be made should the need arise.

E. Evaluation Procedures. 1. Strong Vocational Interests blanks. (TW 398 for Women and 399TM--1969 Revisions) will be administered in pre and post situations to Group A and B to measure strength, change, and direction of change of interest in social service careers. 2. Standardized Reading Test. A standardized test selected by the Director of Elementary Reading will be administered to Group C and D in pre and post treatment situations to measure reading achievement level. 3. Questionnaire. A locally produced questionnaire will be administered to elicit information pertaining to Group C and D's interests, values, and related school experiences under the supervision of the Director of Elementary Reading. 4. Conferences. Conferences will be held with each member of Group A and B to interpret the results of the Strong Vocational Interest Blanks. During the conferences information will be obtained pertaining to the increased knowledge and skills derived, student satisfaction/dissatisfaction, values, and career information. Counseling, consultations with teachers, and other concerned personnel will be available for members of Group A and C. Appropriate statistical techniques will be used to compare Groups A and B for change, direction of change, and significance of change related to constancy of tentative career choice and the tutoring experience. Results of the standardized reading pre and post situations of Groups C and D will be compared and subjected to statistical treatment for significance of growth in reading.

STARS - Classroom Teacher Survey

Name of Teacher _____ Date _____

School _____ Grade _____

Name of STAR _____ Name of Tutee _____

Since the STARS were trained last fall, we hope they have been tutoring on a weekly basis. The time has come when the N.O.W. Program is required to evaluate and report on the STARS Project. Will you please comment frankly about your observations and personal opinion of the Project? Your remarks will be used anonymously in research reporting. No individual STAR or teacher will be singled out in the report. One copy is to be returned to N.O.W. Staff. You may retain the second copy.

I. Behavioral Changes (if any) in "Tutee"

A. Acquisition of reading skills

B. Transfer of reading skills in academic subjects in general (Spelling, Social Studies, etc.)

C. Increased academic achievement

D. Increaseduse of library or other resources materials

E. Attitudinal changes toward school (attendance, disciplinary behavior, motivation, homework, etc.)

F. Self-concept (confidence, emotional depenendence, self-worth etc.)

G. Interpersonal relationship (getting along with peers and adults, etc.)

II. STAR Behavior:

A. Adequary of training in the teaching of reading skills

B. Establishment of friendly relationship with "tutee"

C. Pre-planning of lessons

D. Use of appropriate reading materials

E. Requests for help in aids, techniques from you

F. Initiative, resourcefulness, etc.

G. Dependability (promptness in arriving, regular attendance, notifying you in advance of inability to tutor, etc.)

H. Personal conduct (courtesy, respect, poise, etc.)

I. Additional comments:

Circle one number for each statement:

1. My STAR provided a valuable service. Yes 5 4 3 2 1 No

2. I would use a trained tutor again next year. Yes 5 4 3 2 1 No

3. I think high school students should have the opportunity for training to become tutors through an elective course offered by the Lewiston School Department. Yes 5 4 3 2 1 No

4. High school students should receive academic credit for training and tutoring under closely supervised conditions if such a course were available. Yes 5 4 3 2 1 No

Thank you for your cooperation in the STARS Project this year and for helping N.O.W. Staff to evaluate its effectiveness from your comments.

Please return the completed survey to your principal by_____.

N.O.W. Program

STAR Survey Date_____

Name_____Grade_____

DIRECTIONS: Respond briefly to the following items.

1. What knowledge, skills, and/or techniques did you acquire during the STAR training that you were able to use effectively?

2. What knowledge, skills, and/or techniques did you need and not acquire during the STAR training?

3. What techniques did you improvise on your own?

4. What instructional aids (books, art, music, etc.) did you use in addition to those materials supplied in your kit?

5. What additional materials should be provided in the training kit?

6. What interested you enough to volunteer for the STAR training sessions?

7. What interested you enough to fulfill your commitment to continue tutoring?

8. Do you think your tutee was "matched" well with you for a tutor/tutee relationship?

9. Did you find transportation, telephone, tutoring session scheduling adequate? Explain.

10. Did tutoring experience have any influence on

    A. Your future educational plans?

    B. Your future career plans?

11. Were the results of the SVIB (Interest Inventory) of any value to you? (For example, did you seek further information regarding yourself and careers?)

12. What was the greatest satisfaction to you as a STAR this year?

13. What the greatest dissatisfaction to you as a STAR?

14. If you were able to make the choice again, would you be willing to volunteer to be a STAR or participate in some similar tutoring program?

Thank you for your help.

STARS - Classroom Teacher Survey

N=14
May 9, 1973

1. Behavioral changes (if any) in tutee

   A. Acquisition of reading skills

   4 - none or no response

   Improved considerably in oral reading, understanding what he reads

   Shows ability to "grasp" things

   Reading has improved greatly

   His reading level on RFU test was 4.2 - a big improvement on 2.4 in the fall

   Has not shown much improvement but this is because of previous experiences (2.9 - 3.9) IQ 56

   Some

   A definite improvement in word recognition skills

   Student enjoys independent reading now

   Individual attention was what this student needed (4.8 - 3.6) IQ 85

   B. Transfer of reading skills in academic subjects in general (spelling, social studies, etc.)

   Has been using dictionary more often - whenever she come across an unfamiliar word--reading comprehension is better than in the fall (5.7 - 6.2)

Reading and penmanship better (2.3 - 3.2)

Has improved in spelling and social studies

Still has difficulty, but seems more capable than before

Her improvement has been obvious--she has begun to participate in classroom activities (2.3 - 4.3)

Has shown improvement, especially in social sciences (2.9 - 3.9) IQ 56

Some (2.9 - 3.6) IQ 61

Spelling scores have gone from a 60%ile to 90%ile (4.7 - 5.6) IQ 103

Can't say (grade 7) (3.2 - 3.9) IQ 92

Don't know (grade 7) (4.8 - 3.6) IQ85

Students were not with tutors long enough to show a drastic change (grade 7) (4.1 - 3.6)

4 - none

C. Increased academic achievement

3 - none Student left school two months ago

His grades have improved, although not markedly (2.1 - 6.1)

Able to do better when he wants to--is easily led astray (2.3 - 3.2) definitely improved--more willing to work and ask for help

Grades have improved

Markes have improved

Has improved in all areas

Does not show, but has had improvement (2.9 - 3.9)

2 - Some

His interest has improved in all subjects

Student likes to read by himself now--has discovered reading is a pleasure (4.9 - 3.6)

Insufficient evidence to report this

D. Increased use of library or other resource materials

5 - none

No evidence on his own

Has been using encyclopedia in social studies

Has shown marked increase in their use mostly because of increased motivation

Same

Has been able to turn in one book report a week using library books of a third grade level (4.7 - 5.6)

Yes --student reads for pleasure (3.2 - 3.9)

Yes

She utilizes library more extensively than other students

E. Self-concept (confidence, emotional dependence, self-worth, etc.)

4 - No response

Improved in confidence

Needs constant praising

Confidence low--a real guilt complex-Grade 7 (2.3-3.2)

Self-concept appear higher

Confidence is still low but has improved

Some improvement

Same

Definitely more confidence and self-worth felt by the tutee

None noted

No change

Attachment 4

Classroom Teacher Survey

STARS Behavior

May 9, 1973

A. Adequacy of training in the teaching of reading skills

7 - no response

3 - I did not observe her (grade 7)

2 - Very good

Good

Well trained, I would say

B. Establishment of friedly relationship with "tutee"

3 - no response

I understood the girl tried, but this is a difficult case

Tutee always looked forward to the session

2 - Excellent

They seemed to get along very well

2 - Yes

Very high

Very good

From all reports, good rapport

Did not observe

C. Initiative, resourcefulness, etc.

8 - no response

Excellent--had a good attitude toward her commitment

Hard to say

Can't say

When she ran out of materials, she was able to invent new projects

Yes

Tops!

D. Dependability (promptness in arriving, regular attendance, notification in advance of inability to tutor, etc.)

1 - no response

No advance notice--arrived fairly late in period--irregular attendance (Grade 7)

2 - very good

We seemed to experience more than the usual number of problems--I don't think she was able to devote the needed time to this project (5.7 - 6.2)

2 - Excellent

She has been prompt and regular

Attendance has been very poor, however, when she did arrive, she always was on time

She did not come regularly--did in the beginning, but has not come lately (3.1 - 5.1)

Always on time and attended regularly

Average

Good

Okay

Tutee's attendance very irregular (grade 7)

E. Personal Conduct (courtesy, respect, poise, etc.)

8 - Excellent in all areas

Always polite and responsive

Very polite, courteous--got on well with student

Very much so

By her behavior and decorum, I feel tutee changed for the better

I'd rate her very high in this respect

Very good

Fine qualifications

STARS Survey Results (N=12) - May 14, 1973

1. What knowledge, skills, and/or techniques did you acquire during the STAR training that you were able to use effectively?

   Most STARS listed various Lit. Vol. techniques and materials:

   phonics, words in patters, rhyming words, sight words, proper way to approach the student

   2 STARS stated that they were unable to use Lit. Vol. methods because tutees were absent and not motivated.

2. What knowledge, skills, and/or techniques did you need and not acquire during the STAR training?

   Most STARS responded "none".

   3 listed "psychology", "patience" and "motivation."

3. What techniques did you improvise on your own?

   Relating my lessons to his regular classroom lessons.

   Word games I discovered in a booklet.

   Using a tape recorder.

   Drawing pictures to go along with letters.

   Student pasted pictures and words in a notebook he took home.

4. What instructional aids (books, art, music, etc.) did you use in addition to those materials supplies in your kit?

   school books
   spelling lists
   library books
   newspapers
   Bowmar books about car racing & snowmobiling
   magazines
   worksheets
   comics
   student home work papers
   workbook
   trick and skit book
   posters
   travel book on London

5. What additional materials should be provided in the training kit?

More workbooks and worksheets

More books like Operation Alphabet (slightly advanced for older students)

Higher level of Reader's Digest

Most students thought the kit was satisfactory.

6. What interested you enough to volunteer for the STAR training sessions?

I wanted to be able to help a student with difficulty in English. I needed the help when I was younger.

I plan on being a teacher.

5-I like to tutor and help someone if I can.

I enjoy working with children.

4-I wanted to find out if teaching is for me. (One wrote "After much thought I've decided teaching is definitely not my career ambition.")

7. What interested you enough to fulfill your commitment to continue tutoring?

3 - I felt I had an obligation.

2 - I just got enjoyment from tutoring.

I was curious to see if I would succeed.

In order to help my tutee get over his negative attitude toward school.

I enjoy challenges.

Once ny tutee began to improve I wanted to help continue her progress.

It seemed to be the only thing he really looked forward to in school.

To help my student--he liked the change.

To get to know my student.

I felt he needed me.

8. Do you thinkyour tutee was matched well with you for a tutor/ tutee relationship?

yes - 7 no - 5

(STARS' requests for tutees by age and sex were not always Possible.)

9. Did you find transportation, telephone, and tutoring session scheduling adequate? Explain.

Yes - 7 No - 4 Taxis sometimes late

1 Teacher and I did not understand each other no communication

1 At times there was no place for me to go to tutor

10. Did the tutoring experience have any influence on:

A. Your educational plans? Yes - 6 No - 6

The tutoring was helpful to me in understanding children's inability in English language.

Yes. My decision to go to college is definite.

I already knew I wanted to go to college.

I won't become a teacher.

B. Your future career plans? Yes - 9 No - 3

I hand planned to go on to child care. (She graduated in June and is employed in child care.)

I don't think teaching is my line.

Yes. I learned how to help others.

I already knew I wanted to go into speech therapy.

Though I would not like to become a teacher, I think I may enjoy going into some sort of special education.

Yes. I know what kind of teacher I want to be.

I have been thinking about being a teacher. Yes, tutoring has probably strengthened the possibility.

Yes.

Yes. I won't become a teacher.

11. Were the results of the SVIB (Interest Inventory) of any value to you? (For example, did you seek further information regarding yourself and careers?)

Yes - 4 No - 8

I found out I liked may other things.

3 - I already knew what I wanted to do and the SVIB said the same things.

I'm waiting till next year.

12. What was the greatest satisfaction to you as a STAR?

4 - No response

Knowledge that my tutee's grades went up.

I gained two new friends.

2 - He was learning--and looked forward to my coming.

3 - Seeing him improve.

Being appreciated and not taken for granted.

13. What was the greatest dissatisfaction to you as a STAR?

3 - no response.

The attitude of the tutee.

Days when little progress was made.

When I could not convey a pertinent idea.

Tutee was poorly chosen

Lack of effort on the part of my tutee.

When my first student transferred and I had to start all over.

Having to end it.

I wanted to help too much.

The attitude of my associates.

14. If you were able to make the choice again, would you be willing to be a STAR and participate in some similar tutoring program?

Yes - 10 No - 2

2 - I've enjoyed it very much.

I'd like a younger child. (had grade 7)

But I don't feel that I gave my tutee all that I had to offer.

NOW Field Trip Information for Resource Persons

Date_____

Name of resource:_____

Address:_____

Subject: Field Trip by Students

Teacher_____ School_____

Grade level_____ Number of students_____

Number of adults_____

Estimated time of arrival_____ Estimate time of departure_____

This letter confirms a field trips to your establishment on_____

We recognize that each field trip to a resource will be unique and it may not be possible to adhere to all of the suggestions written below. We do want you to know that we appreciate your service to us and hope that you will have a clearer understanding of just what we are trying to do to incorporate the career education concept into the present school curriculum. We have set forth several guidelines to help you prepare for this visit.

What qualifies as a career education field trip? Answer: Any trip that deals with a study of careers. A trip is of value if student awareness is increased in one or more of the following:

1. The dignity of all work.
2. The inter-relationships of occupations.
3. Factors of skill, preparation, personality involved in occupations.

A career education field trip should emphasize the occupations to be seen. The students expect:

1. To be interested in the worker first, product second.
2. To see work as it actually is.
3. To observe and understand human relations--worker to worker, worker to employer, worker to subordinate.
4. To develop an awareness of various occupations and various levels in each.
5. To relate the function of many different types of work involved in producing a final product or service.
6. To relate the trip to actual current academic subjects they study.
7. To observe the total individual work sceen to include time as well as actual work time.

NOW Staff
9/1972
Form 3
jem

132

Enclosure: Evaluation Sheet

Field Trip

A career education field trip must emphasize the occupations to be seem. The industry or serviceiis not the most important factor. The planning, preparation and follow-up for a career trip needs to increase occupational awareness for the students.

What Qualifies as a Career Education Field Trip?

1. Any trip which deals with a study of occupations.
2. A trip can be related to science, social studies, etc., but careers must be involved.
3. A trip that is of value in terms of increasing awareness in one or more of the following:
   a. The dignity of all work.
   b. The inter-relationship of occupations.
   c. Factors of skill, preparation, personality involved in occupations.
   d. Student examination of himself in relation to the skills, educational preparation, personality factors required by the work and the personal satisfaction which the student may gain.

Procedures in Carrying Out an Effective Trip

Most trips are cooperative efforts and teachers and NOW Staff members are both involved in:

1. Preparation of forms and acquisition of the building principal's approval.
2. Planning goals and objectives, organization, preparation of students, discussion on follow-up and evaluation.
3. Responsibility for discipline of pupils and coordination of groups during trip.
4. Carrying out follow-up discussion and evaluation; the classroom teacher may have the main responsibility for follow-up.

NOW Staff
9/1972
Form 4
jem

Orientation Information for Field Trips

Teachers are encouraged to devote some time to the preparation of students before embarking on a field trip. The purposes of the field trip and its relation to (1) the academic subject area involved and (2) exploratory career information value should be discussed. During the discussion, the following points should be stressed:

1. Suggest that students keep a continuous guidance file for future use.
2. Learn how a factory or place of business looks.
3. Observe the different kinds of work.
4. Get ideas for the kind of work students might be trained/educated for some day.
5. Listen courteously to guide and to other students asking questions or making comments.
6. Dress appropriately for warmth and for safety factors.
7. Develop meaningful questions that may be asked of the guide/employees pertaining to work skills, work opportunities, etc.
8. Students should conduct themselves appropriately:
   a. No eating or drinking on the guided tour of business unless refreshments are provided by the host.
   b. Clean-up details should be assigned to students during the orientation session to the field trip. A few plastic litter bags are suitable for this task when buses are used.
   c. Students will observe school rules regarding smoking and other personal conduct during the field trip.
   d. Students should use the school restroom facilities immediately before departing the school for the field trip.

NOW Staff
9/1972
Form 5
jem

Follow-up Suggestions

Each student should have an opportunity to look at himself in relation to the different careers observed. Some activities might include: role playing, charades, guided group discussions, sociograms, independent research.

Other activities are: Thank you letters, any type of work in art, math, science, social studies, linguistics, etc., which will promote further learning about the carrers involved and that emphasize the relationship between what is learned in school and what is required in the career, report for newspaper.

For newspaper reports the following questions should be emphasized:

1. Who went.
2. Where did you go.
3. When did you go.
4. Why did you go.
5. With whom did you speak.
6. What jobs did you see.
7. What did you learn about careers.

How To Study an Occupation

1. What are the duties of the worker?
2. Who might be interested in the occupation?
3. Where are the greatest opportunities found?
4. Does this occupation promise steady employment?
5. What level of skill is required?
6. Is the work dangerous?
7. What are the minimum and maximum wages?
8. What program of training or what education beyond high school is required to prepare the worker for a job?
9. Must the worker be able to associate and get along well with others?
10. Will he be responsible to the work of others?
11. Will he be called on to make decision?
12. Does the task require great physical stamina?
13. What are the opportunities for advancement?
14. What are the advantages to be found in this work?
15. What are the disadvantages to be found in this work?

NOW Staff

Form 6
jem

The Teacher's Role in Career Development

A teacher of science may ask, "How is it possible for me to know all that there is to know about every occupation to which my subject might lead?" The answer, of course, is that it is humanly impossible to know everying about occupations, although many teachers have become authorities on work related to their particular fields of study. This is certainly an endeavor worthy of each one's consideration.

As a first step in getting started, the classroom teacher will want to acquire a knowledge of where to find occupational information. The sources of information which follow will prove useful to many who help to guide boys and girls in their vocational development.

1. Professional Books
2. General Bibliographies of Materials
3. Periodic Indexes
4. Occupational Briefs and Monograpns
5. U. S. Government Publications
6. Occupational Outlook Handbook 1972-73 Edition
7. Pamphlets on Vocational Planning
8. Posters and Charts
9. Vocational Textbooks
10. Biographies and Career Fiction
11. Occupational Films and Filmstrips and Slides and Tapes

pp. 47-56 Teachers Role in Career Development, Tennyson, NVGA

SUGGESTED GUIDELINES FOR INTERVIEWING RESOURCE PERSONS

The items below may be used during the classroom orientation session by students to help them develop questions for interviewing workers, resource persons, guest speakers, etc.

1. Name
2. Title
3. Length of employment
4. How
5. Why
6. Why this town
7. Duties
8. Necessary knowledge
9. Special education/training
10. Men/women
11. Hours a week
12. Vacation
13. Job satisfaction
14. Disadvantages
15. Length of time to learn
16. Advancement
17. Pay range
18. Personality requirements
19. Union, dues, entry
20. Fringe benefits
21. Number and categories of workers
22. Nature of the work environment
23. Minimum age
24. Future
25. Recommended as a career for youth
26. Would you be willing, if requested in the future, to come to a school class or to meet with one or more students at your convenience at a place agreeable to you, to discuss further your particular work?
    If yes, get NAME ADDRESS AND TELEPHONE NUMBER. If "no" be pleasant and do not pursue.

FILM LIST

CAREER EDUCATION

INTRODUCTION

The films listed below have been ordered for use by teachers in their classrooms. An asterisk indicates confirmation of that film during the week specified. If you wish to show any of the films, please contact the NOW Staff so that delivery can be made to you.

During the 1972-73 school year the NOW Staff is making a serious effort to coordinate the ordering and distribution of materials (including films) as a service to teachers and students. The two major reasons for NOW coordination are (1) to reach the largest, appropriate audience possible and (2) to reduce the cost to provide the most economic service possible.

Catalogs of free films and other free curriculum materials are available in the NOW Resource Center located in the Armory. Teachers are encouraged to borrow the catalogs and place orders through the NOW Staff. All materials will be delivered to teachers and any materials requiring mailing to the lending institutions will be done via the NOW RESOURCE CENTER.

ANNOTATED FILM LISTING

The Extra Step
This color film presents the correct use of the telephone in serving the public through good human relations practices. Common bad habits are contrasted with effective suitable telephone conduct which produces best customer service. 25 min.

Is a Career in Government for You?
This color film presents the enormous scope of career opportunities available in government at the local, state, and national level. The information is up-to-date (mentions 18-year-old voters) and specific in suggesting sources of additional career information. 15 min.

Horizons Unlimited
This film urges young people to think carefully about their future and raises certain questions that should be considered in this regard. It shows how the growth of nuclear energy and its applications have opened the door for all kinds of career opportunities. 37 min.

Films

Ordered for Free Viewing

How About Billy Wilson?

This film answers several vital questions about career opportunities within the Federal Aviation Administration for a young minority group student. Billy Wilson learns that he can compete on a completely equal basis for one of the thousands of jobs in the Federal Aviation Administration.

How We Make A Living

This film shows how Census Bureau statistics, properly interpreted, can help a person make a better choice of a career. It shows the pattern of seasonal employment and demonstrates how the census may help to control unemployment in the future.

Into The World

This film presents the truths and realities about college and continuing education. 28 min.

It's You Against the Problem

This film is a career guidance film illustrating the role of basic research in the space program. It shows the research of Dr. Simon Ostrach and his colleagues at Case Institute of Technology. 26 min.

Laboratory of the Body

This film describes the constantly expanding scope of dental research and its relation to today's scientific community. Its basic purpose is to describe the challenge of dental research to senior high school and college students who are interested in science. It is designed to attract students who will become biologists. 28 min.

Listen, Listen

This film is aimed at high school students and is designed to provide and provoke thought about their education and careers.

Long Ships Passing

This film describes the activities of the Great Lakes vessel industry. It depicts the loading and unloading of ships, life aboard vessels, voyages from the lower lakes to the upper lake ports and return. 32 min.

Mainstay of the Mail

This film shows the importance of well-trained maintenance personnel and of good maintenance practices as applied to Post Office buildings and equipment. It emphasizes the opportunities that exist in the field of equipment maintenance, and the need that is present for trained personnel to maintain the complex mechanized equipment. 14 min.

Films

Ordered for Free Viewing

Matter of Opportunity
This film focuses on the many opportunities available to students who decide on a career in medicine. Produced specifically for members of minority groups. 27 min.

Men's Hairstyling as Your Career
This film portrays the immediate and future need for barbers and men's hairstylists. It provides a glimpse of in-training activities, climaxed by on location scenes of internationally renown hairstyling artists as they display their award-winning talents.

Moment of Decision
This film shows how the army instills the concept of leadership into Officer's Training School Candidates. The film points out how the graduates of OTS become particularly valuable to civilian businesses on the lookout for leadership material. 27 min.

The Noble Breed
This film tells the story of today's firemen---the duties, problems, his new image, and the vital role he plays in modern society. 28 min.

No Limit To Learning
This film is intended for eighth and ninth graders. It follows members of a junior high school guidance class as they visit young people engaged in or training for various occupations. Through conversations with these people, the student learns the importance of investigating the full range of post-secondary education, including junior college, technical institues, four-year college, and business education programs. A discussion guide is available for use by students and counselors as a supplement to the film. 28 min.

Operator
This film shows the work of the telephone operator. It uses footage from D. W. Griffith's silent film about old-time operators. The message: The telephone operator's job, despite its tensions and aggravating moments, is one which consists primarily of human contact and as such carries rich rewards.

Poetry of Polymers
This film portrays the career of a basic research scientist through a career guidance study of the work of Dr. Frank d' Aleio, University of Notre Dame. 19 min.

Precision Tool Making and Machining
This film tells the story of the industry behind industry, the industry where craftsmanship reaches its peak--tool and die making and machining. 25 min.

Preparing for Tommorrow's World
This film opens in a high school laboratory with the physics teacher serving as narrator. The student is asked to examine his interests and abilities with a view toward taking his place in the expanding world of nuclear science and nuclear engineering. 26 min.

Pulse of a City
This film shows the operations of a large metropolitan daily newspaper. You see how reporters gather the news, how photographers cover their assignments and how skilled craftsmen assemble the equivalent of a large volume each day into a newspaper. 20 min.

Some Careers are More Rewarding
This film shows how the para-medical jobs of three girls in physicians' and dentists' offices enhance their lives 12 min.

A Step Ahead
This film presents Chet Huntley, who reports to farm youth on new careers in agriculture and agribusiness. He suggests that they are a step ahead in qualifying for exciting new jobs because of their farm background and experience. 12½min.

That the People Shall Know
This film features six top journalists who describe their careers in the vital field of communication and opportunities and challenges the field offers. 21 min.

They Major in Missiles
This film is a report on the cooperative Training Program at White Sands Missile Range. Students enrolled in this program attend classes at New Mexico State University and Texas Western College for six months of the year. During the remaining six months, they receive on-the-job training in their chosen field.

Time for Decision
This film shows why a farm boy should stay on the farm, when space exploration and a thousand and one other exciting occupations becon. This film takes such a boy on a tour of successful modernized arms and to the Farm Progress Show to prove farming today offers a challenge equal to that of any other progression.

Vehicle Maintenance Story
This film emphasizes the system used to maintain the vast fleet of vehicles needed to deliver the United States mail. It explains the various job opportunities available to vehicle maintenance personnel in the Postal Service. 13½ min.

Films

Ordered for Free Wiewing

What's So Special About Paper?
This film is a guidance film about the paper industry. It reveals the great range of jobs, for people with almost any educational background, and shows how the industry is involved in such socially important work as forest conservation and water purification. 28½min.

Wider World
This film is the third in the series entitled, "The Making of a Doctor." It shows three of the many faces of medicine--private practice, public health, and medical research. 28 min.

Within These Walls
This film is the second in the series entitled "The Making of a Doctor." It continues to follow the education of the physician in his internship and residency. 28 min.

Without Warning
This film tells the story of disaster. Disaster knows no boundaries, it can strike anywhere, anytime, without warning. This is a story about disaster and people--dedicated people serving those who need help. The health professions have been described as some of the fastest-growing industries in the country, and they offer young people an enormous range of career opportunities. 16 min.

You Be The Doctor
This film explains the significance of the degree D. O., depicting the education of an osteopathic physician. It follows the education of the doctor from pre-professional training through graduation, with scenes from the esteopathic colleges and hospitals. 16 min.

Your Call to Colors
This film shows how dyes are made, what kind of skills are needed for their production and where young people can be trained to work in this challenging industry. 12 min.

Your Place in the Nuclear Age
This film gives the student a picture of the professional environment in which he sould be working if he chose a career in nuclear science or engineering. 26 min.

CAREER EDUCATION

INTRODUCTION

The NOW Career Education Resource Center has quite a variety of color sound filmstrips, interview tapes, 16mm films, multi-media kits, career monographs, occupational briefs, professional and student booklets, etc., that you are encouraged to use in your classes on a loan basis for a specified period of time. Duplicates of some materials have been obtained. The materials can be reserved to serve you and your students in Lewiston and regional schools.

Some of the resource materials listed below have not been classified by teachers for grade level. Please feel free to request use of the resources and to help us determine appropriate grade level. In order to avoid repetition for the students, we will act on your recommendations following presentation and will then reserve them for a particular grade level.

NOW Staff will arrange for delivery and pickup and will provide duplicated questions for class discussion or homework assignments to be distributed to each student if you would like this service. Teacher's guides are also available for some of the materials. A short evaluation sheet prepared by NOW Staff should be completed by each teacher concerning the effectiveness and appropriateness of the materials for the grade level of students involved in the presentation(s) and activity(ies).

On the attached sheets are a listing of filmstrips we are eager to schedule on a rotating basis. Please study the list and inform us of your willingness to participate in this career education implementation.

We sincerelyappreciate the cooperation we have enjoyed from you during this past school year in Lewiston and look forward to working with you and teachers throughout the region this coming year.

MULTI-MEDIA KITS

Focus on Self-Development (Grades K-4)

Focus is a K-6 developmental program designed to lead a child toward an understanding of self, of others, and of the environment and its effects. The program is for use in the classroom by the classroom teacher.

Stage One: Awareness for grades K-2 (20 units) logically follow one another although they can be used in any order you feel beneficial to the class.

Stage Two: Responding for grades 2-4 (19 units)

Stage Three: Involvement will be published in fall 1972 for grades 4-6.

The kit for Stage One consists of the following components:

1 Guide	5 36-frame filmstrips with accompanying records
4 10" 33 rpm story records	20 17" X 22" photoboards (two sides)
1 easel to display photoboards	1 pupil activity book: Here I Am

Containing 23 stories, situations, or musical selection

Stage One can be used as an integral part of the curriculum because the units and the activities in them were developed to complement subjects taught in kindergarten to second grade. The necessity of reading has been purposely minimized so that the nonreader can participate fully in the activities.

The kit for Stage Two consists of the following components:

1 Guide 6 36-frame filmstrips with accompanying records
4 10" 33 rpm story records containing 23 stories, situations, or musical selection
20 17" x 22" photoboards (two sides)
1 easel to display photoboards 1 pupil activity book: The Me I Know

Stage Two can be used without having gone through Stage One. The stories and activities in Stage Two can be used with second, third, and fourth graders, and reflects the child's growing awareness of himself, his peers, and his environment.

MULTI-MEDIA KITS

Career Games - Grades 7-12

Career Games emphasizes involvement, decision making, and self-concept building. Career Games is semi-programmed and takes the individual on a career search of 166 different careers where he is confronted in a mysterious and involving manner with many decisions be must make. Designed for use in classrooms. Our experience indicates a maximum of 15 students to one teacher produces best results--for more than 15 students an assistant and a teacher are recommended. Teachers guide available. Produced by Educational Corporation.

Career Information Kit - Grades 7-12

Approximately 600 pieces of current literature reflecting NVGA guidelines have been selected from hundreds of authoritative source for use in the library. The alphabetical filing plan used in the first section of the kit reflects job families; it leads students to explore many jobs within occupational areas and provides easy reference to specific job titles. A second section provides carefully selected publications for both counselor and student in area of education, career, personality, and employment, guidance, and counseling. Produced by SRA.

Job Experience Kits - Grades 8-12

The Job Experience Kits are a collection of work simulation experiences in 20 representative occupations. Developed by a leader in the field of behavioral counseling, Dr. John Krumboltz and co-workers, each kit is designed to give students an opportunity to successfully solve problems typical of a particular occupation. Based on positive research findings, the Krumboltz kits have been generating student interst in career exploration. A maximum of 20 students with an experienced teacher will provide best results. Teachers guide available. Produced by SRA

Occupational Exploration Kit - Grades 9-12

OEK provides students with a systematic, personalized approach to job investigation. The unique OccuScan and student record books give each student the chance to explore occupations in terms of his own abilities, interests, and educational goals. Also serves as a practical and current aid to occupational investigation for a young person at a critical time in his life. Produced by SRA.

INTERVIEW CASSETTES

Cassettes of interviews with persons in many careers are available upon request by teachers. The cassettes may be used for individual, small group or total classroom exploration of the world of work.

NOW CAREER EDUCATION RESOURCE MATERIALS

Guidance Associates Sound Filmstrips Color, Guides, discussion questions for individual students available upon request to NOW staff. Recommended for use at grade levels by local teachers who have previewed or used them.

Grade 7

A NEW LOOK AT HOME ECONOMICS CAREERS. Filmstrip is broad overview of careers. No guide and no questions accompany the program.

Grades 7-9

TESTING, TESTING, TESTING. The filmstrip provides tips on how to take tests and the meaning of standardized test scores.

YOUR PERSONALITY: THE YOU OTHERS KNOW. The tone is personal--no preaching. The deep human importance and value of individual differences is the keynote of the discussion. Guide contains special activities.

YOUR FUTURE THROUGH TECHNICAL EDUCATION. Cassette or 33 1/3 rpm record. No guide, no questions.

YOUR FUTURE THROUGH VOCATIONAL EDUCATION. Cassette or 33 1/3 rpm record. No guide, no questions.

VOCATIONAL AND TECHNICAL EDUCATION FOR A CHANGING WORLD OF WORK. Cassette or 33 1/3 rpm record. No guide, no questions.

Grade 8

HIGH SCHOOL COURSE SELECTION AND YOUR CAREER. This program is an orientation to high school programs, course offerings, school activities and how these relate to selection and preparation for various careers.

YOUR FIRST YEAR IN HIGH SCHOOL. The purpose of the filmstrip is to present an objective and realistic view of what lies ahead.

Grades 8-9

CHOOSING YOUR CAREER. Hopefully, the student sees how a careful evaluation of his own current activities and attitudes can help him to determine the job category best for him.

HOW TO SUCCEED IN HIGH SCHOOL...BY TRYING. This program was designed to help the student understand that he is not expected to achieve success all by himself, and that he must learn to seek out services himself.

IF YOU'RE NOT GOING TO COLLEGE. The filmstrip exposes students to the wide variety of job families and occupations for which students might qualify directly out of high school. Part II introduces career alternatives.

Grades 8-10

JOBS AND GENDER. The students are directly exposed to people who have crossed the sex/work barriers. This program encourages students to explore what they really would like to be and do rather than what they think society expects them to be.

DROPPING OUT: ROAD TO NOWHERE. The filmstrip makes use of the experiences of teenagers who have themselves quit school, who have kicked around long enough on the "outside." Guide contains suggested classroom activities and assignments.

Grades 8-12

JOB ATTITUDES: WHY WORK AT ALL? The ideas presented are the most basic ones--work as a key to independence, as an outlet for energy, as a means of achieving satisfaction, and as a means of channeling hostile and aggressive drives. Guide contains activities.

GETTING AND KEEPING YOUR FIRST JOB. Students are reminded that they must set their own goals, and that the degree to which the goals are reached will depend upon the effort they are prepared to invest.

THE TUNED OUT GENERATION. The filmstrip is filled with candid interviews with mothers and fathers from a variety of backgrounds, revealing their joys, their frustrations and their deep-felt concern about their relationships with their children.

WHAT YOU SHOULD KNOW BEFORE YOU GO TO WORK. Students are reminded that this is a world in which abilities count, with an emphasis on the ability to communicate. Part II deals with aspects of the job itself--from finding and applying for it to succeeding in it.

JOBS FOR HIGH SCHOOL STUDENTS. The program offers practical advice on how to locate jobs in the community, from waiting on tables and baby-sitting to construction, retail sales, trade and industry.

Grades 9-12

PREPARING FOR THE WORLD OF WORK. Part I explores several of the ways students can begin to plan for an enjoyable and meaningful career now. Part II explains what employers expect a person to bring to the job--certain fundamental skills and knowledge.

A JOB THAT GOES SOMEPLACE. Effort, training, and experience are essential to advance.

LIKING YOUR JOB AND YOUR LIFE. The filmstrip features skilled workers speaking directly and spontaneously to students about their work and their life styles.

Guidance Associates, Cont'd

Grades 3-4

First Things Series

Introduces primary grade children to basic concepts of their social and physical environments. The fundamental objective of the series is to help each child grow in understanding of himself and as members of groups within the society.

First Things Series:

Who Do You Think You Are? On the way to school, Tony, and your students discover the excitement of exploring and defining individual identities through personal "facts and figures," actions and feelings.

What Happens Between People. Moving day provides Freddie with opportunities to explore the concept of human interaction. With him, your children discover the different types of interaction (verbal, physical, etc.), positive and negative characteristics, and various objectives of interaction.

Grades 7-12

Babysitting. Essentially an orientation to the job of babysitting, although it is also an effective means of introducing or complementing a more intensive study of child development.

I Wish I'd Known that Before I Went to College. Program discusses problems confronting most college freshmen. Written and narrated by Bill Wilson, Dean of Admissions, Amherst College, and Abraham Lass, Principal, Abraham Lincoln High School, Brooklyn, New York.

Grades 9-12

Trouble at Work. The filmstrip goes straight to the on-the-job conflicts between workers and between workers and supervisors.

Your Job Interview. Tips on how to make a favorable impression in the crucial interviewing situation.

Job Hunting: Where to Begin is designed to provide the novice job hunter with the basic information and skills needed for successfully seeking employment. It also focuses on the attitudes and problems frequently encountered during the job hunt.

An Overview of Technical Education. The program probes semi-professional vocational opportunities available in a technological society. Describes educational demands, schooling available, opportunities for advancement. Developed with the Ohio State Department of Education, Director of Vocational Education. No namual available.

Grades 11-12

On The Job: Four Trainees. Part 1, Advanced Vocational Education; Part 2, Apprenticeship; Part 3, Upgrading; Part 4, On-the-Job-Training.

Professional Resources

As They Grow/Elementary Guidance. New dimensions in meeting public needs. This program (for teachers and other professionals), a case study, live situation approach, places emphasis or developmental aspects of elementary guidance. It explores the role of the counselor in counseling youngsters, referring pupils laying foundations for career planning. No manual available.

The Role of The Counselor in the Secondary School. The program explores the counselor's interaction with teachers, course planning, career and college selection, and parent conferences. Produced in cooperation with the American Personnel and Guidance Association. No manual available.

Bowmar Filmstrips, Cassettes, Instructor's Handbook, Support Literature concerning each of five careers

Grades 7-8

COMPASSION FOR PEOPLE: Registered Professional Nurse; Mental Health Aid; Licensed Practical Nurse; Registered Orthotist; Inhalation Therapy Technician. Suggested for use by Health teacher in each school.

THE AGE OF ELECTRONICS: Electronic Technician; Electronic Assembler; Environmental Test Technician; Technical Writer; Machinist. Suggested for all Industrial Arts and other students.

M'N HAS WINGS: Aircraft Engine Mechanic; Pilot/Flight Instructor; Air Frame Mechanic; Air Traffic Controller; Passenger Service Agent.

Grades 8-12

JOBS FOR THE NOW GENERATION: Equipment Rental Assistant; Food Service Assistant; Park and Recreation Assistant; Real Estate Management Trainee.

Grades 9-12

THE MONEY TREE: Real Estate Appraiser; Investment Counselor; New Accounts Clerk; Bank Teller; Decoder Machine Operator.

CABBAGES TO KINGS AND VARIOUS THINGS: Retail Department Head; Retail Sales Associate; Specialty Retail Sales; Retail Food Clerk; Credit Counselor.

Grades 6-8

THE NATION'S BUILDERS: Heavy Equipment Operator; Carpenters; Electricians; Civil Engineering Technicians; Architectural Draftsman.

HUMAN RESOURCES DIRECTORY

The NOW Staff is compiling a directory to serve as a reference source for teachers and students. When completed, the directory will be a comprehensive list of persons who are willing to assist students in the exploration and pursuit of career educational activities.

To date forty-four persons have agreed to be of service to individual students and/or classroom groups upon request. If you would like NOW Staff to contact one or more of these volunteers in an interest area related to your academic subject or student interest, telephone NOW office (784-1672) or ask one of us in person and we will do our best to accommodate you. Please allow several weeks from date of request to date of guest visit or field trip as these volunteers are employed and must coordinate their working hours to serve us.

Grade Level 10-12

Interest Area:

1. Accountant-Bookkeeper
2. Administration
3. Architect
4. Auto Mechanics
5. Banking
6. Business
7. Business Education
8. Commercial Banking
9. Community Education
10. Court Reporting
11. Predelinquency Counseling
12. Electrical Utilities
13. Engineering and Science
14. Farming
15. Finance
16. Fire Protection
17. Franchise Management
18. Gym and Swimming
19. Industrial Relations
20. Insurance
21. Insurance Salesmanship
22. Law
23. Law Enforcement
24. Legal Secretary
25. Mortuary Science
26. Nursing
27. Occupational Counseling
28. Photography
29. Plumbing and Heating
30. Politics
31. Recreation
32. Rocks, Sea Shells, Woods (collection)
33. Sales
34. Savings
35. Silversmith or Rockhound, Mineral collecting, Lapidary
36. Skiing
37. Social Welfare
38. Spinning, Weaving, Dyeing
39. Sports
40. Supermarket
41. T.V. Programming
42. Youth Work

Field Trips Available for Small Groups (maximum 8):

Mineral Shop--stones, jewelry, bookends, paperweights (Winthrop)
Fine Woodworking, construction of furniture, lamps, and accessories (Topsham)
Handicrafted furniture (Topsham)
Silversmith, Lapidary, mineral collecting, macrame (Litchfield)

CAREER EDUCATION N.O.W.

VOLUME 1 #15

MARCH 1, 1973

DATE LINE: LEWISTON

The staff members of the N.O.W. Program who ordinarily compile information for this weekly paper have been participating in a staff development program called Vocational Exploration Groups. It was designed and developed by Dr. Calvin Daane of Temple, Arizona. The NOW Program engaged Dr. Daane to come to Lewiston and conduct the program. Twenty-four teachers and counselors (seventeen from Lewiston and seven from regional schools) have receive training to become trainers or leaders in future Vocational Exploration Groups. One-hundred-twenty students are participating in the process plus local administrators, educators from Maine Department of Education, and the University of Maine.

Below is a brief description of the program.

INTRODUCTION

The goal of vocational exploration is the development, expansion and personalization of jobs for group members. The process is a highly structured examination of self in relation to the world of work. It helps members use the group to gain an expanded awareness of jobs, to increase the quantity of jobs each would consider appropriate for him in career planning.

GOALS

1. To provide students in grades 8 to 12 (primary emphasis to be performed in grades 10 to 12) the opportunity to develop, expand, and personalize jobs. This will more effectively prepare these students to better evaluate their career preparation and direction. Satellite programs will be offered in grades 6 and 7 in order to prepare students for job exploration.

2. To train teachers and counselors as leaders to increase their understanding of career education activities, the value of this understanding to them in their work, and to increase their involvement in facilitating total student development.

3. To train the NOW Staff as trainers in group procedures for career exploration in order to reach more effectively teachers and students and to provide continuing staff development.

THOUGHT FOR THE WEEK

CAREER EDUCATION IN THE CURRICULUM

Mrs. Smith's Math class at Montello visited CMVTI. They learned about the skills they need to train for technical careers.

Bradley Peters, Public Relations Director of Maine Central Railroad, discussed the railroad industry in Maine with Miss Houle's grade 3 at McMahon.

Brian Albert, Constance Brann, Elizabeth Filliettaz at Pettingill and Paula Beleckis at Wallace took their fourth graders to Augusta this week. The students learned about the history of Maine and discovered some careers in government.

Miss Coutune, Director of Medical Records of Central Maine General Hospital, discussed her career with the Montello Library Club.

Judy Rollin's foods class at Montello visited Country Kitchen. They learned about different careers in automated bakery.

Linda Hackey's first graders had five representatives visit Country Kitchen with the Montello 9th graders. They are becoming aware of community workers.

February 27 - The students in Mrs. Bates' Grade 5 at Martel and Mrs. Jordan's Grade 4 at Farwell traveled to Augusta where they visited the Maine State Museum, the Legislature, and lunched at McDonald's. Mrs. Jordan's group were able to talk briefly with local legislators Minkowsky and Clifford. Mrs. Bates' group observed local industries and historic places and route, particularly in the Winthrop area.

March 6 - Mrs. Jordan's 4th grade at Farwell toured the Seltzer and Rydholm beverage company in Auburn where they observed the processing and bottling of soft drinks to relate job opportunities and the different kinds of work available in the local area.

Anyone interested in participating in Vocational Education Groups short process (two hours) at nights or weekends, contact the N.O.W. Office 784-1672.

THOUGHT FOR THE WEEK

VOLUME 1 #19

MARCH 30, 1973

DATE LINE: LEWISTON

CAREER EDUCATION IN THE CURRICULUM

March 16, 1973 - As part of an aviation visit, Mrs. McGrath's third grade class at Coburn had as a guest Mrs. Fran Cannon a stewardess from T.W.A. The classroom was set up as the interior of a commercial airline and Mrs. Cannon served a light lunch and performed other duties as she would on a regular commercial flight thus giving the students a first-hand look at some of the duties of a stewardess.

March 20, 1973 - Mrs. McGrath's, with the help of a student teacher Mr. Henry Aliberti, third grade class at Coburn took a field trip to the Portland International Jetport. The students observed the various activities involved with an airline terminal and saw a commercial Delta flight arrive and leave. Also some of the students saw Mrs. Cannon,TWA stewardess, as she was leaving to fly to New York so she could make the connection for her working flight schedule from New York City to Rome Italy. While at the airport the students also visited the Portland Weather Station located at the airport.

March 27, 1973 - Mrs. Piper's 9th grade class in Creative Cooking at Jordan Junior High School visited the Main Culinary Arts Center on Spring Street to explore careers in cooking. They toured the facilities and heard an interesting talk by Mr. Marsden, the instructor. Mr. Cotter, the steward explained the preparation of food and the training of student. A delicious and beautiful meal was enjoyed.

March 29, 1973 - One of Diane Bleakney's eighth grade classes at Montello went through the Vocational Exploration Group (V.E.G.) process. Several other groups of Montello students are having a V.E.G. experience.

March 29, 1973 - Jim Helms, Carol Bradford, and Roy Bagley went to Waterville to lead a class of Cooperative Educations teachers in Vocational Exploration Group.

March 30, 1973 - Joan Flynt's Art classes at Jordan Junior High visited the Maine Mall. They are working on a unit in advertising and the related careers.

March 30, 1973 - Mrs. Furtado's grade 6 boys at Dingley visited Mr.Bussell's Trades and Industry class in carpentry. The trip was arranged to related the woodworking activities the Dingley's students are engaged in.

Vocational Exploration Groups are happening everywhere!

DATE LINE: LEWISTON

CAREER EDUCATION IN THE CURRICULUM

March 30, 1973 - Each of Mrs. Furtado's sixth grade boys at Dingley were presented with a bird house that was cut and assembled in forty-five minutes by the students in Mr. Bussell's Carpentry Class at Lewiston High School. Since the NOW Gram was "in press" at the time of the visit, no mention was made of the "surprise" last week.

April 3, 1973 - Mrs. Flynt's Art students at Jordan Junior High School visited the Maine Mall to see the School Art Display. This was in conjunction with a unit in advertising.

April 6, 1973 - Mr. Dennis' class at McMahon had a register nurse visit them this Friday. The class discussed careers in the Health Fields.

ATTENTION K-3

Captain Kangaroo has a special series of four minute films on careers at 8:30 a.m. on channel 13 every Monday, Wednesday and Friday.

CAREER EDUCATION IN THE CURRICULUM

April 10, 1973 - Mrs. Piper's ninth grade girls at Jordan Junior High School visited Augusta on Tuesday, April 10 as an activity related to Human Relations. At the State Legislature they observed the congressmen in action and were recognized publicly by Speaker of the House, Richard D. Hewes, and by President of the Senate, Kenneth P. MacLeod. Representative Joyce E. Lewis, Auburn, and Representative Georgettee B. Berube, Lewiston, personally delivered legislative materials to the girls and welcomed them. A tour of the Blaine House, Maine State Museum, and the State Library provided much information regarding a multitude of careers. The girls lunched at McDonalds.

April 12, 1973 - Jackie Bouchard and Debbie Kajohnian, Jordan Junior High School, toured Pineland where they explored work opportunities in mental-health-related careers.

April 11, 1973 - Dick Lachance, Manager of Pontiac Village Service, visited Dick Dennis's sixth grade class at McMahon School to discussed careers opportunity as a mechanic.

April 11, 1973 - Students interested in the magazine industry at Montello visited Geiger Bros. to learn about careers in the printing industry.

April 11, 1973 - A registered nurse, licensed practical nurse, and a nurse's aide at St. Mary's Hospital visited Montello's Adopt-A-Grandparent Club.

April 13, 1973 - The Language Department at Montello is putting on a play tomorrow to make students more aware of the cultural differences in different countries. The students will learn about careers in the theater and will discuss the careers in the play.

Vocational Exploration Groups are going strong!

Enjoy your vacation next week!

APRIL 27, 1973

DATE LINE: LEWISTON

Karen McMahon, the NOW Program's activities writer, is in the process of gathering information about past and current career activities. If you would like your activities documented, or would like to help develop learning packets centered around these activities, please contact her at our NOW office. (784-1672)

If anyone would like mounts, posters or transperencies made for classroom use. They may be made-up and also returned to you by calling 784-1672. For more information call the above number and ask for Donald Gay, Mobile Resource Coordinator, if any A-V materials are needed feel free to call.

CAREER EDUCATION IN THE CURRICULUM

April 25, 1973 - Sixty-two girls in Mrs. Herrick's Clothing Classes and Poise and Grooming Classes at Jordan Junior High School visited Westbrook College to explore careers in clothing merchandising. While there, they toured the campus and observed a fashion show of garments made and modeled by the college students.

April 26, 1973 - Mrs. Piper's ninth grade class at Jordan Junior High School in Human Relations joined the Senior Citizens for the Hot Lunch at St. Paul's Episcopal Church. Mrs. Aliberti, Director of the Hot Lunch Program oriented the girls on April 25 for the experience. The students prepared May baskets which were used as the centerpiece on each table. After lunch the baskets were then delivered by Mrs. Aliberti to shut-in senior citizens in Lewiston.

CAREER EDUCATION N.O.W.

VOLUME 1 #23

MAY 4, 1973

DATE LINE: LEWISTON

From now on any Audio-Visual equipment and material needed under the N.O.W. Program can be delivered to your school by Donald Gay, the new Mobile Resource Coordinator. There will be a resource van in use by next September and this will be a better system but for now anyone needing equipment, materials or information should call 784-1672 instead of getting films and equipment from the career guidance counselors.

CAREER EDUCATION IN THE CURRICULUM

May 1 - Mrs. Trainor's sixth grade class at St. Mary's School visited Pioneer Plastics Corp., Auburn to learn about careers in the community. Students observed workers involved in the manufacturing of Pionite (formica) from the initial step to the completed product ready for use and installation by the furniture industries and building contractors.

May 1 - Mr. Robert Dionne, Lewiston Fire Prevention Department visited Mrs. Piper's ninth grade Home Economics Class in Human Relations. He showed a film dealing with a babysitter's responsibilities in case of fire. Mr. Dionne returned to the class on May 3 to lead a discussion on careers in fire prevention.

DATE LINE: LEWISTON

Since the school year is drawing to a close, a resource van is being set-up. It would be appreciated if all N.O.W. A-V material (equipment and soft-ware) is returned to the N.O.W. Office by the 8th of June. If you need assistance please call 784-1672 and ask for Don Gay.

CAREER EDUCATION IN THE CURRICULUM

May 4, 1973 - Mrs. Earle has developed a unit in careers involving the military services. Her sixth grade class at Wallace heard a guest speaker from Brunswick Naval Air Station.

May 7, 1973 - Mrs. Piper's 9th grade class in Human Relations at Jordan Junior High School visited the Golden Age Boutique to observe the Senior Citizens at their work stations and engaged in worthy use of leisure time in creative activities. The 9th grade students created a colorful May pole which they presented to the Senior Citizens along with a metal planter containing beautiful red geraniums in bloom. The girls were taught to make lovely broaches from obsolete items. The visit relates to the Public Services Occupations.

May 8, 1973 - Mrs. Fournier and her 2nd grade class at Holy Family Public School have developed a unit in career education. This past week Mrs. Fournier took her class to Cottle's Food Market. Her class observed the different occupations involved in supplying and managing a supermarket. They also had first hand observation of customer services.

May 8, 1973 - Mrs. Swift's classes at Jordan Jr. High School visited the State Museum, the Legislature, and Blaine Mansion. They observed museum workers and workers in government.

May 8, 1973 - Mr. Gaston Bachand, Maintenance Department, visited Mrs. Cyr's 5th grade class at Martel School to present his extensive collection of rocks and minerals in conjunction with a Science unit. The Natural Resources Occupations are related to Mr. Bachand's expertise in his avocation.

May 9, 1973 - The entire student body (K-6) at Frye School participated in a Career Day with the cooperation of the Lewiston-Auburn Chamber of Commerce. The students visited various firms and businesses to obtain a closer look at the various careers involved. Also, several resource people made presentations at the school. It was a very busy but rewarding day.

Anyone interested in a two day summer workshop to be trained as a leader in Vocational Exploration Groups please contact N.O.W. Office by dialing 784-1672 or Roy Bagley.

CAREER EDUCATION IN THE CURRICULUM

May 8, 1973 - Lorraine Fournier's grade one at McMahon School visited Cottle's for an integrated unit including careers, math, spelling, vocabulary etc.

May 14, 1973 - Students from Reta Herrick's Child Care Class at Jordan Junior High School and Mrs. Shuseldt's Child Care Class at Montello visited Day Care Centers in the city, they are developing skills for their playschool.

May 15, 1973 - Mrs. Piper's ninth grade class in Human Relations at Jordan Junior High School visited Marcotte Nursing Home to learn about health related careers and services available to residents. This week is National Nursing Home Week.

May 15, 1973 - Mrs. Cheney's second grade class at Farwell traveled by bus to New Gloucester to visit the Dry Mills Fish Hatchery. Mr. Cecil McAllister, a staff member at the station, discussed the purposes of the hatchery, careers in wild life, fish and game management. After observing the feeding of millions of fish in the outdoor troughs, the children enjoyed the actions of the bears, foxes, pheasants at the animal farm.

May 16, 1973 - Martha Gibbs' fifth grade class at Pettingill School visited the Maine Yankee Atomic Power Company and learned about the various occupations related to the atomic power industry.

May 16, 1973 - Four English teachers from Freeport High School visited the Lewiston schools to see Career Education in action.

MAY 24, 1973

DATE LINE: LEWISTON

Since the school year is drawing to a close, a resource van is being set-up. It would be appreciated if all N.O.W. A-V material (equipment and soft-ware) is returned to the N.O.W. Office by the 8th of June. If you need assistance please call 784-1672 and ask for Don Gay.

Lynn Markee, program coordinator, Vincent Wills, Roy Bagley and Hazel Guyler, career guidance specialists, and Dick Read, cooperative ed. coordinator left this week for the American Personel and Guidance Association Convention at Atlanta, Georgia. There, they will give a Career Education presentation highlighted by N.O.W. Program objectives and activities.

Mrs. Sharon Martin's Adopt-A-Grandparent Club at Montello Junior High School have explored career possibilities in the Health Occupations. Particular attention has been given to health careers involving the problems of the aged. On Wednesday, May 16th, a licensed physical therapist and two physical therapy students spoke to the club about the duties, educational requirements, personal requirements and working conditions of a physical therapist.

Miss Paula Beleckis of Wallace School, Mrs. Edith Jordan of Farwell School, and Mrs. Margaret Parker of Frye School have helped Karen McMahon, our activities writer, in developing a 4th grade social studies unit on Maine. The unit's emphasis will be on how Maine people have worked and lived together in the past and in the present. The unit activities will deal with all occupational areas in our state and will integrate regular classroom subjects as well. Suggestions will also be made for possible field trips, resource persons as classroom speakers, materials, and audio-visuals pertaining to the career areas taken up in the unit. The information and ideas needed to make an inclusive unit are far from complete. Karen McMahon will eagerly welcome any additional communications on the subject. Call 784-1672 to arrange for an appointment or material pick-up by our audio-visual resource specialist, Don Gay.

JUNE 4, 1973

DATE LINE: LEWISTON

The staff members of N.O.W. are curtailing classroom activities. This is due to our need for organizing and analyzing this year's activities. We are compiling all materials, information, and findings into learning packages or reports that can be used next year. Assistance is still available to you in concluding activities now going on.

We would appreciate notice of any materials and equipment you may have that you have finished using. (We will pick-up if you call 784-1672)

Mr. Reginald A. Doucette, Chief Engineer of the Lewiston Fire Department, has requested that teachers of students who are involved (or will be) in babysitting be informed that members of his staff are eager to visit classrooms. A program pertaining to babysitting responsibilities, in case of fire will be conducted in the classroom upon request to the Lewiston Fire Department. Mrs. Piper, Jordan Junior High School, reports that the fire prevention classes have been very valuable for her students.

May 30, 1973 - Brunswick Naval Air Station played host to two forth grades at McMahon School. Ronda Dube and Holly Cooney have introduced careers in the miltary. As a follow-up students will be identifing themselves with people they met on the Base.

CAREER EDUCATION IN THE CURRICULUM

June 1 - Mr. Bernier's Mini-Course students had a career experience at Country Kitchen. Students toured the plant and talked with workers, learning about career opportunities in the bakery industry.

June 5 - Mrs. Bates' 5th grade class at Martel visited the Portland International Jetport and the Maine Central Railroad Terminal in Portland to explore careers in the transportation industry.

June 5 - Miss Fiato's second grade class at Farwell visited Merrill Haven Dairy Farm to observe workers in the agri-business and natural rescouces occupations.

June 6 - Miss Ricker's third grade at Martel visited Ft. Western, the Blaine House, and the Legislature in Augusta to relate past and present careers in government.

June 6 - Mrs. Provencher's second grade class visited Merrill Haven Dairy Farm to observe workers in agri-business and natural resources career clusters.

June 6 - Mrs. Cyr's fifth grade class visited Perham's Mineral Store and Digging Site as a culminating activity in the Geology unit they have studied recently in Science. Many treasures were bought and dug!

June 6 - The Library Club students visited Boothbay Railroad Museum and Bath Marine Museum in an exploration of careers involved in the museum field.

June 6 - The Art Club of Montello visited Boston's Art Museum and the Peabody Museum to explore careers involving their interests in art.

MEMORANDUM

To: Lewiston Teachers

From: Now Exemplary Program

Re: Human Resources

In February and March letters were mailed to more than 200 clubs and organizations in the greater Lewiston area to compile a compreshenvie list of persons who are willing to assist students in the exploration and pursuit of their career and educational activities.

When completed and duplicated (responses are still being received) a directory will serve as a reference source for teachers, students, and NOW staff in identifying local businesses, industry, services, professions, materials, and persons for an actively oriented career education program.

To date 26 perons have agreed by mail to be of service to individual students and/or classroom groups upon request. Many will come to school as guest speakers.

The attached sheet lists the interest area and grade level preferred by the resource person. If you would like NOW staff to contact one or more of these volunteers in an interest area related to your academic subject or student interest, telephone NOW office 784-1672 or ask one of us in person and we will do our best to accomodate you. Please allow several weeks from date of request to date of quest visit since these volunteers are employed and must coordinate their working hours to serve us.

Rent-A-Kid

What Is It?

Rent-A-Kid is a non-profit organization which acts as a clearing house, matching temporary jobs with youth ages 13, 14 and 15 who are interested and looking for work. The employment may be a one-time service or may become a regularly scheduled service after school, on weekends or during school vacations.

Who Does It Serve?

You the student 13, 14 or 15 years of age; your parents or any prospective employer which may want to use the clearing house service.

How Does It Work?

A centralized clearing house will be established to maintain a file containing students who apply for employment and the employers who indicate they want student workers.

1. An employer calls the clearing house requesting a service.
2. The clearing house notifies prospective employee (you) of the employment opportunity.
3. If available, employee (you) contacts employer and establishes pay rates and the time with the employer for the work to be done.
4. Once the job is finished the employer will evaluate the work that was done and notify the clearing house. When the clearing house is notified of the finished job, the employee's card (yours) goes back to the active file to be notified again.

What Are Your Responsibilities?

1. Fill out the enrollment form.
2. Inform your parents of your intentions and have them complete parental form.
3. When notified of possible employment, contact the employer immediately to confirm and make arrangements. ALWAYS BE COURTEOUS.
4. Once you have accepted employment, be sure you are prompt, courteous and efficient.
5. If you have accepted employment and at the last minute are unable to make it, notify your employer immediately and explain your reason. Also, notify Rent-A-Kid so that someone else may accept the employment.
   AN OBLIGATION TO YOURSELF AND THE EMPLOY....

Possible Types of Employment

Prospective employment may include such services as listed and other jobs appropriate to age and skills.

Babysitting	Raking Leaves
Mowing Lawns	Shoveling Snow
Washing Windows	Painting
House Cleaning	Running Errands
Car Washing	Small Repair
Installing Storm Windows	Landscaping
Party Decorating	Pruning Trees
Ironing	Dusting
Washing Floors	Cleaning Attics
Cleaning Basements	Laundry Service

VOCATIONAL AND CAREER INFORMATION PROPOSAL

Tentative
Proposal for Elementary Vocational Training for everyday living with an emphasis on individual career information development.

I. Background.

This year at Frye school several COP trainees, with the assistance of interested teachers and the principal, set up a limited experimental program in automotible mechanics and sewing. Richard Ducharme, using his own tools and parts of engines, taught the care and handling of simple tools and the identification of engine parts. James Gondek has taught sewing with the help of Mrs. Ducharme. Together they instructed approximately eighty 4th , 5th, and 6th grade students on Friday of each week.

II. Rationale for an Expanded Program.

The enthusiasm and interest shown by instructors and students leads logically to this proposal, which seeks to expand the scope of services offered and to reach more students through the increased use of community resources (both people and material), professional faculty at Frye school and COP trainees, most of whom will have arrived at the Teacher Assistant step on the Career Lattice built into the COP program.

III. Program Objectives.

1. To increase an awareness in upper elementary school children of what skills and knowledge are prerequisites for a variety of careers.

2. To involve the community in the school in an instructional role as participants rather than as observers.

3. To enhance each students self-image by providing him with a

skills and knowledges that will not only benefit him now but will provide productive use of leisure time later in life.

4. To improve the school environment by encouraging pride in the design and manufacture of real things that would be useful in the school.

5. To seek out and maintain a strong link with Project NOW, a federally funded elementary vocational training program, by providing a model for the eventual adoption of vocational training and early career information development in all of Lewiston's elementary schools.

6. To tie in skills learned in this program's course offerings with the basic elementary curriculum in Science, Math, Language Arts, Reading and Social Studies.

IV. Curriculum and Scheduling.

Essentially project-oriented, the curriculum would consist of a series of mini-courses, some offered simultaneously, some offered in rotation. All courses would be taught on Wednesday mornings in one, two, or three hour time blocks. The duration of each course would depend on course content, objectives and outcome desired.

At this time the following courses have been suggested, have staff willing to teach them, and a student population eager to participate in them:

1. Woodworking
2. Still Photography
3. Masonry
4. Automotive Mechanics
5. Sewing - both fabric and leather
6. Art Workshop including glass cutting, ceramics, graphics
7. Independent Study, research and remedial instruction

V. Staffing

Frye school is fortunate in having a flexible administration and

staff willing to experiment with new curriculum and new methods to help children there enjoy the learning experiences essential in the elementary years. In addition, and as an example of the staff's willingness to try new approaches to learning, there are eleven COP trainees who have been and will be instrumental in making new approaches to education possible. A further example of the innovative tendencies at Frye school is the presence of the Staff Development Cooperative, funded and supported by NEPTE. Because of the favorable student-teacher ratio and the prevailing openness of attitudes and atmosphere at Frye there will be no problem in getting people to staff this program.

In addition to staff at Frye school, there exists in the Lewiston Model Cities Agency a list of retired professionals from all the areas listed in the course titles. These people are available during school time. Also, because one of the program objectives is to involve the community in every way possible and especially the parents of children at Frye, we plan to survey the parents to find those who have usable skills who would be willing to assist in the instruction of the courses

VI. Program Budgetary Requirements.

1. Equipment desired: Filmstrip, projectors, slide projectors, cassette recorders, super-eight loop film projectors, record players, tool kits, cameras, potters wheels, small print markers, and glass cutting kits.

2. Materials: Although several businessmen in the community, and the Junior Chamber of Commerce have verbally indicated willingness to locate and donate materials or sell materials at wholesale prices there will be a need for funds in this area to ensure the success of

the program. We especially will need software and hardware to develop a career information center.

3. Personnel: The only reimbursement needed here will be to the retired Model Cities residents who will work at an hourly rate when needed to instruct any given course.

Tentative Budget Requirements by Categories:

1.	Equipment:	$4000.
2.	Materials:	
	Model Cities Consultants	2000.
3.	Wages & Salaries	2000.
4.	Evaluation	500.
	Total	8500.

VII. Program Evaluation.

An evaluator chosen in conjunction with the State Department of Vocational Education will be employed to indicate whether program goals have been met and, further, what directions this program may expand in to benefit other elementary schools in the city.

Attachment

Wednesday Morning Activity Sessions

The Frye staff members in grades five and six have decided to try a Wednesday activity period. The purpose of this is to make school not only more receptive of the students' needs, but to provide occupational information and ways of better utilizing their leisure time.

It is expected that the staff will become more aware of the pupils' needs and that the students will become more aware of the options in life available to them.

All activities have been selected to be presented for one or more of the following reasons:

1. The activity is directly related to one or more subject areas.

2. The activity will provide vocational information and experience.

3. The activity will demonstrate personal responsibility and/or team work to the student.

4. The activity will aid a student in strengthening personal weaknesses. (i.e., gross motor skills, interrelationships, etc.)

5. The activity will provide options, for the student when he/she structures free time.

Students would be exposed to their choices for one month intervals. When students have become aware of the possibilities they have before them, we hope to be able to provide a more indepth presentations of their priority activities (those activities they wish to pursue).

Expansion of our program could take several directions. One would logically be with Washburn school who is trying to do similar things. However, we would also try to involve Model Cities Staff Development schools and through the NOW Program any other Lewiston schools which were interested.

Attachment 10

Mini-Courses Offered

Photography -	An insight into the care and handling of photography equipment. The taking of good pictures. Photography as an occupation.
Woodworking -	The care and use of hand tools. Designing and building small projects. Carpentry as an occupation.
Arts & Crafts -	An introduction into the field of creating. The use of the hands and minds to produce useful and decorative objects.
Chess and Other Games of Skill -	Chess and Cribbage to start with make people think ahead, count and remember things that have happened in the past. They are also useful ways to learn how to plan.
Basketball Fundamentals -	The use of sports to teach planning, co-ordination and team work as well as individual understanding. Appreciation of sports in general will also be stressed as a physical fitness opportunity.
Sewing & Knitting -	Practical application of a skill and the general usefulness will be stressed. Also it helps students learn to use their hands for small detailed work.
Learning Activities -	The development of game use for learning or practicing specific concepts or skills needed in school to help students learn faster.
Model Construction-	The use of building models (that can later be used in school) to learn how to follow directions, use their hands for detailed work, and for general understanding of the working model being built.

Attachment 10

SEWING

A sewing course gives interested children an introduction to the various procedures that must be completed before an item can be made.

Children will learn basic stitching paterns by hand, how to use a sewing machine and how to read patterns and use them on fabric. Embroidery will be taught so that children can learn how to make their clothing look more attractive. There will be various sewing projects such as pocketbooks, stuffed animals, bureau vanity sets, belts, toss pillows, doll clothes, pajama bags, pillow cases, curtains, and the children's own special products, if they want to make something special.

NOW Program may make it possible to get a sewing machine and extra fabric. NOW Program will also send a resource person to demonstrate sewing as a job in economics.

Second probable source of funding is S.D.C. which would involve at least $50.00 to run the sewing course for the year. This money would be used to purchase needles, thread, yarn, embroidery thread, extra fabric and sewing patterns.

Since I will be the only personnel teaching this activity for the moment, then my recommendation is to set up two time blocks with 10 children assigned to each block. I will need at least four weeks to develop a course. Some children may not complete their projects in four weeks. If this should happen, those children should be allowed to sign up again to finish their projects. There is no reason to have possible follow-up activities because every four weeks the course will have new children involved who will begin the course the same way as the children before them. The only difference will be allowing the children to develop their own ideas to do a sewing project. If some children should need something extra to fill their time, it will be elaboration on embroidery or making some small item.

Maybe later, some parent could help with children. Sewing is an art that many mothers can do.

Doria St.Hiliare

CRAFTS

Education purpose of the course is to have the students aware of their own creativity and how to use their hands in creating a craft.

Personnel involved - I don't want more than ten students. The reason for this is that I want the students to take their time and do the project correctly and because of the dangers of hot wax, etc.

Possible follow-up activities are field trips to craft centers, speakers coming in and showing how to make their craft. I would also like to have a craft show.

I hope to involve Program NOW, S.D.C., and COP people; also YWCA personnel and parents who are interested either to show the students how to do something or to come in and watch their children while they make something.

J. Gondek

BASKETBALL FUNDAMENTALS

Purpose:
1. To provide for basic knowledge of basketball.
2. To develop co-ordination of various movements.
3. To demonstrate personal and team responsibility.
4. To provide for strengthening personal weaknesses.
5. To develop student interest in physical fitness.

Expectations: It is expected that in four weeks a child will know the basic rules of basketball and the terms involved. Actual use of the basketball itself is only significant as it relates to the procedure. Skillful use of the ball will be taught only as it relates to purposes 1, 2, 4, and 5 above.

H. Hall

PHOTOGRAPHY

Purpose - to help students get interested in hobbies. How some people use their hobbies as their means of income and as a second income.

The length of this course will be one month. I will be the only person involved in the teaching process. The course will cover the following items:

1. The camera and how it works.
2. Film - how to pick the right type of film to get the best results.
3. How to take good pictures to get the most out of your picture.
4. Field trips - we will take short trips to photography studios, etc.

This class will have at the most 15 students. The reason being I want each person to have his own camera. Also a group this size will be easy for me to handle on a field trip.

As a follow-up I hope to get the students to use a camera in their other classes, for example: science, if they were covering a unit on clouds they might take pictures on the different types they saw. They might do a unit on pollution. They can take their own pictures

to show pollution in their neighborhood.

I hope to involve the NOW Program, COP and SDC for people and money.

R. Goulet

WOODWORKING

The course will consist of the basic hand tools of woodworking: tape measure, hammer, plane, handsaw, hand drill, and square. The proper usage of the hand tools will be explained in detail before the children are allowed to use them. When the children use these tools, they will be working on a project such as birdhouses, footstools, toys, etc.

I'm in hopes the children will obtain a better outlook of the school, if they are given a chance to work at something they like. They might enjoy woodworking as a hobby. Give him a chance to achieve a personal goal. To let him realize why math, English, science, etc., are important to learn. All these subjects tie in to woodworking. Allow him the opportunity to see what carpenters do.

R. Ducharme

CHESS

The educational purpose of this mini-course is to develop an awareness of logical thought process, concentration, and a fine motor coordination.

Personnel involved in this mini-course will consist of myself, Mr. LeClair and possibly one or two other helpers at times.

Given the proper amount of equipment we should be able to handle a class of thirty. The initial presentation of the course will be done in a lecture style therefore not creating any limitation on class size except for the size of the room. When practicing and actual playing take place, I feel two people can easily monitor a class of thirty.

Two periods of instruction should be enough to teach the basics. The rest will be used in developing these skills to a higher level of sophistication. Possible follow-up would be tournaments within the school or between schools. The funding would hopefully come from SDC.

R. McCallum

DIVERSIFIED PROGRAM OF GAMES AND CRAFTS

"• Underachievers should be encouraged to participate in projects and some of their suggestions used. Because activities and projects are

an excellent way to make concrete certain abstract principles and to develop in students a way of working with groups and manual skills and co-ordinations, they are especially helpful to underachievers."

The games and craft will involve the use of gross and fine motor skills, They will be verbally loaded to improve psyco-motor co-ordination. This should lead to improved penmanship, spelling, writing and reading.

"* The Pupil who cannot read at grade level invariably falls behind in other subjects."

The craft will also be used to change social attitudes. The first craft project will involve making things for themselves. I will then suggest group projects, such as, seasonal decorations for the school. This will give them group experience and the ego building satisfaction of doing something for someone else.

Twelve students should give me the variety of talents and personalities that I need to make the Games and Craft sessions varied and interesting.

The course can be developed as soon as consultant requested through the SDC program is made available.

Source of funding - SDC Program.

S. Batty

*, Underachievers - by Benjamin Fine, Ph.D., How They Can Be Helped, Clarke, Irwin & Company, 1968.

MODEL CONSTRUCTION

I would like to take part on activity day by teaching students to construct plastic models. The purpose of teaching students model construction are as follows:

1. To have students learn how to follow written instructions.
2. To enable students to work together as a team.
3. To develop small motor skills.
4. To develop eye and hand co-ordination.

Many of the models can be incorporated into reading, science, and social studies classes. By having students involved in making study aids, this should build up students' curiosity in the various subject areas. Students may bring their own model to class. Models will also be available in the classroom for all students. The models provided by SDC will remain in school as teaching aids.

R. Hachey

BASIC KNITTING

The educational purposes of this course are many. One is to be able to use fine and gross motor skills, eye hand co-ordination would be strengthened and the practical use of leisure time. An integral part of the course will be an ability after practice to interpret directions in various knitting pattern books.

I feel I could easily handle fifteen students at a time for one or one and a half hours. At the end of that time fifteen more students could be with me.

Four weeks would be ample time to teach the basic skills. Follow up activities could be strengthening motor skills by games or physical education of pupils who seem to have weaknesses. To have a display of finished products for parents and friends.

The probable source of funding will be SDC.

TITLE: FOLLOW-UP STUDY OF STUDENTS EXITED FROM SELECTED VOCATIONAL PROGRAMS IN NEW HAMPSHIRE SECONDARY SCHOOLS.

DESCRIPTOR: *FOLLOWUP STUDIES; *VOCATIONAL FOLLOWUP; SECONDARY SCHOOL STUDENTS; GRADUATE SURVEYS; DROPOUTS; *STATE SURVEYS; WORK EXPERIENCE; EDUCATIONAL PROGRAMS; *FEASIBILITY STUDIES

IDENTIFIER: NEW HAMPSHIRE

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 46P.

ABSTRACT: THE PROJECT REPORTED IN THIS DOCUMENT WAS UNDERTAKEN IN THE SUMMER OF 1973 TO DETERMINE THE FEASIBILITY OF AND PROCESS FOR GATHERING INFORMATION ON STUDENTS EXITED FROM VOCATIONAL PROGRAMS IN NEW HAMPSHIRE SECONDARY SCHOOLS. A COMPARABLE GROUP OF GENERAL STUDIES STUDENTS WAS INCLUDED IN THE DATA BASE. THE SURVEY WAS DESIGNED TO COMPARE THE FORMER STUDENTS' EDUCATIONAL PROGRAMS AND WORK EXPERIENCE. GOALS WERE TO OBTAIN FOLLOWUP INFORMATION FOR PROGRAM PLANNING IN VOCATIONAL EDUCATION AND TO EVALUATE THE PROCESS FOR GATHERING DATA. SCHOOL RECORDS WERE USED TO SURVEY FORMER STUDENTS AND THEIR EDUCATIONAL PROGRAMS FROM SCHOOL YEARS 1968, 1970, AND 1972. IT WAS CONCLUDED THAT THE PROCESSES USED WERE A VIABLE MEANS OF PROVIDING A HIGH RESPONSE TO A STATEWIDE SURVEY. HOWEVER, STANDARDIZED METHODS OF KEEPING SCHOOL RECORDS WOULD SAVE TIME AND COSTS IN SUCH SURVEYS. SURVEY FORMS AND ANALYSES OF RESPONSES ARE APPENDED. (MF)

REPORT OF

FOLLOW-UP STUDY OF STUDENTS EXITED FROM SELECTED

VOCATIONAL PROGRAMS IN NEW HAMPSHIRE SECONDARY SCHOOLS

PROJECT #400

REPORT OF
FOLLOW-UP STUDY OF STUDENTS EXITED FROM SELECTED
VOCATIONAL PROGRAMS IN NEW HAMPSHIRE SECONDARY SCHOOLS
PROJECT #400

This project was undertaken, during the Summer of 1973, to determine the feasibility of and process for gathering information on students exited from Vocational Programs in New Hampshire public schools. The survey was designed to determine certain aspects of the former student's work experience and the relationship to the education received while in school. For comparison purposes, a comparable group of non-vocational students were included in the data base.

A: Goal: To obtain follow-up information for program planning in vocational education.

Objective 1: To obtain from high school students who have exited from selected public schools, data relative to occupational choices as related to educational background.

Product Evaluation: A report of responses to a survey instrument will be provided for each participating school with cumulative state-wide responses for comparative purposes.

A-1 - Activity: Local agents at the selected sites will collect names, addresses, and phone numbers for all students who have exited from vocational programs at their schools from the classes of 1968, 1970, and 1972, along with a randomly selected group of students from the same years, who exited from a general program of studies.

A-1.1 - Process Evaluation: Names and addresses will be logged on a control sheet with codes so that no further reference will be required to specific names. The log will be maintained by the local agent and only he/she will be able to relate names to code numbers.

Findings: Use of logs (Appendix A) by local agents was hindered somewhat by the diversity of methods used in the schools for maintaining school records after they have exited. The problem of locating student names and addresses delayed the mailing of the survey at some schools.

A-2 - Activity: A single standard survey instrument will be used by all participating schools so as to provide comparative data.

A-2.1 - Process Evaluation: The instrument will be a validated survey form, or if a new one is used, will be validated by means of testing at some selection site.

Findings: An instrument was developed from a variety of state-wide surveys. Local agents assisted in the process of creating the survey. The instrument (Appendix B) was tested prior to final printing and was distributed in sequential batches to the local agents for mailing.

A-3 - Activity: A concentrated effort will be made to reach all of the students in the sample population.

A-3.1 - Process Evaluation: Posted on the log will be the status of each respondent and the number and types of contact attempted by the local agent.

Findings: These logs (Appendix C) were utilized to maintain records of the follow-up activity by local agents.

A-4 - Activity: Data gathered by local agents will be forwarded to Dr. William Annis for conversion to machine readable media (keypunched).

A-4.1 - Process Evaluation: Dr. Annis' office will log in all data as it arrives and will convert it to predesigned punch card form.

Findings: Surveys returned by respondents to the local schools were forwarded in batches to the University and logged (Appendix D). Keypunching was done by batch and verification was done after all batches had been received.

A-5 - Activity: The data gathered will be processed to provide an analytical report of the number and percent of responses to each question categorized by type of program within school with cumulative total for each school and each sending district, as well as a cumulative report by type of program at the state level.

A-5.1 - Process Evaluation: The report by school and by state, along with a guide for interpretation, will be sent to each participating school.

Findings: The data was processed by computer and reports by program within year and within school were generated (Appendix E). In addition, state-wide analyses by program and by type of respondent were provided to every school for comparative analysis (Appendix F). A workshop session was held to acquaint local agents with the interpretation of the computer printouts and to review an analysis done by type of respondents (Appendix G).

B. Goal: To evaluate the process for gathering such follow-up data for a potential statewide effort.

Objective: To compare the quality and quantity of responses to the cost in time, effort, and money.

Product Evaluation: Cost figures, time required and manpower expanded will be logged by all participating local agents.

B-1 - Activity: Each local agent will carefully record all the above data.

B-1.1 - Process Evaluation: All logs will be returned to Dr. Annis for evaluation as to cost effectiveness of process.

Findings: Records were kept on all aspects of the project (Appendix H) and an analysis was done to determine the feasibility of the project process. A relatively good response ratio was achieved through the use of the local agents approach (Appendix I). Local schools benefited from the ability to compare their own respondents with those from a state-wide sample. The cost of the project was primarily (90%) expended in supporting the local effort, such as salaries and supplies. Excluding these costs, the per respondent investment was approximately 50¢. Much of the time spent at the local level was due to the nature of record-keeping systems, and the development of a standard approach could reduce this aspect.

SUMMARY

The process used in this project is a viable means for providing a high response to a state-wide effort. Respondents tend to be more willing to provide information to their former school when familiar names are on the cover letter.

Standardized recordkeeping systems should reduce the amount of time required in constructing the mailing lists, and could reduce [illegible] so that it could become a regular part of the administrative [illegible] school and thus reduce the overhead cost to personnel and sup[illegible] experienced in this project.

Appendix B

I. ABOUT YOU:

Present Age – [ ] Years

Sex – ☐ Female ☐ Male

Marital Status – ☐ Married ☐ Unmarried

II. ABOUT YOUR HIGH SCHOOL EDUCATION:

Year you left High School 19____

Status: ☐ Graduated ☐ Left before Graduation ☐ Earned diploma after leaving

Type of High School program –
- ☐ College Preparatory
- ☐ General Studies
- ☐ Vocational Studies

Area of Vocational Study –
- ☐ Agriculture
- ☐ Business/Office
- ☐ Distributive Education
- ☐ Health
- ☐ Industrial Arts
- ☐ Occupational Home Economics
- ☐ Trades & Industry
- ☐ None
- ☐ Other_____ Specify

Did you have a job while in High School – ☐ No ☐ Yes

Were you in a Co-op Program – ☐ No ☐ Yes

III. AFTER HIGH SCHOOL:

Did you attend school after High School – ☐ No ☐ Yes

Type of schooling –
- ☐ Full time College
- ☐ Part time College
- ☐ On the job training
- ☐ Military School
- ☐ Adult or apprentice
- ☐ Home Study courses

Did you complete this schooling ☐ Yes

IV. ABOUT YOUR *FIRST FULL TIME* JOB:

How long after High School did you start –
- ☐ Immediately
- ☐ 1–3 Months
- ☐ 4–6 Months
- ☐ 7–9 Months
- ☐ 10–12 Months
- ☐ 1–2 Years
- ☐ Still not working
- ☐ Married and never employed
- ☐ Other_____ Specify

How did you find the job –
- ☐ Stayed on job I had in school
- ☐ High School teacher or guidance office
- ☐ School Co-op or Placement Office
- ☐ Employment Office
- ☐ Started my own business
- ☐ Thru friends
- ☐ Thru parents
- ☐ Newspaper ads
- ☐ On my own
- ☐ Other_____ Specify

In relation to WHERE YOU LIVED WHILE IN HIGH SCHOOL this job –

was located –
- ☐ In same town
- ☐ Out of town in state
- ☐ Out of state
- ☐ Out of country

required a relocation of –
- ☐ None
- ☐ 1–50 miles
- ☐ 51–100 miles
- ☐ 101–200 miles
- ☐ Over 200 miles

Relation of the job to your High School Education –
- ☐ Closely related
- ☐ Fairly related
- ☐ Slightly related
- ☐ Not related

How well did High School prepare you for your first job –
- ☐ Excellent preparation
- ☐ Good preparation
- ☐ Fair preparation
- ☐ Poor preparation

Job satisfaction –
- ☐ Very satisfying
- ☐ Satisfying
- ☐ Not satisfying

Pay Scale –
- ☐ Under $50/week
- ☐ $51–100/week
- ☐ $101–150/week
- ☐ Over $150/week

Reason for leaving first job –
- ☐ Still on the job
- ☐ Laid off
- ☐ Promoted
- ☐ More money
- ☐ More challenge
- ☐ Entered military
- ☐ Entered school
- ☐ Marriage or pregnancy
- ☐ Other_____ Specify

TITLE: DEVELOP A PRE-VOCATIONAL PROGRAM FOR FRESHMEN STUDENTS IN A COMPREHENSIVE AREA VOCATIONAL SCHOOL. EVALUATION REPORT.

PERSONAL AUTHOR: WEST, B.R.

DESCRIPTOR: *PROGRAM EVALUATION; *CURRICULUM EVALUATION; *PREVOCATIONAL EDUCATION; *GRADE 9

IDENTIFIER: HAMMOND; INDIANA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 33P.; SEE RELATED DOCUMENT VT 102 009 IN THIS ISSUE.

ABSTRACT: AN EVALUATION OF A PROJECT DESIGNED TO DEVELOP A PREVOCATIONAL PROGRAM FOR NINTH GRADE STUDENTS IN A COMPREHENSIVE AREA VOCATIONAL SCHOOL IN HAMMOND, INDIANA IS PRESENTED. THE EVALUATION IS BASED UPON THE CURRICULUM DEVELOPMENT ASPECT OF THE PROJECT AND THE PREDICTION OF WHETHER OR NOT THE MATERIALS WILL ACCOMPLISH THE STATED PROJECT GOALS. BOTH NEGATIVE AND POSITIVE OBSERVATIONS ABOUT THE INSTRUCTIONAL UNITS ARE OFFERED. THE METHODOLOGY EMPLOYED BY THE PROJECT IS ACCEPTED AS A VIABLE AND VALID ONE. A RECOMMENDATION IS MADE TO EXTEND THE TIME FRAME FOR THE PROJECT IN ORDER TO ALLOW FOR FIELD TESTING, REVISING MATERIALS, AND IMPLEMENTATION STUDIES. (VA)

VT 102 149

EVALUATION REPORT

PROJECT 61-73-C

Introduction

This project entitled "Develop Pre-Vocational Program For Freshmen Students In A Comprehensive Area Vocational School" (hereinafter refered to as the Project) was approved and funded for $19,217 January 1, 1973, for a period of one year to end December 31, 1974. The contract period was later extended twice--once to June 30, 1974, and again to August 31, 1974.

The stated purpose of the Project was". . . to develop and implement a prevocational program for the ninth grade students which would focus primarily on occupational information and career choice, and secondarily on developing work habits, attitudes, and life style within the accepted individual and group values." It was further stated: "Curriculum will be designed that will include suggested areas and concepts to be covered, suggested time schedule, appropriate teaching techniques, and sources of resource material and available community personnel." Quarterly reports have been submitted to the Vocational Education Division, State Department of Public Instruction pursuant to the Division's policy. The contracting LEA has agreed in their proposal to make available all materials developed so that they may be disseminated by the Vocational Education Division. Mr. W. E. Parson, Vocational Education Director for the School City of Hammond, Indiana, is the director of the Project.

Goals And Objectives

The Hammond Technical and Vocational High School has been serving the vocational education needs of the Hammond community for over 50 years; and, in the past, it has been the locus of many innovative programs which have served as models in vocational education. It is now believed by the administration that it might be more educationally appropriate to shift the 9th grade program emphasis from the industrial arts rationale to that of career education which stresses providing the student with career and personal information which would facilitate career choices and decisions with the attendant considerations of helping the student to develop good work habits and helping him to structure a satisfying life style commensurate with his self concept. The purpose of this Project, therefore, was to develop a "transitional vehicle" at the ninth grade level that would shift the program emphasis.

Following are the stated goals and objectives of the Project. It will be noted that these are rather broad, longitudinal statements that imply that a great deal of intermediate work, such as developing the curriculum delivery system, would need to be done before the ultimate goals might be realized.

Objectives

1. Students will be more knowledgeable in the area of career information and thus better able to make wise career choices.

2. Students will develop better work habits and attitudes.

3. Students not ready to begin vocational training at completion of ninth grade will have an interim program available between ninth and eleventh year.

4. There will be increased involvement of the community in vocational education.

These objectives are further explicated in a statement from the Project Director, The career Development Program will help students:

1. Develop an awareness of occupational types of information.

2. Recognize that occupational information which is related to his capabilities and interests.

3. Apply, in terms of involvement, a broad course of action or occupational direction.

4. Analyze skill development as part of information base to determine awareness of skills and attitudes needed for the cluster.

5. Recognize the occupational skills that are compatible with his capabilities and interests.

6. Evolve a commitment to the skill levels within the occupation of his choice.

An inferred objective not stated specifically in the objectives section but alluded to in the Background and Procedures sections of the proposal is the designing and developing of a curriculum and a delivery system for the program. It is felt by this evaluator after talking with the Project Director and other Project participants that this inferred objective was considered a necessary prerequisite and tantamount to the stated ones. It was recognized that the successful accomplishment of the stated objectives rested upon prior development of a sound curriculum.

METHODOLOGY

The following tentative time schedule was presented in the proposal:

January, 1973--select principal investigator

January to June 1973--preliminary meetings of the staff to present and explore the purpose and parameter of the project and to train teachers in the development of curriculum materials.

June 11 to August 3, 1974--complete teacher training and begin development of curriculum materials

August through December, 1974--Implement program through field testing.

January, 1974 and forward--Evaluation.

It was not possible for the Project to adhere to the time line for reasons that have been given in quarterly reports to the Vocational Education Division and ones that will be presented in this report.

It was realized by the project director soon after the beginning of the curriculum development phase (June 11 to August 3) that insufficient time had been allotted for materials development; and, consequently, the implementation schedule was postponed until the second semester, January, 1974. A request for an extension of time was approved by the Vocational Division.

It is felt by this evaluator that the personnel selected by the project director to implement this project were capable practitioners in their respective areas and represented sound choices. Their backgrounds included many years of classroom teaching experience in the public schools as well as practical work experience in their respective fields in industry. With this best of two worlds in their backgrounds, the materials to be developed could logically be expected to be current, relevant, and pedagogically viable.

In addition, there was a director of guidance on the team with experience in research and student counseling and placement. Training in the development of curriculum materials was provided by a representative of Purdue University.

The Procedure

The developmental system and theory employed by the Project is felt to be valid and viable and one that has been used successfully by numerous vocational curriculum development projects throughout the United States. It is based on sound curriculum development models (recognizing necessary local needs and administrative deviations) and could be supported theoretically by such national curriculum research studies as HumRRo, Project Able, Project PLACE, et. al.

The following operating procedure which was followed by the Project seems sound and has produced numerous curriculum packets in four areas for field testing.

1. A professor from Purdue University was employed to train the staff in the areas of task analysis of occupations; generation and writing of measurable goals and objectives; preparation of teacher-centered curriculum packages, including test construction, instruction sheets, and audio-visual materials development and utilization.

2. The four areas which the Project felt needed development were construction, electricity-electronics, metals, and graphics.

These specific cluster areas were selected for development because they represented over 90% of the program areas in the vocational program. Since

these vocational offerings were originally chosen on the basis of employment opportunities and student interest, these two factors may be considered as the basic criteria for choosing these 4 areas for development.

3. A tentative list of occupations available in the Calumet area was prepared for each of the occupational clusters.

4. After the specific occupations to be taught were selected, an analysis was performed on each job title to determine what knowledges and skills were essential to the successful performance of this job. It is felt that for the purpose of this Project, providing exploratory materials, the in-depth analysis performed might have been somewhat excessive since only the very basic and generalizable skills and knowledges were intended to be taught and these merely to provide the student with a "feel" of what it might be like to function in a particular job capacity. The analysis performed for each job in each of the clusters shows the duties performed, knowledges and skills required, and the teachable elements. Exhibit A illustrates the process.

5. Instructional objectives were than developed for each cluster and teaching units structured that would hopefully enable the learner to achieve the predetermined goals.

6. At the conclusion of the curriculum development phase, the materials were to be field tested beginning in the Fall of 1973. However, for reasons cited elsewhere, the field testing was delayed until second semester of academic year 1974 and then in only three of the four clusters identified for development.

7. Project evaluation was planned to begin in the Spring of 1974.

The results of the procedural steps one through five were the construction of teaching units in the identified occupational clusters. It should be recognized that these materials are teacher centered and not intended as individualized delivery systems. As such, provision for individual differences is limited; but it is felt that these teaching units will be very beneficial, indeed, to the teacher as he prepares his lessons.

RESULTS

Following are the goals as they are stated in the proposal of Project 61-73-C. These goals are stated in terms of student achievement rather than in terms of Project accomplishments, but it might be possible to infer from the curriculum materials developed to whether or not these goals might be reached by the student after completing the educational experiences provided in the packets. This is to say that the goals as stated here are attainable, measurable, and therefore subject to evaluation only after the curriculum materials are written, field tested, revised, and implemented longitudinally in the classroom. Therefore, since the Project's efforts have concentrated primarily in the curriculum development phase the evaluation of the Project will center in this area specifically and inferentially to whether or not these materials might be effective in allowing the student to reach the stated goals.

Goal 1: (The student will) develop an awareness of occupational types of information. Even though a thorough analysis of each occupation in a cluster was made, relatively little of the information aside from the cognitive realm of skill related capabilities and knowledges were incorporated in the "planned" lesson units. Scant information from affective domain, how to prepare for the job, educational requirements of the job, future outlook, salary expectations, working conditions, possible career ladders, or resources for further student exploration were included in the materials. A protion of this goal has been satisfied, however, by providing information in the cognitive knowledge

areas and the skill domains. The learning experiences in these areas will surely affect the student's feeling about a given occupation within a cluster or about the total cluster.

Goal 2: (The student will) recognize that occupational information which is related to his capabilities and interests. The same inferences cited in goal 1 above might apply here. While the teaching units do not address this goal directly, it is intended that the teacher augment the packet with occupational information and sources of information so that this goal might be satisfied. In addition, it should be noted that cognitive and skill experiences do provide the learner with critical information related to one's capabilities and do much to shape one's interests.

Goal 3: (The student will) apply in terms of involvement a broad course of action or occupational direction. Again the assumption is that the developed lesson plans will be supplemented with teacher input of other career-centered materials and will provide the student with a sufficient date base for preliminary career planning.

Goal 4: (The student will) analyze skill development as a part of an information base to determine awareness of skills and attitudes needed for the cluster. It is felt that student-teacher interaction around these curriculum materials will lead the student to achieve this goal. The student experiences provided in these learning environments if internalized and learned by the student should ultimately enable the student to measure his capabilities against those required for the job cluster. It might be difficult, however, to measure whether or not the student comprehended in an affective way the "attitudes" needed for the cluster.

Goal 5: (The student will) recognize the occupational skills that are compatible with his capabilities and interests. It is believed that the experiences provided in the curriculum developed should enable the learner to make this comparison of self with job requirements.

Goal 6: (The student will) evolve a commitment to the skill levels within the occupation of his choice. This goal recognizes that career choice is a developmental process. The experiences gained through the packets developed should lead the learner to either higher levels of exploration and skill development in a specific area or lead him to alter his career decision and pursue another cluster.

Based on the curriculum materials developed by the Project, the following conclusions are reached regarding the four objectives.

Objective 1: Students will be more knowledgeable in the area of career information and thus better able to make wise career choices. It is felt that the package experiences alone are insufficient to allow the student to reach this objective. Information other than skill related experiences are believed to be necessary for intelligent, reasoned career choices. However, it should be pointed out that the experiences provided in the materials do satisfy the letter of the objective..."more knowledgeable in the area of career information" since these experiences represent one kind of information necessary for wise career choice.

Objective 2: Students will develop better work habits and attitudes. This objective might be reached by students using these materials if sufficient teacher input is made. It is felt that work habits and attitudes is a person-to-person thing evolving around a work-learning setting.

Objective 3: Students not ready to begin vocational training at the completion of the ninth grade will have an interim program available tetween the ninth and eleventh years. Providing these experiences for students identified as such should satisfy this objective.

Objective 4: There will be increased involvement of the community in vocational education. This objective is a perpetual one for any vocational education program, and the Project has initiated the practice by utilizing the community as one resource base for its curriculum development efforts.

Curriculum Development

Perhaps it needs to be mentioned again that the greatest effort this year has been in the area of curriculum materials development (see Exhibit B) The results to date are as follows:

1. Programs in electricity and metals have been completely written and field tested during the second semester, academic year 1973-74.

2. In the graphics area outlines have been prepared for drafting and printing. Most, but not all, of the drafting units have been prepared and field tested. About half of the printing units have been prepared but not tested since equipment has not been received.

3. The construction curriculum outlines have been developed. All of the units have been prepared and about half of them have been used in the classroom.

4. Industrial mechanics was dropped and replaced by the graphics area.

It is felt that this represents a sufficient output given the time dimensions in which 4 developers worked 10 weeks in the summer of 1973, 2 developers worked the summer of 1974, and then on their own.

time during the school year) and the scope of the task undertaken. The teachers were visited in their classrooms and interviewed concerning the program and the materials. They seemed to feel that the materials were serving the student well, but there was a need for some revision and modification, especially with affective materials. It was felt by the evaluator that while an informal kind of curriculum materials evaluation was helpful, a more structured and formal evaluation procedure was needed. A systematic plan for information gathering would be desirable.

By the way of summary, it is felt that the materials developed are potentially valid as teacher-centered delivery systems, but they should be field tested more rigorously and revised before being adopted as the foundation for the program and disseminated throughout the State.

DISCUSSION AND RECOMMENDATIONS

It should be repeated that this evaluation is based upon the curriculum development aspect of the Project and the prediction of whether or not these materials which are to form the base of the program will lead to the accomplishment of the Program goals which have been stated as the Project goals. Therefore, the following observations are recorded and some recommendations offered.

Observations--Negative

1. Regarding some of the teaching units--the congruency between the objective, practice, and testing is not immediately obvious. A field test will determine if this observation, if valid, will hinder student achievement of the objective.

2. The instructional objective in some units does not describe what the student is to learn or what behavior, other than writing on a test, he is to demonstrate to indicate that he has changed behavior as a result of interaction with the materials.

3. The time dimension on the tests seems to be unnecessary and defeating because it does not allow for individual differences in test-taking abilities.

4. The stimulus presentations do not recognize individual differences.

5. While not necessarily negative, the effectiveness of the teaching units is dependent upon the effectiveness of the teacher-presenter.

Observations--Positive

1. The teaching unit format is excellent. It should be easy for a competent teacher to follow, and it seems to be inclusive of all the elements of a learning situation.

2. The content seems to be adequate in each unit but dependent upon teacher competency for effective delivery.

3. All learning environment components are provided.

4. The small group activities are good, but the instructions in some units may be inadequate.

5. Explaining the study format to the student is good practice.

6. Providing tactile experiences in the units is good practice, especially for students at this level.

Recommendations

1. The materials depend heavily upon verbal presentations which will vary with the individual teacher's interpretation and background. It might be desirable to include a wider range of stimulus presentations including films, tapes, slides, filmstrips, video-tape, field trips, etc.

2. Maximum lecture times might be specified to lessen student boredom.

3. Criterion referenced tests should be developed.

4. Develop an instrument (s) and a plan for field testing, evaluation, and revision.

5. Develop a list of evidences to support goals and objectives statements.

6. Provision needs to be made for individual differences in learning.

7. Instruments should be developed to collect data on changed student behavior in regard to career awareness, tentative career selection, and self-concept evolvement.

It is recognized, in conclusion, that the methodology employed in this research project seems to be a viable and valid one. It begins with an identification of job clusters, analyzing tasks to determine course content and

instructional methodology, planning and developing teacher-centered lesson plans, field testing these, and finally revising and implementing the program. At this writing it seems that only phases I, II, and III (identifying job clusters, analyzing tasks, developing lesson units, and some classroom utilization) are completed. The time table needs to be extended to allow for field testing in a systematic manner, revising materials, and implementation studies.

The packets are systematically developed and should aid the teacher in preparation of classroom presentations. They seem to be flexible in that additional materials and experiences may be added. Perhaps most important, an objective has been stated, based on the real world of work, and a criterion referenced test can now be developed to determine student competency.

In closing, the purpose of the Project--"to develop a 'transitional vehicle' at the ninth grade level that would shift the program emphasis from that of industrial arts to that of career education"--is now closer to reality because of the curriculum development phase. Since this is the first phase, it is recommended that the Project be pursued to its ultimate conclusion.

ELECTRICITY-ELECTRONICS

LESSON PLAN-1
Suggested Time-2 Periods

BASIC ELECTRICITY

OBJECTIVES:

The student will, upon completion of this lesson be able to:

1. Describe the elements of basic electricity in a 20 minute quiz, passing with a score of 70 percent.

PREPARATION:

Teacher

Equipment:

Chalkboard, eraser, chalk
Overhead Projector and Screen
Oscilloscope
Capacitor
AC and DC Power Supply

Teaching Aids (in order of introduction in course):

1-1-T	Objectives for lesson
1-2	Outline
1-3-T	Complete Atom
1-4-T	What is electricity
1-5-T	Static and Dynamic electricity
1-6	Post test

References:

Exploring Electronics, Gerrish, Howard H., Goodheart Wilcox, 1971, Chapter 1.

Exploring Electricity and Electronics, Rollain, Phillip J. and Kraus, Thomas E., 1971, Chapter 2.

Basic Electricity and Electronics, Steinberg, William B., and Ford, Walter B., 1962, Unit 6A.

Learner

- Read in text Unit 6A, pages 32-34.
- Ask question, "Now that you are all enrolled in Electricity, who knows what electricity actually is?"

1-1-T - Cite objectives

OBJECTIVES

THE STUDENT WILL, UPON COMPLETION OF THIS LESSON BE ABLE TO:

1. DESCRIBE THE ELEMENTS OF BASIC ELECTRICITY IN A 20 MINUTE QUIZ, PASSING WITH A SCORE OF 70%.

COURSE OUTLINE
(Lecture - Demonstration)

PRESENTATION:

I. INTRODUCTION - Matter and Electron Theory

A. Explain to the student the importance of what electricity is: (EXAMPLE: As in any form of energy person who works with it can do a better and more economical job if he knows why and how it works.)

(EXAMPLE: automobile mechanic)

B. Acquaint the students with the format to be used in this presentation.

1-2 1. Hand out 1-2

II. BASIC ELECTRICITY

A. Nature of matter

1. Definition - anything that has weight and occupies space
2. Structure - (EXAMPLE: salt)
   a. Compound
   b. Element
   c. Atom

1-3-T

B. Electron Theory

1. Discuss electrical charges
   a. Negative
   b. Positive

1-4-T

2. Identify laws of electrical charges
   a. Refer to handout 1-2
3. Have members of class tell you:
   a. Flow of electrons
   b. Direction of electrons

C. Identify types of electricity

1-5-T

1. Static - Demonstrate with capacitor and paper showing how electricity is stored.
2. Dynamic - Demonstrate showing electricity in motion with light bulb.

D. Explain kinds of electricity

1. Refer to handout 1-2
   a. Alternating
   b. Direct current
2. Demonstrate showing what AC and DC look like on an oscilloscope.
3. Field questions

APPLICATION:

I. Organize students into small groups no larger than five (5).

A. Select leader and recorder

II. Give each group a question on which to report collectively.

(EXAMPLES: 1. Does the normal atom have an electrical charge?

2. Explain and give examples of static electricity.

1-2 3. Explain the laws of electric charges and cite examples of these.)

III. Group recorder restates question and then gives their summary. Then teacher clarifies or asks questions to bring out other pertinent information.

IV. Question class on questions at bottom of Hand out 1-2.

EVALUATION:

1-6 I. Assessing outcomes

A. Administer test

B. Collect and critique test having students participate in answering

1-1-T C. Refer to Handout 1-1-T and have student make his own assessment.

D. Summary

1. Review Handout 1-2

2. Solicit questions from members of class.

THE ELECTRON IS ELECTRICITY

WHAT IS ELECTRICITY?

ELECTRICITY IS THE FLOW OF ELECTRONS!

WHAT HAPPENS AT THE END?

Hammond, Indiana
HAMMOND TECHNICAL VOCATIONAL HIGH SCHOOL

Name _____ Date _____ Mark _____

BASIC ELECTRICITY

DIRECTIONS: In the following statements or questions select the correct answer and circle the letter in front of the correct response.
(EXAMPLE: An example of dynamic electricity is:
A. Lightning
(B). A motor operating
C. A dead light bulb
D. An unused battery)

1. An electron has:
   A. a negative charge
   B. no charge
   C. a positive charge
   D. either positive or negative charge

2. Electrons drifting from atom to atom in a material:
   A. are free electrons
   B. are bound electrons
   C. go in opposite directions
   D. have a positive charge

3. Electric current is considered to be the movement of electrons
   A. from a positive point to a negative point
   B. in orbit around a nucleus
   C. from a negative point to a positive point
   D. in a random fashion

4. Direct current flows
   A. in alternate directions
   B. in one direction in a particular circuit
   C. from negative to positive
   D. from positive to negative

5. The following is a compound.
   A. iron
   B. copper
   C. water
   D. oxygen

6. The nucleus of an atom contains
   A. an electron
   B. an electron and proton
   C. a proton and neutron
   D. a proton

7. If a negatively charged material came near a positive material it would

A. attract it C. have no effect

B. repell it D. depend on their strength

8. When electrons have motion

A. they move in a straight line

B. you call this static electricity

C. you call this current

D. they form a compound

9. If you took the compound salt and divided it into its principal parts; you would have

A. two atoms C. salt

B. two elements D. a molecule

10. Alternating current differs from direct current because

A. it changes direction

B. it flows from negative to positive

C. half way through it reaches zero

D. it is not portable

11. Most all atoms in their normal state

A. have a negative charge C. repell each other

B. have a positive charge D. are neutral

DIRECTIONS: Answer the following questions with a short statement or word.

12. Of what is all matter made? _____

13. What do we call loosely held electrons? _____

14. How do electrons move through a material? _____

15. What are five (5) examples of matter?

(a) _____ (b) _____

(c) _____ (d) _____ (e) _____

16. Explain in your own words what is electricity?

TITLE: THIRD YEAR ASSESSMENT OF CAREER EDUCATION PROJECT. BRIDGEPORT CITY SCHOOLS BRIDGEPORT, CONN. APRIL 29, 30, MAY 1, 1974.

DESCRIPTOR: *CAREER EDUCATION; *OCCUPATIONAL GUIDANCE; *PROGRAM EVALUATION; *SUMMATIVE EVALUATION; *ELEMENTARY SECONDARY EDUCATION; EVALUATION METHODS; FIELD INTERVIEWS

IDENTIFIER: BRIDGEPORT; CONNECTICUT

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 139P.; SEE RELATED DOCUMENTS VT 102 010, VT 102 011, VT 102 154 AND VT 102 012 IN THIS ISSUE.

ABSTRACT: THE THIRD YEAR ACTIVITIES OF THE BRIDGEPORT, CONNECTICUT, CAREER EDUCATION PROJECT ARE ASSESSED IN THIS EVALUATION REPORT. DATA AND INFORMATION CONCERNING ALL ASPECTS OF THE CAREER EDUCATION PROJECT WERE OBTAINED BY THE TEAM OF EVALUATORS DURING A THREE DAY ON-SITE VISIT. ADDITIONAL DATA EXAMINED BY THE STUDY TEAM WERE OBTAINED FROM PROJECT REPORTS AND QUESTIONNAIRE-RECORDED ATTITUDES OF INDIVIDUALS. INTERVIEWS WERE CONDUCTED WITH PRIVATE AND PUBLIC AGENCIES, ADMINISTRATORS, FACULTY, EMPLOYERS, STUDENTS, AND PARENTS. THE RESULTS OF THE EVALUATION ARE PRESENTED TO ENHANCE THE USABILITY OF THE REPORT FOR ALL INTERESTED PERSONS. THE STUDY TEAM CONCLUDED THAT THE BROAD STATEMENTS OF PHILOSOPHY AND THE SPECIFIC OBJECTIVES OF THE BRIDGEPORT PROJECT WERE MET AND IN MANY INSTANCES EXCEEDED. RECOMMENDATIONS FOR THE CONTINUED EXPANSION OF THE CAREER EDUCATION PROGRAM ARE PRESENTED. (VA)

I INTRODUCTION

THE ROLES OF SUPERVISION IN MAINTAINING AND FURTHER IMPROVING CAREER EDUCATION

I INTRODUCTION
THE ROLES OF SUPERVISION IN MAINTAINING AND FURTHER IMPROVING CAREER EDUCATION

During the two decades past, several urgent issues in education have been brought to the attention of the American public generally; some have become the urgent and often "all-consuming" concern of teachers, supervisors and administrators in the public schools. Behind the banners or "thrusts" of accountability, relevancy, cost-benefits, meaningfulness in education, individualized education, measurable objectives, program evaluation, self-paced instruction, multi-media techniques and methods, mosaic programming and other similar valuable concepts and/or procedures, education in our schools has been influenced for varying periods of time. Much of the leadership and the motivation needed to encourage local, state and regional educational agencies to engage in activities designed to achieve the anticipated benefits and educational advantages were supplied from national agencies, chiefly the U. S. Office of Education. However, with changes in political administrations and with rapid changes in Office of Education leadership, the targets and thrusts proposed for American education have likewise undergone changes and/or modifications. Some of the most potent drives sponsored by national agencies have receded somewhat or have been incorporated in other newer and more appealing or contemporary "thrusts." Thus, with the advent of the Career Education concept, strongly advocated by former Assistant Secretary of H.E.W., Sidney Marland, an all-inclusive vehicle was provided educators which enabled them to incorporate philosophy, objectives, product and process in a single national

movement. The rationale and the logic of Career Education in our schools caught and held the enthusiasm of educators, the lay public, planners and organizers of education, but more especially the parents of in-school youth. Under skillful direction, many Career Education programs got underway in the schools, and involved extensive community participation. Supported by federal grants and through state and local funding, Career Education established itself as a viable means to the achievement of goals and objectives long desired by students, parents, communities and professional educators. Evidences of goals achieved such as career awareness in elementary school children, occupational orientation in high school youth, curriculums designed for meaningful and concept-relevant experiences became plentiful in the schools. It is safe to predict that solid achievements in the schools will be retained and even expanded to include other facets of Career Education even as national, state (and often local) immediate targets tend to direct the attentions of educators and their communities toward new banners, new mottoes and new thrusts. The comprehensive nature of Career Education, its relevance to the many needs of each youth and adult and its jointure with socio-economic influences in communities indicate Career Education as a "concept of the whole," can and will persist. As the vehicle for providing assistance in achieving the "thrusts" of the past, and for possibly for "thrusts" that may appear in the future, Career Education will be retained in the great majority of schools where its efficiency and viability have been amply demonstrated.

Career Education did not just happen, however. It was carefully analyzed, planned for and organized, and energetically guided into profitable educational channels by intelligent educational administrators and supervisors. Where successful Career Education programs have matured, many of the successes achieved have been those directly attributable to the wisdom, energy and professional competence of the supervisors. These key individuals provided the urgently needed bridges between school and community, administration and teachers, and above all between conceptualization and practical realization.

As educators look to the future it would be well to assess the successes and limitations of the past in Career Education projects, and to plan carefully the roles of its supervisors in the task of maintaining and further improving Career Education in America's schools.

> "New occasions teach new duties,
> Time makes ancient good uncouth.
> They must upward then and onward
> Who shall keep abreast of truth."

This quatrain penned by James Russell Lowell many years ago speaks quite clearly to contemporary educators. It speaks of change, the alterations and obligations that change demands; it challenges educators to replace the outdated with the new, and it reminds them that gains are bought with effort. All of these "truths" must become activated by supervisors in the Career Education movement. If it is to succeed, educators must indeed redirect their thinking and change some of their procedural operations. They must be

willing to discard that which is ancient and supplant it with that which is innovative and exciting to the thousands of students who now sit in the classroom of the nation, and who are often not certain about why they are there.

The amount of change will be in proportion to the supervisory efforts expended, and the efforts must be planned and paced. Often, there is danger in too much talk, too little planning, and trying to move too fast. Favorable outcomes of a Career Education program will depend upon careful planning, and the wisdom to work each of the segments of the plan at its opportune time.

The role of the supervisor will continue to be critical. Since instruction must be adapted to new emphases, teachers will need much help and support, not only in acquiring new knowledge and expertise, but also in changing personal attitudes. It has been unreasonable to assume that all teachers would immediately accept the Career Education concept, although Dr. Sidney Marland gave it top priority in the U. S. Office of Education during his tenure. Hence, it is apparent that the supervisor should be enthusiastic and skillful, as well as the possessor of pertinent knowledges and supervisory techniques. He should strive to be a planner, a coordinator, a consultant, a manager, and a group leader who works through and with teams of people to accomplish the purposes of an educational program.

How will such a supervisor of Career Education effect so many roles? The answer to this must lie in a conglomerate of answers to other questions, such as: What various functions will the supervisor perform? How will he make certain supervision is a cooperative

enterprise? What mechanisms will he use in supervision? How will he promote articulation among the various levels of the program? How will he involve the community? What kinds of knowledge will he need to possess in order to effectively supervise a career education program?

Much has been written about the roles of supervisors in our school systems. Some of the roles advocated for supervisors are clouded with misunderstandings, but there are other roles which enjoy general agreement among educators. For example, the supervisor is a "helper-of-teachers"; he usually takes the leadership role in building or modifying curricula; he initiates evaluative procedures; he assists in matters of equipment and facilities; and he is a reservoir of intelligence in connection with teaching methods and techniques. Each of these roles contributes to the specific purpose for which supervision exists: to improve the quantity and the quality of instruction. This general purpose, however, can never know ultimate fulfillment; it is as the tomorrow which never comes. Thus, the Career Education supervisor must direct his attention to more specific, achievable and immediate objectives which are within reasonable limits of accessibility and attainment--yet which contribute to the ultimate general purpose indicated above.

A long list of goals and specific objectives may be identified, but the following ones are pertinent to Career Education supervisors:

(1) <u>To help teachers develop an understanding and acceptance of the purpose of Career Education</u>. Without this, all administrative

efforts may well be fruitless. There are a number of ways the supervisor can assist teachers to achieve this understanding and acceptance, if he takes time to clarify his objectives and plans accordingly. Of prime importance is his own attitude. He must accept the concept himself--totally. There is no place in a Career Education program for a supervisor who segments the concept and then rejects some of the segments. If the supervisor is not totally committed, it is unlikely that the instructional staff will develop understandings and the acceptance that the Career Education concept requires.

Another way the supervisor can help effect a personal attitude change in teachers is by allowing time for change to take place. New ideas, like plants, must have time and be properly nurtured before they can grow and blossom. Given time, materials, in-service education, confidence, and support as they are needed, classroom teachers will react favorably in an environment which encourages acceptance of the Career Education concept and its procedures for facilitating its introduction and nurturing.

(2) To assist teachers in gaining the knowledge and skills needed to foster the growth of a Career Education program. It is naive to assume that all teachers recognize the career implications of the subjects they teach. Many of them have never known any practical work experience outside the classroom and a philosophy of work and its relationships to life are often vicarious understandings. Provisions must be made for them to gain the understandings they do not have, and to secure the knowledge and skills they need. The support and cooperation of administrative

personnel, leaders in business and industry, labor, community agencies, and the citizenry in general are imperative to the teachers faced with this particular problem.

There exist many ways that the supervisor can approach this problem. The first one that educators commonly think of is in-service education. This is very effective if it is planned well, takes place at opportune times, and is an involvement experience rather than a "being-told" one. Ideally, if a school system plans to implement the Career Education concept, a pre-school workshop of several weeks' duration should be held. This is a logical time for the supervisor to secure the services of the state staff, specialists, and/or career education consultants to help lay a solid foundation on which all concerned with program operation can build. Generally, teachers are more receptive to new ideas and major changes in programs during the time preceding a new school session or the early part of the school session than they are later; and since they do look to the State and Local Departments of Education for direction, some of their initial help and information should come from members of that group.

The supervisor, along with other staff members--including an adequate representation of teachers--must plan wisely and carefully for in-service education meetings, workshops or conferences. There must be ample opportunity for individuals to ask questions as they meet in small groups with state agency personnel or specialists. The philosophy underlying Career Education, the key concepts, and why it is needed should be skillfully interwoven into all activities. Lectures by the experts should be avoided, but a sharing of ideas for action encouraged.

In-service education can also occur in the classroom in the form of demonstration lessons or specialists working with teachers. It can occur outside the classroom as the supervisor works with the individual teacher, as teams of teachers develop curriculum guides and instructional aids, as teachers avail themselves of observational opportunities in the world of work, as they read current books and periodicals and research reports. The supervisor has the responsibility to plan for a wide variety of experiences in order to provide in-service education. In addition and recognizing local regulations, he may be able to arrange for some teachers to have actual work experience outside the realms of the educational institution. These experiences can broaden the teacher's knowledge of activities outside of the classroom.

(3) To help teachers revise current learning activities to incorporate the Career Education emphases. Unless vital, meaningful changes are made in instruction, the tenure of career education could be as brief as that of "life-adjustment education" some years ago. Teachers embarking on a new program need to experience a measure of success fairly early, else they may revert to traditional stereotyped teaching. One possible way to avoid this is by making the transition to the new and untried as painless as possible. To help teachers do this is clearly one of the roles of the supervisor.

It is obvious that the very thoughts of major curriculum or learning activity revision may be difficult for many teachers. It will be time consuming, and the supervisor in spite of his zeal for efficiency and action, should not be impatient. He must be

cognizant that most teachers cannot make all the needed changes during a regular school term. (Indeed, some summer weeks will need to be invested in the planning of Career Education activities and preparation of materials.) The supervisor should be aware that attitude changes and the gaining of new knowledge may come concurrently with curriculum revision and the development of instructional materials.

It can be assumed that there will be a number of "specialist" teachers who work with students in grades 7 - 14; the task of curriculum revision will be most acute for the teachers of young grade school children, since such teachers have a much broader curriculum responsibility. Although the supervisor should encourage teachers to be self-directive in curriculum revision, he will need to locate and make available to teachers many materials. These will include suggested learning activities developed in other Career Education programs, as well as instructional aids, books, human resources and reasonable quantities of effective instructional materials which teachers may wish to adapt to the needs of their particular students.

Teachers of the academic disciplines throughout the junior and senior high schools also need assistance in continuing the modification of curriculums to accommodate the Career Education concept. The supervisor will need to meet with these teachers individually and in groups, and plan cooperatively with them suggested plans, activities, curriculums, and learning activities.

Although curriculum revision may not be quite as acute for "specialist" teachers, some will need to be done nonetheless.

Instead of teaching as many specifics, teachers may need to broaden their instruction to include the cluster concept. Those charged with the responsibility of skill training will need to revise curriculums often in an effort to keep current. The duty of the supervisor in all instances should be to stimulate and coordinate the efforts of the teachers through such activities and services as: (1) providing visibility, (2) listening to requests for assistance, (3) arranging for individual and group conferences, and (4) suggesting or providing current instructional aids to supplement daily learning activities.

(4) To assist teachers in selecting and developing appropriate teaching materials, locating resource people, and planning activities to implement the Career Education emphasis. Although teachers may be well prepared in planning for learning activities, teaching techniques, and handling problems common to the classroom, the Career Education supervisor is in a unique position to assist teachers in developing and locating aids to give added meaning to instruction. The key word in this context should be assist. Very often, teachers are innovative and the supervisor should stimulate their innovative efforts by recognizing resultant accomplishments. He should determine where teachers are in their thinking as it relates to a need for help, and then seek the best methods to provide the help desired. He should avoid situations that include "telling" them which procedures or instructional materials to use; rather, he should suggest. When he encourages and stimulates the teachers to be self-directive, the best results occur. This is not to ignore the fact, however, that there are many activities which a supervisor

of Career Education may be required to initiate, in order to be of most assistance to teachers as they replan and rebuild curriculums. For example, a supervisor could suggest that a selected group of teachers make a list of service agencies in the community and their respective services, and then widely distribute this information to all instructional personnel. He might also encourage the formation of a committee to identify the various specialists in the school community. Others could analyze community action clubs and outline a plan for relating their services to the Career Education concept. Also, some groups would need to make a comprehensive list of all occupations represented in the area and the implications of each for the Career Education program.

In addition to the responsibility for helping teachers identify community resources, the supervisor should be responsible for acquainting the teachers with new teaching materials, and learning aids as they are developed. This would include those prepared by pioneering teachers in the system, as well as those prepared by commercial sources. Also, the supervisor should provide the means by which teachers may develop audiovisual materials that incorporate a local slant. He should encourage them to develop a storehouse of instructional materials such as pictures, slides, games, books and charts. At the same time, he should establish a central location for materials which will be shared, and work with the teachers in arranging transportation for field trips, arranging radio and TV programs, securing on-the-job training for students as needed, and arranging for introductory skill experiences and vocational skill experiences.

(5) To provide effective leadership and maximum opportunities for teachers to develop leadership potential. The Career Education supervisor will not be able to divorce his role of supervision from his role as a leader. By the very virtue of his position, he should be a leader. Providing coordination among the work of individuals and groups and promoting unity of purpose among them requires leadership ability.

What should be his major functions as a leader? First, he should promote group conscience by exemplifying the democratic philosophy of it himself. He should respect all individual staff members and their unique contributions to the Career Education program. He should be willing to seek help, to delegate responsibility, communicate, make decisions, and involve many people in his plans for solving problems and promoting the program. Secondly, he should provide leadership and promote leadership training through stimulating group action. For example, if a school is interested in developing plans and implementing one major Career Education activity in order to involve the entire school, the supervisor should urge the staff to meet as a group, help them to establish "ground rules," and to organize for action. In this manner, he should strive to become a participating member of the group. His responsibility should be to try to release the potential ability of the members of the group, to arrange for consultant services, and to assist the group in being self-directive. Third, the supervisor should coordinate the efforts of the group. The total Career Education program is important; no one element, segment or level is of greater worth than another. Thus, the supervisor should be

very careful not to favor any one facet over another. He should be knowledgeable about the total program and strive for unification of individual and group efforts as each relates to the whole. Last, he should be responsible for promoting appraisal by individuals, groups, and as a total effort.

(6) To promote articulation among the various facets represented in a Career Education program. In order to assure the continued success of Career Education, each facet must blend into the next with a smoothness which leaves one almost unaware that a transition is being effected. Each level of instruction should complement the other; all professionals should work together to achieve the common purpose. No facet should operate as a subsystem of the greater system, but rather as an integral part of the whole. Achieving this as a result will require development of coordinated approaches which involve personnel on each level, and which will require their working together to produce continuity of instruction and articulation of the parts. Such an arrangement should prevail from the lowest grades to the highest, and should promote unification of the total program by cutting across grade level lines. It should also provide for a cross-fertilization of ideas and eliminate duplications of efforts.

Another very viable way to promote articulation is through the work of an advisory council on Career Education. The supervisor should be instrumental in the appointment of a council which would not only advise on occupational training requirements, but would also be able to furnish information on needs and issues as they exist in the academic elements of the school, and make suggestions

for obtaining the active participation of the community. The occupational community should be well represented on this advisory council, along with parents, members of the educational staff, students, and teachers from phases of the program. As teachers and other staff members work with the advisory council, they should become increasingly cognizant of the total program, and as a result lend force to the achievement of articulation. The supervisors should assure through their activities that both vertical and lateral articulation can be achieved. Each should make efforts to coordinate and unify activities in the total Career Education program, as well as among the various levels of it. If components of the program are treated as separate entities, there is every likelihood that there will be too little communication and too much duplication, either of which could retard the development of the Career Education program.

Finally, articulation involves counselors, and supervisors should make every effort to involve counselors from the start. The supervisor should involve them in planning at all levels, and have them meet regularly with the in-school committees. Unless the right hand (counselor) knows what the left hand (teacher) is doing, the counseling facet of the program cannot become as pivotal as it should be. The importance of coordination of efforts between teachers and counselors needs to be stressed, and the supervisor is the individual best equipped to stress it.

(7) <u>To initiate opportunities for appraisal of teachers' efforts, both individually and collectively</u>. Evaluation is an integral part of supervision, and it can be very profitable for

all who participate in the process. In fact, unless teachers and supervisors recognize strengths and limitations, the need for continual improvement of instruction may become a stagnated concept. The Career Education supervisor should take action to see that this doesn't happen. One of his major objectives as it relates to evaluation should be to work with teachers to critically analyze their instruction in terms of recognized aims. As a tactful supervisor approaches this sensitive area of evaluation, he may recognize that probably the best way is to encourage teachers to concentrate on the successes they have attained. Once a teacher is aware of his achievements, he may not feel as vulnerable to evaluation, and should be more willing to identify the limitations which constrain his efforts. For example, suppose that a teacher should realize that one of his strengths has been in the utilization of resource persons in the classroom, but on the other hand he recognizes a limitation in his hesitancy to arrange for field trips. The supervisor should assist him to identify the causes of his problem. Once identified, steps can be taken to eliminate the conditions that produce a limited program, and the instructor can be motivated to continue evaluation with the objective of improvement to instruction. Supervisor should conduct their activities in order that evaluation of instruction becomes a teacher activity promoted by the supervisor, rather than a supervisory activity promoted by the administration.

If a school system has formal evaluations which take on an aspect of legality; that is, they are ratings which become a part of the teacher's personnel record, the supervisor should arrange

for the teachers to formulate the criteria by which they expect to be evaluated. This places an important segment of the responsibility for improvement on teachers. The supervisor should have the responsibility to initiate group evaluations and total program evaluations. Representatives of all concerned (Advisory Council members, teachers, students, parents, administrative staff) should participate in the evaluative efforts. Provisions for such should be built into the plans originally developed for the implementation of the Career Education program. Arrangements should be made for some evaluation by a local group working independently of the system. In any event, those persons involved in the appraisal should be very familiar with the goals of the program and be able to measure progress or a lack of it in relation to the goals.

8. To provide supervision through visibility. Quality supervision has a prerequisite that the supervisor be out where the action is. He should schedule visits to classrooms, shops, laboratories, and any school-related educational programs outside the school. This is a very effective way to maintain contact with the Career Education program, and should be utilized as the major means of discovering needs and elements of improvement to the program.

Visibility in the school should take the form of frequent classroom visitation, attendance at committee meetings, attendance at school functions (particularly those that feature any sort of Career Education display prepared by students and teachers), or just stopping by a teacher's classroom long enough to clue him in on a new instructional aid. The important point is that supervisors

will uncover needs for advice and services, only to the extent that are readily available to teachers. He should get around in the occupational community, too. There are businesses and industries to visit, representatives of labor to talk to and consultants and specialists to secure. Since Career Education is a home-school-occupational community enterprise, however, the success of it may depend to a large extent upon the ability of the supervisor to communicate frequently and effectively with those outside of the school.

II THE STUDY TEAM

II THE STUDY TEAM

The third year of the *Bridgeport Career Education project was* marked by growth in all directions. Faculty involvement, development of curriculum materials, numbers of students activated and extension of activities into all grades and levels of public school education were characteristics that were significant. Hence, it was proposed to the Career Education Project administrator that the identical team that conducted the assessment in May of 1973 be reassembled for the third assessment in May of 1974. This was proposed chiefly because the team would be fully cognizant of successes and limitations reported a year earlier, and be thereby enabled to move swiftly into the growths, successes and other characteristics that could be attributed to the 1973-74 year. Approval of the proposal was given. As in earlier years of assessment, it was agreed that practical experience in the fields of public school teaching, guidance, supervision and/or administration would lend credence and authority to the final assessment report. The following annotated listing of study team members indicates the competencies and expertise of each, and the relationship to the major elements of the Bridgeport Career Education project.

*Mrs. Rachel Cline

Coordinator of Career Education in the Caldwell County (N.C.) Career Education Project. Many years as teacher and supervisor in the public schools, particularly in the grades through 9; expert in elementary education programming and curriculum, and in effecting

articulation between grades and within the subject matter areas of the respective grades; Principal of large elementary school.

*Dr. David R. Hill

Coordinator of Curriculum for the First Supervisory District, B.O.C.E.S. Buffalo, New York. Extensive experience in the field of guidance, curriculum organization and production, long range planning of education, and student personnel services.

*Mr. Walter J. Raines

Former member of the state supervisory staff of the Virginia State Department of Education. Presently Executive Director of Technical Education Center, Charleston, S. C. Has been extensively involved in educational planning and organization at both state and local levels. Long experience in private business, public school teaching, and particularly in planning and organizing of the teaching and supervising functions in education.

Dr. Joseph T. Nerden (Chairman)

Professor, School of Education, N. C. State University, since 1964. Teacher of mathematics, physics and chemistry, and for many years a visiting professor during summer sessions at leading universities in the nation. Long experience in teaching, supervision and administration of public and college education. Former Connecticut State Director of Vocational and Technical education, and member of Connecticut State Department of Education, 1941-1964.

III METHODS AND PROCEDURES IN ASSESSING CAREER EDUCATION PROGRAM

III METHODS AND PROCEDURES IN ASSESSING CAREER EDUCATION PROGRAM

During the three day period on-site, the team of evaluators obtained data and information concerning all aspects of the Career Education project relating to personnel involved, school-community activities and support, learning activities and projects, curriculum units and materials, teacher attitudes, and many other factors. These data were readily available, since planning many months earlier had identified sources from which data should be requested, in addition to that contained in the excellent monthly topical reports and the quarterly reports. To facilitate the data gathering activity, suggested instruments developed for Career Education were provided the project administration in Bridgeport; these were duplicated and distributed on a broad basis. Thus, information and data were obtained by the Bridgeport Career Education staff on a "pre-basis" and augmented by comparative information and data obtained nine months later. Such information as was obtained and summarized by the staff derived from students, teachers, administrators, coordinators, parents, lay citizens and others. Some of the data examined by the study team were obtained from the quarterly reports, plus questionnaire recorded attitudes of individuals concerning the values in Career Education activities as provided in Bridgeport. Other aspects of the data obtained from the records in the staff offices provided significant information on changes that had occurred during the year of program operation. The project director and staff were responsible during the year for the assembly of data and summarizations after having first taken the suggested instruments and modified

them for the unique purposes of the Bridgeport schools. Study team members reviewed the results, and on the basis of study and analysis produced conclusions and recommendations for further consideration. These appear throughout the body of this report, after having been discussed during conferences with knowledgeable and responsible Career Education personnel in Bridgeport.

Several other major sources of data were also tapped, and these data when added to the total, either reinforced or modified the results, conclusions and/or recommendations obtained from the data and information provided the study team by the staff. Major sources of data included teacher groups, classes of students, parents, employer groups, occupational education personnel, Employment Security Agency personnel, and workers in the community. Interviews with groups and individuals such as the foregoing provided opportunities to explore and determine in depth some of the Career Education aspects related to school-community understandings and attitudes related to Career Education, relevance of the education program to the world of work, aspirations of parents for their children, school recognition of changing societal-technological forces, and suggested activities to further develop and improve Career Education in Bridgeport. From subjective information obtainable from interviews with as many individuals and groups as was possible in three on-site days, and from observable learning activities, it was agreed that the evaluation which would be of most value to Bridgeport public schools would place little emphasis upon statistical analyses of assembled data. Rather, it was accepted that the report would provide narrative aspects of all phases and characteristics of the Career Education

project, accompanied by suggested procedures, activities and modifications of the project that had recognized possibilities for maintaining and further improving Career Education in the Bridgeport schools. Further, it was recognized that the evaluation report could have very complimentary effects within the community, if it could be easily read and digested by the people whose support of Career Education needed to be maintained and stimulated. Thus, no attempt was made to assemble data specifically for the purpose of making statistical analyses and determining levels of significance, since it was agreed that a report so constructed would limit the intent of the city administration to produce an evaluation document which would contain valued suggestions for school personnel and readable information for the lay public.

With the assembly of the data, the several pertinent backgrounds of study team members were brought to bear upon the analyses and recommendations, calculated to maintain and further improve the Career Education program. On the third day of the on-site visitation, an initial draft of the major findings and recommendations for consideration was prepared, with particular attention given to those steps, activities, organizational modifications and curriculum changes that were feasible for the Career Education staff and the city educational administration to consider. The draft of these matters was presented to the project staff, and opportunities provided for corroboration, modification and discussion. Several valuable observations were made by the project staff and suggested for incorporation in the final draft of the report. Then, since general

agreement appeared to prevail regarding the major findings and recommendations, the complete evaluation report was prepared by the team of evaluators during the six weeks following the on-site visit.

The final document reporting the evaluation of the third full year of the Career Education project was delivered to the Bridgeport office of the project by the contractually stipulated date.

IV FINDINGS AND OBSERVATIONS

A. THE ADMINISTRATION OF THE PROGRAM

B. GUIDANCE SERVICES

C. CAREER EDUCATION IN GRADES 1 THROUGH MIDDLE SCHOOLS

D. CAREER EDUCATION IN HIGH SCHOOLS AND VOCATIONAL TECHNICAL CENTER

IV FINDINGS AND OBSERVATIONS

A. THE ADMINISTRATION OF THE PROGRAM

INTRODUCTION

The Bridgeport Public Schools Project in Career Education, identified approximately three years ago as an exemplary project by the State Department of Education, and also by the Office of Education (HEW), was seen in its final stages of development. When it began approximately three years ago, the middle schools were clearly the prime target area, with much effort devoted to curriculum development and the organization of teachers, supervisors and administrators into closely working teams of individuals needed to carry on the broad concepts and the specific elements of the Career Education program. At that time, only slight reference was made to the elementary grades and the senior high schools. During subsequent years of operation, the efforts of the central staff concerned with Career Education supervision and administration carried the Career Education program into the elementary schools and into the high schools, with the results that over 20 schools in Bridgeport of the 37 in the public school system, and over 3200 students, were involved and were actively engaged in carrying out some phase of Career Education for the students, teachers and supervisors. A year ago, the central office staff reported that teachers, supervisors, administrators, parents and students were increasingly involved in Career Education aspects in the three high schools, nine elementary schools and five middle schools. In addition, at that time one parochial elementary school and the Bullard-Havens Technical

School were also reported as involved in the Career Education effort, and there was also strong evidence that articulation was being effected between the public schools and the Norwalk State Technical College in Norwalk, Connecticut, and also with the Housatonic Community College nearby.

During the 1973-74 school year the project staff which made such a marked contribution to Career Education was maintained at about the same level, for the early part of the school year. However, the counselor-coordinator, Mr. George Palermo, who had earlier been responsible for coordination of the Career Education program in the three high schools in the city, left the central office staff and removed to Greenwich, Connecticut. This resulted in some reorganization, but with the high school elements of the Career Education program added to the many duties of the project director, Mr. Bonitatebus. The new arrangement had some very obvious detriments, since any activity which required the full time professional assistance of one man could not equitably be transferred to the director of the total Career Education project whose responsibilities already required him to expend full time and energy to matters of supervision and administration.

During the early months of the career education project, special efforts were made to develop evaluation instruments which would apply to all levels of education in the Bridgeport public schools. Many such instruments were developed, but since the project made a late start in the first school year of the project, the questionnaires were merely tested and to some extent modified to more nearly meet the eventual requirements of the Career Education project.

During the second year of the project, extensive use was made of the questionnaires and considerable information was derived from both the statistical information and the comments supplied by the individual respondees. The questionnaires were those that were developed for use on students, teachers, parents, supervisors, administrators, lay personnel and others. Thus, after several years of adjustment and modification, the questionnaires were used in the third year of the project and revealed some very interesting and exciting information. In general, students were highly complimentary about the content of the Career Education program in the various grades where they were involved in one or another aspects of Career Education; parents and teachers indicated that their observations concerning Career Education regarding the students was by and large a wholesome one and highly encouraging. It was noted that much of the information that was returned on the questionnaires was of a subjective nature, and other than numbers of teachers, numbers of students and numbers of schools involved in Career Education, the subjective information contained in the replies of the respondees to the respective questionnaires indicated a high degree of confidence in the Career Education planning, programs, and outcomes. The instruments that have been designed for Bridgeport and were used over the several years were intended to tap for reaction, critique and insight as many persons as could be contacted during the year. The questionnaires, of course, were not intended to be complete in the sense that they had been validated for a wide field base, but were intended to be used by the Career

Education program personnel as devices for supplying to the central organization such information as would assist the central staff in constantly adjusting the program to meet the needs of the youths that were participating, and the needs of the teachers for direction, curriculum materials and methods of appraisal. With instruments of the foregoing type under constant modification, it was expected that the Bridgeport Public School System would be able to gather data annually, subject them to close examination and analysis, and thereby adjust the Career Education program well into the succeeding years. In this way, it was expected that the Career Education program which began as an exemplary project would persist into the years after the federal support for the particular project had been terminated.

In accordance with many of the valuable suggestions that had been made by the team of evaluators during the 1972-73 school year, some of the instruments were redesigned and made available for utilization during the 1973-74 school year. In early September of 1973, the initial efforts of the school year were made to obtain data from the wide variety of individuals (students, teachers, supervisors, administrators, parents and lay citizens) and the data thus acquired banked for comparative use later in the year when a similar data gathering process was carried out. The questionnaires were again used in the spring of 1974, and some new data obtained, to a limited extent, and made available to the team of evaluators upon its arrival in Bridgeport on April 29, 1974.

CITY ADMINISTRATION AND ITS INFLUENCES

The Bridgeport Career Education program was in the third and final year of operation as a federally funded research and development project. The Project Director for this Career Education project was Mr. Joseph Bonitatebus. In moving from a pilot program as an exemplary project into an established segment of the curriculum in the Bridgeport city school system, the administration indicated that Mr. Bonitatebus would provide the leadership for Career Education in Bridgeport. The Bridgeport city school administration was organized so that five assistant superintendents reported directly to the Superintendent of Schools. Each of the assistant superintendents was assigned to a district containing a number of elementary schools, middle schools, and a majority of the assistant superintendents had the responsibility for at least one high school. In addition, these assistant superintendents had responsibility for at least one city-wide administrative activity, such as school plant planning, business affairs, pupil personnel services, etc. The Career Education Director reported to Dr. E. J. Smith, District Assistant Superintendent of Schools. Dr. Smith was responsible for District 3, all middle school education, and pupil personnel services. Also reporting to Dr. Smith was the Director of Guidance, social services center, special education, psychological services, speech and hearing, and the center for interim education. The Career Education project's staff reporting directly to the Project Director was composed of a project coordinator, guidance specialist, and three vocational guidance counselors. The Career Education Director was also responsible

for the supervision of three high school department heads, the work experience coordinators, two home economics teachers, and a supervisor for home economics. In addition, the staff included the following support personnel: an executive secretary, a clerk typist, and three para-professional aides. The executive secretary position was vacant; however, the position was projected for fiscal year 1974-75. The Director indicated that the position would be filled. The Career Education aides worked directly with the vocational counselor. The local budget for continuation of Career Education projected one additional aide for fiscal year 1974-75 and six additional Career Education teachers. The proposed budget also provided for two additional home economics teachers and one work experience teacher. The Career Education project continued to involve the services of the three district superintendents of schools, the director of guidance, the supervisor for upper elementary schools, and the supervisor of the lower elementary schools. It was significant that the continued involvement of these administrators was projected as a continuing part of the regular responsibility of each of the administrators and not based on any funding pattern or source of funds. The Project Director also had the responsibility for coordination of the Career Education program with other program supervisors such as industrial arts, art, math, etc.

The evaluation team, through interviews with the city level education administrators, concluded that the Career Education staff had accomplished much in the past year in gaining the involvement, understanding, and support of the central administration staff.

Several examples of good support and involvement in administration at all levels were in evidence. One such example reflecting wide involvement of administration, as well as teachers and several community agencies, was the Career Guidance Institute. The Career Institute was initiated by the Director of Guidance and was attended by Bridgeport city schools guidance counselors and principals. The National Alliance of Business, the Chamber of Commerce, and the advisory committee for Career Education presented a program to the counselors outlining the career opportunities for young people in the Greater Bridgeport area and discussed the qualifications that business and industry were seeking in recruiting employees.

Other activities which exemplified the support received by the central administration and of which also required involvement of administration at the school level were as follows: a reassignment of Career Education counselors to schools and school districts due to the reorganization of the counselor's duties; a meeting of principals and counselors at East Side, John Winthrop, Reed, and Blackmon Middle Schools relative to the support Career Education would provide to the regular school curriculum; and the implementation of secondary Career Education programs at Bassick and Harding High Schools in academic areas of business, English, and social studies. These meetings required the active involvement of the assistant superintendents, program supervisors, principals, and counselors in planning and conducting these activities. The introduction of the Cooperative Education programs at Bassick, Central, and Harding High Schools to serve 250 students also required the active participation of many administrators as well as teachers. Other examples

which are indicative of the support by administrators in the Bridgeport city schools include meetings with administrators and teachers from Holy Rosary School in the planning and implementing of the Career Education program at the seventh and eighth grades, the participation of the Project Coordinator in the planning of programs to be presented by the State Department of Education to Career Education personnel throughout the state, and the administration allowing the staff to meet with the Mayor of Bridgeport, Comptroller, and Board of Education members in planning facilities to house a teenage-parent program, and the Career Education staff's involvement in the planning and implementing of state sponsored workshops for career guidance specialists and teachers from local school systems throughout Connecticut.

Further examples which attest to the administration's willingness to encourage contact with outside agencies included meetings with representatives from the American Association of University Women to actively engage them as resource people for Career Education, meetings with Bridgeport Regional Mental Health Clinic personnel, meetings with the Chamber of Commerce and representatives from the Armed Services for planning and implementing the use of the Armed Services vocational aptitude battery for all students in the high school, the coordination of the program with the Model City Agency, and finally paving the way for representatives from the New York Times as teaching resources in the Cooperative program. Interviews conducted with several principals and teachers further supported the fact that the administration was actively involved in the planning and implementing of Career Education projects. Such

activities as working with Greater Bridgeport Personnel Association to develop a program of orientation for minorities for students in business and industry, cooperating with representatives from the Boy Scouts of America and conducting a career interest survey for high school students, the purchase of two mini-buses for field trips, the introduction of Career Education into the special education programs are all representative of the support received by the administration of the school system. Finally, there was consensus among the evaluation team members that there was much more evidence of local participation and interest as evidenced by the above activities as well as the favorable comments gained through interviews with administrators and teachers.

CLIMATE AND ATTITUDES

The evaluation team procedures followed a similar pattern to the previous year and conducted interviews with private and public agencies, administrators, faculty, employers, students and parents. It was reported last year that many of these individuals viewed the Career Education project as a vehicle of change in the Bridgeport school system. This year it was revealed that these groups continued to view Career Education in the same light; however, the greatest change in attitude was the feeling that Career Education was now becoming a permanent part of the curriculum of the Bridgeport school system.

The project staff and city level education administrators were secure in their opinions that the Career Education program would continue in the future and that the program would be supported

financially at the local level. This attitude and view was supported by the fact that the school board had requested the appropriation of a sizable increase in local funding for the continuation of the program for the 1974-75 fiscal year. The positive action of the Board of Education was expected to remove the uncertainty of the future of the program and particularly of the staff members. The administration, including the central level staff and principals had changed somewhat over the past year from acceptance to a position of realizing that the Career Education program had indeed brought about a number of very visible changes within the school system. Principals and teachers, particularly at the elementary level, were requesting that they be included in Career Education program participation as the program expanded in the Bridgeport city schools. There was a general awareness by principals, central administrative staff, and parents that more options would have to be developed for students moving from middle schools to the high school, especially options for vocational education preparation.

SUPERVISION PROVIDED, QUALITY

There was evidence of significant improvement in the quality of supervision provided for the Bridgeport Career Education project for the 1973-74 school year. Several factors have contributed to this improvement. A most significant factor was the involvement of the assistant superintendents, general supervisors, principals, and teachers in many Career Education activities. Another important factor was teacher acceptance of Career Education as an

established facet of their curriculum. Several activities required widespread involvement of the Career Education staff, general supervisors, principals and teachers in planning, implementing, and follow-up. A concrete example of the close cooperation was the introduction of the exploratory or mini-course in cosmetology being introduced into the four middle schools. This project required the four principals, the Career Education staff and the general supervisors to spend much time in planning and implementing this project. The implementation of the alternate high school program was another example of an activity that required the involvement of several local educational personnel in planning, implementing and supervising.

In organizing for supervision, the Project Director continued to make staff assignments on the basis of grade levels in schools, with each staff member assuming specific responsibilities for the operation of the Career Education project within those schools. Interviews with principals, supervisors, and assistant superintendents indicated that effective supervision was being provided by the project staff. There was some indication from the standpoint of central staff administration, that as the Career Education project moved from a research and development phase into an established part of the total education program that inter-staff communications would have to be improved. Discussions with the individual staff members revealed that they still enjoyed the right to develop their own plans of supervision and operation within their area of assignment. Staff assignments were the same as reported last year with three counselors working with K-8 grade level programs involving

twelve elementary schools and five middle schools. The counselors were again assisted by three para-professionals. The Career Education Coordinator was assigned the responsibility for working with the middle schools. The Career Education Coordinator position for the three high schools was vacant. The responsibilities of this position were assumed by the Project Director which appeared to create an overload for him. There was some question as to when this position would be filled by a new person. This vacancy took on added significance when it was considered that a great deal of planning would be required to further develop the Career Education program to reflect a broader scope of career options for students at the secondary level.

With the central administration, the Career Education staff, and the assistant superintendents projecting that Career Education would be part of the total curriculum in the Bridgeport city schools, the need to develop a long-range plan to clearly outline the roles and responsibilities of those involved, as well as outlining the requirements for supervision, was clearly an issue of paramount proportions.

FACILITIES, EQUIPMENT, MATERIALS

Some concrete improvements were noted by the evaluation team in the area of providing facilities, equipment, and materials. The administration added two mini-buses as transportation for Career Education students to field trip sites. The Resource Material Center continued to receive attention with positive reactions by teachers and supervisors in regard to the services of the Center.

However, it was noted that the resources of the Center were being taxed since the program was expanded to include more teachers and more students. The Center was providing such materials as film strips and curriculum materials to the teachers on a weekly basis. In general, the interviews with the teachers revealed that there was an adequate supply of equipment and materials available and that these materials were disseminated on request. However, when the program is introduced into other schools and expanded in existing schools, there will be an ever-increasing demand placed on the Resource Material Center. It appeared advisable that the Career Education staff would need to begin their planning on a purchasing, storage, and retrieval system to meet the demands of the expected growth. Discussions with the Career Education staff and teachers pointed toward good utilization of the community resources.

The facilities at the elementary and lower school levels seemed to be adequate since the Career Education program was operating as a part of the total curriculum at this level and required only the regular use of such facilities as classrooms and laboratories. The facilities and equipment at the high school level was totally inadequate to meet the demands placed on them. This problem was further compounded by the fact that students now in the elementary level and particularly those students in the middle schools will move to the high school and demand to enroll in programs that are currently nonexistent or enroll in programs that are currently offered but cannot accommodate sufficient numbers of students due to lack of space. The space problem appeared to be critical in the vocational area where some of the industrial programs were operating

in mobile units where space was totally inadequate for proper provision of equipment or instruction. The problem of accommodating students in the vocational area was further complicated by Bullard-Havens Vocational Technical School which was accepting only a small number of students from Bridgeport. The evaluation team leader discussed this problem with the Superintendent of Schools and the Chairman of the Board, and it appeared that the Superintendent and the Chairman of the Board were now cognizant of the magnitude of the need to provide additional space for the vocational programs if they are to meet the demands of the students now and in the immediate future. Consideration should be given to conducting a feasibility study to identify facility requirements for vocational education in Bridgeport.

FINANCE

A review of the budget with the Superintendent and the Project Director revealed that the level of funding for the 1973-74 school year was adequate to carry out the Career Education project activities. Subsequent discussions with several administrators, principals and teachers supported this conclusion. The most significant factor in the area of finance was the fact that the Career Education was expected to be continued and funded locally. A review of the 1974-75 budget which was approved by the Bridgeport city government revealed that the level of funding would be increased to provide for the Career Education project's staff, additional teachers and materials. The following chart reflects the expenditure of local funds for the 1974-75 school year.

CAREER EDUCATION BUDGET

1973-74 and 1974-75

Item	1973-74 Appropriation	1974-75 Projected Cost
Salaries	434,666	462,839
Office Supplies	1,000	1,500
Transportation	3,300	3,630
General Supplies	2,500	3,000*

*Represents city contribution. A total of $85,000 is projected to come from the State Department.

In the interview with the Superintendent of Schools, he indicated that the administration was committed to the Career Education concept and that he was equally committed to working toward providing the necessary funds to support the Career Education program in the Bridgeport city schools.

PUBLIC INFORMATION

It appeared that the Career Education project staff was dedicated to keeping the Bridgeport city community aware of the development of the Career Education program in the city schools. The staff had utilized all the available media in Bridgeport to transmit project activity. In addition, there was evidence of good active contact with the various public and private businesses and industrial agencies and groups in Bridgeport. The staff was publishing the Bridgeport Action Career Education News which was disseminated to various groups in the city as well as to parents. The

Chamber of Commerce newsletter continued to provide space for Career Education news releases in an effort to keep the businesses aware of the Chamber's involvement in the Career Education program. Many of the projects themselves contributed to good public information. Several examples serve to support this. One activity was the "Careers on Wheels" which was a student tour of several businesses and agencies in the same career clusters. Another activity was the career days in several schools. In general, the Career Education staff projected steady improvement in the area of public information, since it appeared that the city education administrators, the supervisory staff, principals, and teachers would benefit from receiving continuous information on project activities in order to keep abreast of the development of the Career Education program.

ADVISORY COMMITTEE ACTIVITIES AND REACTIONS

The Chamber of Commerce for the Greater Bridgeport Area continued to serve as the general advisory committee for the Career Education program with the responsibility of working with the schools being assigned to the education committee. The evaluation team met with the Chairman of the Chamber of Commerce Education Committee. It was noted that the Chamber of Commerce Education Committee was indeed active in its support of the Career Education program with good involvement at the superintendent's level as well as with the Career Education Project Director, principals, and teachers. The Education Committee was involved with the Board of Education's Subcommittee on Curriculum Revisions, and the Chairman of the Education Committee reported that the sub-committee was very responsive to the

notion of infusing Career Education into the total curriculum of the Bridgeport city schools. The advisory committee had worked with the Director of Guidance in planning and conducting the city-wide guidance institute for counselors where the advisory committee had the opportunity to share with counselors the personnel requirements of business and industry. The advisory committee worked with the Career Education staff and principals in planning and conducting the Career Education days held in several schools. Good evidence of advisory committee support was in the School Program and Career Education Program (SPACE) where a total of 45 students were placed on a cooperative basis with businesses in the Bridgeport area. In 1973 the Chamber of Commerce developed and administered a survey to determine the level of skills required for employment and the opportunities for employment in the Bridgeport area. The Chairman of the Education Committee reported that through meetings with the Board of Education, principals, general supervisors, and the Career Education staff, positive results could be reported for this study. The Chairman indicated that as a result of the study, there was an expansion of the business curriculum in the high schools, there was more guidance involvement as evidenced by the Guidance Institute, and finally teachers were becoming aware of job opportunities for students in the Bridgeport area. The Chairman of the committee indicated that communications between business and education had opened up, but further development in this area was required.

A visit was made to another member of the advisory committee. This member held the view that more must be done to provide opportunities for youth to develop the proper attitudes and skills

necessary for entry into employment. He indicated that the Guidance Institute was the first step; however, he did express the concern that some of the counselors may have reacted adversely to the committee's discussion of business requirements. He also expressed the opinion that counselors and parents continued to be college-oriented and that a new and continued thrust should be started to get teachers and counselors prepared to provide career guidance information to students. The discussion with the advisory committee members indicated that the Chamber of Commerce was sincerely interested in working with the schools in an advisory capacity, to assist the schools in whatever manner possible in meeting the needs of the students in their quest for careers. The advisory committee had expanded its efforts in working with the schools from K-8 but only through the special activities such as the Career Education day, etc. It appeared that they were continuing to place their emphasis and concern on the vocational offerings at the high school level.

The Career Education Project Director appeared to be the only Career Education staff member maintaining frequent contact with the advisory committee. Discussions with the Career Education staff, principals, parents, and employers appeared to point to the need to obtain more advice from a broader segment of the community than that as represented by the Chamber of Commerce Advisory Committee. Some thought is expected to be given to the expansion of the advisory committee to effect these suggestions, and to the need to provide for active involvement of the Career Education staff and teachers with the advisory committees. In addition to the general

advisory committee, serious consideration is expected to be given to establishment of advisory groups for the special programs such as SPACE, CEVO, the cooperative work experience programs, and each vocational offering. Consideration will also be given, it was reported, to the establishment of an internal advisory committee with membership drawn from the teaching staff, counselors, principals, parents, and possibly students.

PARENT REACTIONS

A conference was arranged for the purpose of obtaining parent reaction to the Career Education program and was attended by parents, the Career Education staff and the evaluation team. The general reaction from the parents was much the same as last year's group with that of expressing support and appreciation for the Career Education program in the Bridgeport schools, and with many indicating high interest and desire to become more involved. However, this year's group of parents expressed some real concerns as the program continued to move from the pilot stage to an established part of the total school curriculum.

One major concern was the question of what happens to the student moving from the middle schools with a career objective in mind and then finding that he cannot continue in his chosen area because he cannot get into vocational-technical school, or that the high school was not offering that particular curriculum. The parents appeared to feel that the high schools were equipped to serve those students that were embarking on the professional career choices which required strong academic preparation. There

was a general feeling among the group that the high schools did not provide enough options for those students who chose to enter occupational education. Their big question appeared to be, "What is to be done about career preparation in the skill areas when the opportunity doesn't exist now or where there are gaps in the offerings which would require a student to wait until his junior or senior high before being allowed to pursue his career choice?" The parents explained that there was a parent advisory committee which met with the Board of Education and indicated that these questions and concerns would be communicated to the Board of Education. The parents discussed the questionnaires that they completed earlier in the year. The questionnaire indicated that parents were not well enough informed about Career Education, with fifty reporting that they were quite ignorant of the program and its objectives. With this reaction, the Career Education staff indicated its intention to continue to develop participation and to plan on new ways to keep parents informed of the Career Education development.

Random samplings of parents remarks from the questionnaire for parents were somewhat parallel to the reactions from the parents in the evaluation team-parent meeting.

PARENT REMARKS

"My son enjoyed the program very much."

"Are you sure Sheradon School has a Career Education program?"

"I don't feel that parents are really aware of the Career Education program. Also, my second grader seems to be greatly involved, whereas my fourth grader is not. I am very much in favor of the program."

"I think there should be more information on what is happening in this program sent to each parent. I would like to participate."

"A step forward for the Bridgeport public school system."

"Prior to receiving this letter, I had no knowledge of the work program. I think it is a terrific idea and I am willing to support this program in any way I can."

"I would like more information on this program, all about it really. It really has never been explained to me in full."

"My daughter has enjoyed her Career Education program. Her school has improved, and she misses working and wishes she could continue working in Blackmon School. It's too bad that this is only a six month course."

REACTIONS OF TEACHERS, PRINCIPALS, ADMINISTRATORS

The evaluation team made an effort to talk with as many educational personnel as possible in the Bridgeport city school system, and had opportunities to talk to most teachers, principals, and district superintendents directly involved in the Bridgeport Career Education program. There were many varied views and concerns expressed by the individuals in this group. In general, the statements were very positive with those expressing concerns directed toward requirements for improving the Career Education program. One assistant superintendent indicated that steps were being taken to infuse the Career Education program into the total curriculum, therefore assuring permanency and that, as a district superintendent, there was the opportunity to have input into the process of curriculum revision. Further discussion with district superintendents indicated that they were involved with the Career Education staff in selecting schools where the Career Education program would be introduced, and also in the selection of teachers to participate

in the Career Education program. Further, the superintendents worked with the Career Education staff and general supervisors in arranging supervisory patterns for those teachers involved. It was indicated that they also were involved in curriculum development for Career Education. One superintendent expressed a need for additional counselors, particularly Career Education oriented guidance counselors, because so many students do not receive full benefits from guidance.

One district superintendent declared that the services of the Learning Resource Center or Materials Resource Center should be available to all schools and all teachers. He recognized that this would mean additional financial support for this area, but indicated that many of the teachers were asking the question, "Why not?" In addition, he expressed the opinion that these services could serve as a springboard for gaining wide involvement and support of the teachers in the Bridgeport city schools.

A principal at the high school level indicated that he was pleased with the increased amount of activity and involvement of the community brought about by the Career Education program. He stated that it was particularly significant that the Chamber of Commerce was invited in to work with the teachers, citing the participation in the Career Day programs, the Armed Services interest surveys, and the Career Guidance Institute. He also stated that as a result of the Guidance Institute, the Career Education staff should consider working on a program to arrange for faculty visitations to industry, and emphasized that the initiative in planning this must come through the Career Education program. The

principal indicated that there was a healthy attitude among the faculty toward Career Education and that he felt the existing program now operating was sound, but that Career Education must be expanded so that more students can take advantage of wider offerings. This principal emphasized that additional facilities and staff would have to be provided before much future growth and expansion could be realized. Another high school principal indicated that the Career Education program was a good addition and, as a result, guidance counselors in the school were working closer with the faculty and the Career Education staff; this principal was particularly pleased with the widespread involvement of the faculty in special projects such as the fashion shows, career days, etc., and he also emphasized the need for additional facilities for occupational training.

REACTIONS OF EMPLOYERS

The evaluation team met with employers and students of the SEVO program, which is an exploratory program at the eighth grade level. The teachers assigned to conduct this special program appeared to be very enthusiastic and expressed their opinions that the program was very successful. Discussions with the teachers resulted in the evaluation team's conclusion that there was general agreement among the participating teachers that the Career Education program was providing good results. The teachers commented that students were showing an increased interest in school and that they were becoming aware of career opportunities at an early age; the teachers were using resource people from the community

in their classrooms. In general, the climate appeared to be good and the timing right for further development of the Career Education program in the Bridgeport city schools.

The evaluation team had the opportunity to interview several employers of students in the Bridgeport Career Education program. Employer support of the SPACE program, the SEVO program, and the work experience program was a good indicator that the business community recognized the need to cooperate with the schools in providing opportunities for, and training of, students for eventual employment and/or further training within the career field of their choice. In addition to the interviews, the monthly report submitted by the Project Director to the Superintendent, State Department of Education, and the U. S. Office of Education contained many examples of business and industry support. Examples of programs and activities requiring the support of business and industry included the following: the School Program and Career Education (SPACE) program at Bassick High School involving 45 students; the Cooperative Education program at Bassick, Central, and Harding High Schools implemented this year with 250 students involved; the Distributive Education program at the high schools was expanded to include 180 students; and finally the SEVO program. All of these activities required that employers work directly with the students in an on-the-job situation. The monthly report also reflected meetings with IABS, the Chamber of Commerce, Urban Coalition, the advisory committee, representatives of the New York Times, and others.

In an interview with the personnel manager of a large department store, the conclusion was drawn that business and industry were willing to work with the schools in providing occupational opportunities for students and graduates of the high schools. A banker who was employing two work experience students was interviewed. The banker was extremely pleased with the progress of the two students employed on a part-time situation with the bank. It was further indicated that the students were receiving good supervision by the bank and by the work experience coordinator. In addition, the banker served on the advisory committee and indicated there was widespread interest in developing more occupational opportunities for students in the Bridgeport schools. The employers working with the eighth grade exploratory program (SEVO) appeared to be excited with the opportunity to work with students at this level. A general conclusion was reached that employers and citizens are becoming more aware of the objectives of the Career Education program and were increasingly willing to lend support to the schools in further development of the Career Education concept.

LONG-RANGE AND SHORT-RANGE PLANS

The planning of the Career Education program had been confined to meeting the objectives of the Career Education project proposal and to limited continuance of the program in subsequent years. As reported by the evaluation team last year, the Superintendent of Schools expressed a commitment to not only meeting the objectives of the pilot project, but to continue the program on a permanent basis. Now that the Career Education program had aroused the

interest of students to the point that they had embarked on a path of Career Education, it appeared to be raising within administrative circles, the question of how the school system will go about providing the required facilities, staff, materials, and curriculum offerings to meet the demands of these youngsters. The Superintendent and the Chairman of the Board of Education for Bridgeport City Schools recognized the need for developing a long-range plan to meet the needs of the youth and adults in Bridgeport, and the evaluation team concurred.

SUMMARY OF FINDINGS AND OBSERVATIONS

1. To the extent that time was available to the team members, the attitudes concerning Career Education held by public school administrators in the Bridgeport public schools were sampled. This particular aspect of the evaluation appeared to be extremely necessary, since with the conclusion of the current school year, federal funding of the exemplary project would terminate. The expectation was expressed in most of the administrative circles that the gains that had been achieved during the three-year period during which time the exemplary project was in operation would persist and be maintained throughout the Bridgeport Public School System. Discussions with the administrators evidenced a reasonably high level of enthusiasm for the Career Education project and its outcome. The most encouraging aspect of the entire administrative study in the school systems was evidenced by the placement in the projected school budget for the 1974-75 school year of more than $400,000 to carry on all aspects of Career Education. Discussions held with

the Superintendent of Schools, Dr. Rosenstein, and others connected with the City Board of Education, the administration of the high schools, the middle schools and elementary schools, indicated that Career Education had made its mark upon the total public school educations program and that it should be retained and expanded in the years ahead. The team of evaluators was very much encouraged by this particular evidence, since it appeared likely that the Career Education project, funded with approximately $1,000,000 of federal funds, would persist well into the future and would be highly valuable to the youth of Bridgeport in formulating plans for a wide variety of career opportunities.

2. The advisory committee attached to the Career Education project had been organized early in the Career Education activities which started approximately three years ago. Connected directly with the Chamber of Commerce, and referred to frequently as the Education Committee of the Chamber of Commerce, the advisory committee on Career Education reflected a high level of intelligence, appreciation and determination upon the part of the membership of the committee. Also, the Urban Coalition has functioned as advisory to the project. The advisory committee had continued during the current school year to work very closely with the administrative and supervisory staffs of the Career Education projects and had made not only a great many valuable suggestions to improve the program, but had engaged in a great many new and expanded activities intended to bring the values of Career Education closer to the needs of the youth in the public schools. These

additional activities provided a wide range of resource speakers available to the public schools, field trips, "hands on" experiences and activities that were reflected in the "Alternate high school program," the "SPACE" program, and other similar activities. While many of these activities were devoted largely to the upper grades in the high schools, the advisory committee appeared to be extremely interested in what transpired in the lower grades and the middle schools, and indicated that during the next school year (1974-75) steps would be taken to extend the activities of the advisory committee downward into these additional levels of education. The hope expressed by the Chairman of the Advisory Committee was that vertical articulation would take place and that that which began at the lowest grade levels of education in Bridgeport would reach fruition during the high school years when youth would be able to make valid decisions concerning eventual career objectives, and possibly to engage in activities which would bring them into direct "hands on" contact with selected careers in the Greater Bridgeport community.

3. As the 1973-74 school year neared completion, it was clearly evident that all aspects of Career Education in Bridgeport were being brought to bear upon the needs of all levels and all grades of youth. The very notable aspects of the Career Education program during previous years which provided services to the mentally retarded group received additional attention, as well as the Career Education activity which was provided for special needs, disadvantaged and other groups. Much planning in the administrative offices, and considerable attention by the supervisory staff

had resulted in the broadest possible application of Career Education activities to all youth in Bridgeport. Even though the total Career Education project had not enveloped every school in the city, it was evident that adequate experimentation and exemplary activities had touched all areas of education, and that it would require only the persistence of the School Board and the accompanying appropriations to extend the Career Education activities to all youth and all teachers in the public school system.

4. The breadth of the Career Education program and its obvious positive outcomes were revealed as partially due to the excellent relationship that had been established with the community. However, as is the case in most educational ventures, a considerable amount of time and energy must be applied to a community relations program, in order to firmly establish "bridges of information" with the people whose public tax dollars support education. The Chairman of the Advisory Committee for Education of the Bridgeport Chamber of Commerce pointed out significantly that the bridge between the schools and the community has always needed effective building and maintenance efforts. He pointed out that there was a critical need at the present time for further building of bridges between school and community, now that the federal funds were soon to be terminated, and the city of Bridgeport would be called upon to maintain its own Career Education program. The Chairman pointed out that the Chamber of Commerce believed that Career Education was not only successful in the schools, but that members of the community that had been tapped for information and reaction had indicated the hope that Career Education would be

continued long into the future. He pointed out that once the communications bridge had been firmly built, and regularly administered to from the standpoint of maintenance, the dollar support for Career Education would be enhanced. He further reported that through the efforts of the advisory committee, constant contact with employers in the Greater Bridgeport Area would be maintained and that employers would be encouraged to work closely with the Career Education staff in the central office. As evidence of the need of this particular kind of coordination, the Chairman of the Advisory Committee pointed out that in Connecticut, 35,000 jobs for skilled personnel were still open, and that there were not now enough skilled people being prepared in the state to fill this void. During his meeting with the evaluation team, the Chairman of the Advisory Committee on Education revealed that the Chamber of Commerce had felt that the character of Bridgeport was now undergoing change. Formerly a highly "blue collar" type of community, many professional, corporate and other "white collar" types of personnel were moving into the area. With a growth of this nature in prospect, it was clear that the Chamber of Commerce would be active in promoting skills not only of a production and operating order, but also those which would contribute to the greater business and professional aspects of the community. He felt that with the unemployment rate now down to approximately 5 1/2% from an astonishing 11% of a year ago, attention to the occupational needs of Bridgeport on a broad scale would need some extensive planning, coordination and carrying out for the future.

5. Career Education programs in the high schools appeared to be one of the most difficult aspects of program development. Largely because of the compartmentalization of education by departments of high school study, the infusing of the Career Education objectives and concepts with regular academic high school subject matter still presented problems upon which the Career Education staff would have to spend more time. The plans for the 1974-75 school year anticipated more frequent involvement of high school teachers in in-service education programs designed to acquaint them with methods which might be used to effect coordination and infusing.

6. A relatively new program called the "Alternate High School Program" for approximately 45 juniors and seniors in the high schools had been put into operation during the 1973-74 school year. The students that were selected to participate in the program were those that had indicated interest in such broad career possibilities as architecture and business. The space for the alternate high school program was the University of Bridgeport. The advisory committee of the Chamber of Commerce had notified all 1,000 members of its organization of the intent of the alternate high school program, and had received rather enthusiastic replies from a small number. It was expected that as the alternate high school program grew and matured in Bridgeport, it would be more adequately representative of all of the employment and career interests in the Greater Bridgeport Area. Students who were selected to engage in the program agreed on their own volition, and were assigned to career business, architecture and other interests in the community which would provide for them approximately one-half day each day

of participatory experience. It was viewed by the Chamber of Commerce that such a program, cooperative in nature, would have strong Career Education elements and that students would ultimately identify their interests with the experiences provided for them. A few of the University of Bridgeport professional personnel were employed on a part-time basis to guide the program, and much hope was being expressed for the broadening of program during 1974-75 school year. It was also expected that the city of Bridgeport would fund the alternate high school program well into the future, and that it would become an entrenched segment of the total education program in Bridgeport.

7. With the passage of the Comprehensive Employment and Training act of 1973, (CETA) it was expressed in administrative circles in Bridgeport that there was need now for immediate action (and continuing action well into the future) to cooperate with the State Labor Department and its subsidiary interests in the Bridgeport area. Since CETA was being funded by the federal government for upwards of $2,000,000,000, and with the operation of all training conducted under CETA by the labor departments of the several states, it was clear to the Career Education staff, and also to its advisory committee, that steps would have to be taken at the earliest possible moment to make plans with the Labor Department with regard to the training potential in the public high schools particularly. Initial steps had already been taken, and it was expressed by the administrative staff that succeeding steps would be taken in the very near future to bring the school departments into close coordination with the State Labor Department

and with the employment security people in the Greater Bridgeport Area.

8. One of the most exciting characteristics of the Career Education program in the Bridgeport public schools concerned the broadening aspect of career units developed by the teachers and under the supervision, coordination and stimulation provided by the central office Career Education staff. Many of these projects or curriculum units included opportunities for youth to become involved in the broadest career targets such as agriculture, trades and industry, business and distribution, health and allied areas of employment. It was clearly evident to the evaluators that much original teacher and student labor and ingenuity went into the production of the units, and it was equally evident that the teachers who were using these units in the instructional programs were pleased with the outcomes in terms of student learnings.

9. Industrial arts and home economics education in the Bridgeport public schools have long been a strong characteristic of the academic program. During the three years of the Career Education project, efforts were made to involve the general education segments of home economics and industrial arts for Career Education purposes. To some extent, the middle schools had been more successful in this effort than had been the high schools. There still remained a residual antipathy between industrial arts and some aspects of Career Education at the upper levels which begin to take on vocational preparation aspects. It was clear to the team of evaluators that here was an area that would require continuing attention during succeeding years if the full potential of industrial arts,

and also that of home economics, is to be brought to bear upon the Career Education needs of students.

10. All of the teachers in the 20 schools involved in the Career Education project during the current school year appeared to be making extensive use of materials, curriculum devices and, particularly, teaching techniques and methodologies appropriate to the needs of the Career Education project. Their involvement in the development of guidelines for teacher participation in Career Education projects showed up in many ways, and it appeared to the evaluating team that teachers were unusually competent in creating and modifying teaching techniques in accordance with the demands of individual students, small groups of students and classes.

11. During the 1972-73 school year, an extensive Career Education curriculum center was established at the Shelton School. Considerable growth in the curriculum materials center, and also in the use made of the materials provided by the center, was noted by the evaluation team. However, as the Career Education program continues to grow, and as it expands to include all students and all teachers in the Bridgeport system, the demands upon the curriculum center will far exceed the present capabilities of the center. Some attention will undoubtedly have to be given to additional space and to personnel to staff the center, conduct institutes for teachers, and provide advisory services throughout the system. Some thought will have to be given to all of the foregoing; the growth problem has already begun to receive the attention of the central supervisory and administrative staff.

12. The public high schools in Bridgeport have set up a relatively effective procedure for making it possible to provide actual vocational preparation for many of the youth attending high school. On the one hand, two of the high schools have had implaced portable buildings on their campuses which provide beginning experiences for vocationally minded individuals, chiefly in the areas of electronics, health services, welding and the quantity food trades. These were viewed as valiant attempts to meet the needs of high school youth, but the schools have taken additional steps to work with the Bullard-Havens Regional Vocational Technical School, situated close by the Eastside Middle school, to furnish additional opportunities for high school youth. This arrangement, which has been quite successful for a relatively small number of high school youth, involves the use of the Bullard-Havens Technical School facilities between 3:00 PM and 6:00 PM daily, five days per week. In this manner, it was reported that four specific vocational shops are maintained in operation, along with special instructors to provide the learning experiences for the high school enrollees. This arrangement has some very obvious difficulties in that many of the high school youth leave home on the school bus about 7:30 AM and, after the completion of the "second shift" instructional program at the Bullard-Havens Technical School, arrive back at their home at about 7:00 PM. This appeared to be an unusually long day for high school youth and some efforts were noted as needed to be made during the 1974-75 school year to adjust or modify the programs of instruction in the high schools to enable more youth to participate in the "second shift"

program at Bullard-Havens. Conferences with the administrative staff of the Career Education project, and also with the administration of the Bullard-Havens Technical School, indicated that approximately 110 high school youth enrolled in the late afternoon program at the beginning of the school year, and that at the time of the Career Education evaluation, approximately 75 youth were still enrolled. It should be noted that the 35 students that left the late afternoon program either dropped out of the program because of the excessive long hours required of them each day, or because the training provided at the Bullard-Havens Technical School enabled them to go directly into employment.

13. It was reported by the central Career Education administrative and coordinating staff that extended efforts had been made to establish wider community action programs in the Greater Bridgeport Area. While the Chamber of Commerce had taken strong steps to initiate employer-school-community relationships, and had inaugurated several very fine programs connected with industry and the technical occupations in the area, similar action had been taken by the Career Education staff to establish equally strong community action programs with such areas as business and the health and allied areas. For example, nurses drawn directly from the St. Vincent Hospital were being used on a regular basis as lecturers and as resource people to aid the Career Education program. Many of the nurses had evidenced real interest in the Career Education program and had volunteered their services to work cooperatively with the Career Education staff. It was estimated that the program would double and triple during the next few years, largely because

because no costs were involved, and very obvious advantages would accrue to the students who were favored by working with specific resource persons.

14. Consultations held with Dr. Smith, the Assistant Superintendent of Schools for Bridgeport, indicated that his concern for the Career Education program was a sincere one, but that care should be taken not to evaluate totally the results on the basis of three years of participation in the exemplary program. He pointed out that government funds made available for a three-year period are not always adequate to produce the results anticipated in the early days of the proposal writing. He reflected his belief that the Career Education program had been firmly established and that it would require more than the minimal support which the city of Bridgeport was prepared to provide. He amplified his position by indicating that continuing federal support on a cooperative basis with the city of Bridgeport would be required if the program was to reach its ultimate potential for career information, orientation, exploration, and actual vocational preparation for all of the students in the city school system. He suggested that it would require constant attention and regular budgeting in order for the city of Bridgeport to hold onto the gains that have been made in Career Education. He noted with enthusiasm that the commitment of the city of Bridgeport to Career Education had already been displayed by its inclusion in the 1974-75 school budget of allocations in excess of $400,000. This, he pointed out, was evidence of sincere support.

15. One of the interesting programs in the upper levels of the Career Education project involved the SPACE program, which enabled 16 students to take on responsibilities at full salary in connection with the public utilities companies in the area. Chiefly because of the influenced wielded by the Chairman of the Educational Advisory Committee of the Chamber of Commerce, 16 high school youth had been carefully selected by teachers, counselors and others, and employment was made available to them in the telephone company, the power company, and other similar public utilities. It was the hope expressed by the Chamber of Commerce through the Chairman of The Advisory Committee that the SPACE program would be broadly expanded to include manufacturing agencies also, in order to serve many more youth in the high schools. Begun as an experiment, the Chairman of the Advisory Committee expressed the belief that the successes of the program were clearly evident, and volunteered information concerning the satisfaction of the employers and the students with the procedures which originated with and were developed by the Chamber of Commerce. The Career Education central staff was also in strong support of the activity and had worked cooperatively with the advisory committee. In an effort to more effectively meet the needs for vocational preparation expressed by students in the three high schools in Bridgeport, much attention had been given to cooperative aspects of work-experience programs. At the Warren Harding High School, a full-time coordinator had been given the responsibility for the placement of students on work-experience kinds of jobs, and this coordinator placed the students in profitable career-related activities while arranging

for the continuance of the students' academic high school program. At Bassick High School, a full-time coordinator was employed and, because of the large enrollment at the Central High School, two coordinators had been employed. These four individuals had a very responsible activity to conduct, all of which enabled students to move along toward career decision-making and ultimate choice, while at the same time enabling them to earn sufficient funds to remain in school. It was suggested by several of the coordinators that without the income which the work-experience students acquired, further attendance in their high school program might be impossible. In a sense, the work experience program acted to retain individuals in the high schools at a time when it was most necessary for them to be prepared and trained for entrance into the labor market at the conclusion of their high school program.

16. It was clearly evident to the evaluation team that by virtue of the successes enjoyed by the city of Bridgeport Public School System in connection with Career Education, more youth at the high school level would continue to demand actual job preparation through vocational education procedures. Discussions held with parents, counselors, students and teachers indicated a high level of enthusiasm for Career Education and the possibilities which the Career Education project evidenced for effective entrance into the labor market in the Greater Bridgeport Area. Thus, after having expended the better part of $1,000,000 made available by the federal government for the purposes of the Career Education exemplary project, the city of Bridgeport now faced a very critical problem. Thousands of youth had seen the wisdom of engaging in

Career Education activities ranging all the way from attitudinal changes through occupational information and on to career decision-making. Now that the decisions had been made by many of the youth at the high school level, Bridgeport was faced with the necessity for providing not only the facilities in which Career Education activities of a vocational preparation nature must be provided, but also providing for the personnel, equipment, and other peripheral elements of vocational preparation for an increasing number of high school youth. While valiant attempts had been made to place portable units on the campuses of two of the high schools, this was being viewed as a relatively token or "band-aid" treatment. Each of the portable units offered instruction in three or more vocations, but examination of the facilities clearly indicated that the space in one of the portable units was quite insufficient for even one quality vocational program. Reliance upon the Bullard-Havens Technical School, the state-conducted regional vocational program for the Greater Bridgeport Area, was regarded as useless. Conferences held with the Bullard-Havens administrative staff indicated that the school could accept 250 students from the total region, of which approximately 50 would be from the Bridgeport public school system. At the present time, the administration revealed that over 950 applications had been received, all of which further complicated the problem to be faced by Bridgeport in administering to the needs of its own public high school students. Clearly, the $1,000,000 of federal funds made available for Career Education activities in Bridgeport had yielded results beyond the hope of the proposers of the program, prior to its start three

years ago. Now, with a burgeoning number of high school youth demanding vocational preparation, the city of Bridgeport was faced with the urgent need to do something far more than it had done in the past in providing facilities, equipment, teaching staff, and other elements of the upper levels of career preparation. All of the foregoing was realized by the Superintendent of Schools and by the School Board for Bridgeport. On a number of occasions, attempts had been made to establish in Bridgeport its own vocational training center, but these attempts met with little or no success. The evaluation team believes that as the pressure from parents and students continues to grow, the School Board in Bridgeport (and certainly the taxpayers in the Greater Bridgeport community) will recognize the gravity of the situation and move toward a city-controlled vocational facility. The evaluating team believes that it would be foolhardy for the public school system in Bridgeport to await further development of the Bullard-Havens Technical School's facilities, since over the past eight years attempts of a similar nature have been made and have been unsuccessful. At the present time, a relatively small addition to the Technical School is being constructed, but the doubling of the facilities still hangs in abeyance. Until such time as the State of Connecticut decides to offer bonds for sale and proceeds with the development of the Bullard-Havens Technical School facility to accomodate approximatley 600 additional students, there appeared to be little likelihood that the Bullard-Havens Technical School could accommodate any more than a token number of Bridgeport high school youth who need vocational preparation. Discussions with

the Superintendent of Schools and the Chairman of the School Board for Bridgeport revealed that the very conservative number of 700 high school students that needed vocational training immediately represented a problem of severe proportion, and one which would demand long-range planning and immediate action on the part of all administrative school personnel in Bridgeport.

17. From the standpoint of curriculum development, the matter of facilitating new acquisitions and extending the uses made of auxiliary teaching-learning materials, the staff was making great efforts prior to the withdrawal of federal funds. They were involved with the Sub-committee of the Board of Education on Curriculum Revisions to infuse Career Education into the total curriculum. The Career Education central staff paved the way to involve the advisory group in curriculum decisions at the policy-making level. This appeared to be a good step toward broader involvement of the staff and community groups into the Career Education program.

B. GUIDANCE SERVICES

INTRODUCTION - THE ROLE OF GUIDANCE IN CAREER EDUCATION

The impact of the Career Education movement was evident throughout the educational community, and in no phase of education was this impact felt more than in the area of guidance services. Although many of the concepts of Career Education had been part of the basic philosophy of guidance and counseling for many years, counselors were not finding many new allies among the teaching and administrative members of the educational team. It also appeared that they were experiencing a subtle change in community pressures. Parents were beginning to question the "college equals quality" syndrome which had been typical of the last few years, and were increasingly interested in having their sons and daughters exposed to a wider variety of career options from which they could choose.

The result of these changes was an emerging new role for counselors. Teachers and administrators were looking more and more to counselors as resource persons and consultants in the area of careers. Students and their parents were no longer looking for expertise just in the area of college admissions, but also had expectations that counselors would have a broad understanding of the tremendously wide variety of careers available in today's world of work. The counselor, therefore, had become a central figure in the total Career Education program and the success of that program was, to a large degree, clearly dependent upon the quantity and quality of the guidance services provided. Although the Bridgeport

Career Education project was primarily a curriculum-based program rather than a guidance-based program, it appeared important for the future development of the program that guidance personnel be deeply involved in its planning and implementation. It was recognized that if counselors were not committed to the Career Education concept or were not equipped to provide the kinds of new services required, neither the teachers nor the students would be provided with the information or the options necessary to make Career Education a success. Any evaluation of a Career Education program had to, therefore, attempt to determine the degree of commitment to the program on the part of the counseling staff, and some measure of the degree to which they were carrying out this commitment. The findings and observations which follow were based on interviews with counselors, teachers, students and administrators in the Bridgeport Central Office and in the following schools: Blackham Middle School, Blackham Elementary School, East Side Middle School, Warren Harding High School, Bassick High School, Central High School and Bullard-Havens Vocational Technical School. Interviews were also conducted with the counselors and para-professionals on the Career Education Project staff. Parents, advisory council members, and CEVO project community sponsors were also interviewed to solicit their reactions and concerns.

INTERPRETATION OF CAREER EDUCATION AMONG COUNSELORS

There was considerable difference in interpretation of Career Education between the elementary and middle school counselor-coordinators attached to the project and the regular counselors in

the middle schools and high schools. Those personnel attached to the project had accepted the concept of Career Education as being inherent in the total educational program and were doing an admirable job of facilitating the integration of Career Education concepts into the entire curriculum. This was particularly true at the elementary level and indicated that this portion of the project was successful.

However, at the secondary level the counselors seemed to have a rather narrow concept of Career Education. They did not, for the most part, identify it as a concept which should be infused throughout the entire educational program, but conceived of it instead as a few scattered courses such as distributive education, health services, food services, and in some cases industrial arts. Although they spoke very highly of these programs and appeared to be involved in a number of cooperative activities with the teachers of these programs, they generally did not see themselves as having a significant role to play as Career Education consultants to other members of the teaching staff. Their priorities appeared to be in the areas of college admissions, student scheduling and, in a few cases, personal counseling. Career development activities seemed to be rather low on most counselor priority lists.

ACTIVITIES AT THE ELEMENTARY AND MIDDLE SCHOOLS

The elementary and middle school counselor-coordinators who were attached to the Career Education project seemed to feel more comfortable with their roles and seemed to have more of a sense of direction than was the case last year. Their enthusiasm was

contagious and the success of the program at these levels appeared to be, in large measure, due to their dedication to young people and to the concept of Career Education and its place in the total educational effort in the Bridgeport schools. They appeared to be faced with a very real problem, however. The program had been so successful and was growing so rapidly that they had to make some judgements in terms of how they could best spend their time. Teachers who had been involved in the program continued to make demands while teachers and building administrators who wanted to become involved were also making new demands on their time and energies. Basically, the counselor-coordinators seemed to be feeling more comfortable with what they should be doing (their role in Career Education) but were beginning to feel a sense of frustration because they did not have adequate time to do it.

A second potential problem seemed to be developing at the middle school level where elective courses in Career Education were being offered. Student reaction to such programs was mixed. Some seemed to be quite enthusiastic about their experiences while others were very negative about what appeared to them to be just another academic class. The dangers in such an approach appeared to be twofold. First, if students perceived Career Education as a separate subject much like any other academic subject, there would be a tendency to view the whole concept of career development as segregated from the other activities of the educational program. Second, teachers in other subjects would also feel that they were "off the Career Education hook." They could feel that they had a ready-made excuse for not including Career Education concepts in their curriculum, since it was "being taken care of in that other class."

One of the most successful programs at the middle school level was the CEVO, or student volunteer, program. Activities in conjunction with this program were observed at both East Side Middle School and Blackham. Students appeared to be quite enthusiastic about the program and community sponsors were equally enthusiastic about having the young people participate. Of particular interest was a brief interview with the program director at a nursing home where two eighth grade students had volunteered. This director indicated that she had been quite hesitant to become involved in the project because of some past experience with older high school students. She indicated, however, that the younger students had worked out extremely well and had made a real contribution to her program at the home. In addition, she indicated that she felt the students had gained some valuable insights into the needs of other people and the career possibilities in health related fields. Although there appeared to be considerable interest in the CEVO program on the part of the regular middle school counselors, they seemed to view the program as the major responsibility of the Career Education counselor-coordinators and were not as involved in the total planning and implementation of the program as they could have been.

ACTIVITIES AT THE HIGH SCHOOLS

High school counselors appeared, in general, to be a conscientious group of professionals, genuinely concerned with young people. On the other hand, they seemed to be extremely frustrated in what, at times, appeared to be impossible situations. A number of

factors probably contributed to this sense of frustration: lack of sufficient counseling staff, limited clerical assistance, what appeared to be a lack of financial commitment to the guidance program, and accountability based on numbers of students going to college and numbers of schedules completed on time rather than on their ability to serve the needs of students are a few. Also contributing to this sense of frustration seemed to be a history in Bridgeport of starting programs for youngsters and then dropping them after the federal or state funds were no longer available. As a result counselors had, it appeared, understandably developed an apathy toward new programs and they did not extend themselves to find out much about them until they looked like they might have some stability and longevity in the system. In general, the counselors seemed to be extremely supportive of some of the elements of the Career Education program which they felt were providing students with more realistic options, were preventing dropouts, and were contributing significantly to the development of self-worth in youngsters who had previously a limited feeling of accomplishment. However, counselors seemed to be hesitant to become totally involved and committed to Career Education until they were certain that it was not just another "passing fad."

One of the factors which no doubt contributed to the lack of understanding and enthusiastic support for Career Education at the secondary level was the loss of the secondary program coordinator during the 1973-74 school year. The failure to replace him had, it appeared, resulted in some loss in the momentum which was developing during the 1972-73 school year. Although the Career

Education Project Coordinator met regularly with the Director of Guidance Services and had met with the regular guidance staff on occasion, the lack of a full-time coordinator to continually monitor secondary Career Education activities and supply supportive services for teachers and counselors appeared to limit the potential growth of the concept at the secondary level.

COORDINATION OF SPECIAL PROJECTS

The Bridgeport schools were participating in a wide variety of excellent special projects which contained elements of Career Education. One of the problems that faced counselors and teachers, however, was the fact that many of these programs were not well described and articulated. There was no single source to which an individual could turn for information concerning such programs as the Alternative High School, Project ACT, Project SPACE, CEVO, the Career Education Project, the Bullard-Havens after-school program, etc. This problem was further compounded by the fact that these projects, even though they had a common Career Education thread running through them, were coordinated by a variety of individuals, some of whom appeared to have very little identification with the Career Education movement. As a result of these limitations some counselors and other personnel appeared to be somewhat confused about the philosophy and objectives of the programs, student qualifications desired, credit awarded, etc. No doubt some students who could have profited by participation in these programs were being denied opportunities to participate because of these limitations.

INTERACTION WITH THE BUSINESS COMMUNITY

In two of the secondary schools, members of the Bridgeport Chamber of Commerce had taken time to visit with counselors and teachers and begin some dialogue concerning industry-education cooperation. These visits were a direct result of the efforts of the Career Education Project staff and advisory council and were supported by the counselors interviewed. However, they cautioned that failure to follow-up on these meetings with further discussions could result in a widening of the communications gap between industry and education rather than a closing of the gap. The feeling seemed to be that some of the businessmen had come to the schools to tell them what was wrong with education but were unwilling to listen to the problems faced by the educational community. The profit-orientation of industry and the people-orientation of education apparently seemed, at times, to be in conflict and there was not enough time for in-depth dialogue on this topic.

The Career Guidance Institute showed considerable promise in 1972-73 of providing a good forum for industry-education interaction. This program, which had received considerable support from the Career Education Staff, did not seem to be receiving as much emphasis in 1973-74, apparently as a result of a cut in financial support from the National Alliance for Businessmen. There was evidence, however, that the Institute program was being revived.

COMMUNICATION WITH BULLARD-HAVENS VOCATIONAL TECHNICAL SCHOOL

There appeared to be a number of side-effects of the Career Education project which were being felt at the Bullard-Havens Vocational-Technical School in Bridgeport. One of the most obvious was the increase in requests for field trips to Bullard-Havens from elementary and middle school teachers and counselor-coordinators. Although students of all ages had been taken on such tours, there appeared to be some concern developing about their value for very young students. It was suggested that those students in the upper elementary and middle grades seemed to be profiting the most by their exposure to the types of training opportunities which would be available to them in the next few years. Younger students, although causing no particular problems for Bullard-Havens, seemed to be having some difficulty in understanding the implications of what they were seeing for their future career development.

Another side effect of the Career Education Project on Bullard-Havens was that the personnel at the vocational-technical school were beginning to realize the value of the various cooperative work-study programs operated by the city schools and were exploring ways to institute such programs. The Bullard-Havens students would not, in all probability, be competing for the same jobs as the city school students because of their advanced vocational training. However, the potential for a misunderstanding concerning this appeared to exist and could cause some concern.

There appeared to be a communications gap between the Bullard-Havens Vocational-Technical School and the Bridgeport public school

counselors concerning the late afternoon vocational skills program. This program provided for the use of the vocational training facilities between the hours of 3:00 PM and 6:00 PM for public school students who had not had the opportunity to enroll in a full-time vocational program. All expenses were paid by the State through Bullard-Havens. The counseling staff at Bullard-Havens expressed some concern about the quality of students enrolled in the program and what appeared to be a lack of flexibility on the part of the public schools to adjust student schedules to accommodate these students. It was mentioned that many of the program participants attend school from 8:00 AM to 6:00 PM. The public school counselors also expressed some concerns about what appeared to be a lack of sympathy for the problems and feelings of the students on the part of the Bullard-Havens staff. Both groups were concerned that too many students were using this special program to earn extra points for graduation rather than for career preparation. This program appears to have considerable potential for alleviating some of the pressure to provide vocational training for an increasing number of secondary students, but lacks careful cooperative planning and regular communications.

CAREER INFORMATION

The Career Education Materials Center continued to provide valuable services to the Bridgeport schools and there was evidence of extensive counselor use of the information and materials available through the Center. Notable among the additions to the secondary counselor's guidance tools were some key pieces of hardware

such as the 3M Microfische reader-printers and the accompanying career information materials. Probably because of the loss of the secondary Career Education Coordinator, the secondary counselors did not appear to be having as much input into the selection of materials which were appripriate to the needs of their student body as they had at an earlier stage in the program. With the replacement of this staff member for the coming year, however, this input will no doubt increase again.

SUMMARY

It was apparent that Career Education had matured considerably in Bridgeport during the 1973-74 school year. Elementary counselor-coordinators had been so successful in "selling" the concept that they were faced with a problem of increasing demands for their services and lack of time to provide the services. Students, parents, teachers and counselors at the elementary and middle school level were obviously highly motivated and involved; many of them commented that education in Bridgeport had, in some cases, taken on a new aura of relevance that had been unknown in the past. Career Education at the secondary level, while making progress at a slower rate, was, nevertheless, also demonstrating its relevance and its potential for meeting the needs of a large number of Bridgeport young people. The basic problem at this level appeared to be a hesitancy to get one's hopes up too high for fear "the Career Education rug would be pulled out from under the students." The need to build Career Education concepts into all elements of the curriculum appeared to have been recognized. The

need to provide expanded vocational training opportunities for secondary students was also recognized. Unfortunately, however, the ability of the schools to provide these services appeared to be questionable because of limited finances. Until there appeared to be a firm commitment to continuing financial support, it would take a very creative, dedicated Career Education staff to achieve the kind of involvement necessary to make Career Education an integral part of the secondary school program.

C. CAREER EDUCATION IN GRADES 1 THROUGH THE MIDDLE SCHOOLS

INTRODUCTION

In the Bridgeport Career Education Program, there were almost 80 teachers and over 3,200 students involved. According to grade level, the involvement included eight teachers in kindergarten, eleven in second grade, twelve in third grade, ten in fourth grade, ten in fifth grade, nine in sixth grade, eleven in seventh grade, and ten in the eighth grade. Most of these teachers had been involved in the project since its inception two years ago. Two new schools and a few new teachers were added in 1973-74, however. The reason given for the small increase was an apparent administrative preference to maintain the project on a pilot basis. During the 1973-74 school year the instruments that had been designed previously were applied. A study of the summaries of the instruments revealed high levels of interest and approval for the Career Education concepts.

ATTITUDES AND REACTIONS OF TEACHERS AND PRINCIPALS

The teachers were very obviously excited about their successes in the Career Education project and interested in its further development. The enthusiasm displayed by the majority of teachers who were visited had a high level. Most teachers concurred that it was a very worthwhile program and they revealed genuine concern, sympathy, and empathy with its overall objectives. They expressed the feeling that school had become more meaningful for students and that they themselves had acquired a great deal of new knowledge

about the world of work. Many teachers expressed the desire for the program to be expanded to include all teachers in their buildings. One teacher who had not been involved stated that it was unfair to the students who were not in the program. She felt that they were being denied the experiences that many of the other students were having. The principal of one of the schools which was not in the program was also very adamant about her desire to be included next year.

The evaluating team was satisfied with the display of the positive attitudes by the teachers and principals, who appeared to be pleased that they had been chosen to participate in the project. One middle grade principal stated that with the advent of Career Education in his school, discipline problems had been reduced 98%. He contributed this to a more relevant program for students, stating that now school was beginning to "make sense."

ATTITUDES AND REACTIONS OF STUDENTS

The acceptance by students of the Career Education project was very conspicuous. Students were especially enthusiastic about the field trips and CEVO. They volunteered much information about their experiences and their desire to continue what they were doing. They stated that school was more meaningful and that the opportunity to talk with people involved in so many careers was especially helpful in making decisions about what they might want to do later in life.

One group of students noted their approval of Career Education because "It had brought so many interesting visitors to their

school." The young people stated that resource people had provided encouragement to students by furnishing more information about particular career opportunities in which they had shown specific interest. In a sense, students indicated that relevancy was the most appealing aspect of Career Education; they were able, in many cases, to associate their work in academic classes with potential career goals.

Without exception, the elementary children were highly commendatory about the Career Education program. Many of the children were observed at work in Career Education activities and vied with each other for opportunities to explain how much they enjoyed working on the project, the people they had talked to, the booklets they had produced, and the field trips they had taken. Students also reported that field trips were more meaningful this year because, in many instances, they were involved in planning the trips and choosing where they would visit. In most cases smaller numbers of truly interested students participated in the trips.

EXPLORATORY AND "HANDS-ON" ACTIVITIES

Many activities were planned and carried out to make it possible for children at a relatively early age in their school life to have experiences which would enhance their own special interests in careers, as well as develop an awareness of many other occupations. In kindergarten and first grade, parents came to the school and helped make cookies, doughnuts, popcorn balls and candied apples. In second grade, movies were made of community helpers. In third grade, using a unit on transportation, the

students planned a trip overseas and learned about all the careers involved in their trip. They worked very closely with a travel agency. The unit was culminated by a visit to the ocean-liner Michelangelo. In fourth grade, the students wrote letters to various city and state officials. In addition, many officials were interviewed and booklets which described the interviews were kept. They visited the State Capital where they talked with the representative from their district. In fifth grade, a simulated assembly line in candy-making was used to acquaint students with the process of manufacturing. In another project, comparisons were made between the time it took to make artificial flowers by hand with the time it took to make them on an industrial assembly line. In sixth grade, units on marine careers and environmental careers were combined, and students talked with a marine biologist and the harbor master. The study concluded with a visit to the fish hatchery and the salt flats. In addition, almost an entire day was spent aboard a boat.

While studying careers in the recreation cluster, seventh graders were visited by a representative from a sporting goods store who talked about careers and equipment involved in various recreational careers. They then visited Powder Hill, a ski resort, where they discussed the advantages and disadvantages of recreation-oriented businesses.

Career Days were held in most of the middle schools. Teachers and principals reported that this had been a most effective experience. Students were appreciative of the fact that people from the community had given their time to talk with them about various

careers. One principal suggested that next year the Career Day should be scheduled in the fall of the year instead of the spring because it was such "a great motivator" for his students.

Since teachers reported that most children learn more readily by using all of their senses, they felt that hands-on experiences extensively utilized had served to provide substantial improvement in student learning competencies.

KNOWLEDGE OF OPPORTUNITIES PROVIDED WITH REGARD TO WORLD OF WORK CLUSTERS AND SPECIFIC OCCUPATIONS

Community resource people provided excellent opportunities for students to receive first-hand information about the world of work. During their visits to the schools, they provided numerous experiences for students, often bringing with them articles used in their respective work areas. There were numerous advantages reported in having resource persons visit the schools. Students, when in their familiar surroundings, tended to be more relaxed and consequently were able to converse more readily and ask more pertinent questions. Visits to the schools by these persons also enabled them to reach many more students during one visit than they could accommodate at their places of business.

Field trips played a very important role in providing opportunities for students to learn about the world of work, and the trips produced a wide variety of classroom activities and many opportunities to correlate activities with subject content. They were of great significance in that they lent themselves to the gathering of knowledge which was often unattainable through conventional means.

CURRICULUM MATERIALS IN USE

In 1972-73 the K-8 segment of the program was provided with two curriculum units for each grade level. This year it was heartening to note that there had been an increase to three units per grade level and that they were being fully utilized. The additional units were constructed during the summer by teachers in the pilot program who worked from three to five additional days. All the Career Education units were highly commendable in connection with related Career Education activities. These units had given teachers an opportunity to capitalize on student interest and appeared to have resulted in an improved overall performance in school.

The teachers had been extremely resourceful in providing experiences, reading materials and class discussion time for the edification of the students. They drew upon all kinds of materials from the multi-media resource center and made extensive use of the items and materials. The multi-media resource center was located in Shelton School where teachers could browse and select materials appropriate for their classes. Counselors were also called upon frequently to deliver materials. Additional materials were constantly being added and there was evidence that teachers were being involved in the selection of materials. Each principal had been supplied with a "package" of curriculum units to share with his teachers. These were available if the principal and his teachers wished to have Career Education in their school.

It appeared to the evaluating team that materials had been used to enhance and enrich the curriculum. They stimulated student

interest and a desire to search for additional information in many instances, all of which appeared to result in teacher-student involvement in identifying career possibilities for each student.

NEW AND INNOVATIVE LEARNING ACTIVITIES AND EXPERIENCES

One of the most outstanding facets of the Bridgeport project was the Career Experience Volunteer Opportunity (CEVO) program. It had increased tremendously in the 1973-74 year, expanding to all the middle schools and involving approximately 130 eighth graders. East Side Middle School had seventy students involved; Read Middle, fifteen; Maplewood, fifteen; Blackham, fifteen; and Winthrop, fifteen. CEVO students were placed in various businesses and schools within the city for the purposes of observation and work experience for one day a week extending over approximately five weeks. In many instances, the employers had asked that the time be extended. Businesses such as grocery stores, a tool and die shop, real estate agencies, a cabinet shop, a pet store, the animal shelter, a dentist, a dental laboratory, and others, cooperated with the program. The counselors stated that almost 100% of the businesses participating in the program last year had asked for CEVO students to be placed with them again this year. Following their CEVO experiences, sessions were held at which time students reported on and shared experiences. The evaluating team members felt that this program provided an excellent opportunity for students to become very well acquainted with the working world.

Another innovative learning experience initiated this year for eighth graders was the "Career on Wheels." Students from the five middle schools chose five clusters of work they would like to investigate and study, and a specific career from each cluster was selected to be intensively studied. Ten students from each school were identified for the task of observation, and they submitted an application in limited detail concerning why they should be chosen. Selections were made from these "applications." After the visitation the students shared their observations with other students, and led discussions.

A new experience for first graders this year was the interchange of students in Bridgeport with other school systems. One Career Education curriculum unit utilized in the first grade is "School Helpers." In order for first graders to see helpers other than the ones in their own school, they were taken to a school in another town. Interviews were conducted, ideas exchanged, and much peer interaction took place. All of the foregoing was regarded as highly beneficial to the students.

In two instances intercity visitations were conducted because the respective schools were so different. An example of this was the visit of a seventh grade to an eighth grade. The visiting students toured the school and talked with other students about CEVO, in which they were extremely interested.

Services to special education children were expanded this year, particularly in the use of community resource people. Seventeen student nurses from St. Vincent Hospital participated in Career Education activities at the schools one-half day a week for

eight weeks. Many careers at the hospital were discussed, as well as demonstrations performed, to illustrate duties of various hospital personnel. Teachers and students felt that this was a most worthwhile undertaking and expressed a desire for it to be continued next year. St. Vincent Hospital also expressed the desire for it to be continued. A luncheon was given for the student nurses to express appreciation for their help and to honor them for services rendered. Excellent relationships had been established. As a result of the activity, plans have been discussed about involving the health service students at the high schools in a similar project.

In fifth grade and eighth grade classes during Black History Week, students visited and talked with present day Black leaders in business, education, and law. Thus, the Career Education project in Bridgeport provided many opportunities for students to improve their attitudes and overall outlook of the working world.

INTEGRATION OF CAREER EDUCATION WITH SUBJECT MATTER

Evidence was presented that integration of subject matter with the Career Education concept had been broadly facilitated in the Bridgeport city schools. Because the existing school curriculum was used to interweave Career Education into subject matter it was more easily accomplished. With the help of the supervisory staff and counselors, teachers were able to change their approach to include career elements, thus providing relevancy in all study areas.

The evaluation team discovered that true integration had been more successful in the earlier grades and not quite as good at the

more subject-oriented levels. In order to expose students at these levels to more Career Education concepts, teachers had been employed to teach Career Education. There were two teachers at East Side Middle School, one at Blackham, and one teacher was shared by Winthrop and Read Schools. Certain clusters were especially emphasized in these classes. Students were able to elect whether they would be in these classes and the classes lasted for one semester.

It was evident that classroom activities which expanded the world of the student were employed to teach content areas. The Career Education concept provided opportunities for teachers to introduce their students to new situations, thereby expanding the classroom to include the home, school, community and nation. This had been accomplished through the use of the multi-media approach--literature, visual aids, hands-on activities, field trips, and speakers from a wide variety of occupations.

ARTICULATION WITH OTHER GRADES

Evidence was presented that extensive articulation with other grades had occurred during the year. Most of the eighth graders in the middle schools visited the high schools before matriculation occurred, and were enabled to note the relationship of their middle school activity to the choice they would eventually make at the high school. However, there was need, it was reported, for more coordination between the middle schools and the high schools in order that a fully functioning and effective program could become city-wide. Articulation activities also took place when

seventh graders from one school visited eighth graders in another school to discuss all aspects of Career Education, especially CEVO. Such positive interaction as the foregoing appeared to motivate students in accomplishing worthwhile activities and, at the same time, assist them in acquiring valuable information related to school life, both present and for their future. It was clear that Bridgeport teachers were convinced that an effective program of articulation was essential in order to inform students of the occupational and career opportunities in succeeding stages of their educational development.

ARTICULATION AND EVIDENCES NOTED

The evaluation team noted with high approval the progress made in the area of articulation since last year. Occasions such as first graders visiting other first grades in the Bridgeport system, as well as in other systems, were noted as very valuable horizontal articulation designed to assist young people share their career experiences. The grade level meetings that were held with all the teachers involved in the project were also highly commendable. Teachers from grades K, 1, and 2; 3, 4, and 5; and 6, 7, and 8 met at different times to share their methods and techniques, materials used and problems encountered. All of the meetings were reported as useful and productive. At some of the meetings, evidence was presented that field trips were being heavily scrutinized this year to see that duplication was not taking place.

In many instances other classes were invited to observe the culminating activities of a particular Career Education curriculum

unit, and the results of subsequent discussions disclosed that class interfacing will continue into succeeding years.

D. CAREER EDUCATION IN THE HIGH SCHOOLS

INTRODUCTION

All three of the public high schools in Bridgeport were concerned with Career Education; however, because of the nature of the instructional program which was primarily compartmentalized by subject matter areas, some of the subject areas were making far greater progress in the infusing of the Career Education concept than were other departments or subject matter areas. Many of the teachers that were queried about their activities of a Career Education nature indicated that they were seeking every possible means to make more relevant to the world of work the subject matter that they were responsible for teaching. However, as indicated above, some of the subject matter areas provided the basis for more readily locating and using applications and illustrations from the world of work than did other subject matter areas. A great deal of interest was expressed in the high schools by teachers with regard to Career Education, particularly where students had received stimulation in the Career Education activity prior to their arrival in the high school. These young people had had opportunities to explore a variety of occupations, and to acquire a wealth of occupational information.

In general, the participation of the high school in the Career Education program appeared to have been maintained at about the same level as in the previous year. There was some doubt expressed by teachers and by administrators that the growth of the Career

Education concept within the high school instructional program could be as rapid as in the middle schools. When prompted for the reason why such a slower development would occur in the high schools than in the other schools, the individuals that supplied reactions seemed to feel that "less interaction between departments on the high school level takes place than in any of the other schools." Thus, a teacher of English might not find reason to confer with individuals in the Mathematics Department or in the Home Economics Department to the same extent as in the middle schools. Also, with the loss to the high schools of the counselor-coordinator, Mr. George Palermo, the position had been left unfilled. The urgent need for someone to work closely with the high schools appeared to be one of the points on which many of the high school professional personnel felt was being overlooked. It was pointed out that with the loss of the counselor-coordinator to another school system, Mr. Bonitatebus had to assume the responsibilities formerly discharged by Mr. Palermo, in addition to his other many duties. Obviously, the same kind of assistance to teachers, department heads and principals earlier provided by Mr. Palermo could not be provided by anyone else on a part-time basis.

In the high schools the principals appeared to be active in their responsibilities to further encourage the development of the Career Education infusing process. However, with their growing experience in the Career Education field, one or two of the principals were beginning to see on the horizon many problems that would shortly become major concerns. They pointed out for example,

that the differences in philosophy held by departments in the school presented a basic problem to the development of Career Education in their respected institutions. As an example of this they indicated that industrial arts and its relevance to Career Education was a matter that needed almost immediate attention, since there appeared to be a conflict in the philosophical bases. Thus, Career Education would be hampered in its development so long as the industrial arts personnel in the City of Bridgeport believed that what they were doing was essentially the same as what was occurring in Career Education. Further, the problem of providing adequate space, equipment and personnel for the upper levels of Career Education that deal with vocational preparation had all of the principals concerned. The evaluation team believed that concern for all of these matters and problems, and particularly the concern being evidenced by the principals to reach satisfactory solutions in connection with each of the problems, was a good sign. However, it was volunteered that the further growth and the persistence of Career Education in the high schools would depend on the extent to which attention was given now and continuing activity was developed by the central staff in the area of problem solutions as envisioned by the high school principals.

Another problem which was apparent in the public high schools, and which had become a problem of major proportions for the administrators concerned the upper levels of the Career Education ladder relating to vocational preparation. Now that the K through 8 Career Education program had been judged so very successful in

reaching thousands of students and almost 80 teachers in the Bridgeport Public School System, and now that career orientation, exploration and occupational information had been so plentifully provided students and teachers alike, the problem of greatest magnitude to be faced by the high school segment of the Career Education program in the future was that dealing with the provision of actual vocational preparation for growing numbers of students. In a sense, during the last three years when Career Education had been receiving the attention of so many professionals in Bridgeport, students had been the recipients of much occupational information, and opportunities to arrive at decisions based upon their own knowledge and to some extent their experiences. These students, now estimated to be upwards of several hundred young people in the high schools were making urgent requests for the opportunities to prepare themselves for jobs in the Greater Bridgeport area. These 700 high school students needed occupational preparation, and obviously the number would increase with each year and the problem would become one of the most demanding and formidable problems that would have to be coped with by the administration of the Public School System.

Many very encouraging aspects of Career Education were evident in the work experience program, the SPACE program, the alternate high school program and the cooperative program. All of these efforts to engage young people in profitable experiences of a career nature were the bases for high commendation, since they represented good Bridgeport attempts to provide for the needs of the students at a time when these needs had become uppermost in the minds of youth.

The instruments that were designed three years ago and modified last year, and were applied in an effort to measure student interest and teacher interest in Career Education in the high school, were again used this year. The results of these instruments, while recognized as being highly subjective, are interspersed in this report. In general, the questionnaires returned from the high schools indicated a reasonably high level of enthusiasm and interest, and the willingness to move ahead on the infusing of the Career Education concept wherever possible. However, as indicated earlier, traditional compartmentalization of the education program would continue to be a problem, and might understandably tend to retard the speed with which Career Education would move through the high school.

Visitation to the classrooms, laboratories and shops of the high schools disclosed teaching techniques used by teachers that were innovative, unusual, creative and oftentimes motivating to the students. These techniques which were particularly of value in connection with the infusing of the Career Educational concept were reported by teachers as being highly productive and motivating to the youth in their respective classes. For example, in the Department of English, the head of the department in one of the high schools was conducting a mini-course, and using The New York Times newspaper as the focal point of the teaching technique. The New York Times was reviewed by the students, and then on an individual career choice basis, students took elements from the newspaper and constructed letters, reports, replies to the editor and a wide variety of other tasks. Students who were contemplating

careers, and who would need a college preparatory program to prepare for the eventual career, often selected items of high interest dealing with national economics, international economics, history, law and other elements. Other students whose interests were more appropriately business-oriented careers discovered elements in The New York Times that were of most concern to them and using the information developed exercises in English which improved their letter writing, their composition, and to some extent their comprehension. In all, 370 students in the English Department were involved in this particular innovative teaching technique. Besides the department head, eight teachers and 13 classes were served with The New York Times Career Education device.

Discussions with the high school principals revealed the need to make certain that Career Education elements provided in the high schools were integrated with the continuing education objectives of many of the youth. Thus, many of the high school youth who were contemplating moving on into the community college system in Connecticut, or were planning to go on to a four-year university needed to be helped to understand the continuing elements of education, and the extension of Career Education from the high school into the post high school levels. Efforts were made in those high schools to provide occupational information relative to offerings on the post high school level, and to encourage youth whose capabilities and interests tended to lie in that direction.

The cooperative education programs conducted in the high schools, largely distributive education and business education,

were conducted by instructors who were high in their praise of the support given their programs by the principals of the high schools. They indicated that materials, funds, and other services were made available to the cooperative programs they conducted, and to a very considerable degree these services and funds contributed to the ultimate successes achieved. In general, the cooperative education personnel reported that the support from the high school administrative group was both enthusiastic and continuous, and that the best characteristics of the cooperative programs they were conducting would undoubtedly persist long into the future, even with the termination of the federal funds at the end of the present scholastic year.

The evaluation report for Career Education for the school year 1972-73 indicated that the enrollment situation at the Bullard-Havens Technical School was a serious matter. This would have its effect upon the high schools in Bridgeport in that only a small number of high school youth would be accepted by the Bullard-Havens Technical School where they would receive preparation for jobs in the labor market. Consultation with the director of the Bullard-Havens School, Mr. Buchli, indicated that the situation had worsened during the school year 1973-74, to the extent that he now had in excess of 950 applications for admissions to the Bullard-Havens Technical School for September 1974, with the likelihood that at a maximum the school would be able to accept only 250. Since the Bullard-Havens Technical School is one which serves the entire region, including cities such as Fairfield, Stratford, and many of the towns bordering upon the City of

Bridgeport, there appeared to be little likelihood that many more than 50 Bridgeport youth would be admitted to the programs offered at the Bullard-Havens Technical School. Mr. Buchli further explained that the million dollar addition presently being built onto the west end of the school would not solve any of the enrollment problems anticipated for September of 1974. The addition would merely provide adequate space for shops and laboratories that had long been overcrowded, but would not in any way allow the school to take additional students. He also explained that the expansion to the school which would enable it to accept 600 additional students was still being held up, pending the sale of state bonds to finance the expansion program. When complete, if the addition is ever funded, the new structure will be south of the present Bullard-Havens Technical School, and located on a hill overlooking the original building. Mr. Buchli reported that additional curriculums in the health area and expansion in some of the shop and laboratory areas currently located in the original Bullard-Havens Technical School buildings were anticipated for the new building.

Most important of all facts uncovered in connection with the state-operated technical school was the high level of willingness and cooperation evidenced by its director in making the necessary efforts and carrying through on the development of the programs to meet the needs of Bridgeport high school youth. Mr. Buchli was very much concerned with Bridgeport's youth, and indicated he would do anything possible to press the facilities of his buildings into use 24 hours a day, if it would better serve the needs

of high school youth in Bridgeport. However, he pointed out that while four shops were currently being used from 3:00 to 6:00 p.m. each day on a "second shift" basis, that while instructors were given responsibilities for teaching classes in these four shops, and while consumable supplies were being used up at a considerable rate, the total expense for the operation was being underwritten by the State of Connecticut through its operations at the Bullard-Havens Technical School. Mr. Buchli urged that at the earliest possible moment the Bullard-Havens Technical administration join hands with high school administration in Bridgeport and prepare a long-range plan which would best meet the needs of high school youth, and at the same time recommend the procedures for the funding of programs that would take place outside of the public high school in Bridgeport.

Discussions with personnel in the high schools indicated that the Career Education program was continuing to meet significant and vital needs of students for entrance into the job market. At the same time, one principal indicated the Career Education program was fully meeting the needs of the college bound youth who were intent upon engaging ultimately in careers which would require four years of college preparation. The breadth of the Career Education program was applauded by this particular principal, and he further commented that the best effect of the Career Education could be continued without any appreciable extra funding process. One of the administrators of the high schools pointed out that the Career Education infusing concept was sufficiently near to the broad mission of the total school guidance program, such that

guidance would need to be refocused in the immediate future and efforts made to assure guidance of its relevancy to careers. He expressed his own preference for the direction and refocusing of the guidance activity by saying that he hoped that guidance would take on largely the aspects of "vocational guidance of an earlier year." To the extent that this particular principal is able to effect changes in the guidance program, he expected to begin the review of the general objectives of guidance for his high school and to work cooperatively with the guidance counselors in the school to bring about "a change of target," as he called it.

The growth of the Career Education infusing concept in the high schools would depend, one individual reported, upon the extent to which teachers saw the favorable outcomes achieved by their colleagues. For example, the English Department indicated (in an earlier comment here) that it had achieved some rather encouraging outcomes, and the other departments in the school concerned with academic subjects were considering ways and means to reorganize their instructional program to achieve similar outcomes. For example, both the Department of Mathematics and the Department of History in one of the high schools was moving strongly to change its program sufficiently to include large elements of "vocational mathematics" and "history for vocational majors." The principal of the particular high school where this movement was taking form commented that growth of this nature in the Career Education field was far more effective than any other type of growth. He pointed out that when advantages were recognized by teachers, and when they forthwith made changes in their curriculum

and in their operating procedures to achieve desirable outcomes, there was far greater likelihood of success.

The high school evidenced strong desires and to some extent planned activity with the Greater Bridgeport community in providing community resources in connection with Career Education elements of the instructional program. For example, the Heart Association in Bridgeport during the year made extensive loan of its models and equipment to the Health Occupations Center on one of the high school campuses. These expensive anatomical models, accompanied by professionals from the Heart Association demonstrated and carried on discussions and teaching sessions wherever the instructor in charge of the Health Occupations Class so desired. This kind of community cooperation was applauded by the instructors, and by the principals of the high school also.

CONTRIBUTIONS OF INDUSTRIAL ARTS AND HOME ECONOMICS TO CAREER EDUCATION

While it was reported in one of the high schools that there are still some internal differences in philosophy relative to the missions and contributions of the Industrial Arts and Home Economics segments of the school instructional program, it was clear that the work going on in these two major high school activities contributed a great deal to the infusion of the Career Education concept in the total school instructional program. There were reports that the Career Education program was instrumental in helping youth to acquire broader knowledge of occupations, while at the same time affording many youth opportunities to obtain "hands on" experiences with regard to broad clusters of occupations.

While the industrial arts program was strongly oriented toward helping students achieve an awareness of the world of technology, the home economics program was oriented toward the fundamental concepts needed to make and conduct a home effectively. Other aspects of the home economics program dealt with wage earning occupations for which instruction in the broad field of home economics would be valuable. The home economics program at the high schools was of a general education nature, and not intentionally vocationally oriented. However, from the standpoint of Career Education, all of the instruction in both the home economics and industrial arts programs in all three of the high schools was functional and relevant to careers. Discussions with numerous administrative personnel in Bridgeport seemed to indicate that there was need for greater interaction between the proponents of Career Education, and the industrial arts and home economics segments of the high school program. Hopefully, an understanding of the missions of each of these several areas would serve to bring about a desirable level of cooperation.

VOCATIONAL EDUCATION IN THE HIGH SCHOOLS

Indicated earlier in this report was the estimate of approximately 700 Bridgeport public high school youth who were desirous of receiving instruction which would prepare them for entrance into wage earning jobs in the Greater Bridgeport community. It was clear that the responsibility of the City of Bridgeport to meet the needs of youth who had made such decisions could not be met, since the vocational facilities in the high schools were

inadequate. Portable classroom buildings erected at Warren Harding High School and at Central High School were clearly inadequate to meet the needs of such large numbers of 700 high school youth. These classroom buildings were each subdivided into three separate shops, making it impossible for classes in any one of the subdivided shop areas to accommodate any more than 8 to 10 individuals satisfactorily. Discussions with the instructors in each of these situations indicated that far more high school enrollees wished the instruction that was being offered than could be accommodated. In an effort to make the best possible use of the facility in each case, classes enrolled in the vocational shops were scheduled for two hours at a time, and the maximum use that might be used of any one facility would be three times per day in each scheduled two-hour block. Vocational education offerings included welding, electronics, health education, and food trades. However, in the major high school buildings, other vocational aspects were conducted by the business education department and by the distributive education coordinators. Both teachers and students were highly enthusiastic about the programs in which they were involved, even though the facilities were exceedingly limited for space, and the equipment contained in the respective facilities was often minimal. Wherever discussions were held, there was the general feeling that with more space and more equipment the numbers of students that could be served would be doubled or even tripled, and there was hope that in the next year or ~~two~~ the urgent needs for space and equipment would be met by the school administration. Even where the vocational program was being conducted within the main school

building, space was at a premium. For example, during the evaluation of Bassick High School last year, it was pointed out that the vocational distributive education program that was being used for about 30 students was extremely crowded. However, during the year, the facility was expanded and some additional space was found for the distributive education program.

CURRENCY AND ADEQUACY OF EQUIPMENT, CURRICULUMS AND MATERIALS

The equipment situation with regard to Career Education in the high schools varied from school to school somewhat. Up to the point where the Career Education ladder pointed upward into vocational preparation, there was no serious lack of equipment, consumable materials or suggested curriculum materials. The central office of the Career Education project had had sufficient funds to enable it to supply all of the requirements for a quality level Career Education program, wherever the request had been made by a high school. However, where the Career Education activity merged into vocational preparation on the upper high school levels, the situation with regard to equipment became serious. As indicated earlier in this report, business education and distributive education were conducted within the main building of the high school and appeared in general to be reasonably equipped. As a matter of fact, in two high schools the distributive education activity actually made use of a "store" as part of its central facility and appeared to be equipped adequately to conduct a full series of experiences calculated to prepare individuals for entrance into the distributive occupations. The same was true in

the business education departments where adequate laboratories containing computational equipment, typewriters, transcription equipment and other important items of equipment and materials were in ample supply. However, as indicated earlier, where the occupational preparation moved into the trade, industries and technical levels of instruction, these had to be conducted out in the portable buildings on the high school campuses. In each case, the equipment that was in use in each of the several occupational preparatory areas was appropriate for the cramped facilities, but nowhere near the complement of equipment that would be required to conduct full and quality level programs of preparing young people for entrance into the labor market. Even had the equipment been available, there was no place to put it to use, since the shops were so small that approximately eight to ten students crowded the shop facility unreasonably. However, it should be noted that whatever equipment was in use in these vocational shops was of high quality and of recent vintage.

The curriculum resource center located at the Shelton School also appeared to have grown considerably in its supplies and materials. Numerous new items were added beyond those that had been stocked last year, and it would appear that this resource center will continue to grow in usefulness and in service to the teachers and students engaged in the Career Education project. It was obvious, however, that additional funds will need to be expended in the curriculum center from time to time, to accommodate the needs of the rapidly spreading Career Education program in the Bridgeport schools. Many more sets of the same kinds of

materials will have to be purchased as more teachers in the elementary schools, middle schools and high schools become involved in infusing Career Education in their respective programs of instruction.

FACILITIES

Facilities for Career Education varied in character, when considered with each of the aspects of the high school program. Where teachers of regular subject matter infused Career Education into their regular teaching procedures and learning activities, no additional facilities appeared to be needed. However, as indicated earlier in this report, where the Career Education activities begin to merge into the vocational preparatory experiences needed by youth in the high schools, facilities become a major consideration. These have been commented upon earlier in this report, but it was clear to the team of evaluators that the need for more and better facilities in the years ahead had already become a major problem. Some thought will have to be given to securing adequate facilities for the vocational preparatory elements; these facilities will have to be far greater in square foot size, and of far different character than those presently located on the campuses of the several high schools.

ARTICULATION BETWEEN MIDDLE SCHOOLS AND HIGH SCHOOLS

During the school year 1972-73 a period of adjustment occurred, during which the transition of the students in the middle schools to the high schools took place at the same time that the

teachers were attempting to develop smoothly operating relationships between the middle schools and the high schools. At that time, there was some feeling that the articulation was not operating as smoothly as it might have been. However, during the 1973-74 school year many of the difficulties that had appeared last year were eliminated, and all who were active in the transitionary aspects of the Career Education program admitted to greater satisfactions. For example, teachers in the middle schools had heard that mini-courses would be needed to help orient the new student arrivals in the high schools with regard to broad clusters of occupations with which they would need to become reasonably familiar. Rather than providing instruction on a half-year or full-year basis, the recommendation was to facilitate the offering of mini-courses, and to adapt the mini-courses to the specific needs of as many different individuals arriving from the middle schools as was possible. This was done in the high schools to some extent, and the result appeared to be very satisfactory.

Another aspect of articulation which provided evidence of success was the continuous follow-up provided for the middle school student arriving at the high school. As these students arrived and took their places in the high school curriculums, data and information was assembled on them, and their progress was closely watched throughout the school year. On the basis of the information obtained, it was judged that the transition with regard to Career Education from the middle schools to the high schools was being conducted on a successful level.

SCHOOL-EMPLOYER RELATIONS

Wherever possible in Greater Bridgeport, employers and individuals in the community were interviewed with regard to the Career Education program. By virtue of the cooperative program, the SPACE program, and the work experience program, relationships between the universities and the high schools had been improved. The coordinators assigned to the three high schools had made vigorous efforts to keep employers and members of the general community aware of the career aspects of the several programs, and had in their own way established bridges to the community. By virtue of the work experience program, relationships had to be established with employers and automatically required teachers to work closely with employing firms in the region and with specific members of these firms with regard to program design and supervision. Employers concerned with the work experience program were reportedly most enthusiastic about opportunities to cooperate with the Bridgeport Public Schools, and evidenced the wish to continue this development in the future, but with additional expansion to several of the programs into other areas of employment that at the time of the evaluation appeared to be untapped. The evaluating team was convinced that the successes in the Career Education program were partially the result of much effort on the part of school personnel to develop extensive school-employer contacts and to keep the general Bridgeport community fully aware of the status of the Career Education program.

PLACEMENT OF GRADUATES FROM VOCATIONAL PROGRAMS

For many years, the business education program conducted in the high schools in Bridgeport had made a major contribution to the business community. Graduates of the business education program were successful in entering business firms in the region, and in succeeding in their chosen vocations. This continued to be one of the strong aspects of the vocational preparatory program. The same was true of the field of distributive education, where annually the graduates of the DE programs enter employment in the Greater Bridgeport area and make successful careers of their chosen vocations. The school played an important role in the placement of these graduates, and particularly was this so where the distributive education teacher-coordinator played out his important role of making effective contacts with employers during the training period, and in assisting the students to make the transition into permanent employment upon graduation. The record of the high schools was good in connection with placements in both the business and distributive education activities.

Even though the facilities for providing job training opportunities for those planning to go into the trade, industrial and technical occupations appeared to be rather inadequate for the large numbers of students desiring this kind of preparation, the results achieved by individuals completing the program was most satisfactory. Students that graduated the high schools after having completed vocational preparatory programs in the trade, industrial and technical areas were absorbed by the industries in the Greater Bridgeport area. Much of the success in placing students

on good jobs, and in enabling students to perform well on the job was attributed to the instructors in the several vocational curriculums. As indicated above, while the facilities were quite inadequate and the equipment was quite limited, the successes were notable and commendable! Further, each of the teachers of the vocational preparatory curriculums was convinced that the graduates from his particular curriculum were competent to move into a job and to continue to grow in employment. Many of the students had been counselled to think carefully about entering employment and in seeking additional higher education at the Housatonic Community College close by, or in the Norwalk State Technical College, or in special programs or regular curriculums conducted by the Bridgeport Engineering Institute, or the University of Bridgeport.

COOPERATION WITH THE BULLARD-HAVENS REGIONAL VOCATIONAL TECHNICAL SCHOOL

Earlier in this report, it was pointed out that the facilities at the Bullard-Havens Technical School were quite inadequate to serve the needs of the entire region, but more specifically the 700 or more high school students in Bridgeport who are critically in need of vocational preparation. The expansion to the Bullard-Havens Technical School was long overdue, and while there appeared to be evidence that the larger expansion program would be underway soon, it would be at least three years before the facility would be able to enroll increased numbers of students from Bridgeport. In the meantime, the high schools in Bridgeport would continue to need additional space and facilities for the vocational preparation needs of their own students.

Discussions with the director of the Bullard-Havens Technical School indicated that should air conditioning be provided in all of the Bullard-Havens Technical School facility, both in the present building and in the anticipated $6 million addition, the school could then be used the year around and serve approximately one-third more individuals on a staggered basis. The director of the school, Mr. Buchli, expressed his earnest hope that something of this nature would be done and that more of the Bridgeport high school youth would then be served. Requests had already been made to the State of Connecticut to supply these additional facility modifications, and the requests were being considered by the Department of Public Works for the state.

The "shared time" type of program being conducted at the technical school operated between 3:00 and 6:00 p.m. daily. Over 100 students began in this program in September, and approximately 75 were still left in it, with some of the leavers having gone into employment. The director of the technical school expressed the feeling that "had there been more cooperation and more cooperative activities established between the high schools and Bullard-Havens far better results could have been made of the present facilities." He pointed out that instead of 100 plus students entering in September on a shared time basis, he felt that four or five times that number could be accommodated. However, he also indicated that the increasing costs to support the personnel needed to teach, and the increased cost of consumable supplies, power, light and other commodities required that a cooperative arrangement would have to be established between his institution

and the three high schools in the City, in order to share the cost of operation. For example, in addition to the teaching staff engaged in providing vocational preparation for high school students, several members of the counselling staff of the Bullard-Havens Technical School worked with the shared time students and coordinated the programs needed by these youth. Still further, a clerk had been designated whose activities had to be supported entirely from Bullard-Havens School appropriations.

It was the feeling of the evaluating team that more effective use of the facilities in the Bullard-Havens Technical School could be provided, if some improved level of flexibility could be built into the high school programs in order to enable students to attend the Bullard-Havens Technical School from 3:00 to 6:00 p.m. This would be a major matter, and one on which the high school and the technical school would need to coordinate efforts.

E. HIGH SCHOOL RECOMMENDATIONS

V SUMMARY AND RECOMMENDATIONS

A. GENERAL SUMMARY

At the time when the initial project for the City of Bridgeport's Career Education program was approved by the Office of Education, HEW, the objectives of the project were clearly defined and the operating philosophy under which Career Education would be conducted in the Public Schools of Bridgeport appeared to be clearly understood. However, during the three years of the project's duration, a number of modifications to the original program took place, all of which were positive in nature and beneficial to the individuals who took part in the Career Education program. During its three days of on-site evaluation, the study team visited as many of the schools as was possible, talked with as many people as had information to provide, and examined all of the literature, documents and records of the Career Education project. As a result, the study team was satisfied with the extent to which the original planning for the Career Education project and its specific objectives were being met. Following is a brief summarization of the high points concerning the Career Education project and specific recommendations concerning the means that should be considered in enabling the Career Education project to continue, since federal funding will terminate at the end of the school year. Throughout the on-site visitation, much of the concern of the evaluating team had to do with the extent to which the Career Education project would persist after the termination of federal support for the project; the summary and recommendations which follow indicate this concern.

1. Considering the modifications that were made to the original proposal, and the extension of the Career Education program into areas that were not originally anticipated for growth, the study team was satisfied that the broad statements of philosophy and the specific objectives of the project were met and in many instances exceeded.

2. In order to conduct an expanded program of Career Education, the administration of the project appeared to be cognizant of the need to construct and conduct a closely coordinated central office staff administration. This appeared to have been done. However, with the loss of the counselor-coordinator for the high schools, the staffing pattern appeared to have suffered a considerable loss. Growth of the project into the years ahead will require considerably more in the way of central office supervisory and administrative staff, in order to accomplish the results anticipated for an all-school-wide program encompassing all students and all teachers.

3. Funds made available to the Career Education project were administered wisely and the appropriate allocations of funds for supplies, materials and other necessary Career Education materials were made in accordance with the needs of the teachers and students.

4. The supervision and the coordination which were provided by the project staff, and also by the individual school administrative and coordinating personnel appeared to be meeting the needs of the project. However, as the Career Education project continues to grow in Bridgeport, there will be the need to be concerned about additional personnel, or possibly reorganization of the administrative-

supervisory activity that would ultimately provide teachers and school personnel with the consultation, help and advice needed to maintain the project at an even higher level of efficiency.

5. Although it was the hope in the beginning of the project that the entire City of Bridgeport Public School System would be encompassed in the Career Education project, approximately 20 of the 37 schools in the City System were finally involved in Career Education. All of the teachers, all of the counselors, and all possible personnel in the remaining schools were involved in workshops and other activities designed to bring the remaining schools into the Career Education orbit. However, because of time, lack of sufficient administrative-supervisory staff, and because of the limited funds provided, it was not possible to reach out and encompass the total school population. Plans for the future should certainly anticipate further growth of the Career Education program, and the necessary financial backing provided to facilitate such expansion.

6. Both teachers and students evidenced interest, satisfactions and significant learnings from the Career Education program. Students were concerned with the wide range of occupations that existed within specific job clusters, and displayed intimate knowledge of occupational information and the possibilities surrounding specific job opportunities to which they might aspire. Teachers indicated that they were now making full use of the many applications and illustrations connected with the world of work, as their regular teaching proceeded. In this way, they explained that students appeared to be getting far more value from the usual academic

instruction, at the same time that they learned something more about the many occupations in the fields of work.

7. The success of a program of Career Education is often marked by the approval gained for such a program in the region served by the school. In Bridgeport, bridges between the school and the community, and involving many of the employers in business, health activities, industry and the utilities have been built to the credit of the Career Education project. Real effort had been expended by the personnel in the Career Education administration office to establish these close links with elements of the Greater Bridgeport community, and the positive results of such activity were noticeable.

8. Career Education in Bridgeport appeared to the study team to be an excellent example of how all parts of the Career Education model can be facilitated. Beginning at the very lowest grades where the youngsters should be concerned with the acquisition of desirable work attitudes, the instruction all seemed to be providing that kind of opportunity for the attitudinal acquisitions and the teachers appeared to be most satisfied with the results. As the Career Education model was facilitated in its other aspects, occupational information, "hands on" experiences, and finally vocational preparation were all being exemplified in the Bridgeport Public Schools. With over 20 schools of the 37 in the City active in some phase (or all phases) of the Career Education project, there was ample evidence on every hand of the efforts made by the central administrative staff to implement each part of the Career Education model. Not all parts were as well conducted as others,

but this was not for the lack of effort on the part of the central staff. Often, a lack of facilities as in the case of the vocational preparatory segment, hampered the central staff in carrying out the full intent of the model.

9. Bridgeport, as a highly industrialized community where the greater number of employed persons were working in manufacturing operations and in the business field, represented an excellent example of how a Career Education project could administer to the needs of the industrialized community. The high schools in the Bridgeport Public School System recognized the need to assume the responsibility for providing vocational preparation for some of its enrollees. Working with the Bullard-Havens Technical School, a small number of high school youth found it possible to engage in vocational preparatory curriculums during a 3:00 p.m. to 6:00 p.m. "second shift" arrangement. Also, at two of the large Bridgeport high schools, portable buildings were placed on the campuses and some limited space made available for the teaching of those occupations in which students had registered considerable interest. Neither of the foregoing activities met the needs of large numbers of Bridgeport youth that were evidencing needs for vocational preparation, and other activities tended to supplement these purposes. A work experience program, a cooperative program, and a SPACE program enabled youth to prepare for foreseeable employment in the Greater Bridgeport community through cooperative activities established by the businesses and industries in the region. These programs were eminently successful, but administering to a relatively small number of youth. As the needs for

vocational preparation of Bridgeport youth continues to grow, greater efforts will have to be made to expand the cooperative types of programs, at the same time as arrangements are made for larger numbers of Bridgeport youth to prepare for work during the regular high school day, either at the Bullard-Havens Technical School, or within the main buildings of the three high schools.

During its three on-site days in Bridgeport, the evaluation team was made fully cognizant of the extent to which the Career Education project had developed. However, it was equally evident that with additional funds and with opportunities to employ a larger central office staff, considerably more might have been done during the three-year period during which the project was funded by federal dollars. The uses made of the federal funds were optimum, and these optimum results were achieved largely through the high degree of ingenuity, creativeness, dedication and resourcefulness of all who were concerned with the administration, supervision, coordination or teaching in the Career Education project. Students also evidenced high levels of creativity themselves in connection with developing Career Education materials, projects, units and other instructional devices.

The recommendations which follow are supplied chiefly as a guide to the Career Education project personnel as the project moves into a new phase. With the termination of the federal support, and with the full funding of Career Education activities in Bridgeport to be underwritten by the City School System, the evaluation team believed that it would be wise not only to comment on the extent to which the Career Education project had achieved results

in terms of what it proposed to do, but also to supply suggestions for further improvement to facilitate further growth and further efficiency of operation. Each of the following recommendations has its direct implication for local policy making, action and coordination; however, many of the recommendations also imply action that should be considered relative to the state education program, chiefly at the Bullard-Havens Technical School. Local and state influences should be weighed carefully; involvement of all who will be affected by the changes should be sought and assured.

B. ADMINISTRATIVE RECOMMENDATIONS

1. As the Career Education program continues to grow and develop in effectiveness by virtue of its introduction into all the schools in the City, it is strongly recommended that the central Career Education staff engage in the long-range planning activity needed to facilitate and implement growth. Tasks which will need to be engaged in include the identification and redefinition of the organizational structure for effectively supervising and administering the expanded program. As a part of the task, there will be the need to identify the roles and relationships of each of the central administrators with respect to missions, objectives and job responsibilities relative to Career Education.

It should be clearly understood by the central staff for Career Education that the long-range planning must take place immediately, since all the elements of urgent problems to meet the continuing needs of youth are already clearly apparent. What began three years ago as an exemplary program has grown and matured into a dynamic program of significant career thrust for hundreds of youth in Bridgeport. Successes achieved in the grades K-8 have generated major problems for the high schools that now must meet the demands of the youth that have been motivated to identify careers for themselves. The recommendation here is that the central staff take the initiative and address itself to the whole task now! The long-range plan should specify the mission of Career Education, its planned objectives, and then the very important organizational structure that will be needed to conduct a full-blown

Career Education project for all the schools. Everything in the Career Education concept and program, from additional encouragement in the kindergarten to the coordination that must occur between the high schools and post-high school institutions, will have to receive attention and action in the development of the final long-range plan. Not the least of the considerations must be the facilities and equipment that will be needed to accommodate the occupational preparatory demands of high school youth. Attention will have to be given and recommendations passed up to the Board of Education for action (via the Superintendent of Schools) concerning whether a new vocational high school is desirable and needed, or whether an area vocational service center is needed, or whether some other facility arrangement would be more efficient.

2. Several central office administrators pointed to the need for in-service training at the administrative level geared toward gaining a better understanding of Career Education. Some preparation should be made for a late spring conference to facilitate this need. Several worthy in-service activities for the staff were in evidence this year; however, it appeared that need still existed for a structured and planned in-service program in which all administration would have adequate opportunity to input into this type of activity.

3. In planning and implementing the growing City-wide program of Career Education, further consideration and planning will be required and naturally followed by the expansion of the services offered by the Resource Materials Center. Many teachers

appeared to be depending on the Center as a source of required hardware and software for teaching.

4. As the system-wide Career Education program continues to develop, more citizens and community groups will need to become involved. In order to effectively work with and benefit from contacts with these groups, attention should be given at this time to the many additional lines of communication that will have to be established. Consideration should be given to the extended and planned involvement of the Career Education staff with community groups such as the advisory committee, the Urban Coalition, PTA, and any others that appear to be feasible to the Career Education program.

C. GUIDANCE RECOMMENDATIONS

1. Since there still appeared to be differing interpretations of the role of guidance and counseling in Career Education, efforts should be continued through regularly scheduled meetings and workshops to involve the counselors at all levels in the Career Education project. Mutual support for both the Career Education project and the on-going guidance program should be the goal of these meetings.

2. Since the addition of Career Education staff members at the elementary and middle school levels seemed unlikely, some decisions should be made relative to the use of the time and expertise represented on the present staff. These decisions should include an understanding of roles of the principals and the elementary and middle school supervisors in the total Career Education picture. The possibility of some of the middle school counselors assuming some of the supervisory responsibility for the CEVO program should also be explored as a way to relieve the Career Education coordinators of some of their supervisory burdens. Methods of capitalizing on the experience and expertise represented on the teaching staff should be carefully considered.

3. The separate Career Education classes at the middle school level appeared to be receiving mixed reactions from students and teachers and should be the subject of an intensive study. This study should be directed toward finding an answer to the question of whether these classes are counter-productive to the major objective of infusing Career Education concepts into all phases of the curriculum.

4. Since Career Education seemed to be moving more slowly at the secondary level than at the elementary and middle school levels, major efforts should be made to evaluate present activities, and to plan for an integrated program at that level. Counselors should play a major part in establishing the goals and objectives of the secondary program; their involvement would be critical to the ultimate success of the program.

5. The wide variety of special projects such as the Alternative High School, Project ACT, etc. all showed promise of alleviating some of the pressure to provide career exploration and training for secondary students. An effort should be made, however, to provide a catalogue of special programs of a Career Education nature, whether they be officially under the supervision of the Career Education Project Director or not. This catalogue should also be supported by information sessions for counselors, designed to answer questions and solve problems relative to the programs.

6. Methods of continuing the dialogue between industry and education should be explored. This dialogue should be carefully structured so that one group does not always tell the other group what's wrong with them. Means to cooperatively solve the problems which affect the whole community should be the objective of such efforts. Some communities have experimented with the idea of an industry adopting a school as a method of improving communications. Other ideas such as Business-Industry-Education Days should also be explored. Every effort should also be made to re-establish the Career Guidance Institute as an on-going program.

7. Cooperative planning with the staff of Bullard-Havens Technical School should be instituted as soon as possible so that the potential of the after-school program and other cooperative efforts can be fully realized. None of the differences of opinion concerning the present after-school program appeared to be irreconcilable, but they are unlikely to be resolved unless the people involved take steps to look at the problems and plan solutions cooperatively. These efforts should also include plans for long-term program development and use of facilities as well as the immediate problem of the after-school program. It may be discovered that, in order to provide quality Career Education and vocational training at the secondary level in Bridgeport, there will need to be some restructuring of the present programs to make better use of existing facilities in the area.

8. Efforts to expand the services of the Career Education Materials Center to the secondary counselors should be continued. Methods of involving the counselors more in the selection of materials might also be considered since they are probably the most knowledgeable staff members concerning the career information needs of the students in their respective buildings.

D. MIDDLE SCHOOL RECOMMENDATIONS

1. In planning for the project expansion next year to include more teachers, it would be helpful to conduct a principals' workshop this summer to help principals more clearly understand the concept and objectives of Career Education, and also to motivate the principals to take an increasingly active role in supervising and conducting career education in their respective schools.

2. If the program is maintained at the same level or is expanded next year, a cooperatively developed plan should be put into operation whereby the project staff would give a greater proportion of time and help to the newer teachers and to those schools that will engage in the program for the first time.

An excellent job was done by the counselor-coordinators in providing individualized assistance to each teacher, but with the growth of the program to include all teachers and all schools in the system, a change of roles should be considered wherein the counselors would withdraw to a more supervisory position with regard to the presently Career Education engaged schools, while at the same time placing emphasis and time upon the newest entrants into the program. Such a role change might anticipate the identification of lead resource personnel for Career Education in each school, working closely with the immediate on-site supervisor of all Career Education activities in the school--the principal.

3. More frequent staff meetings with the project staff and other City School supervisory and administrative personnel should be considered in order to help strengthen lines of communication, as well as provide for imminent problems to be clarified, tentative

solutions to be agreed upon, and to "brain storm" Career Education ideas.

4. The three full-time Career Education teachers should develop mini-course specialties, and then on an itinerant basis travel through the schools where there are sixth through eighth grade students. Such a procedure would provide more specialized services to increasing numbers of students.

5. A special in-service workshop should be provided for all teachers in the Career Education project, as well as new ones coming into the project. The workshop should emphasize the special Career Education curriculum units, trips, projects and Career Education materials available to teachers; it should also provide for the necessary discussions relative to teaching techniques in the utilization of curriculum resources.

6. Consideration should be given to involving the coordinators in activities that will bring them into contact with the high school program, thus providing for some elements of continuity, K-12. These activities would help facilitate vertical articulation, and enable counselors to be fully aware of the impacts of middle school Career Education activities upon student choices that are being made at the high school level.

7. There should be more involvement of the advisory committee with the staff members K-8. There appears to be more emphasis by the advisory committee upon high school and vocational education aspects of Career Education, and while this is regarded as valuable and extensive, the growth of the Bridgeport project is such that attention should be focused at this time upon the contributions to careers that can be made in the grades through eight.

E. RECOMMENDATIONS CONCERNING CAREER EDUCATION IN THE HIGH SCHOOLS

1. With the wealth of industrial and business organizations in the Greater Bridgeport area, steps should be taken by each of the high schools to expand their cooperative and work experience programs. With approximately 700 youth in the three high schools needing vocational preparation of one kind or another, coordinators in the high schools should be provided in the number required to meet this growing emergency. Coordinators so designated should work closely with the businesses, health and industrial elements of the community and develop training plans, supervisory plans and procedures for engaging many more high school youth in cooperative learning experiences that are now being accommodated under the present plan.

2. The vocational aspects of the Career Education project are those which will require greatest attention during the next several years. At the earliest possible time, a council of high school administrators and the administrator at the Bullard-Havens Technical School should meet and plan how best to serve the needs of Bridgeport youth with vocational preparatory experiences. Suggested for the concern of such a council would be items such as:

a) how to expand the high school program

b) how to divide the responsibilities for vocational preparation between the high schools and the Bullard-Havens Technical School

c) how to share the cost for conducting vocational preparation of high school youth at the Bullard-Havens Technical School

d) how to obtain valid and reliable information from the community relative to emerging occupations for which high school youth might be prepared

3. With the growing emphasis upon vocational preparation, at the upper level of the Career Education ladder there will be a continuing need for established personnel at each high school to be delegated responsibilities for coordinating all aspects of vocational education. Such an individual could conceivably be a coordinator, a regular high school appointee, a central office designee, or some other arrangement. The matter should be studied carefully at the earliest moment and steps taken to place in the hands of one person in each of the high schools the full responsibility for the broadening of the vocational education effort, its coordination with the Bullard-Havens Technical School, its extension into the community, and responsibility for coordination of all work experience and cooperative programs. Such an individual placed at each of the high schools should be provided supervision by the central Career Education office, in order that all youth in Bridgeport who desire and are capable of profiting by the instruction will have such instruction made available to them, thereby enabling them to prepare for the world of work.

4. The industrial arts program in the high schools can serve several purposes. However, because of some conflicts in the thinking which has been generated by the industrial arts personnel, and as it appears to be opposed to the thinking of the Career Education movement, there is an urgent need to seek an accommodation of

philosophy. Steps should be taken at the very earliest moment to bring these two major philosophies into harmony.

5. Discussions with members of the Bridgeport industrial community appeared to indicate that there is a growing need for larger numbers of individuals to enter employment at the "service level." In a sense, this reflects the growing need in Bridgeport for more yough entering employment at less than the skilled craftsman level. A study should be made of the Greater Bridgeport area, and compared with the data and statistics available from the Employment Security Agency for the region in order to determine the extent to which the numbers of youths in the high schools who need vocational preparation should receive it at a lower level. When that has been decided, then the possibility of making further use of the industrial arts facilities in each of the high schools should be facilitated. Many youth can be supplied with entering skills for immediate employment, using the facilities of a well-equipped industrial arts department in a high school. Learning to operate a single machine or several machines would open up possibilities for immediate employment. Such a vocational preparatory effort should not be confused with the highly skilled type of preparatory experiences provided by institutions such as Bullard-Havens Technical School. It is conceivable that less than one year of such "entering skill" preparation could be provided by a high school industrial arts program, thereby enabling graduates of the high school to enter employment at a lower level of skill.

6. Not all high school personnel (including administrators) are firmly convinced of the validity of the Career Education movement. Some personnel explained that Career Education had always been integral with regular academic instruction and that special efforts to infuse Career Education into the total instructional program in the City School program was unnecessary. These same individuals felt that with the cessation of federal support for the program, little would persist of the Career Education project. It is recommended that the points of view expressed by the individuals indicated here be further studied, and the central office staff make a special point of supplying to such individuals oral and printed advice concerning the objectives and procedures under which Career Education can be conducted. The points of view which the dissenters expressed were judged by the study team to be genuine, even though they appeared to be incorrect, and to some extent the result of ignorance concerning Career Education. This will be a major concern as the program continues to grow in the high schools, and particularly if vocational preparation continues to be an urgent need of the student. Many of the traditional high school personnel believed that vocationalism had no part in a public high school, and so out of hand tended to reject the emphasis upon that aspect of the Career Education model.

7. Traditional academic education in a high school tended to resist change. In spite of the fact that in several of the important academic departments of the high school where evidence was ample to demonstrate that efforts were being made to make the instruction offered in the respective classrooms relevant to

the world of work, there was still a large untouched field of instruction that continued to need attention in the same respect. Many teachers were reported to be continuing their instruction in traditional fashion, and claiming that there was scarcely time enough to do what they had to do without introducing Career Education infusing activities. Changes to be brought about in the conduct of the teaching provided by such teachers will need to be a continuing effort, but the central organization of the Career Education project will need to give special attention to this particular activity. Through workshops, personal consultation, literature of a variety of kinds and the offer of assistance by a proposed school Career Education coordinator could do much to bring more of the high school teachers into the Career Education orbit. Hopefully, such an effort would provide high school teachers with information concerning the steps taken in the early grades to achieve favorable results with regard to the acquisition of attitudes by grade school children, occupational information and both "hands on" experiences by middle grade students and the need for high school instruction to have some degree of relevancy to its usefulness in the world of work. A clear concept provided for high school teachers should be helpful in inducing them to shift slightly and to carry on their traditional instruction, but with additional increments of career application.

9. The relative successes achieved in the middle schools produced a problem of growing proportions for the high schools. Career Education activities of a variety of types and kinds excited and motivated youth in the middle schools such that their

arrival in the high schools made them aware of the possibilities for vocational education. Not all youth were concerned with immediate preparation for the world of work. Some, by virtue of the successful middle grade program in Career Education appeared to be convinced of the validity of their career choices which will demand that they acquire a college education for professions such as medicine, dentistry, law and other areas. However, where youth were provided adequate opportunities to learn about occupations which they may enter at the completion of a high school program, their demands upon the high school authorities for opportunities to pursue preparation for employment became numerous. Limited facilities at the high schools, and limited possibilities for engaging in work experience programs and in cooperative vocational enterprises will continue to make the vocational aspects of the Career Education program more urgent and more critical with each succeeding year. The central career education staff should make it a major concern of its subsequent operations to keep information flowing toward the Bridgeport Public Schools Superintendent and his Board of Education relative to the needs in the high schools for providing vocational preparation. The public school system in Bridgeport should be helped to realize that the program of vocational preparation is a major concern for the City School System, and that full reliance upon an institution such as the Bullard-Havens Technical School cannot possibly serve the needs of Bridgeport at the present time or at any time in the foreseeable future. As a Bridgeport problem, the Career Education staff should emphasize the need of the Board of Education to assume full responsibility and to make plans for high school vocational training programs.

10. The program of articulation that was put into operation between the middle schools and the high schools two years ago made excellent progress during the school year 1972-73. It made further progress during the 1973-74 school year, but will require further study and attention in order to make certain that the articulation is relevant to personal growth, curricular experiences, curriculum feedback, follow-up data and other similar factors. This is one of the most important segments of the Career Education model for Bridgeport and it should be strengthened to the limit that time and funds can be made available.

11. The efforts made by the Career Education central staff to infuse Career Education elements into the traditional high school courses and curriculums have been both valiant and determined. However, with the loss of the counselor-coordinator for the high schools, and with the transfer of this individual's responsibilities to the director of the Career Education project, less effort was made in the area of infusing. With successes achieved in the middle schools and in the grade schools, the last important area of concentration appeared to be the area of infusing Career Education in the high schools' curriculums. Study of the situation would undoubtedly show need for replacement of the original counselor-coordinator for the high school, and possibly the employment of additional personnel to facilitate the "infusing." Some immediate concern for this element of the Career Education program might be valuable in terms of retaining some of the excellent gains in the infusing effort achieved in the high schools during the past several years. Care should be taken now that

these gains are not dissipated by lack of personnel to administer to them.

12. One of the most successful means to achieve infusing of Career Education objectives in the high school curriculum is that of involving high school teachers in the design and in the development of modified curriculums. To the extent that funds can be allocated for this purpose, it is recommended that special short-term curriculum workshops be established by subject matter areas in Bridgeport to facilitate the production of new and innovative high school curriculum designs. In a sense, the basic elements of the curriculum would be maintained, but would be appended thereto by suggested devices, speakers, activities, field trips, films, and other paraphernalia that could be used by teachers and students to effect the best elements of the Career Education objectives.

TITLE: VOCATIONALLY COORDINATED CURRICULUM FOR GENERAL EDUCATION. PROGRESS REPORT.

DESCRIPTOR: *COURSE OBJECTIVES; GENERAL EDUCATION; *COMMUNICATION SKILLS; *HUMAN RELATIONS; INTEGRATED CURRICULUM; *TECHNICAL INSTITUTES; INTERVIEWS; SURVEYS

IDENTIFIER: MORAINE PARK DISTRICT; WISCONSIN

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 85P.

ABSTRACT: A SIX-WEEK STUDY WAS CONDUCTED DURING MAY AND JUNE, 1974, BY THE MORAINE PARK TECHNICAL INSTITUTE TO OBTAIN INFORMATION FROM EMPLOYERS AND EMPLOYEES ABOUT COURSE OBJECTIVES FOR COMMUNICATIONS, HUMAN RELATIONS, AND MATHEMATICS/SCIENCE SKILLS FOR RESTRUCTURING GENERAL EDUCATION COURSES TO BECOME MORE APPLICABLE TO VARIOUS OCCUPATIONS. MORE THAN 200 EMPLOYERS AND EMPLOYEES IN THE MORAINE PARK DISTRICT, INCLUDING INSTITUTE GRADUATES, WERE SURVEYED. INTERVIEWEES WERE SELECTED TO CORRESPOND TO OCCUPATIONS IN THE VOCATIONAL-DIPLOMA PROGRAMS. THE STUDY PROVIDED DATA FOR DEVELOPING COURSE OBJECTIVES AND FOR IDENTIFYING UNITS OF STUDY SUPPORTIVE TO THE VARIOUS SKILL AREAS. THE SURVEY INSTRUMENT LISTED VOCATIONAL PROGRAMS AND CALLED FOR RATING THE DEGREE OF KNOWLEDGE NECESSARY IN EACH OF 18 AREAS OF COMMUNICATIONS, EIGHT AREAS OF HUMAN RELATIONS AND ECONOMICS, AND 10 AREAS OF MATHEMATICS AND APPLIED SCIENCE. THE COLLECTED DATA WERE TABULATED AS BEING ESSENTIAL TO COURSE CONTENT, ADVISABLE, OR A POSSIBLE ELECTIVE. CONTINUATION OF THE PROJECT WILL PROVIDE FOR WRITING BEHAVIORAL OBJECTIVES FOR THE COURSES STUDIED, DEVELOPING INSTRUCTIONAL MATERIALS, AND DESIGNING A PILOT PROJECT TO IMPLEMENT THE NEW CURRICULUM. SUMMARY

During a six week period (May to June 30, 1974), Moraine Park District conducted a study to obtain pertinent information from employers and employees relative to course objectives in communications, human relations and mathematics. The information was categorized into a form that contributes to the restructuring of general education courses. All general education staff members participated to some degree in the six week concentrated effort.

Because of the study, the participating staff now has data for developing relevant objectives for their courses and for identifying units of study supportive to the various skill areas. The project as conducted verified a study that had been made earlier involving students and program advisors at Moraine Park Technical Institute. A survey instrument was designed to question students and program advisors about the needs and interests which they would identify as adding support to the program skills.

BACKGROUND

In 1968 the report made by the Advisory Council on Vocational Education to the president of the United States noted that the inability of students to perceive the value or need of the informational content among a number of programs - "The lack of relevancy in teaching of isolated disciplines causes many to lose interest and motivation."

Concurrence with the findings as presented by the Advisory Council was found in Vocational, Technical and Adult Education District 10 (since Moraine Park District), especially in the area of General Education, specifically in vocational type programs. It was recognized where a need existed to change course content into learning experience considered valid by the student. It was agreed that a new approach was needed which resulted in the proposal to justify general education offerings in the vocational program. The result was a proposal to study a flexibly scheduled vocationally coordinated curriculum for general education courses.

The proposal from the onset differed from the attempts by other VTAE districts in that its restructuring did not presuppose a given instructional methodology but reserved the decision to employ whatever methodology fits the subject matter, and the abilities and interests of the students would elect it. It was not meant to focus on and mean merely a calendar revision. Several factors were considered as contributory to the changes that were being suggested.

The project proposal was scheduled to extend over a period of years.

PROBLEM

The present structure of the general education curriculum cannot fully accommodate the wide range of student ability and achievement and does not identify the behavioral objectives in the general courses in our one and two year diploma programs because:

1. It does not allow students to pursue their personal needs and interests which vary according to:

   a. their particular vocational goals.
   b. their past levels of achievement in other educational experiences.
   c. their immediate needs for knowledge and skills to successfully pursue vocational-technical training.

2. It does not fully provide the opportunities for the implementation of methodology such as team teaching and individualized instruction.

3. It lacks a flexible scheduling which would allow for more appropriate timing of instruction to their immediate needs and interests.

OBJECTIVES

1. To restructure the general education curriculum (Communications, Human Relations and Math) to become more applicable to the various occupations it serves in our one and two year diploma programs.

2. To provide flexibility in:

   a. application of subject matter.
   b. method of instruction.

3. To explore opportunities for innovative methods.

4. To coordinate general education curriculum with needs of the student and employer.

5. To coordinate general education curriculum with the objectives of vocational programs.

6. To coordinate the implementation of the general education curriculum with the counseling process.

7. To investigate the applicability of the general education curriculum to other VTAE districts.

Over two hundred individuals were contacted and invited to respond to a questionnaire on a one-to-one basis in interview style. The individuals surveyed included graduates of Moraine Park Technical Institute and employees and employers representative of business and industry in Moraine Park District. Interviewees were selected to correspond to jobs for which vocational-diploma programs prepared workers.

In addition to gaining the necessary information for restructuring the general education courses supportive to vocational/diploma programs, data was collected for associate degree and less-than-one-year diploma programs as well. Opportunity to use the information in restructuring this type of program is a future possibility.

The opportunity for the general education staff to meet with industry, business and past graduates in actual on-the-job situations provided an enriching experience for the staff. The project also served as an excellent publicrelations tool, opening channels of communication that did not previously exist.

The general education staff interpreted the data collected and made application to individual programs. Communications, Human Relations, Math and Science were (1) broken into units of study, (2) identified as supportive to the program and (3) given rank order as to importance.

The study revealed units which were common to all programs and indicated units which were unique to particular programs.

FINDINGS AND CONCLUSIONS

The reactions from the participants in the project were indicative of the success of the project. The involvement of the staff was in evidence throughout the project. Prior to the activities involved, the staff initiated the need to restructure courses, identified the method by which the goals would be accomplished.

Finally, the findings and conclusions were jointly agreed upon. There was consensus of opinion.

Conclusions recognize the ability to unitize and develop a mini-course approach to the teaching of general education subjects. It has been further concluded that the approach is not only possible but more beneficial than the present traditional system.

It is recommended that the project be continued with the intent to create and implement a mini-course system. Evaluation of the project was established through a time frame for marking progress. Regular meetings of the participating staff were held throughout the project to reestablish goals.

An invitation was extended to state staff members for formal review and critical analysis of the project and its methodology. This provided opportunity to compare the project with other studies which have been conducted in the state. Comparisons were made to reinforce the findings of the Moraine Park project.

Recommendations developed by the participants in the project to restructure General Education were as follows:

1. The actual survey was good public relations for vocational-technical education and Moraine Park District in that it showed local industry the interest in their recommendations and gave them general information about our system.

2. The experience of interviewing different industries and occupations was an excellent learning experience for the individual teachers in the General Education department.

3. Many areas of general education identified by the survey are essential in the training of the one and two year vocational students.

4. Much of the course content, as indicated by the survey instrument, was complete and beneficial; however, some aspects or subject areas could be deleted for a more concentrated approach to the essential areas.

5. Needs in general education subjects vary from department to department, program to program, and individually within programs.

6. Some units of instruction, rated as essential, proved common to many programs.

7. The material listed in the survey instrument is well suited for a unitized mini-course approach.

METHODOLOGY

A timetable was designed to guide the activities and to establish objectives. The timetable was prepared by staff participants involved in the project. The schedule established checkpoints to determine progress and provided basis for evaluation.

May 20	Orientation to Project 1. Review objectives of project 2. General discussion - collection of data/form 3. Participant mechanics (1) Time slips (2) Mileage
21	Development of Survey Instrument 1. Divide into two general areas (1) Communications, Human Relations (2) Mathematics, Science
22	Evaluation of Questions Staff - joint meeting
23	Test Survey Instrument - Trial 1. Refinement of survey instrument 2. Organize areas to be surveyed (1) List of previous graduates (a) Employers (b) City-town, etc. (2) Letter to employer (advance)
24	Printing of Survey Call for appointments - whom to contact? (1) personnel manager (2) graduate
May 28-31) June 3- 7) June 10-14)	Conduct Interviews
June 17-21	Summarize Data
June 24-28	Analysis - Conclusions

It was determined that each interview/survey contact lasted approximately 35 minutes, although in some cases employers chose to discuss their educational concerns, criticize programs or comment on Moraine Park Technical Institute in general; therefore, some interviews took as long as an hour and a half. In some instances the employer invited the MPTI representative to tour their business or industry.

The public relations aspect of this project must be recognized. The telephone interview was discouraged as a means of collecting data. Representative business and industry was selected to include both supervisor and employee, firms producing a product or service according to location and length of employment of interviewee.

In general, math responses to survey questions were more specific than those in communications and human relations. A consideration for the future, should a project of this type be repeated, might be to use a Q-sort approach for communications and human relations.

In summarizing the data, it was questioned whether or not the data would be computerized. It was decided that hand counting enabled the participants to familiarize themselves with the information collected, enabling better usage of the collected information.

SURVEY MATERIALS

1. Pre-survey Letter

2. Division of Moraine Park District for survey

3. Contributing information to develop cross section of interviewees

4. Survey instrument
    - (1) general data sheet
    - (2) subject area information
        - a. communications/human relations
        - b. math/science

Moraine Park Technical Institute

District Office 235 North National Avenue, Fond du Lac, Wisconsin 54935 (414) 922 8611

May 13, 1974

Dear Sir:

The General Education Department of the Moraine Park Technical Institute, in an effort to enrich our courses and to meet the needs of the students in our district, has been granted a federal project that will enable some of our staff members to call on industries in our district. We hope to discuss with employers, employees and former students now in your employ, things you feel should be included in courses to make them more meaningful to the student and more applicable to the type of employment found in the industries of our district.

We will be calling on industries in the district between May 20 and June 30, 1974, and individual staff members may be contacting you for an appointment to visit your industry. It is hoped that this letter will serve as an informal introduction to our staff members.

We would like to take this opportunity to thank you in advance for your cooperation, and I am certain that the information we can gather will be most helpful to us as teachers and to our students as well.

Sincerely,

Robert P. Sorensen

COMMUNICATION

Please rate the degree of knowledge that you feel is necessary in each of the 18 areas listed below. (Please check)

Circle the 5 most important numbered areas.	Knowledge is Essential	Some Related Knowledge Advisable	No Knowledge Necessary
1. READING A. For comprehension B. For speed C. Remedial	( )	( )	( )
2. SPELLING Skill improvement	( )	( )	( )
3. VOCABULARY A. General vocabulary B. Technical vocabulary	( )	( )	( )
4. LISTENING A. Note-taking (lecture) B. Informal C. On-the-job D. Critical listening	( )	( )	( )
5. STUDY SKILLS A. Scheduling of time B. Efficient use of printed material (texts, manuals, etc.) C. Use of reference and library materials	( )	( )	( )
6. RESEARCH SKILLS A. Organization of written reports B. Documenting information C. Handling prime (raw) data D. Conducting experiments	( )	( )	( )
7. BUSINESS LETTER WRITING A. Basic letter format B. Common letters (requests, inquiries, complaints)	( )	( )	( )
8. ADVANCED BUSINESS LETTER WRITING A. Advertising letters B. Collection letters C. Bid letters D. Complaint responses E. Letters of recommendation F. Other _____ _____ _____	( )	( )	( )

	Knowledge is Essential	Some Related Knowledge Advisable	No Knowledge Necessary
9. JOB APPLICATION PROCEDURES A. Completing job application form B. Letters of inquiry C. Letters of application D. Resumes E. Interviewing techniques	( )	( )	( )
10. SHORT REPORT WRITING A. Memorandums B. Progress reports C. Simple directions or instructions D. Descriptions E. Illustrations through graphs F. Catalogue and manual descriptions G. News releases H. Advertisements I. Job descriptions J. Employee evaluations K. Designing brochures L. Summaries M. Conference reports N. Field service reports O. Other (please specify) _____ _____	( )	( )	( )
11. ORAL REPORTING A. Organization of an oral presentation B. Group persuasion C. Use of visual aids D. Oral interpretation E. Giving oral instructions F. Argumentation G. Reading prepared data H. Public speaking	( )	( )	( )
12. NON-VERBAL COMMUNICATION Understanding facial expression, tone of voice, gestures, etc.	( )	( )	( )
13. TELEPHONE USAGE A. General courtesy: receiving and placing calls B. Taking and relaying messages C. Transferring, holding, conference calls, etc. D. Placing and receiving orders and complaints	( )	( )	( )

	Knowledge is Essential	Some Related Knowledge Advisable	No Knowledge Necessary
14. COMMITTEE, CONFERENCES, AND ASSEMBLY PROCEDURES A. Small group problem-solving B. Conducting a meeting	( )	( )	( )
15. TECHNICAL REPORT WRITING A. Formal report format B. Indepth research techniques C. Complex graphic illustration D. Completeness of content	( )	( )	( )
16. RADIO AND TELEVISION Understanding the use and impact of radio and TV in our society	( )	( )	( )
17. NEWSPAPER AND MAGAZINE A. Understanding use of printed materials B. Understanding and use of trade journals and pamphlets	( )	( )	( )
18. THEATER, FILM AND VIDEO DRAMA Critical interpretation of contemporary media	( )	( )	( )

Are there any other areas in Communication that you consider important and feel should be included in the curriculum?

Please rate the degree of knowledge that you feel is necessary in each of the eight areas listed below.

HUMAN RELATIONS AND ECONOMICS

Circle three of the eight areas which you feel are most important.	Knowledge is Essential	Some Related Knowledge Advisable	No Knowledge Necessary
1. ON-THE-JOB RELATIONSHIPS A. Working within groups B. Employee-employee working relationships C. Employer-employee working relationships D. Labor organizations E. Other (specify) _____	( )	( )	( )
2. INDUSTRIAL PSYCHOLOGY A. Organization and structure of management B. Work environment - effects of physical conditions C. Work aptitudes, attitudes, and interests D. Job satisfaction and enrichment E. Improving efficiency and employee morale F. Other (specify) _____	( )	( )	( )
3. LEARNING ON THE JOB A. Theories of learning applied to work (conditioning, reinforcement, etc.) B. Improvement of learning skills C. Memory aids D. Means of continuing education E. Differences in learning ability F. Other (specify) _____	( )	( )	( )
4. DEVELOPMENT OF THE HUMAN BEING A. Influences of heredity and environment B. Total personality development C. Childhood experiences D. Adolescent experiences E. Adult experiences F. Understanding motives and emotions	( )	( )	( )

	Knowledge is Essential	Some Related Knowledge Advisable	No Knowledge Necessary
5. MENTAL HEALTH A. Dealing effectively with problems, stress, frustration, etc. B. Problem-solving techniques C. Normal and abnormal behavior D. Types of mental illness E. Techniques of helping others with problems F. Professional treatment of mental illness G. Personality improvement	( )	( )	( )
6. RELATING TO OTHERS A. Family relationships B. Male-female relationships C. Forming good interpersonal relationships D. Interpersonal competition, aggression, hostility, etc.	( )	( )	( )
7. RELATING TO SELF A. Developing a realistic self image B. Clarifying personal values C. Setting realistic goals	( )	( )	( )
8. CONSUMER RELATIONS A. Effects of advertising B. Personal budgeting C. Personal income tax D. Insurance - life, health, auto E. Credit and banking F. Home purchase - rental G. Lease arrangements H. Automobile purchase I. Investment of money - stocks, bonds, property, etc.	( )	( )	( )

Are there any other areas in Human Relations or Economics that you consider important and feel should be included in the curriculum?

MATHEMATICS/SCIENCE

The following are topics in mathematics and science which may be used in your occupation. Check or answer appropriately the topics that are used in your particular job.

I. ARITHMETIC _____

A.

	WHOLE NUMBERS	FRACTIONS	DECIMALS
Addition			
Subtraction			
Multiplication			
Division			

B. English units of measurement _____
1. Inches and a fraction of an inch _____
2. Inches and a decimal of an inch _____
3. Feet and inches _____
4. Other linear units _____
5. Units of area _____
6. Units of volume _____
7. Units of weight _____

C. Metric units of measurement _____
1. Millimeters _____
2. Centimeters _____
3. Other linear units _____
4. Units of capacity (cubic cent., liters, etc.) _____
5. Units of weight (grams, etc.) _____

D. Percent _____
How used _____

E. Graphs _____
How used _____

F. Averages _____
How used _____

G. Square roots _____
How calculated _____

H. Cube roots _____
How calculated _____

Additional information: _____

_____

_____

_____

_____

II. APPLIED ALGEBRA _____

A. Equations and formulas _____
   1. Evaluation (plug in) _____
   2. Rearrangement _____
   3. Formulation (Make up your own) _____

B. Operations with positive and negative values _____

C. Operations with unknowns _____
   1. Addition of unknowns _____
   2. Subtraction of unknowns _____
   3. Multiplication of unknowns _____
   4. Division of unknowns _____
   5. Exponents _____
   6. Roots and radicals _____

D. Ratios _____

E. Proportion _____

Additional information _____

_____

_____

_____

_____

III. APPLIED GEOMETRY _____

A. Plane figures _____
   1. Triangles _____
   2. Four sided figures _____
   3. Hexagons _____
   4. Circles _____
   5. Other figures _____
   6. Area of plane figures _____
   7. Finding dimensions _____

B. Solid figures _____
   1. Rectangular solids _____
   2. Cylinders _____
   3. Cones _____
   4. Others _____
   5. Volumes of solids _____
   6. Surface area _____

C. Angles _____
   1. Method of measurement _____
   2. Accuracy (deg, min, sec) _____
   3. Addition of angles _____
   4. Subtraction of angles _____
   5. Multiplication of angles by a constant _____
   6. Division of angles by a constant _____
   7. Minutes and seconds converted to a fraction of a degree _____

8. Vertical angles _____
9. Complementary angles _____
10. Supplementary angles _____
11. Perpendicular lines _____
12. Parallel lines _____
13. Layout geometric shapes _____

Additional information _____

_____

_____

_____

_____

IV. APPLIED TRIGONOMETRY _____

A. Solving right triangles _____
1. Solving for a side when two sides are known _____
2. Solving for an angle when two sides are known _____
3. Solving for a side when one side and one angle are known _____

B. Solving other than right triangles _____

Additional information _____

_____

_____

_____

_____

V. CALCULATION TECHNIQUES _____

A. Long hand _____

B. Slide rule _____

C. Calculator _____

D. Machinery's Handbook _____

E. Charts _____

F. Other methods _____

Additional information _____

_____

_____

_____

_____

VI. BUSINESS MATHEMATICS _____

A. Payroll _____

B. Taxes _____

C. Interest _____
1. Simple _____
2. Compound _____
3. Interest on unpaid balances _____

D. Banking records _____

E. Cash discounts _____

F. Trade Discounts _____

G. Commissions _____

H. Markup, markdowns _____

I. Depreciation _____

J. Inventories and turnovers _____

K. Stocks and Bonds _____

L. Insurance _____

M. Annuities _____

N. Financial statements _____
1. Income statement analysis _____
2. Balance sheet analysis _____

O. Statistics _____

Additional information _____

_____

_____

_____

_____

VII. APPLIED SCIENCE _____

A. Properties of Matter
1. Solids _____
a. Density _____
b. Specific Gravity _____
c. Elasticity _____
d. Hardness _____
e. Shear _____
f. Malleability _____
g. Ductility _____

Additional information _____

_____

_____

2. Liquids _____
   a. Force _____
   b. Pressure _____
   c. Hydraulics _____
   d. Buoyancy _____
   e. Density _____
   f. Specific Gravity _____
   g. Additional information _____
   _____

3. Gases _____
   a. Lift Pumps _____
   b. Venturi _____
   c. Siphon _____
   d. Pressure Measurements _____
   e. How _____
   f. Additional information _____
   _____

B. Mechanics and Machines _____
   1. Units of Work (ft. lbs.) _____
   2. Energy
      a. Kinetic _____
      b. Potential _____
   3. Units of Power Used _____
   4. Horse Power Measurement _____
   5. Basic Machines
      a. Lever _____
      b. Inclined Plane _____
   6. Friction _____
   7. Pulley Systems _____
   8. Gear Trains _____
   9. Mechanical Advantage _____
   10. Additional information _____
   _____

C. Electricity _____
   1. Amperage _____
   2. Voltage _____
   3. Resistance _____
   4. Wattage _____
   5. Ohm's Law _____
   6. AC _____ DC _____
   7. Sources
      a. Distant Generator _____
      b. Local Generator _____
      c. Primary Cell _____
      d. Secondary Cell _____
      e. Other _____
   8. Transmission _____
   9. Electrical Devices
      a. Capacitor (condenser) _____
      b. Resistance _____
      c. Transformer _____
      d. Choke Coil _____
      e. Relay _____
      f. Solid State _____
      g. Other _____

10. Additional information _____

_____

_____

D. Heat _____

1. Temperature Measurement _____
2. Measurement devices used _____
3. Temperature Scale used _____
4. Heat Measurement _____
5. Measurement devices used _____
6. Units of heat measurement used _____
7. Heat transfer _____
8. Specific heat _____
9. Liquid Boiling Point _____
10. Liquid Freezing Point _____
11. Expansion and Contraction _____
12. Additional information _____

_____

_____

ANALYSIS OF DATA

The length of time an individual had been employed in a position was considered an important factor in selection of interviewees. (Care was also taken in selecting graduates from Moraine Park Technical Institute to include both supervisors and employees.)

Information was tabulated as being essential to course content, advisable or a possible elective. A descriptive paragraph was written to summarize findings as they related to the various subject areas--communications, human relations, mathematics and science. The summaries are included in this report.

Although the objectives of the project concentrated on vocational/diploma programs, data was collected for associate degree and less-than-one-year programs as well. This information has not been categorized or analyzed.

COMMUNICATION

HUMAN RELATIONS

One Year Vocational Programs

- Account Clerk
- Auto Body
- Clerk Typist
- Data Processing
- Electronic Servicing
- Food Service Assistant
- Machine Tool Operation
- Mechanical Drafting
- Metal Fabrication
- Office Machine Repair
- Operating Room Assistant
- Practical Nursing
- Small Engine and Chassis Repair

Two Year Vocational Programs

- Agricultural Mechanics
- Auto Mechanics
- Machine Tool Technicians

ONE YEAR VOCATIONAL

ACCOUNT CLERK

The graduates of the account clerk program are in need of basic communication skills. The employers and graduates themselves related that they needed training in reading, spelling, vocabulary, and listening techniques. It was also emphasized that job application procedures are good to know. Telephone procedures are important because many of the graduates are communicating a large part of the day over the telephone.

There is a high degree of personal contact with people on the job. Account clerks must be able to adapt to the situation that presents itself on the job and relate it to their classroom studies. The graduates indicated they needed to know much about consumer relations on and off the job. The need to be informed about good buying habits and to have an awareness of products and service one can purchase was considered important.

DATA PROCESSING

The employees and graduates of the data processing program have indicated the need for a wide range of learning activities. The highest priorities lie with basic vocabulary, reading and listening skills. A high degree of knowledge is necessary in job application procedures, telephone procedures, newspaper, magazine and non-verbal communication skills. Writing and reporting are included in the essential group along with the others because the employees found that when dealing with the general public they must be able to communicate effectively both in verbal form and non-verbal form.

It was advisable to include in the course content that related to technical report writing, research skills and group meeting procedures. These areas will be programmed as mini-courses but not stressed as heavily, or they could be selected as electives.

All items under the Human Relations sections were deemed necessary because the graduates of the data processing program deal with people every day on a very personalized basis.

AUTO BODY

The auto body repairman works closely with his fellow workers, deals with the public both personally and on the phone, and needs to learn a great deal of his trade on the job. Thus, the communicative skills ranked as essential include listening, telephone usage and oral skills. Those that ranked as advisable include reading, spelling, vocabulary and non-verbal communication.

Because the auto body repair trade depends on close working relationships and the work requires a high stress tolerance, the human relations area ranks all but human development as essential.

CLERK-TYPIST

The clerk-typist group surveyed, because of its clerical emphasis, ranked fifteen of the communication skills as either essential or advisable. Reading, vocabulary, spelling, listening, letter writing, telephone usage and short report writing are used daily, and the position requires proficiency in each. The ranking of job application procedures as essential demonstrates that from a clerk typist position advancement is possible and probable.

The clerk typist works in close contact with other clerical personnel and supervisors. All areas of human relations were ranked as essential, indicating a need for getting along with others on the job, understanding oneself, and understanding and relating to others.

Consumer relations was ranked fourth, possibly indicating a need for knowledge in personal income management.

ELECTRONIC SERVICING

Electronic servicemen must be able to deal with the public as well as be able to find the best method of repair. Thus, all Human Relations areas were considered essential as well as consumer relations and those areas of Communication which deal with oral communication--for example, listening, vocabulary, telephone usage and oral reporting. They must fill out work reports and therefore require reading, spelling, research skills, study skills and newspaper and magazine skills for research in repair manuals.

FOOD SERVICE ASSISTANT

The Food Service Assistant responses indicated the need for basic listening, reading and non-verbal communication skills. It was stressed that this individual receive this training because he is constantly using these skills on the job. Short report writing, spelling and job application procedures are already being covered in the Communications classes.

Because the Food Service Assistants have a close personal contact with the general public, the graduates and employers rated all Human Relations topics as essential.

MECHANICAL DRAFTING

Draftsmen work with technical and complex details as part of their everyday job routine. Therefore, spelling, reading, study skills and vocabulary are rated as being essential communication

skills for their jobs. Listening is rated as number one for the entire list of skills, reflecting the need to listen and interpret instructions and assignments as part of the job. Job application procedures is rated as being advisable to course content, indicating awareness of initial competition for the job and the importance of first impressions in an interview. Research skills, short report writing and technical report writing are also rated as being advisable to course content. These skills would again support the technical side of their job requirements.

In the area of Human Relations, learning on the job, relating to self and on-the-job relationships are the most highly rated categories. This would stress the importance of working with others as well as utilizing and improving your own abilities. Consumer relations and mental health are also rated as essential to course context. Draftsmen also deal with people, and this is indicated by the emphasis on mental health and its improvement.

MACHINE TOOL OPERATION

The machine tool operation student interviews indicated the need for the basic communication skills - listening, reading, spelling, vocabulary and oral reporting.

The program deals with people on a very personal one-to-one basis. They established the need for all the Human Relations material, especially the sections relating to others.

METAL FABRICATION

The metal fabrication group surveyed gave reading, vocabulary and listening the rank of one, indicating a need for communication on the job, especially in the area of giving and following instruction. Other high-ranking areas included job application procedures, oral reporting and telephone usage, indicating higher than expected emphasis on oral communication.

All areas of human relations ranked as essential or advisable, especially those relating directly to the job and to the understanding of self.

OFFICE MACHINE REPAIR

This field requires dealing with the customer directly; thus, vocabulary, telephone usage, listening, committee procedures, oral reporting and non-verbal communication are essential. It also requires research into repair manuals and short repair reports; so reading, study skills, research skills and short report writing are also essential. Some experience in business letter writing is advisable for anyone who hopes to advance in this field.

The entire Human Relations area is considered essential in this field due in the most part to the necessity for dealing with the public as a combination salesman/repair man and complaint receiver.

OPERATING ROOM ASSISTANT

Due to the lack of people in this area available for surveying, only one individual was interviewed. Therefore, the validity of this section is questionable. However, in the area of Communications, most of the skills taught as such are rated as essential. This includes reading, vocabulary, listening, job application procedures, spelling, etc. In the area of Human Relations most of the course content taught as such is also rated as essential.

PRACTICAL NURSING

Licensed practical nurses must be able to communicate freely with both patients and colleagues. Nurses listed telephone usage, vocabulary, listening, oral reporting and non-verbal communication as essential for that reason. Reading, study skills, and spelling are essential since they must keep charts which are legal documents. For this same reason, short report writing is listed at the top of the advisable column.

One of a nurse's primary responsibilities is the comfort of the patient, and all areas of Human Relations are essential to this.

SMALL ENGINE AND CHASSIS REPAIR

The small engine repairman must do research into repair manuals, particularly for motorcycles. Thus, reading, study skills and research skills were rated as essential. They must write warranty forms and work orders and thus need spelling, short report writing and technical report writing. People in this field often change jobs as they try to advance, and they rated job application procedures as essential. Small engine repairmen often work in or for a small business and deal directly with the public, so they require training in all areas of Human Relations except relating to self.

TWO YEAR VOCATIONAL

AGRICULTURAL MECHANICS

An agricultural mechanic graduate often works for a small business and is required to perform varied duties. He must be able to repair various types of farm machinery, deal with customers and write work reports. All areas of human relations are essential (except Human Development) for customer relations. Consumer relations is important because these graduates must sometimes handle parts inventory. Study skills, vocabulary, research skills, reading, and newspaper and magazine are essential for familiarity with repair manuals. Listening is necessary for receiving instructions correctly. Short report writing, spelling and technical report writing are important for repair orders.

AUTO MECHANICS

An auto mechanic is required to be proficient not only in his trade, but also in dealing with the general public. Therefore, the areas of communications, listening and telephone usage are rated as being essential to on-the-job performance. Reading, study skills, vocabulary, short report writing and spelling are also rated as being essential, for these skills complement other technical skills required by a mechanic. Non-verbal communication, oral reporting and business letter writing are among those skills rated as being advisable to course content - again reflecting the need to deal with people.

In the area of Human Relations, most of the course content taught as such is rated as being essential. Learning on the job, on-the-job relationships and relating to self are the three most highly rated categories. This may indicate a need for developing personal awareness as well as awareness of others. Consumer relations also rated highly, perhaps indicating a need for personal and practical economics.

MACHINE TOOL TECHNICS

The machine tool technicians graduates are typically placed in tool and die apprenticeships. Constant learning throughout the program and expanding into his working years creates the need for communication skills related to learning. Rated as essential were: listening, reading, study skills, vocabulary and oral skills. Job application procedures also ranked high, indicating the possibility and need for job advancement or change.

The technics group surveyed ranked all areas of Human Relations as essential, again emphasizing learning on the job. Other highly ranked areas included mental health, relating to and getting along with others and understanding oneself. These indicate a need to better know oneself for setting and achieving realistic goals.

Machine Tool Technicians

ONE YEAR VOCATIONAL

ACCOUNT CLERK

Basic arithmetic is essential in job entry skills for the account clerk. Most students entering this program satisfy this prerequisite but their proficiency needs to be upgraded to increase both accuracy and speed of calculation. A knowledge of the efficient use of calculators is helpful in attaining this skill. In addition, it is desirable to have a good business background in the following units: percent, averages, payroll, taxes, interest, bank records, cash and trade discounts, commissions, markup and markdown, depreciation, inventories and turnover, stocks and bonds, insurance, annuities, financial statements and statistics.

The account clerk does not have a need for Applied Science in the curriculum. The survey results verify this.

AUTO BODY REPAIR

Many of the auto body repair students have a poor mathematical background; therefore, it becomes necessary to have remedial basic arithmetic units in their curriculum. It is also essential that they have an understanding of English units of measure, the metric system, percent involving cash and trade discounts, averages, ratio and proportion, surface area and calculation techniques by longhand and calculator.

It is desirable for the student who may become a manager or owner of a shop to have a business mathematics background. The following units of instruction could be offered as electives: payroll, taxes, interest, bank records, commissions, markup and markdown, depreciation, inventories and turnover, stocks and bonds, insurance, annuities, financial statements and statistics.

In regard to science, the survey shows considerable interest in properties of matter, mechanics and machines, electricity and heat.

CLERK-TYPIST

Since duties vary from office to office, the various mathematical skills used will differ. It is desirable to have a good basic arithmetic background and, in addition, good calculation techniques both in longhand and calculator.

Various units of business mathematics as now taught are considered desirable.

The clerk-typist does not have a need for applied science in the curriculum, and the survey results verify this.

DATA PROCESSING

According to the survey, basic arithmetic is essential and applied algebra is desirable in the data processing curriculum. It is also essential to have good calculation techniques by longhand, calculator and charts.

All business mathematics units as presently taught are necessary.

The data processing curriculum does not offer applied science. However, the survey shows that most units of mechanics and machines, all of the electrical units and some of the heat units are desirable.

ELECTRONIC SERVICING

The electronic serviceman is working with different kinds and sizes of electronic devices. It is essential that he is proficient in the following math units, viz., basic arithmetic, percent, graphs, averages and calculation techniques by longhand, calculator and charts. He also showed considerable interest in taxes, cash and trade discounts. All other units of arithmetic, algebra, geometry and trigonometry were considered necessary to be in the curriculum. While the student does not have a course in business mathematics in his curriculum, he showed much interest in it.

In the area of science, all units of electricity as taught are essential. This is also true of pulley systems and heat measurement. It is necessary that properties of matter, mechanics and machines and the other units of heat, excepting liquid freezing point, be included in the curriculum.

FOOD SERVICE ASSISTANT

Because the food service assistant will be working with large numbers of people and estimating and preparing different kinds of foods, it is necessary to have a good basic mathematical background. It is also necessary to have proficiency skills in applied algebra, but it is not now in the curriculum. Calculations by longhand and calculators are also important.

All units in business mathematics are necessary.

In regard to applied science, it is not included in the program, but there is desirable interest in the unit on gears, most electrical units, temperature measurement and devices and heat measurement and transfer.

MACHINE TOOL OPERATION

Course content relative to machine tool operation appears to satisfy the requirements of the average operator for job entry.

Continued experience in a specific area produces operator specialization that course content, because of practical considerations, cannot hope to cover. Survey results in all mathematical areas indicate that all items were agreed upon by the majority of interviewees. Two exceptions noted are those of root extraction and operations with algebraic unknowns as found in handling more than one abstract variable at a time. Increasing use of the electronic calculator steadily forces the decline of the slide rule, which the accompanying chart does not indicate.

Business mathematics and applied science are not part of the curriculum for machine tool operation.

MECHANICAL DRAFTING

All the units of mathematics are essential to the mechanical draftsman. For the student that has a poor mathematical background, mini-courses would be very helpful. Students learn at different rates, and some students need more reinforcement on specific units.

A knowledge of the various units in applied science is desirable and at the present time is being taught in the production tooling course and as an elective.

METAL FABRICATION

It is essential for the student of metal fabrication to be proficient in basic arithmetic, applied algebra, applied geometry, applied trigonometry and the various calculation techniques.

Applied science is not currently a part of this curriculum. The survey shows a strong interest in all portions of applied science. Mini-courses could be set up as electives to enrich the program.

OFFICE MACHINE REPAIR

A very small sampling for this program makes it difficult to arrive at any definite conclusion. Basic arithmetic content and work in percent, graphs and averages is considered essential, while some selected items found in the business mathematics section were considered desirable.

Generally, the content topics of applied science were regarded as no more than desirable. Apparently, the needs of this program are few and very select.

Before any action can be taken toward establishing behavioral objectives for this program, it is recommended that this sampling be enlarged.

OPERATING ROOM ASSISTANT

While our school assumes that each operating room assistant student has a background of sixth grade mathematics, mini-courses can be devised to reinforce the student in areas that are essential to the student. These areas would be in basic arithmetic, English units of measure, metric system, percent, graphs, averages and ability to make calculations by longhand, slide rule, calculator and the use of charts.

In the science area, it is essential for the student to have some knowledge in the properties of liquids and gases.

PRACTICAL NURSING

It is assumed that each student has a background of sixth grade mathematics, but mini-courses can be devised to reinforce the student in areas that are essential to the student. These areas would be in basic arithmetic, English units of measure, metric system, graphs, proportions, the ability to make calculations by longhand and the use of charts.

In the science area, it is essential for the student to have some knowledge in the properties of solids and liquids. It is also necessary to have knowledge of temperature measurement, measuring devices and liquid boiling and freezing points.

SMALL ENGINE AND CHASSIS REPAIR

Mathematics content for this program follows closely that of auto mechanics. Again, those items through Calculation Techniques that surveyed as nonessential are not part of this program's course content. Square root extraction is the exception to this and should be deemphasized or perhaps removed completely from the course content.

Portions of business mathematics, currently not part of the curriculum, should be considered seriously for a limited presentation to cover preparation for running a small business.

Many items of the applied science section received strong affirmative response. Applied science, too, is not a part of the curriculum for this program. If the items marked as essential are not covered as part of other courses, they could be considered for presentation in some sort of a science mini-course.

TWO YEAR VOCATIONAL

AGRICULTURAL MECHANICS

Basic arithmetic emphasis is essential with lesser attention necessary in the areas of applied algebra, geometry and trigonometry. The survey sampling for this program was extremely small, so to point out trends and needs in this area would be difficult. Extraction of roots and slide rule operation obviously are not among the needs of the agricultural mechanics.

Business mathematics is not included in the curriculum, though a few items such as payroll, taxes and interest are identified as desirable and can easily be incorporated.

Though the response was limited, the applied science section shows a very strong approval of the current course content.

AUTO MECHANICS

The study seems to indicate that the course content, as it now stands, is more than adequate to meet the needs of the automotive service field. Those areas of study showing the stronger negative response--applied trigonometry and certain portions of business mathematics--are either not taught by the General Education department or are not part of the shop mathematics course content for the auto mechanic. An exception to this is the item of square and cube roots. While cube roots are not included in the mathematics course, square root extraction is included relative to calculations involving swept volume and compression ratio. Square root application in this instance might find value if one should wish to determine bore diameter when swept volume is known. At this level of education, a problem such as this is not of practical value to the average mechanic and should be ignored.

All indications point to the continued presentation of course content as it now exists but with less emphasis on operations with the common fraction. Concentration on use of charts and simplified calculators is important in most standard servicing and repair practices.

Response in the applied science section was most strong in the electricity unit and weakest in mechanics and machines. It is suspected that fundamental scientific concepts are so buried and interwoven with the other elements of routine auto mechanics that their identity is often lost to the mechanic.

MACHINE TOOL TECHNICIANS

A good math background is a prime requisite for the machine tool technician students. The survey shows that all units as taught are essential in arithmetic, applied algebra, applied geometry and applied trigonometry.

For the student who has an excellent math background, mini-courses in business mathematics might be used as electives. According to the survey, interest is shown in this area.

Applied science is not currently a part of this curriculum. The survey shows a strong interest in all portions of applied science. Mini-courses could be set up as electives to enrich the program.

EVALUATION

At the conclusion of the project several state staff members were invited to Moraine Park District to participate in evaluation of the project. Opportunity was provided to critique the various aspects of the project and finally to determine whether objectives had been met. Representing the State office were:

George Kinsler - Director, Bureau of Program Development
Robert Johnson - General Education Consultant
Doyle E. Beyl - Director, Bureau of Research, Professional and Student Development
Roland Krogstad- Research Consultant
Larry Allwardt - Trade and Industry Consultant

Reference was made to other studies conducted in the State VTAE system - Southwest Wisconsin, Fenimore and Nicolet, Rhinelander. Positive correlation between the studies was in evidence.

Each phase of the project was set within a time frame which established checkpoints for the project. Recommendations for changes were noted for improving the survey instrument, the interview technique. A larger sampling would have increased reliability of the findings.

The varying interviewing techniques used by individuals resulted in variations in data collected. More time should have been allotted to testing the survey instrument which would tend to correct this difficulty.

A letter of thanks was sent to all businesses, industries and individuals surveyed.

Moraine Park Technical Institute

District Office 235 North National Avenue, Fond du Lac, Wisconsin 54935 (414) 922 8611

July 1, 1974

Moraine Park Technical Institute has recently completed a survey of businesses and industries in the district to review course content in general education courses.

We would like to take this opportunity to thank you for participating in the survey.

It has been beneficial to the staff to have an opportunity to meet directly with you and your employees. Pertinent information was gathered which will contribute to restructuring and upgrading present course offerings.

Thank you again.

Yours truly,

Robert P. Sorensen, Ph.D.
District Director

Moraine Park Vocational, Technical and Adult Education District
Robert P. Sorensen, Ph. D.
District Director

CONTINUATION OF PROJECT

Funds to continue Project 10-044-151-224 have been identified. The new project 10-044-151-225 has established the following objectives:

1. Write behavioral objectives for each unit of study to be included in courses in mathematics, science and human relations.

2. Develop an instructional design for each unit considered as essential or needful to the course.

3. Reorganize the counseling procedure to adapt to the new curriculum.

4. Design a pilot project to implement new curriculum.

Volunteer staff members are continuing to move forward to complete the first two objectives. In the process a format is being developed to serve other areas of instruction. On the average of 4 hours per week are being spent to accomplish this purpose. The following schedule will serve as a guide:

October		Joint staff meetings to clarify goals
November 16 December 28 February 22 April 22	Review Dates	4 hours/wk./instructor Develop instructional materials
May 27 - June 30		Design pilot project/ Corresponding counseling procedure

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 150P.

ABSTRACT: THIS NINTH IN A SERIES OF REPORTS SUMMARIZES INFORMATION RECEIVED FROM STATE RESEARCH COORDINATING UNITS (RCU'S) REGARDING RESEARCH ACTIVITIES CONDUCTED UNDER SECTION 131(B) OF PART C OF THE VOCATIONAL EDUCATION AMENDMENTS OF 1968 DURING THE PERIOD OF JANUARY 1 THROUGH JUNE 30, 1974. THE PURPOSE OF THIS REPORT IS TO PROVIDE INFORMATION THAT WILL ASSIST THE STATES TO BE AWARE OF RESEARCH AND DEVELOPMENT CONDUCTED BY OTHER STATES, THUS FACILITATING EXCHANGE OF INFORMATION AND REDUCING DUPLICATION OF EFFORT. THE INDIVIDUAL STATE REPORTS INCLUDE THE PROJECTS COMPLETED, NEW PROJECTS FUNDED, RESEARCH RELATED ACTIVITIES, AND PROJECTS AND ACTIVITIES PLANNED. NAMES OF EACH RCU AND STATE VOCATIONAL EDUCATION DIRECTOR ARE INCLUDED. (AUTHOR/NJ)

FOREWORD

This report summarizes information received from State Research Coordinating Units (RCU's) regarding research activities conducted under Section 131(b) of Part C of the Vocational Education Amendments of 1968. This report covers the second six months of Fiscal Year 1974. The purpose of the report is to provide information that will assist States to be aware of research and development conducted by other States, thus facilitating exchange of information and reducing duplication of effort.

This Semiannual Report has been prepared by Larry Braaten, Chief, Demonstration Branch and Annette Miller of the Demonstration Branch of the Division of Research and Demonstration. This is the ninth in a series of reports on the activities of the State RCU's. The previous reports are listed below:

a. Annual Report on State Research Coordinating Unit Activities for Fiscal Year 1970 (ED-053-293)

b. Semiannual Report on State Research Coordinating Unit Activities for the Period July 1, 1970 to December 31, 1970 (ED-052-381)

c. Semiannual Report on State Research Coordinating Unit Activities for the Period January 1, 1971 to June 30, 1971 (ED-067-463)

d. Semiannual Report on State Research Coordinating Unit Activities for the Period July 1, 1971 to December 31, 1971 (ED-068-718)

e. Semiannual Report on State Research Coordinating Unit Activities for the Period January 1, 1972 to June 30, 1972 (ED-076-781)

f. Semiannual Report on State Research Coordinating Unit Activities for the Period July 1, 1972 to December 31, 1972 (ED-080-720)

g. Semiannual Report on State Research Coordinating Unit Activities for the Period January 1, 1973 to June 30, 1973

h. Semiannual Report on State Research Coordinating Unit Activities for the Period July 1, 1973 to December 31, 1973

Copies of the above reports with assigned ED numbers can be obtained from the ERIC Document Reproduction Service.

Howard F. Hjelm
Director, Division of
Research and Demonstration

November 1974

INTRODUCTION

For fiscal year 1974, the States received $9 million under Section 131(b) of Part C of the Vocational Education Amendments of 1968. These funds could be used for paying up to 75 percent of the costs of the State Research Coordinating Unit (RCU) and for grants and contracts covering 90 percent of the costs of research and/or developmental projects. The minimum received was $12,068 by Alaska and the maximum was $762,090 by California. Thirty States received more than $100,000 for research and development. Among these 30 States, 17 received more than $200,000 and 7 more than $300,000.

By the end of the fiscal year, nearly all of the States reported the expenditure of FY 1974 funds for grants and contracts. More than 300 new grants and contracts were approved, with approximately 50 percent of the projects relating to career education and development of curricula and instructional material. Titles reported for other studies indicate continued emphasis in the areas of evaluation, administration and planning, including investigations into improving management information systems for followup and data analysis.

In addition to the main function of administering the State's R&D program, reports indicate that extensive consultant services are being provided to teachers and researchers in both the secondary and postsecondary institutions. An increasing number of States are striving to improve dissemination functions and are bringing the products of R&D directly to the practitioner. Especially significant is the increasing utilization of microfiche and the development of search and retrieval capabilities within the State department headquarters.

The nature of the projects reported tends to indicate that State-administered R&D projects are making worthy contributions to the research literature and have provided significant assistance to many communities in launching career education programs.

The Semiannual Report which follows is a compilation of State Research Activity Reports covering the third and fourth quarters of FY 1974 which have been received from the States. Additional information on projects listed under the category of "new projects funded" may be found in the "Research Projects in Progress" section of Abstracts of Instructional and Research Materials in Vocational and Technical Education (AIM/ARM), published by the Center for Vocational and Technical Education, Ohio State University. Final reports of the "projects completed" are abstracted in the monthly issues of Research in Education and/or in the bi-monthly issues of AIM/ARM. All reported research projects administered by the State educational agency were included in this report, whether or not they were funded under Section 131(b) of Part C.

Summaries of

State Research Coordinating Unit

Semiannual Reports

for the period

January 1, 1974 - June 30, 1974

ALABAMA

T.L. Faulkner, State Director of Vocational Education
Douglas Patterson, RCU Director

PROJECTS COMPLETED:

1. Implementation of Career Education K-12 in the Phenix City Public Schools, Phenix City Schools

2. Proposal for Career Education Project in Vocational-Technical Education, Mobile County

3. Montgomery County's Approach to Career Education-Grades One Through Twelve, Montgomery County

NEW PROJECTS FUNDED:

1. Joint Leadership Training Conference for Selected Students and Advisors of Alabama's Vocational Youth Organizations, John M. Patterson, State Technical College

2. Distributive Education Dissemination Project, John M. Patterson, State Technical College

RESEARCH RELATED ACTIVITIES:

1. Conducted pilot study for automated collection of secondary enrollments in selected service areas

2. Computerized the fiscal accounting and personnel records

3. Investigation of computer system peripherals for cost effectiveness and selected optical scanning device and appropriate magnetic tape recorder

4. Prepared occupational demand for the state by service area and by OE code

5. Revised Area Vocational Center course offerings, course codes and occupational demand

6. Prepared reports of dropout and unemployment rates for two employment regions

7. Prepared the 1974-75 Alabama State Plan for Vocational Education

8. Curriculum developed to include energy conservation measures applicable in each service area

PROJECTS AND ACTIVITIES PLANNED:

1. Collect enrollment data on all secondary students in vocational education and add to existing fiscal data base

2. Establish systematic manpower analysis reporting procedures

3. Preparation for collection of data for the state and federal reports

4. Assess state vocational education needs

5. Evaluation of local vocational programs

ARIZONA

Eugene L. Dorr, State Director of Vocational Education
Beverly Wheeler, RCU Director

PROJECTS COMPLETED:

1. Development of 8-10 Profiles of Decision Making in Mexican-American Families, ASU

2. P.E.P. Pre-Vocational Education, Casa Grande Elementary Schools

3. Pinal County Employability Program, Central Arizona College

4. Educational Needs Assessment of Adults in the Globe/Miami Area, Eastern Arizona College

5. Yuma Union High School District Career Preparation Laboratory Project, Yuma Union High School District, Kofa High School

6. Career Awareness Packages for Incarcerated Youth, Maricopa Skills Center

7. Profile of School Dropouts in Mesa Public Schools, Mesa Public Schools

8. A Motivational Math Lab, Nogales High School

9. A Computerized Task Inventory System for Providing Curriculum Content, Northern Arizona University

10. Development and Evaluation of a Guide for Individualized Instruction in Distributive Education, Phoenix Union High School District, South Mountain High School

11. Development and Use of Challenge Exams for Clinical Laboratory in Nursing II (Part I), Pima Community College

12. A Follow-up Survey of Graduates of Sunnyside High School to Determine Vocational Placement, Sunnyside High School District #12

Arizona

13. A Survey to Ascertain Vocational Home Economics Needs in Tucson District #1, U of A

NEW PROJECTS FUNDED:

1. Development of 8-10 Profiles of Decision Making in Mexican-American Families, ASU

2. P.E.P. Pre-Vocational Education Program, Casa Grande Elementary Schools

3. Educational Needs Assessment of Adults in the Globe/Miami Area, Eastern Arizona College

4. Career Awareness Package for Incarcerated Youth, Maricopa Skills Center

5. Profile of School Dropouts in Mesa Public Schools, Mesa Public Schools

6. A Computerized Task Inventory System for Providing Curriculum Content, NAU

7. Development and Evaluation of a Guide for Individualizing Instruction in Distributive Education, Phoenix Union High School District, South Mountain High School

8. Development and Use of Challenge Exams for Clinical Laboratory in Nursing II (Part I), Pima Community College

9. A Follow-up Survey of Graduates of Sunnyside High School to Determine Vocational Placement, Sunnyside High School District #12

10. A Survey to Ascertain Vocational Home Economics Needs in Tucson District #1, University of Arizona

RESEARCH RELATED ACTIVITIES:

Wrote and disseminated four career education booklets:

<u>Questions and Answers About Career Education</u>

Arizona

Why Career Education in Arizona?

Arizona Career Education--What Is It?

Career Education and You--The Teacher

PROJECTS AND ACTIVITIES PLANNED:

1. Conduct a state-wide survey to determine availability of microfiche readers

2. Develop a slide/tape presentation on the services offered by the RCU to be made available to the twenty career education projects in the state

3. Develop an activity-based publication(s) by grade level, subject area, and career education element utilizing material developed in Arizona

4. Supervise the refining and dissemination to state implementation sites Arizona-produced field tested units

ARKANSAS

Luther Hardin, State Director of Vocational Education
Jack D. Nichols, RCU Director

PROJECTS COMPLETED:

1. Teaching Techniques and Resource Material Development for Nutrition Education Among Disadvantaged Youth & Adults, University of Arkansas, Fayetteville

2. The Development of Sequential Self-Paced Vocational Activities Units Utilizing Multi-Media for Use in Vocational Aptitude Evaluation Carrels..., Little Rock School District

3. Thirteen (13) Local Action Oriented Research and Development Mini-Grants, Statewide

4. The Development and Testing of Single Occupation Film Loops and 135 MM Color Slides..., University of Arkansas, Fayetteville

5. ...A Study to Determine the Correlation Among Student Interests, Vocational Courses Pursued and Job Entry Occupational Choices, Newport Public School

NEW PROJECTS FUNDED:

1. A Comparative Study of the Occupational Achievement of Vocational and Non-Vocational High School Graduates in the State of Arkansas, Educational Planning and Evaluation Services--Magnolia, Arkansas

2. A Unified School-Community Approach to Remodel Guidance Services and Expand Next Step Placement and Followup, State Department of Education

RESEARCH RELATED ACTIVITIES:

1. "Arkansas EXPO '74 Vocational Curriculum Fair," a personnel development activity funded under the Education Professions Development Act, Part F, Section 554 for the purpose of familiarizing teachers with new curricular materials

Arkansas

2. Integrating Career Education into the consumer and Homemaking Curriculum

3. Vocational Education Leadership Program for 1973-74

PROJECTS AND ACTIVITIES PLANNED:

1. A Comparative Study of Alternative Methods and Techniques in Stenographic Training

2. Continue State Career Development project at Russellville involving seven school districts and other ongoing R&D projects

3. Inservice training for personnel involved in R&D projects

CALIFORNIA

Samuel L. Barrett, State Director of Vocational Education
James Crandall, RCU Director

PROJECTS COMPLETED:

1. Development of an Audiovisual Self-Identification Model for Use in Vocational Counseling, Arthur N. Cherdack, Los Angeles Community College District

2. Priority Determination for Vocational Education Through a Formal Needs Assessment Process, Otto A. Heinkel, San Diego Community College District

3. A Comparison Between Automated Method and Two Conventional Methods of Data Collection for Vocational Student Followup Studies, Mel Barlow and Joseph A. Miller, U.C.L.A.

4. Selected Business Educational Curriculum Standards and Practices in United States Public Secondary 1971-72, Mel Barlow and Christ Chialtas, U.C.L.A.

5. Survey of Occupational Cognizance, Cliff Purcell and Charles C. Brady, Santa Barbara City High School

6. Development of a Model for Determining Needs for Vocational Education Personnel--A Profile of Vocational Educators, Mel Barlow and Vern Halcromb, U.C.L.A.

7. Program Planning - Case Studies of the Impact of Organization and Operation of School System after Implementation of a Program that has Components of Career Education, Mel Barlow and Ralph Bregman, U.C.L.A.

8. Impact of Career Testing and Human Potential Seminar Training Upon Persistence and Performance of High Risk Students Declaring Vocational Majors, Thomas F. MacMillan, Mendocino Community College District

9. Career Education Opinions of Elementary Teachers, Mel Barlow and Jeff Reyes, U.C.L.A.

California

NEW PROJECTS FUNDED:

1. A Study of Career Centers in the State of California, Thomas J. Jacobsen, Grossmont Union High School

2. A Study of the Vocational Entitlement and Grants Management System, Melvin Barlow, University of California, Los Angeles

3. Involvement of Vocational Agriculture Students in Vocational Agriculture Students in Vocational Education Student Organization, O. S. Gilbertson, Larry Rathbun, Joseph Sabol, California Polytechnic State University Foundation

4. Career Education Opinions of California Educators, Melvin L. Barlow, U.C.L.A.

5. California Industrial Education Program Guide, Norman R. Stanger,California State University, Long Beach

6. Curriculum Competencies Needed and Possessed by Vocational Education Administrators in California

7. Experiment to Determine the Effects of Repetition and Alternating Levels of Practice on Learning to Typewrite, Melvin L. Barlow, Barbara Simi, U.C.L.A.

8. An Empirical Comparison Between the Gregg and Laurie Shorthand Systems, Lawrence W. Erickson, Charles T. Laurie, The Regents of the University of California

9. A Survey of Teacher-Pupil Relationships of California Vocational Agriculture Teachers Trained by Full Pay Intern Program, Melvin L. Barlow, Robert J. Winterbourne, The Regents of the University of California

10. Field Testing of HumRRO Office Education Materials, Phil Garver, Jr., Robert Fuller, Clovis Unified School District

11. An Evaluation of Self-Administration and Self-Interpretation of the California Occupational Preference Survey, Patricia Lux, James Saum, San Juan Unified School District

California

12. Assessment of Attitudes and Expectations of High School Teachers of Vocational Agriculture and Industry, O. S. Gilbertson, California Polytechnic State University

13. The Measurement of Attitudes of Chicano Freshmen Who are Preparing for a Criminal Justice Career, George T. Payton, San Jose Community College District

14. Research Training, J. R. Toothaker, Pasadena Area Community College District

15. Compton-Minority Community Attitude Survey, Rosetta Barnett, Compton Community College District

16. Field Test of Project #42-10421-C048-71: The Research and Evaluation of Followup Studies of High School Graduates Using Sampling Methods, William Harris, Santa Barbara County Schools

17. Chartering, James Farmer, Coast Community College District

18. Profiles of Community College Students in Career Programs for Use in Occupational Counseling, Richard E. Whiteman, Cerritos Community College District

19. Manpower Projection Model System: Phase II, W. H. Lawson, Odessa Dubinsky, Ventura County Schools

20. Development, Field Test, and Evaluation of a Method for Statewide Longitudinal Followups of High School Graduates Using Sampling Techniques, Fred E. Orr, William Harris, Santa Barbara County Office of Education

21. Student Perceptions of the Link Between School and Work, Sanford M. Dornbusch, Bruno Zachary, The Board of Trustees of the Leland Stanford Junior University

22. Industry Validated Vocational Performance Objectives, Robert L. Branch, Ralph Thompson, Sacramento County Office of Education

23. Use of Need Assessment in Improving the Utility of Community College Advisory Committees, Otto Roemich, Sidney McGaw, Otto A. Heinkel, San Jose Community College District

California

24. Research on Application of a Self-Actualization Process in Attempt to Improve Effort and Performance in Selected Vocational Programs, Mildred Hight, Hilding Nelson, Mt. San Jacinto Community College District

25. Improving Occupational Student Followup in California Community Colleges, Leslie Koltai, Benjamin Gold, Los Angeles Community College District

26. Project COPES - Part C, Nathan H. Boortz, George Ebey, Foothill Community College District

27. Occupation Needs Assessment of the Elderly, James R. Lagerstrom, Kevin Galvin Los Angeles Community College District

28. Comparison of Listing - Viewing Comprehension Levels of a Junior College Population Enrolled in Vocational Education Compared to the Comprehension Levels of the Learning Materials Utilized in Vocational Education, John Ross, C. E. Woodward, Jr., Harvey B. Rhodes, Yosemite Community College District

29. The Effects of Providing Pre-Educational Treatment to Handicapped Young Adults to Increase their Readiness for College and Vocational Education Programs: A Controlled Research Study, Bryan Kemp, Hospital Attending Staff Association

30. Reasons for Dropout and Inhibitors to Training Related Job Placement of Vocational Education Trainees, William A. Kempf, Ralph Bregman, State Department of Corrections

RESEARCH RELATED ACTIVITIES:

Research related activities during this period included conducting workshops, coordinating research projects between agencies, on-site visits to approved research projects, providing information and consultation to individuals and agencies preparing requests for funds to conduct research, and providing research information and consultation to members of the State staff.

California

1. Workshops: Six workshops were conducted during the period ending June 30, 1974. The workshops involved professional staff members from 38 counties, 79 school districts and 5 regional occupational program and centers. They were conducted as a first phase of Statewide implementation of a followup procedure using sampling methods. The procedure (TRACE) has been produced through three years of research, development and field testing using P.L. 90-576, Part C, Section 131(b) and local funds.

   Three workshops were conducted for State Vocational Education staff to orient them in the use of TRACE at the local level.

2. Project Visitation: Twenty-three onsite visits to research projects were conducted. Both regular and small grants were included. The onsite visits were intended to accomplish the following:

   a. Provide consultation in research methodology to help the agency solve problems that may have developed in the conduct of the project.

   b. Where appropriate, provide resource material that would (1) increase the generalizeability of the results of the project, and (2) strengthen the quality of data produced by the project.

   c. Perform an audit function to assure that (1) the study was being conducted in accordance with the approved project application, (2) personnel employed out of the project funds were performing project functions, (3) changes in objectives, procedures, or budget had prior written approval of the Coordinator of Vocational Education Research, and (4) the project directors' questions concerning reporting procedures were answered prior to submitting progress reports.

   d. Provide information to State staff that might be useful to project or program activities in other agencies.

3. Coordination and Consultation: Consultant service has been provided to State staff members, to individuals studying for higher degrees in vocational education,

and to individuals and agencies in universities, county school departments, local school districts and the State Department of Corrections. Activities have included consultation to insure coordination or research projects in vocational education with district programs of career education and guidance. Coordination of separate research projects within some large school districts has also been accomplished.

COLORADO

M.G. Linson, State Director of Vocational Education
Robert F. Barnes, RCU Director

PROJECTS COMPLETED:

1. A Comparison of Selection Criteria and Student Characteristics in Colorado LPN and ADN Programs, University of Northern Colorado

2. Developing Behavioral Objectives for Pre-Vocational Industrial Education Programs, Pueblo District #60

3. Needs for Vocational Training Programs to Meet Job Demand in Music Industry, Trinidad State Junior College

4. A Survey of Job Demand by Mesa County Businesses with Four or More Employees, Mesa College

NEW PROJECTS FUNDED:

1. A Pilot Program in Consumer Education Through Vocational Business and Office Education and Home Economics Programs, Colorado State University

2. In-Depth Evaluation of Consumer Homemaking Programs in Colorado, Colorado State University

3. Designing a Model for Federal Legislation, AVA

4. Developing Teacher Competencies in Trade and Industrial Education, Colorado State University

5. An Evaluative Study of Vocational Youth Organizations as an Integral Part of Vocational Educational Curricula, University of Northern Colorado

6. A Comparison Between Block Period and Traditional Scheduling of Business and Office Education Programs, University of Northern Colorado

7. A Comprehensive Statewide Adult Needs Assessment in Colorado, Colorado Department of Education

Colorado

RESEARCH RELATED ACTIVITIES:

1. Directed an EPDA, Part F, Section 553, funded Workshop on Developing Strategies for Involving Business, Industry and Labor (B/I/L) in Cooperative Teacher Training for Vocational Education. One state from each of the ten U.S.O.E. regions was invited to send a team of six participants - three from B/I/L, two from teacher education and the State Professional Development Coordinator. Workshop strategies and materials were developed by the Eckman Center who also furnished staff for the training. Each state team developed a total plan for implementation by the end of the workshop. Followup activities are being planned for next spring.

2. The RCU staff spent a great deal of time with the Research and analysis staff of the Colorado Department of Labor and Employment working out problems in total implementation of the BLS Occupational Employment Statistics (OES) Program. At present, data will soon be available for Manufacturing and Non-Manufacturing employment estimates. These data will be available by county, planning and management regions (13) and statewide. The MIS Supervisor will be developing an interface system between these data and the Division's enrollment and completion data.

3. The State Board and the Colorado Department of Education (CDE) entered into a contractual agreement to conduct a Statewide Adult Need Assessment. The RCU staff (SBCCOE) and the Adult Education staff (CDE) are responsible for carrying out this project. A project manager and staff are hired and data collection instruments are being developed. A sample of about 8,000 adults will be interviewed in the State. Data will also be collected from all agencies offering services to adults as well as from a sample of employers. Data collection will be complete by October 15 and the first preliminary report is due November 30. The final report is scheduled for June 1, 1975.

Colorado

PROJECTS AND ACTIVITIES PLANNED:

Research priorities for FY 75 have been identified and approved. Funding of all research activities with 131(b) monies will be limited to these priority areas. The priorities are:

1. Support projects that show the influence of occupational education programs on students being served in Colorado

2. Support projects that provide outputs that will identify and bring about needed changes in Occupational Counseling and Guidance in Colorado

3. Support projects that provide information relevant to decision-making and management as State and local levels of Occupational Education in Colorado

4. Support projects that provide outputs to improve the quality of Occupational Education programs in Colorado

5. Support projects that provide knowledge for improving the quality of teaching in Occupational Education in Colorado

A list of these priorities with guidelines for submitting "idea papers" (prospectus) will be sent to each Vocational Educator in the State.

A series of regional workshops for local vocational staff members are planned. The objective of these workshops is to improve the quality of proposals being submitted. If this objective is attained, the amount of staff time required for assisting in proposal development should be decreased.

The RCU staff will be heavily involved in training field staff for the Adult Needs Assessment project. An orientation workshop will be held for the 13 Field Coordinators. Three workshops will also be conducted to train the interviewers employed by the Field Coordinators.

CONNECTICUT

Herbert Righthand, Acting State Director of Vocational Education
Richard C. Wilson, RCU Director

PROJECTS COMPLETED:

1. Client Need Analysis to Determine the Need for Vocational Services for Handicapped School-Age Persons in the Greater New Haven Area, Area Cooperative Educational Services, North Haven, Connecticut

2. A Survey of Community Resources and Employment Opportunities Having Implications for Programs of Vocational Agriculture in Connecticut: Phase I, Univ. of Connecticut, Storrs

3. Research Study on Planning Expansion of Connecticut Regional Vocational-Technical Schools, University Research Institute of Conn., Inc., Wallingford

4. World of Work, Vocational Self-Concept and Career Planning, Hartford Board of Education

5. Career Education Program: Troup Middle School, New Haven Board of Education

6. Project 70,001, Hartford Board of Education

7. Alternative School-"Open Door", Waterbury Bd. of Ed.

8. Career Guidance Program, Urban League of Greater Hartford

9. Career Education in the Norwalk Public Schools, Norwalk Board of Education

10. Development and Operation of a Career Education Center, University of Bridgeport

NEW PROJECTS FUNDED:

1. Client Need Analysis to Determine the Need for Vocational Services for Handicapped School-Age Persons in the Greater New Haven Area, Area Cooperative Educational Services, North Haven, Connecticut

2. Research Study on Planning Expansion of Connecticut Regional Vocational-Technical Schools, University Research Institute of Connecticut, Inc., Wallingford

Connecticut

RESEARCH RELATED ACTIVITIES:

1. Administered Part C and Part D State projects

2. Disseminated research reports, releases, and other materials

3. Completed annual evaluation reports for State Legislature on research and exemplary programs

4. Prepared publication on 1973 graduate followup data

5. Served as liaison between Division of Vocational Education and State Labor Department

6. Attended USOE Regional Meeting on reporting procedures in Boston on May 30

7. Attended RCU Personnel Conference in Scottsdale, Arizona, March 18-21

8. Coordinated development of State Plan for Vocational Education for FY 1975

9. Attended State Board of Education public hearing on State Plan

10. Met several occasions with State Advisory Council representatives regarding development of State Plan

11. Participated in meeting with Education Committee of State Legislature regarding funding patterns and formulae for local education agencies

12. Collected end-of-year enrollment data for all vocational programs

13. Served as liaison between Division of Vocational Education and Program Review Committee of State Legislature on special study of secondary vocational education

Connecticut

14. Served as Division of Vocational Education representative on Department Executive Committee on Needs Assessment

15. Served as Division of Vocational Education representative on Departmental CEIS Committee

16. Attended meeting of CEIS Subcommittee on Occupational and Adult Education in Columbus, Ohio on January 8

17. Met on separate occasions with Vocational Education Sub-Committee of State Board of Education regarding State Plan development

18. Collected, processed, and compiled graduate followup data for 1973 vocational graduates and completed USOE Followup Report

19. Arranged for and attended presentation on MISOE (Management Information System for Occupational Education) given by Massachusetts representative on February 28

20. Worked with data processing personnel in updating and revising Connecticut Vocational Education Information System (CVEIS)

21. Served on Graduate Followup Guidelines Committee

22. Compiled USOE statistical report for FY 1973

23. Attended Career Education Conference at University of Connecticut on March 29

24. Participated in evaluation of Somers High School by New England Association of Colleges and Schools

PROJECTS AND ACTIVITIES PLANNED:

1. Long-Range Followup Study of Connecticut Secondary School Distributive Education Graduates

2. A Survey of Community Resources and Employment Opportunities Having Implications for Programs of Vocational Agriculture in Connecticut: Phase II

3. Development of Career Guide to Vocational Education Program in Connecticut.

DELAWARE

Conrad C. Shuman, State Director of Vocational Education
Burton Braverman, RCU Director

PROJECTS COMPLETED:

1. Development of a Model Delivery System for Comprehensive Exploratory Programs for Grades Five Through Nine, Seaford School District (The first year of this project has been completed, and a final report prepared)

2. Career Education Demonstration Project, Caesar Rodney School District (This project has been completed and copies of the final report have been forwarded to the U.S. Office of Education)

NEW PROJECTS FUNDED: NONE

RESEARCH RELATED ACTIVITIES: NONE

PROJECTS AND ACTIVITIES PLANNED: NONE

DISTRICT OF COLUMBIA

Paul E. Cawein, State Director of Vocational Education
Jeannie H. Carter, RCU Director

PROJECTS COMPLETED:

1. Vocational Education and Urban Youth a Followup Study of 1968, 1971 and 1972 Graduates of the Public Schools of the District of Columbia, Center for Occupational Education, North Carolina State University, Robert L. Morgan, Project Director

NEW PROJECTS FUNDED:

1. Project INFO - To determine the impact of a readily accessible information and resource center for program and curriculum development. Houses a microfiche library collection, instructional and curriculum materials. Bruce Administration Center, Public Schools of the District of Columbia, Mrs. Ouida Madel, Project Director.

RESEARCH RELATED ACTIVITIES: NONE

PROJECTS AND ACTIVITIES PLANNED: NONE

FLORIDA

Joe D. Mills, State Director of Vocational Education
K. M. Eaddy, RCU Director

PROJECTS COMPLETED:

1. Field Test the Development of Elementary Curriculum for Career Education (D4-001), Ernest Upthegrove, Dade County Public Schools, Miami

2. Develop and Evaluate a Placement and Followup System (BR-1383), Clifford A. Bellum, Sarasota County Public Schools, Sarasota

3. Study of Pupil Personnel Services for Elementary Counselors in Career Education (C4-003), Harman Burck, Florida State University, Tallahassee

4. Design, Develop and Disseminate a Professional Career Education Self-Instructional System - PROCESS (BR-4-0023), James Edmundson, Florida State University, Tallahassee

5. Field Test and Complete Project LOOM (C4-004) - Learner Oriented Occupational Materials, Ernest Berger, Florida State University, Tallahassee

6. Development of Project FAIS (C3-075) - Fusion of Applied and Intellectual Skills, M. F. Smith, P. K. Yonge Laboratory, University of Florida, Gainesville

7. Dissemination-Diffusion Process in Selected Florida Schools (B3-0017), A. J. Lewis and J. W. Hensel, University of Florida, Gainesville

NEW PROJECTS FUNDED:

1. Continuation of FERIC Satellite Center (C3-0072) - Florida Educational Resources Information Center, George Sloan, Pensacola Jr. College, Pensacola

2. Dissemination of Employability Skills Catalog (C3-079), James C. Edmundson, Career Education Curriculum Laboratory, Tallahassee

Florida

3. Research Assistant Program (C3-076), Robert Lathrop, Florida State University, Tallahassee

4. Project Agriculture Manpower Survey & Analysis of Data & Develop Curriculum (Research Study)(C3-073) W. T. Loften, University of Florida, Gainesville

5. Graduate Assistants Program (C3-074), R. O. Gallington, Florida State University, Tallahassee

6. Identifying Performance Objectives Needed by Workers in Tourism Related Industries (C4-008), L. M. Buckner, Florida Atlantic University, Boca Raton

7. Controlled Vocabulary Approach to Teaching Shorthand (C4-011), Everett L. Groover, Duval County Public Schools, Jacksonville

8. Exploratory Study of Competency Based Teacher Education Programs in Occupational Home Economics (C4-101), Bonnie B. Greenwood, Florida State University, Tallahassee

9. Evaluation of Career Education Programs in Orange, Broward, Brevard, Leon, Escambia, Duval, Dade, and Hillsborough Counties (C4-002), L. H. Perkins, University of West Florida, Pensacola

10. Preparation of Teachers for Utilization of the Valuing Approach to Career Education (C4-012), J. B. Hodges, P. K. Yonge Laboratory, Gainesville

11. Distributive Education Dissemination Project (C4-007), L. M. Buckner, Florida Atlantic University Boca Raton

12. Placement and Progress of Florida's Technical Graduates (Phase II)(C4-006), J. W. Hensel, University of Florida, Gainesville

13. Phase III - Student Personnel Services at Area Vocational Technical Centers (C4-005), J. L. Wattenbarger, University of Florida, Gainesville

Florida

14. A Project to Develop and Implement Curricula for Florida Vocational Exemplary Programs (C4-001), L. H. Perkins & John Crittenden, University of West Florida, Pensacola

15. Completion of Report on 3-Year Curriculum Development Project FAIS (C3-080), J. B. Hodges, University of Florida, Gainesville

16. A Summary Report on Communication and Teaching Effectiveness in Vocational Education (C4-009), Churchill Roberts, University of West Florida, Pensacola

17. Comprehensive Career Education Development Program (CC3-001), Evelyn K. Csikos and Sterling Bryant, Leon County Public Schools, Tallahassee

18. A Comparative Study in Business Education Programs in Areas I and III (D4-004), Dolores M. Robinson, Florida A&M University, Tallahassee

19. Articulation Program in Associate Degree Nursing (D4-006), Joseph E. Rhile, Lake Sumter Community College, Leesburg

20. A Comparative Study of Work Experience Programs in Broward County (D4-003), Lucius Crawford, Broward County Public Schools, Fort Lauderdale

21. Development of Criterioned Referenced Objectives Automotive Mechanics (D4-005), Roger L. Richardson, Florida A&M University, Tallahassee

22. Automotive Body Repair (D4-002), Roger L. Richardson, Florida A&M University, Tallahassee

23. Development of Criterion Referenced Objectives in Turfgrass Management (D3-0004), J. Glenn Morrill, University of Florida, Gainesville

24. Continuation of Work of Curriculum Development in Career Education Programs (D4-007), John Crittenden, University of West Florida, Pensacola

Florida

25. Planning for Comprehensive Program of Vocational Education for Career Development K-University (D3-005), Rex C. Toothman, University of South Florida, Tampa

26. CAVIEW: College Adaptation Vital Information for Education and Work (D3-006), Jack Keller, University of West Florida, Pensacola

27. A Comprehensive Vocational Education Program for Career Development in Grades K-12 (DD4-001), Robert S. Megow, Orange County Public Schools, Orlando

RESEARCH RELATED ACTIVITIES:

1. Consulted and provided technical assistance to State-administered vocational and career education projects.

2. Consulted and provided technical assistance to projects established through the U. S. Commissioner's share of discretionary funds.

3. Worked with Southern Association of Colleges and Schools V-TECS Consortium.

4. Conducted a series of meetings throughout the State for placement and followup.

5. Worked with National Curriculum Management Network Centers and National Curriculum Dissemination Project.

6. Developed Management by Objectives System for bureau and division.

7. Worked with legislative committees on career education, research and evaluation.

8. Prepared Presentation on career education for Chief State School Officers annual meeting.

9. Meet with area vocational-technical center directors and local vocational-technical directors to explain research and development for VTAE Division.

Florida

10. Assisted in preparation of career education guidelines for 1974-75, to be utilized with all school districts.

11. Attended the National Research Coordinating Unit Personnel Conference and the Southwide Research Coordinating Council.

12. Worked with U. S. Office of Education personnel studying disadvantaged programs.

13. Worked with council of 100 project.

PROJECTS AND ACTIVITIES PLANNED:

1. Complete the current projects operating through the U. S. Commissioner's discretionary share of research and training, and exemplary funds.

2. Prepare specifications and recommendations for research and exemplary projects for 1974-75.

3. Develop a diffusion/dissemination model for the Vocational Division.

4. Establish new research and exemplary projects funded through discretionary monies.

5. Continue developmental activities for:

   a. placement and followup
   b. career education
   c. curriculum
   d. program standards
   e. management by objectives for research and evaluation bureau.

6. Continue liaison and coordination of vocational research and development efforts in and out of State.

GEORGIA

Russell S. Clark, State Director of Vocational Education
Paul Scott, RCU Director

PROJECTS COMPLETED:

1. The Development of an Individualized Instructional System for Selected Multi-Occupational Programs in the Area Vocational High Schools of Georgia, University of Georgia, Athens

2. Developing and Piloting a Program of Individualized Instructional Systems for Five Postsecondary Vocational Offerings in the Field of Trade and Technical Education, University of Georgia, Athens

3. Survey of Employment Opportunities, Career Ladder, and Training Requirements for Vocational Basic Job Clusters with Projections of Job Openings and Training Requirements to 1976, Georgia Institute of Technology, Atlanta

4. The Establishment of a Research and Dissemination Component in the Vocational Education Division of The University of Georgia, University of Georgia, Athens

NEW PROJECTS FUNDED:

1. Project to Develop Curriculum Materials for the Disadvantaged and Handicapped, Georgia Southern College, Statesboro

2. Vocational Guidance Project, Georgia Department of Education

RESEARCH RELATED ACTIVITIES:

1. In the areas of Data Processing and Machine Shop, produced State of the Art Reports, developed and validated a comprehensive tool, equipment and task listing, produced domain reports as part of the seven-State V-TECS Consortium.

Georgia

2. Developed a manual for writers of performance objectives and criterion-referenced test items.

3. Developed the preliminary study for adopting the California Public Service materials to the Georgia Cluster Program.

4. Consulted with University of Georgia classes on the preparation of research proposals.

5. Prepared a guidance proposal.

6. Worked with local school systems in the development of proposals to fund selected validated programs.

7. Performed numerous searches of the literature.

8. Conducted workshops concerned with career and/or vocational education.

PROJECTS AND ACTIVITIES PLANNED:

1. Implementation of a Public Service Cluster in the Gwinnett County School System.

2. Cobb County, Georgia Diffusion Project.

3. Development and Implementation of a Fine Arts Cluster.

4. Valdosta State College Dissemination Project.

5. Renew membership in V-TECS Consortium.

6. Develop a Statewide Evaluation Plan.

7. Provide mini-grants to school systems for use in adopting validated projects.

HAWAII

Samson S. Shigetomi, State Director of Vocational Education
Sybil Kyi, RCU Director

PROJECTS COMPLETED:

1. A Statewide Followup of Postsecondary Vocational Education Graduates in the University of Hawaii Community Colleges

2. Community College Instructor's Survey of Occupational Needs in Hawaii, Honolulu Community College

3. Study on Molokai and Lanai Job Requirements

4. Kauai Community Occupational Survey

5. A Statewide Followup System of Secondary Level Program Graduates, FY 1972, FY 1973, Data Technical Associates, Honolulu, HI

NEW PROJECTS FUNDED:

1. Statewide Followup Survey on FY 1973 Vocational Education Graduates in the University of Hawaii Community Colleges

RESEARCH RELATED ACTIVITIES:

1. Preparation of individual community college reports on FY 1973 Vocational Education Graduate Followup Survey. Preparation of Statewide report and publication including summary and comparisons with FY 1972 Graduate Followup Survey.

2. Dissemination of and resource consultant for information on AIM/ARM, ERIC, NIE Grant Applications, local manpower, employment and occupational information, other funding opportunities for R&D in vocational-technical programs; maintenance of vocational-technical staff library.

3. Development of and close coordination with Part C Commissioner's grant award project and related EPDA (553) grant award.

4. Development of Statewide occupational employment demand projection model.

5. Preparation of Management By Objectives workshop for State Vocational Convention.

6. A Statewide enrollment data system for secondary level program graduates, FY 1974.

8. A Statewide comprehensive Career Development Continuum (K-14).

9. Inservice experimental team programs at Waianae, Kaimuki and Konawaena high schools.

10. ETV materials development for Career Development Program support at grades 4-6.

11. Career Information and Resource Centers established and maintained at Roosevelt and Kailua high schools.

PROJECTS AND ACTIVITIES PLANNED:

1. Complete Statewide publication on Followup Surveys of FY 1972 and 1973 Vocational Education Graduates.

2. Continue R&D dissemination activities and maintenance of vocational-technical staff library.

3. Recruitment and orientation of staff for Part C Commissioner's grant award project and related EPDA (553) grant award project.

4. Continue development and initiate contractual negotiations for Statewide occupational demand projection model.

5. Conduct Management by Objectives Team (Oklahoma) Visit and coordinate their workshop at State Vocational Convention; help to develop Statewide vocational education administration MBO plan.

6. Preparation of Vocational Education FY 1974 Graduate Survey.

7. Solicit applications for research studies in designated priority areas.

IDAHO

Roy D. Irons, State Director of Vocational Education
Kenneth Hanson, RCU Director

PROJECTS COMPLETED:

1. Evaluation of the Impact of a Comprehensive Program to Improve Office Occupations Education at Madison High School as Measured by Student Competence (R-3), Madison High School School Dist. #321, Rexburg

NEW PROJECTS FUNDED:

1. Career Development through Vital Information for Education and Work (R-12), Sugar-Salem School Dist. #322, Sugar City

RESEARCH RELATED ACTIVITIES:

1. Assisted State staff in the development of Management by Objectives
2. Distributed curriculum information and materials
3. Developed and distributed Idaho State Plan
4. Distributed research reports
5. Participated in review of Exemplary Projects

PROJECTS AND ACTIVITIES PLANNED:

1. Continue development of Management by Objectives
2. Continue curriculum dissemination effort
3. Increase dissemination effort of research information

ILLINOIS

Sherwood Dees, State Director of Vocational Education
Ronald D. McCage, RCU Director

PROJECTS COMPLETED:

1. Computer Based Guidance, Chicago Board of Ed.

2. Analysis of Current Manpower Labor Market Information in Illinois, Phase II, Western Illinois University, Macomb

3. DISCOVER - A Computer Based Guidance and Administrative Support System, Phase I and Phase II, Willowbrook High School, School District #88, Villa Park, Illinois

4. Career Education Resource Laboratory, Phase I, Eastern Illinois University, Charleston

5. To Review, Sunthesize, and Annotate the Body of Literature Written Since March, 1970 in the Areas of Career Development and/or Career Education (Facilitating Career Development: An Annotated Bibliography II), Southern Illinois Univ., Carbondale

6. Consumer and Homemaking Articulation Program, Southeastern Illinois Community College, Harrisburg

7. A Demonstration Center for a Secondary, Post-Secondary and Adult Consumer and Homemaking Program, Kennedy-King Community College, Chicago

8. A Demonstration Center to Exhibit the Merits of W.E.C.E.P. Programs and Ways in Which They May Be Originated, Carbondale Community High School District #165

9. W.E.C.E.P. Demonstration Center for Northern Illinois, School District #46, Elgin, Illinois

10. A Needs Assessment for New and Innovative Programs in Cooperative Education, Person-o-metrics, Inc., Dearborn Heights, MI

Illinois

NEW PROJECTS FUNDED:

1. To Assess the Status of Career Education Activities Supported by the Division of Vocational and Technical Education in Illinois Since 1970, Tadlock Associates, Inc., Los Altos

2. Measuring Career Readiness in Elementary and Secondary Education, Southern Illinois University, Edwardsville

3. A Design for a Regional Occupational Education Coordination Council, Northwestern University, Evanston

4. Survey of Governmental Agencies to Determine Job Opportunities and Related Training Possibilities, Western Illinois University, Macomb

5. DISCOVER - A Computer Based Guidance and Administrative Support System, Phase II, Willowbrook High School, School District #88, Villa Park

6. Tri-County Career Education Project, Illinois Central Community College, Tri-County Industry-Education-Labor Council, East Peoria

7. Thinking for Action in Career Education, National College of Education, Evanston

8. To Develop and Demonstrate a Heavy Equipment Program in Operation and Maintenance for High School Students, Edwards County High School, Edwards County Community Unit School District #1, Albion

9. Career Education for the Handicapped, Springfield District #186, Springfield

10. An Exemplary Program in Occupational Education for the Veteran, Arlington, VA, Has Chicago, Illinois Office -- Control Systems Research, Inc.

11. Implementation and Field Testing of the Adult Vocational Education Model Program, Thornton Community College, South Holland

Illinois

12. An Impact Assessment of the Demonstration Center As a Dissemination Technique, Northern Illinois University, DeKalb

RESEARCH RELATED ACTIVITIES:

1. The Development of a Career Education Model for Grades 7-10, Posen-Robbins School District 14 1/2, Chicago State University, Posen

2. Production of Multiple Copies of a 15-30 Minute Film Based on Illinois Developments in Career Education, Southern Illinois University, Carbondale

3. East St. Louis Career Education Project, East St. Louis School District 189

4. Third Party Evaluation of Six Career Education Projects, Success Research Consultants, Inc., Tinley Park

5. CIOEDC Project, Site A, Elementary Secondary, and Joliet Junior College District/Joliet Township High School District #204, Joliet

6. CIOEDC Project, Site B, Cumberland High School and Junior College/Cumberland Unit School District #77, Toledo

7. CIOEDC Third Party Evaluator, Educational Management Services, Inc., Minnespolis, MN

8. CIOEDC Project Headquarters - Research and Development Unit, Division of Vocational and Technical Education, Illinois Board of Vocational Education and Rehabilitation, Springfield

PROJECTS AND ACTIVITIES PLANNED:

1. A Field Test, Validation, and Refinement of the Career Education Resource Laboratory, Eastern Illinois University, Charleston

2. Implement, Field-Test, and Provide Visibility for the Supply, Demand, Followup, and Cost Analysis Components with Emphasis on the Integration of All Components into a Viable, Interacting System, Continued Project Managed Through Research and Development Unit

3. Development of a Model Placement Center as a Comprehensive, Developmental/Diffusion-Oriented Ancillary Source to be Offered by Local Educational Agencies at the Secondary and Post-Secondary Level, Request for Proposal

4. Initiate an Activity to Develop a Systematic Approach for Determining Teacher Supply, Demand, Qualifications, and Trends on a Statewide Basis, Request for Proposal

5. To Provide for the Support of Innovative Ideas for the Improvement of Career Education that Relate to the Three Goals Supported by Part C Funds, Request for Proposal

6. Refinement and Demonstration of the Career Education Model for Grades 7-10, Chicago State University

7. To Implement, Field-Test, and Refine a Model Occupational Education Program for Disadvantaged Persons at the Secondary Level and to Ascertain Recommendations for Program or Course Changes Based on the Data Collected Pertaining to the Effectiveness of the Model Program and Each of Its Separate Components, Southern Illinois University, Carbondale

8. To Operationalize a Comprehensive Illinois Occupational Education Demonstration Center (K-14) Utilizing Completed Contractual Activities Sponsored by the Illinois Division of Vocational and Technical Education, Request for Proposal

9. The Development and Implementation of New and Emerging Occupational Programs for Young Women at the Secondary Level, Request for Proposal

Illinois

10. To Support a Demonstration Center to Highlight the Five Occupational Clusters Being Field-Tested Under a Contract Issued by the Professional and Curriculum Development Unit, Springfield School District #186, Springfield

11. Develop an Occupational Education Orientation Program Designed to Equip the Student with the Ability to Survive in Today's Work World, Request for Proposal

12. To Provide a Means Whereby the Classroom Teacher Can Make the Most Effective Use of Educational Resources--A Guide for Conducting "Action" Research, Request for Proposal

13. To Conduct a Multi-Stage Comparative Assessment of Secondary and Post-Secondary Consumer and Homemaking Education Programs with Emphasis on Identification of Exemplary Program Components, Request for Proposal

14. To Conduct a Comparative Analysis of the Organizational and Operational Patterns of Regular Cooperative Education Programs as Compared with Special Cooperative Education Programs, e.e., WECEP, CWT, Special Education Programs, DVT, Request for Proposal

INDIANA

Don K. Gentry, State Director of Vocational Education
Carol Ann Hodgson, RCU Director

PROJECTS COMPLETED:

1. Innovative Plan for Teaching Automobile Service Station Occupations, Porter County

2. Pre-Vocational Program at a Middle School, North Gibson Sch. Corporation

3. The Development of a Vocational Management by Results Model for State and Local Vocational Administration to Create an Annual and Five Year Plan for High Schools in Indiana, Ross Township

4. A Follow-up on the Plans of Indiana High School Seniors in the Class 1972, John Birdcell, Indiana Vocational Technical College

5. Pilot Project Research in Modern Mathematics as Applied to Machine Trades, Daniel Rayschich, Elwood City Schools

6. The Development and Testing of an Independent Study Instructional Unit Concerning the Metric System of Measurement - A Guide to the Metric System, Dan Householder & Gary Hansen, Purdue University

NEW PROJECTS FUNDED:

1. Development of a Health Occupations Continuing Education Center, Evansville-Vanderburgh School Corporation

2. Innovative Project Involving Research and Development of New Approaches to Vocational Education in Oral Communication Skills for Business Students, Indiana Vocational Technical College

3. Horticulture Seminar, Charles Allen Prosser Vocational Center

Indiana

4. General Related Instruction Guide for Vocational Distributive Education (Revision), Fort Wayne Community Schools

5. Identification and Evaluation of Student Admissions and Evaluation Procedures for the Vocational Nursing Programs in the State of Indiana, Fort Wayne Community Schools

6. Course Content for Teaching Electrical Discharge Machining for the Secondary Vocational Level, Mid Central Area Vocational School

7. Mini-Project to Develop an Individual Instruction Mode for the Course "You and the World of Work", Vincennes University Junior College

8. Development of Supervised Experience Program Record Books for Students Enrolled in Indiana Vocational Agribusiness Programs, Prairie Heights High School

9. Development of Instructional Materials for Use by Indiana Vocational Teachers in Teaching Leadership and Character Development to Youth in Indiana, Purdue University

10. Developing and Maintaining a District Center to Provide Services for Teacher-Coordinators in BOE, Graduates of BOE Programs, and the Business Community, Tri-Creek School Corporation

11. The Development of a Model Followup Instrument and Computerized Procedure Applicable to High or Post-High Utilization, Vincennes University

12. Model Career Placement Service, LaPorte Community School Corporation

13. Strategies for a Placement Service at the LEA Community Level, New Albany-Floyd County Consolidated Sch. Corp.

14. Placement Service Model, Elwood Community Sch. Corp.

Indiana

15. A Proposal to Develop a Comprehensive State-Wide Assessment and Evaluation Plan for Indiana's Vocational-Technical Activities, New Educational Directions, Crawfordsville, IN

16. Data Systems Contract, MSD of Washington Twp.

17. Piloting the Career Education Guide, 12 school corporations

18. A Dissemination System for the Indiana Research Coordinating Unit, Indiana University

19. A System to Integrate Efforts of Universities' Counselor Educators, Vocational Educators and School System Educators to Develop a Stronger Counselor Training Program, Indiana University

20. Career Education Program Helping all in Counseling, Ball State University

21. A Needs Assessment for Region V in Indiana for Area Planning, Marion Community Schools

22. A Proposal for Continuation of the Career Resource Mobile Training Unit as a Statewide Service, Penn-Harris-Madison School Corporation

RESEARCH RELATED ACTIVITIES:

The organization of the Division has been revised with the Coordinator of Research as part of the OPERATIONS UNIT. Overall Division objectives are being written and will be the focal point of each individual's direction.

PROJECTS AND ACTIVITIES PLANNED:

1. Issuing of "Requests for Prospectuses" based upon priorities identified by the State Board for Vocational and Technical Education

2. Meeting of all project directors of recently funded projects so each has a clear understanding of expectations and funding stipulations.

IOWA

William O. Schuermann, State Director of Vocational Education
Kenneth M. Wold, RCU Director

PROJECTS COMPLETED:

1. Instructional Materials Development and Articulation in Career Education, Iowa State University

2. Workshop in Curriculum Organization and Development in Agri-business and Natural Resource Education, Iowa State University

3. Identification of Occupational Competencies in Services for the Electromechanical Cluster of Occupations, Iowa State University

4. The Development of Learning Activity Packages for a Distributive Education Learning System, University of Northern Iowa, Cedar Falls

5. The Development of a List of Competencies for Office Occupations, University of Northern Iowa

6. Computerized Vocational Information System (CVIS), Joint County School System, Cedar Rapids

7. IOWAscript, Des Moines Area Community College, Ankeny

8. Models for Precareer Education in Iowa, Iowa State University

9. Total Career Education, Monticello, Monticello Community School District

NEW PROJECTS FUNDED:

1. Implementing Distributive Education Learning Systems, University of Northern Iowa

2. Career Development Needs in Merged Area III, Iowa Lakes Community College, Estherville

Iowa

3. Needs for Integrating Career Education Services Within Des Moines Area Community College District, Merged Area XI, Des Moines Area Comm. College, Ankeny

4. Area XV Comprehensive Career Education Research and Plan Development, Indian Hills Comm. College, Ottumwa

5. Interdisciplinary Curricular Planning for Career Development at Secondary Level

RESEARCH RELATED ACTIVITIES:

1. A Training Area Priority was developed and distributed to area schools

2. Worked with individuals interested in preparing proposals for research and exemplary projects

3. Visited with project directors and staffs to review and assess the progress of research and exemplary projects and to consult with regard to continuation of these projects

4. The State Plan for the Administration of Career Education in Iowa, FY 1975, was prepared and fowarded to the Region VII Office of Education for approval

5. Prepared reports for Project Baseline

6. Reviewed elementary-secondary and postsecondary program proposals for approval and funding

7. Coordinated the review and preparation of research and exemplary project materials for dissemination

8. Continued to develop a file of competency studies for use by state consultants in assisting local educational agency personnel in the development of curriculum materials

9. A Career Education Assessment and Planning Workshop was held to share information and to encourage area schools to become involved with assessment and planning projects to assist in efficient resources management. Directors of six research projects provided progress reports; technical assistance and support now available from the state educational agency were explained. Participants included area school superintendents, assessment and planning project directors, and local area chairmen from the Council for the Improvement of Education in Iowa

10. Printed and Disseminated:
Models for Career Education in Iowa --
"Selected Occupations by Clusters for Use in Elementary Schools"
"Information Centers in Career Education"
"Implementing Career Education in the School Curriculum"

11. Placed the above publications on microfiche and disseminated them to the Iowa Regional Educational Media Centers and to others upon request

12. Made a video tape presentation for a university workshop concerning available career education publications

13. Conducted on-site Department of Public Instruction team visits to exemplary projects for evaluation of progress

14. Acted as consultant in formulation of agreements and development of Career Information System of Iowa as a merger of two exemplary projects, CVIS and IOWAscript

PROJECTS AND ACTIVITIES PLANNED:

1. The Career Education Research Advisory Committee will meet to review research proposals

2. Visitations to on-going research and exemplary projects will continue

3. Consultative assistance will be provided to proposal initiators and directors of research and exemplary projects

4. The Annual U.S. Office of Education Statistical, Fiscal, and Descriptive Report of Activities for Fiscal Year 1974 will be prepared and submitted

5. The State Plan for the Administration of Career Education for FY 1976 will be prepared in cooperation with the Career Education Division and other divisions of the Department of Public Instruction

6. Upon approval of the U.S. Office of Education will print and disseminate the State Plan for the Administration of Career Education, FY 1975

7. A Career Education Handbook to supplement the use of the State Plan will be revised

8. Staff will continue to stimulate interest in additional exemplary and research undertakings

9. Staff will continue to disseminate appropriately the findings of the various projects

10. Update the exemplary projects portion of the Iowa Career Handbook

11. Prepare additional publications for dissemination

12. Conduct on-site team visits to exemplary projects

13. Provide consultative assistance in the development of exemplary proposals

14. Encourage and stimulate the initiation of exemplary proposals

KANSAS

John E. Snyder, State Director of Vocational Education
Wilbur A. Rawson, RCU Director

PROJECTS COMPLETED:

1. Identifying, Securing and Classifying Curriculum Materials in Agri-Business and Natural Resources, Ralph Field, KSU

2. Kansas Manpower Utilization System for Training Phase II, James Harris, KSU

3. Coordination of Vocational Research in Institutional Settings in Kansas, Dr. Kittleson, KSU

NEW PROJECTS FUNDED:

1. Study of Job Studies by Distributive Education Students, KSTC-Emporia

2. Identified Core Curriculum for Productive Agriculture, KSU

3. Development and Testing Training Memorandums for Distributive Education, Wichita AVTS

4. Development of Tested Curriculum for Conceptual Based Industrial Education Programs, Wichita AVTS

4. An Assessment of Industrial Education Teacher Preparation and Performance, Kansas City AVTS

RESEARCH RELATED ACTIVITIES: NONE

PROJECTS AND ACTIVITIES PLANNED:

1. Development of a Southeast Kansas regional planning component for vocational education and career education

2. Developing a research component for vocational education in the State Department of Education

KENTUCKY

Carl F. Lamar, State Director of Vocational Education
Robert M. Schneider, RCU Director

PROJECTS COMPLETED:

1. Research Related to Bowling Green Independent School System's Comprehensive Career Education Model, Western Kentucky University, Bowling Green

2. Research Related to the Regional Career Education Development Project -- KVE 3, Western Kentucky University, Bowling Green

3. Effects of a Program of Career Education in the Hazard Region, University of Kentucky, Lexington

4. Field Testing Career Exploration Materials, Bureau of Voc. Ed., Frankfort

5. Career Education Development Project: Hazard, Bowling Green, and Owensboro, SACS, Atlanta, GA

6. Dissemination of Information Relating to Selected Aspects of the Bowling Green City Schools Career Education Project, Bowling Green City Schools

7. Career Education Development Project -- KVE 3, Daviess County SVTS, Owensboro

8. Developmental Program in Distributive Education, Western Kentucky University, Bowling Green

9. Development of Instructional Materials for Teachers of Adult Programs in Vocational Fire Services, Bureau of Voc. Ed., Frankfort

NEW PROJECTS FUNDED:

1. Career Education Development Project: KVE 3, Daviess County SVTS, Owensboro

2. Developmental Program in Distributive Education, Western Kentucky University, Bowling Green

Kentucky

3. Career Education for Region 12 (Hazard), Kentucky Valley Educational Cooperative, Hazard

4. Mining and Reclamation Cooperative Education Program, Madisonville SVTS, Madisonville

5. Addendum to Distributive Education Curriculum Project Phase II, University of Kentucky, Lexington

6. Addendum to Two Hour Vocational Classes at the Laurel County Area Vocational School, ROPES XIII, Barbourville

7. Addendum to Field Testing Career Exploration Materials, Bureau of Voc. Ed., Frankfort

   Note: the above three projects are addendums to proposals that were listed in earlier semiannual reports

8. Development of Competency Based Examinations for Practical Nursing Program Challenge, Bureau of Voc. Ed., Frankfort

RESEARCH RELATED ACTIVITIES:

1. The Bureau of Vocational Education has developed and conducted a series of three day workshops across the State on the procedures and techniques used in developing research and development proposals. Approximately 120 vocational education teachers and administrators have participated in these workshops.

2. There has recently been established a Bureau of Vocational Education--University Coordinating Committee consisting of representatives of all of the Kentucky institutions of higher education that prepare vocational education teachers and the Bureau of Vocational Education. The major purposes of this committee are:

   a. To establish formal communication channels between and among the universities in the Commonwealth and the Bureau of Vocational Ed.

b. To provide advice concerning vocational education programs, services, and activities of mutual concern to personnel in the universities and personnel in the Bureau of Vocational Education.

c. To seek appropriate ways and means of cooperating in the providing of services to local education agencies.

3. Following a series of inservice education activities, The Bureau of Vocational Education is operating under a system of Management by Objectives with each division, unit and staff member developing objectives and activities relating to their various functions.

PROJECTS AND ACTIVITIES PLANNED:

1. By January 1, 1975 it is anticipated that the Bureau of Vocational Education staff will have completed 6 catalogs of objectives relating to the specific skills and abilities necessary for selected occupational areas.

2. By January 1, 1975 the Bureau of Vocational Education expects to have documented a model for developing instructional packages, based upon the concept of open entry-open exit, individualized instruction, for the catalogs mentioned above.

3. Between July 1 and December 30, 1974 the Bureau of Vocational Education plans to develop a model for a comprehensive management information system (MIS) for vocational education in Kentucky. This will include manpower supply, manpower demand, student interest and aspirations, student followup and several other components currently unidentified.

LOUISIANA

Kirby K. Awagain, State Director of Vocational Education
Gertrude Enloe, RCU Director

PROJECTS COMPLETED: NONE

NEW PROJECTS FUNDED:

1. Louisiana Occupational Training Information System, Roger L. Burford, Louisiana State University

2. Research and Development Project in Career Education, Harold Gauthe, Lafayette Parish School Board

3. Research and Development Project in Career Education, Paul J. Moses, Calcasieu Parish School Board

4. A Comprehensive Follow-Up System of Louisiana's Vocational Education Students Who Have Completed Training or Left With Marketable Skills, Charles Curtis, School of Vocational Education, Louisiana State University

5. Research and Development Project in Career Education, Robert J. Aertker, East Baton Rouge Parish School Board

6. An Orientation Program for Vocational Education, James O. Lancaster, Ouachita Parish School Board

7. A Pilot Abbreviated Subsidized Work-Study Program Ouachita Parish High School, James O. Lancaster, Ouachita Parish School Board

8. Career Development of Youth for the World of Work, E.H. Farr, Winn Parish School Board

9. Mobile Exploratory Unit for Vocational Development, James V. Soileau, East Feliciana Parish School Board

10. A Follow-Up Program for High School Graduates in the Vocational Fields, Thomas G. Judd, Lincoln Parish School Board

Louisiana

11. Continuous Health Service Education, Chiles I. Carpenter, Union Parish School Board

12. Exemplary Program for Career Education, W.J. Bullock, Natchitoches Parish School Board

RESEARCH RELATED ACTIVITIES:

1. Monitoring Part C and Part D research projects in progress

2. Assisting in proposal writing in the State Department of Education

3. Assisting project proposal writing and planning for persons outside the Department of Education

4. Processing reimbursement request forms for Part C and Part D projects

5. Receiving, reviewing, and submitting quarterly, interim, and annual for Part C and Part D projects

6. Served on committee for planning the new vocational-technical school system for Louisiana

7. Served on NCATE reviewing team at Northwestern State University

8. Assisted local education agencies plan for vocational education programs in a new school

9. Continued data collection by request and also population data for preparation of the State Plan

10. Served as workshop consultant on Career Education in St. Tammany Parish

11. Completed feasibility studies for the establishment of vocational-technical schools in Livingston and Catahoula Parishes

12. Completed a survey to determine the location of microfiche readers, reader-printers and subscriptions to Research in Education in the State of Louisiana

PROJECTS AND ACTIVITIES PLANNED: NONE

MAINE

Elwood A. Padham, State Director of Vocational Education
Charles W. Ryan, RCU Director

PROJECTS COMPLETED:

1. Consortium in Higher Education, University of Maine Augusta

2. Occupations Course in Modern Forestry Practices, SAD No. 27, Fort Kent

3. Program to Advance Career Education, Portland Public Schools

4. Career Education Curriculum Guide Grades K-12, University of Maine, Orono

5. Prediction of Success in Selected Vocational-Technical High School Programs, University of Maine, Orono

6. Coastal Opportunities in Vocational Education, SAD No. 40, Waldoboro

7. Westbrook Educates for Business, Westbrook Regional Technical Vocational Center

8. GIVE - Geographically Isolated Vocational Education, MSAD #2, Greenville, Maine and MSAD #12, Jackman

9. Center for Educational Field Service & Research, University of Maine, Portland-Gorham

10. The Self-Directed Career Program As A Tool for Presenting Career Information to Ninth Grade Students

NEW PROJECTS FUNDED:

1. Career Days, Hall-Dale High School, Hallowell, ME

2. An In-School Job Placement Service for Secondary School Students, Mt. Ararat High School, Topsham

3. Teacher Training for Career Education, College of Education, University of Maine, Orono

Maine

4. Development of Demonstration Modular Curriculum, Lewiston Comprehensive High School, Lewiston

5. Career Education Within the University of Maine System, College of Education, University of Maine, Orono

6. The Effects of Selected Instructional Strategies on Learning Efficiency in Vocational Technical Education Programs, College of Education, University of Maine, Orono

RESEARCH RELATED ACTIVITIES:

1. Women in the World of Work, sponsored by Technical Education Research Center, Hartford, Connecticut, March 17-18, 1974

2. World of Work Economic Education, sponsored by the Joint Council on Economics Education, Hartford, Connecticut, April 29-30, 1974

3. Career Education In The Schools, Bangor Rotary Club, January 22, 1974

4. Career Education In Rural Areas, Penquiscook In-Service Training Project, Blue Hill, Maine, April 15, 1974

5. Case Conference - A Guidance Technique, Conference sponsored by the Division of Counselor Education, College of Education, University of Maine, Orono April 26, 1974

6. Career Education In The School - Grades K-12, Worcester, Massachusetts Public Schools, May 14, 1974

7. What Is Career Education, Guilford Public Schools, Guilford, Maine, May 17, 1974

PROJECTS AND ACTIVITIES PLANNED: NONE

MARYLAND

James L. Reid, State Director of Vocational Education
Marinus A. Kip, RCU Director

PROJECTS COMPLETED:

1. Career Information Resource Center for Learning Experiences, Baltimore County Board of Education

2. An Empirical Optimality Determination of Three Career Program Planning and Development Aspects: Articulation, Community Participation, and Faculty Commitment, Catonsville

3. Research and Development of a Computer-Assisted Instruction Center for Postsecondary Vocational Projects

4. A Research Project to Develop Model Curricula for Food Technician Programs, Chesapeake

5. Paraprofessionals as Debt, Nutrition and Medicare Counselors: A Study in Effectiveness, Dundalk

6. Evaluation Planning at the Wye Institute, Prince George's

7. Compilation and Dissemination of Existing Research Findings Concerning the Vocational Industrial Teacher in the State of Maryland, University of Maryland

8. A Study to Assess the Feasibility of Installation of a Computer and/or an Information Dissemination System for Vocational Education in the Alleghany County Resource Center, University of Maryland

NEW PROJECTS FUNDED:

1. Project "ACE" - Approaches to Career Education, Baltimore County Board of Education

2. Career Information Resource Center for Learning Experience, Baltimore County Board of Education

3. Study of the Effects of Career Education, Prince George's County Board of Education

4. Food Service Manpower Study, Chesapeake College

5. A Study to Determine the Effectiveness of Multi-modeling Individualized Instructional Packages in Teaching Seminar Methodology to Occupational Industrial Education Teachers, University of Maryland

RESEARCH RELATED ACTIVITIES:

1. FY 1974 Operation of the Vocational Education Student-Teacher Data System. A complete statistical description of programs, students and teachers on the secondary, postsecondary and adult levels.

2. The Annual Maryland High School Graduate Followup Study. Comprehensive followup of all Maryland High School graduates, public and private, with special emphasis on vocational-technical graduates by program area.

3. A Comprehensive Program and Institutional Evaluation of the Wicomico Vocational-Technical Center.

4. A large number of ancillary services in the areas of accountability, project evaluation designs, and research designs.

PROJECTS AND ACTIVITIES PLANNED:

1. Initiate application of a procedure for determining cost effectiveness of one or more postsecondary occupational programs.

2. Initiate application of a procedure for determining cost-effectiveness of one or more secondary occupational programs.

3. Plan and implement a sample procedure which will cover non-respondents to the followup survey.

4. Conduct a study of contributions that are currently being made by State, regional, and local Governments and institutions who provide manpower programs for the overall vocational-technical education program in the State.

5. Maintain systems for followup student data and teacher data.

6. Maintain and fund personnel and services necessary to operate the Research Coordination Unit.

7. Maintain support for ongoing research projects.

8. Develop and fund one research and demonstration project for an interdisciplinary approach to Consumer Education.

9. Plan and implement a project to ascertain the most effective method for integrating the vocational-technical education curriculum with the student's overall high school program.

10. Plan and implement one project to identify and develop curricula for occupations which would lend themselves to training in existing occupational programs to be trained in each of the following areas: distributive education, auto mechanics and business education.

11. Continue the existing evaluation system and pilot implementation for secondary programs toward a goal of completion and feasibility by end of fiscal 1975.

MASSACHUSETTS

John Manning, Acting State Director of Vocational Education
Jack Sweeney, RCU Director

NO REPORTS RECEIVED

MICHIGAN

Addison Hobbs, State Director of Vocational Education
Stanley Rumbaugh, RCU Director

PROJECTS COMPLETED:

1. Career Education Personnel Model, John T. Odbert and Eugene E. Trotter, School of Education, University of Michigan, Ann Arbor

NEW PROJECTS FUNDED:

1. Agribusiness and National Resources Education in Michigan: Employment Demand, Competencies Required and Recommended Delivery Systems, College of Agriculture and Natural Resources, Michigan State University, East Lansing

RESEARCH RELATED ACTIVITIES:

1. A major effort to develop a career development conceptual model, including a sound foundation of goals and objectives has been completed. The goals and objectives organized as a comprehensive hierarchy of objectives is now being subjected to an extensive validation process, including reviews by career development theorists, learning theorists, and various user groups, including teachers and counselors.

2. An innovative alternative to the career education "unit" approach to implementing career education has been developed. This process assists teachers to incorporate career development instruction into their existing instruction without reducing or replacing the instruction they are now delivering. This process places importance on the maintenance and improvement of existing instruction.

3. Assisted development and EPDA-F grant for operation of training programs for vocational educators in the use of local advisory councils. The grant, to Central Michigan University, involves a needs assessment, the development and implementation of training materials, and a final evaluation.

4. Assisted in development of an RFP for implementing performance based instruction in Michigan vocational education program.

5. Continued development and pilot testing of the Vocational Education Information Support System.

PROJECTS AND ACTIVITIES PLANNED:

1. The innovative process approach to implementing career education will be pilot and field tested within workshops conducted around the State. These workshops will be conducted with the aid of a workshop package designed and developed by Career Education project people in the State of Michigan.

2. During the next few months, work will begin on the development of an exploration program which will be consistent with the goals and objectives for career development which are now undergoing validation and refinement.

3. Completion of work cited in number 3 above.

4. Assist in the planning, development, and implementation of the vocational-technical inservice training program.

5. Continue development and pilot testing and begin installation of the Vocational Education Information Support System.

MINNESOTA

Robert P. Van Tries, State Director of Vocational Education
Jerome Moss, Jr., RCU Director

PROJECTS COMPLETED:

1. Project opportunity (Phase III), Anoka AVTI

2. View and Match Project, Dakota County AVTI

3. International Vocational Studies in Fashion Merchandising and Design, Suburban Hennepin County AVTI

4. Project Shore: Providing Relevant Supplies and Equipment for Vocational Education in Minnesota, Detroit Lakes AVTI

5. Administration of Educational and Vocational Guidance Tests in Minnesota Schools, University of Minnesota

6. Research Coordinating Unit - Vocational Education, University of Minnesota

NEW PROJECTS FUNDED:

1. Administration of Educational and Vocational Guidance Tests in Minnesota Schools, University of Minnesota

2. International Vocational Studies in Advanced Culinary Arts, Suburban Hennepin AVTI

RESEARCH RELATED ACTIVITIES:

1. Emphasis will be placed on dissemination of processes and products which have resulted from research and development projects. The establishment of an instructional materials center for facilitating this effort is expected to take place during this time.

Minnesota

PROJECTS AND ACTIVITIES PLANNED:

1. Numerous projects will continue into succeeding phases of operation. Additionally, new projects will be implemented from Fiscal Year 1975 monies.

MISSISSIPPI

Troy V. Majure, State Director of Vocational Education
James E. Wall, James F. Shill, RCU Co-Directors

PROJECTS COMPLETED:

1. Mississippi Research and Curriculum Unit, Mississippi State University (MSU)

2. Evaluation of an Urban Career Education Project in Mississippi Delta, MSU

3. Evaluation of Northeast Mississippi Career Opportunities Program, MSU

4. Evaluation of Louisville, McComb, and Winona School Systems Career Education Projects, MSU

5. Vocational-Technical Education Consortium of States (V-TECS), MSU

6. Evaluation of a Career Education Project on Mississippi Gulf Coast, MSU

7. Impact of Instructional Manpower Development Training Act Programs of Vocational-Technical Education in Mississippi, University of Southern Mississippi (USM)

8. Identification of Social Skills in Specific Vocational-Technical Areas and Possible Instructional Approaches Applicable to Such Needs, USM

9. Development of Comprehensive Vocational-Technical and Adult Education Programs, Itawamba Jr. College

10. Evaluation of Greenwood Career Education Project, MSU

NEW PROJECTS FUNDED:

1. Evaluation of Three Rivers Career Education Project EXPLORE, MSU

Mississippi

RESEARCH RELATED ACTIVITIES:

1. Assist in implementation and development of career education in the State.

2. Development of performance objectives catalogs on plumbing and groundskeeping.

3. Development of Statewide system for determining vocational reimbursement for local programs.

4. Evaluation and monitoring of funded research projects in Mississippi.

5. Assist State Advisory Council in conducting evaluation of vocational-technical education.

6. Assist in development of EPDA plan.

7. Assist in research proposal development for local school systems, junior colleges, and universities.

PROJECTS AND ACTIVITIES PLANNED:

1. Conduct Regional EPDA project on Training State Departments of Education personnel.

2. Evaluation of an Urban Career Education Project in the Mississippi Delta.

3. Evaluation of Northeast Mississippi Career Opportunities Program.

4. Evaluation of Louisville, McComb, and Winona School Systems' Career Education Projects.

5. Vocational-Technical Education Consortium of States (V-TECS).

6. Evaluation of a Career Education Project on Mississippi Gulf Coast.

7. Evaluation of Three Rivers Career Education Project EXPLORE.

MISSOURI

B. W. Robinson, State Director of Vocational Education
Glenn W. White, RCU Director

PROJECTS COMPLETED:

1. Research to Determine the Effectiveness and Adaptability to Individualized Instruction of the APEX Simulation Program, Shirley Evans, State Fair Community College

2. Identification of Competencies and Skills, Development of Objectives and Determination of Problem Areas for Courses Included in Agricultural Curricula Being Offered by Postsecondary Institutions in Missouri, Nila Hibdon, State Fair Community College

3. A Survey of Southeast Missouri to Determine Farm Power Technology Needs on the Postsecondary Level, George Stanek, Three Rivers Community College

4. A Research Proposal to Survey Southeast Missouri to Determine Present and Future Personnel Needs in the Field of Ornamental Horticulture, Samuel T. Denton, Three Rivers Community College

5. Followup of University of Missouri-Columbia Home Economics Education Program Entrants and Graduates from September 1, 1967 through December 1972, Joan Quilling, University of Missouri at Columbia

6. Visuals that will Aid in Teaching the Metric System to the Homemaker, Treva Kintner, University of Missouri at Columbia

7. Establishment of a Production Unit for Slide-Tape Presentations in Hotel, Motel, and Restaurant Training at Crowder College, Farrell Siddens, Crowder College

8. Discovering Yourself and Careers (Career Seminar), Joyce Fielding, State Fair Community College

9. Needs Assessment Inventory for Career Education, Richard Ehlers, Jr., North Kirkwood Junior High

10. The Career Planning Function of Selected Practical Arts Programs in Southwest Missouri, Lawrence Drake Southwest Missouri State University

11. An Analysis of Factors Influencing Costs of Delivering Vocational-Technical Programs Among Missouri Junior Colleges, Donald Osburn, University of Missouri at Columbia

12. A Study of the Change and Impact of the Administration, Intrepretation, and Related Counseling of the Career Planning Profile, Marvin McDonald, Missouri Western College

13. A Competency-Based, Criterion Referenced Instructional Model for Careers in Agricultural Mechanization, Glen Shinn and Gene Love, University of Missouri at Columbia

14. A Comparison of Instructional Approaches to Teaching the International System of Weights and Measures to Elementary School Children with Varying Mental Ability, W. A. Downs, Central Missouri State University

15. Cable TV - A Media Approach to Communicating Job Development and Placement Services to Employers and to the Community, Jerry White and Travis Montgomery, State Fair Community College

16. Investigation of Needs of the City of St. Louis for Paraprofessionals in Home Economics, Mary Ann Zerjar, Forest Park

17. Preparation and Testing of Career Education Modules for Teacher and Counselor Education, Norman C. Gysbers, University of Missouri at Columbia

18. A Pilot Program to Identify the Competencies, Development of Objectives and Determination of Problems Included in Agricultural Curricula Being Offered by Postsecondary Institutions of Missouri, Nila Hibdon, State Fair Community College

19. Establishing Vocational Skills in Severely and Profoundly Retarded Individuals, R. B. Hogoboom, St. Louis State School Hospital

Missouri

20. Parkway Business Speaker's Resource Bureau, Maurice Geisler, Parkway School District

21. Career Development in Brentwood, Raymond Bentz, Brentwood Public Schools

22. Needs Assessment Inventory for Career Education, R. C. Ehlers and R. S. Mosby, North Kirkwood Junior High

23. Entry-Level Competencies in Clothing Related Careers Needed by Graduates of Secondary Occupational Programs and Area Vocational Schools in Missouri, Joyce Waldron, Northwest Missouri State University

24. Parent and Teacher Attitudes Toward Career Education, Barbara Fulton, University of Missouri at St. Louis

25. Followup of University of Missouri-Columbia Business Education Program Entrants and Graduates from September 1, 1964 through June 30, 1974, Jo Behymer University of Missouri at Columbia

26. Computerized Accounting Applications Filmstrip, Aldo Leker, Longview Community College

27. A Survey of Adding, Calculating, and Accounting Machines Being Used in Kansas City Area Businesses, Elwyn McGaugh, Longview Community College

28. Feasibility Study on the Need for Developing a Curriculum for Improving Corrections Personnel, Richard Hair, Longview Community College

29. A Feasibility Study to Determine an Alternative Method of Cooperative Work Experience by Block Time in a Major Metropolitan Area for Community Colleges, Gayle Wasson, Longview Community College

30. Cost-Benefit Analysis of One-Year and Two-Year Distributive Education Programs in the State of Missouri, Donald Osburn, University of Missouri at Columbia

Missouri

31. Analysis of Mathematical Skills in Mechanical Engineering Technology at Florissant Valley Community College, Donald Osburn, Florissant Valley

32. Analysis of Student Mathematical Skills in Civil Engineering Technology at Florissant Valley Community College, John Matejcic, Florissant Valley

33. A Program to Obtain Industrial Input in Program Development, Don Gelven, Linn Technical College

34. Development of an Individualized Instruction Module; Use of the Metric System: Weight, Linear, and Volume, Melba Pruitt, Florissant Valley

35. County Vocational Development Clinic, Gene Van Matre, University of Missouri at Rolla

RESEARCH RELATED ACTIVITIES:

1. Conducting information retrieval and dissemination activities including a total of 454 searches resulting in distribution of 1,517 microfiche.

2. Participated as visiting chairman in two on-site vocational-technical evaluations.

3. Acted as chairman for a committee to develop new methods and procedures in conducting on-site evaluations for junior colleges. The new strategy was developed and field tested in a large metropolitan junior college.

4. Provided consultative assistance in carrying out project proposals.

5. Continued the implementation of MOTIC (Missouri Occupational Training Information System) Student Accounting Component. Two forms - Student Enrollment Data Form (Sac-1) and Class Summary Data Form (SAC-CS) - were developed and disseminated to the participating school districts to gather enrollment data, computer programs written to handle the data and generate reports for dissemination to the participating schools for verification.

6. Information workshops were held in five separate locations for the purpose of interpreting and disseminating the information generated in the first operational year of MOTIS.

7. Five workshops were held in separate locations throughout the State to disseminate information regarding the procedures for the local schools to use in completing information required through the MOTIS system.

8. Developed an agreement for the collection and dissemination of demand data with the Missouri Division of Employment Security.

9. Solicited Level I and II research projects on a Statewide basis.

10. Continued to monitor approved research projects.

PROJECTS AND ACTIVITIES PLANNED:

1. Continued activities in the information retrieval and dissemination.

2. Monitor approved research projects.

3. Solicited Level I and II research projects on a Statewide basis.

4. Continued developments of materials and procedures for the MOTIS system.

MONTANA

Benjamin Ulmer, State Director of Vocational Education
Robert Lehman, RCU Director

PROJECTS COMPLETED:

1. Identification of Competencies in Agriculture Products, Montana State University, Bozeman

2. Identification of Competencies in Agriculture Resources, Montana State University, Bozeman

3. Career Interest Survey, School District #1, Great Falls

4. Management Information System for Vocational Education, Office of The Superintendent of Public Instruction, Helena

NEW PROJECTS FUNDED:

1. Career Interest Survey, School District #1. Great Falls

RESEARCH RELATED ACTIVITIES:

1. Currently in the process of building more parts to our Management Information System for Vocational Education. As mentioned earlier, we have completed the high school portion and consider it to be an excellent effort.

PROJECTS AND ACTIVITIES PLANNED:

1. The next step is to add the adult portion and tie our career interest survey data and employment data to the system.

NEBRASKA

Glen H. Strain, State Director of Vocational Education
Elton B. Mendenhall, RCU Director

PROJECTS COMPLETED:

1. Nebraska Vocational Technical Graduate Followup System, Kearney State College Center for Vocational Technical Education

2. Statewide Computerized Model for Determining Occupational Opportunities in Nebraska, University of Nebraska, Lincoln Research Coordinating Unit for Vocational Education

3. Minimum Levels of Technical Competency in Office of Education, Kearney State College, Center for Vocational-Technical Education

NEW PROJECTS FUNDED:

1. Statewide Computerized Model for Determing Occupational Opportunities in Nebraska, University of Nebraska, Lincoln Research Coordinating Unit for Vocational Education

2. Home Economics Related Occupations Promotion in Nebraska Through Media Visitations, Kearney State College Center for Vocational-Technical Education

3. A Competency-Based Program for Preparing Vocational Education Teachers, Kearney State College Center for Vocational-Technical Education

RESEARCH RELATED ACTIVITIES:

1. Dissemination of Career Education materials from the Milford Career Education Project to other RCU Directors.

2. First year the annual occupational opportunities in Nebraska was coordinated on regional basis by technical community college areas.

3. Assisted proposal development and review for exemplary (Part D) projects.

4. Program evaluation for State career education projects.

5. Developed proposal for a Nebraska Vocational Information System under the U. S. Commissioner's discretionary award of Part C.

PROJECTS AND ACTIVITIES PLANNED:

1. Coordination of a project funded by U. S. Office of Education for Nebraska Vocational Information System for Division of Vocational Education, State Department of Education.

2. Merging of past project products with ongoing vocational programming.

NEVADA

R. Courtney Riley, State Director of Vocational Education
Jake Huber, RCU Director

PROJECTS COMPLETED: NONE

NEW PROJECTS FUNDED: NONE

RESEARCH RELATED ACTIVITIES:

The activities which follow were conducted on a half-time basis by the Associate Director of the RCU.

The Nevada RCU does not have under its aegis the responsibility or authority for the funding of research or exemplary projects. Consequently, no new projects were funded by the RCU nor were any projects completed during these two quarters.

1. The RCU has been very active in its monitoring capacity of all Part C and D (commissioner's funded and state funded) projects. There were four such projects in operation. The monitoring duties of the RCU assume the fole of:

   a. Assuring project compliance with state and Federal regulations

   b. Keeping abreast of project progress for purposes of problem identification (if any), progress reporting to state and Federal personnel, and to assure compliance with the agreed upon work statement

   c. Providing technical or consultative assistance, upon request, to project staff. This latter function is perhaps the most important, most time consuming, and most useful function that the RCU provides to project staff

2. The RCU Curriculum and Resource Library has had the following usage:

   31 walk-in users
   27 phone and mail requests for information

18 information search requests

New additions to the collection include:

3 microfiche
52 documents
7 (three prints of each) films

3. "RCU Report" Newsletter--Five issues of the newsletter have been printed and disseminated to 1,100 educators in Nevada plus 250 people across the nation.

4. Consultant Services--This activity of the RCU has been where the majority of emphasis has been applied. Consultant Services (non-fee, of course) have been provided to LEA and SEA for program planning, program review, proposal development, and program technical assistance

Ours is a small state in terms of population (489,000 people by 1970 Census) and a large state geographically speaking (110,540 square miles). With an average of 4.4 people per square mile, it is not difficult to see that an information dissemination system for our state must take some rather unique forms. Consequently, when a request is received from a school district, our reaction (depending upon the request) is to research their problem in our resource collection, gather and synthesize the information, and then go meet them armed with selected information relevant to their needs. We have found this technique to be quite successful in that it:

a. allows for personal involvement and assistance in the LEA's problems
b. reduced the number of "unnecessary" requests
c. reduces the total amount of information they must review
d. increases the sophistication of the user in terms of formulating his search statement and limiting the scope of his search. Through personel interaction with user, he is advised of certain search procedures and techniques. Thereafter, his information requests can be satisfied by phone and mail

e. serves to further develop familiarity and rapport between the SEA and the individual LEA's

5. These consulting services have been provided to:

   Elko County
   White Pine County
   Clark County
   Washoe County
   State Department

6. Conferences attended:

   National RCU Conference, March 18-21, 1974
   Technical Education Research Center sponsored conference on "Women in Work," January 27-29, 1974

PROJECTS AND ACTIVITIES PLANNED:

1. Publication and dissemination of the "RCU Report" (newsletter)

2. Publication and dissemination of selected research relevant to Nevada's vocational educators

3. Continuation and expansion of RCU curriculum and resource identification, acquisition, and dissemination activities

4. Monitoring of Part C and D funded projects

5. Continued consulting services to field personnel, LEA, SEA, advisory council, etc.

6. Development of a staff development program to improve or otherwise upgrade the R&D skills and R&D management expertise of Nevada's LEA and SEA staff

7. Act as a resource person in the development of a statewide plan for the implementation of career education

8. Such activities as assigned by the State Director of Vocational-Technical and Adult Education

NEW HAMPSHIRE

Neal D. Andrew, State Director of Vocational Education
Gloria Cooper, RCU Director

PROJECTS COMPLETED:

1. Community Needs Assessment for Vocational Education in N.H., Melvin Severance, Milford, NH

2. Exploring the World of Work - Part II, Roland Desrochers, Franklin, NH

3. Follow-Up Study of Students Exited from Selected Vocational Programs in New Hampshire Secondary Schools, Willian Annis, Durham, NH at UNH

4. Grade Five Career Education Program, David Johnston, Wolfeboro, NH

5. Career Education: Field Testing the N.H. Guidelines, Robert Wilkins, Newport, NH

6. Career Concepts Urban Applications - Manchester, NH, Chris Kehas & Louis Des Ruisseaux

7. Exploring the World of Work, Robert Ross, Franklin, NH

NEW PROJECTS FUNDED:

1. Programs for Dropouts, Salem High School, Fran Tate

2. Curriculum Development Coordination for New Hampshire Secondary Vocational Education, Keene State College, Richard Gustafson

3. Task Analysis Development, Kennett High School, Conway, Ted Raymond

4. Developing, Field Testing, and Implementing a Vocational Electronic Skills Training Curricula, Nashua High School, John Cepaitis

5. Vocational Guidance and Placement Program, Lebanon High School, Robert Holt

6. Performance Skills Profile, ConVal High School, Peterborough, NH, Edward Hamblin

7. Concord Career Education Project - Implementing, David Morin, Concord School District

8. A Career Education Program for the Somersworth Schools, Norm Yeaton, Somersworth School District

9. N.H. Career Education Model for Educationally Disadvantaged Adults - Technical Assistance, Project Second Start, Nancy Callahan, Concord, NH

10. Design of Four-Year Baccalaureate Program in Vocational Teacher Preparation, Keene State College, Richard Gustafson

11. LPN-ADN Transition Project, N.H. Technical Institute, Goldie Crocker

12. Multi-Media Multi-Faceted Approach to Instructing Fire Department Pump Operations, Fire Service Training, Voc-Tech Division, Concord, Barry Bush

13. Bread and Butterflies Career Exploration Program, Somersworth School District, Norman Yeaton

14. Building Trades - An Opportunity for Everyone, Exeter School District, Richard Bergeron

RESEARCH RELATED ACTIVITIES:

1. Coordinated State Plan

2. Completed Statistical, and Placement Reports for USOE

3. Completed a 1,3,5 year followup study

4. Completed a Needs Assessment Handbook for Vocational Planning

5. Wrote a funded proposal for ABE discretionary funds for "New Hampshire Career Model for Disadvantaged Adults"

6. Was liaison with National Diffusion Network

7. Helped to develop a screening process for 20 Vocational Center Plan

PROJECTS AND ACTIVITIES PLANNED:

1. Will develop performance-based curricula in five program areas beginning with task analyses

2. Will develop Phase II of Needs Assessment Handbook; i.e., How to use collected date for planning and implementing

3. Will develop and implement Guidance, Counseling, and Placement function statewide

4. Will begin work on statewide student enrollment system

NEW JERSEY

Stephen Poliacik, State Director of Vocational Education
Joseph Kelly, RCU Director

PROJECTS COMPLETED:

1. Career Development for Counselors, Glassboro State College

2. Business Education Cycle-Introduction to Vocations, West Deptford

3. Model Office Project, West Deptford

4. Career Development Project, Jersey City State College

5. Career Development Survey, Edison Township

6. Career Counseling, Middlesex County College

7. Career Development Curriculum Project, Rutgers University

8. Career Development Project, South Brunswick School District

9. Career Development Project, Asbury Park

10. Immigrant Information Service Agency, Essex Co. College

11. Needs Assessment, Hudson Co. Voc.

12. Research Planning Grant, Hudson Co. Voc.

13. Research and Evaluation Training Workshops, Trenton State College

14. Career Resource Center, Edison Township

15. Orientation to the World of Work, Rutgers University, Dr. Goldstein

16. Technology for Children Study, Rutgers University, Dr. Kievit

New Jersey

17. Research Grant, Rutgers University

18. Career Development Project, Middletown Twp.

19. Career Counseling Project, Central Reg. School District

20. Career Development Articulation Project, Ocean Co. AVTS

21. Career Development Project, 20 Urban New Jersey Cities

NEW PROJECTS FUNDED:

1. Validation of a Teacher Competency Exam, Rutgers University, M.S. Fabian

2. Computer Research Seminar, Rutgers University, Dr. Schaeffer

3. Research and Computer, Somerset Co. Voc. School

4. Teacher Training Study, Sussex Co. AVTS, Dr. Bach

5. Special Needs Study, Plainfield School District

6. Effects of Technology, Camden City, Dr. Curlott

7. Leadership Research Conference, Essex Co. Voc. School

8. W.E.C.E.P. Study, North Hunterdon Reg., Mr. Coogan

9. Automated Individual Student Report and Follow-up System, Division of Voc. Ed.

10. Teacher Competency Testing, Rutgers University

11. C.I.E. Study, Rutgers University, James Pen

12. Curriculum Development, Rutgers University, Benjamin Shapiro

New Jersey

13. A Study of T&I - Teachers Attitude Toward Administrators, Teachers and Students, Rutgers University, Joseph L. Hopkins

RESEARCH RELATED ACTIVITIES:

1. Prepared Special Papers
   a. Feedback
   b. Career Education Progress
   c. Current Research

2. Conducted Workshops on Career Education

3. Conducted Workshops on Research Utilization and Dissemination Techniques

4. Provided assistance to Federally funded projects (USOE) for both Part C and D

5. Coordinated the activities of the Northeast Regional Curriculum Network

6. Assisted in the development of a County Planning and Funds Distribution Model

PROJECTS AND ACTIVITIES PLANNED:

1. Hold an Annual Statewide vocational-technical education researchers conference

2. Continue operation and expansion of occupational resource centers

3. Assist in the further development and refining of the County Planning and Funding System

4. Support the development of the New Jersey Model for Career Development

5. Continue application of State EPPBS for planning, administration and evaluation of career development activities

New Jersey

6. Continue the review and research of effective student assessment instruments pertinent to cognitive, affective and psycho-motor domains

7. Plan, initiate, and support research, planning, evaluation, curriculum, information dissemination, and innovative activities

8. Prepare additional special papers

NEW MEXICO

James B. West, State Director of Vocational Education
Roger A. Labodda, RCU Director

PROJECTS COMPLETED:

1. North Area (APS) Career Education, K-9, Nelson Lowery, Albuquerque

2. Socorro Municipal Schools Career Education Program, Gilbert Gabaldon, Socorro

3. Curriculum Development, George Amsbary, Santa Fe

4. Farm Business, Management, Calf-Raising, Espanola, Hilario Maes, Espanola

NEW PROJECTS FUNDED:

1. Implementation of Career Education in New Mexico, Jean Page, Santa Fe

2. Career Implementation Program for Small Rural School, Paul Shelford, Penasco

3. Dona Ana Branch, Career Ladder Nursing, Margaret Scarbrough, Las Cruces

RESEARCH RELATED ACTIVITIES:

1. Observed Vocational Education Week (February 10-16).

2. Wrote State Plan for Vocational Education.

3. Attended National RCU Convention, Scottsdale, Arizona.

4. Continued project monitoring activity.

5. Submitted proposal, Part F, EPDA.

6. Continued Manpower Reports.

7. Planned fifth annual vocational education conference.

New Mexico

8. Conducted three-day workshop for State Vocational Education staff.

9. Continued data retrieval for vocational information system.

10. Finalized third-party evaluator contract for Part C project.

11. Continued advisement to Part D Exemplary Advisory Committee.

12. Submitted State Plan for Vocational Education to State Advisory Committee for Vocational Education and the State Board of Education.

13. Printed Annual Report.

14. Monitored Part F, EPDA projects.

15. Submitted Part C proposal for FY 1974-75.

PROJECTS AND ACTIVITIES PLANNED:

1. Begin Part C project.

2. Renew Penasco Project (second year).

3. Attend Western Regional RCU Conference.

4. Attend Fifth Annual Vocational Education Conference.

5. Implementation of EPDA Itinerant Teacher workshops.

6. Initiate vocational followup project.

7. Part D proposals due to program development.

8. Submit quarterly reports to Dallas.

9. Print State Plan for Vocational Education.

10. Submit Annual Report to Dallas.

11. Completion forms due to program development.

12. Expansion of Vocational public relations.

NEW YORK

Robert S. Seckendorf, State Director of Vocational Education
Louis A. Cohen, RCU Director

PROJECTS COMPLETED:

1. Travel Agency Survey

2. Summary activity report of the two R&D Centers: City University of New York Institute for Research and Development in Occupational Education and Cornell University Institute for Research and Development in Career Education.

NEW PROJECTS FUNDED: (Internal Projects)

1. A staff member developed a model for a combined occupational education related youth organization in cooperation with the Youth Leadership Unit. Model was presented to Bureau Chiefs and State Advisors.

2. Staff worked on the development of a metric system proposal in response to an RFP from Washington.

3. A staff member is writing a publication entitled The Matrix: A Simplified Approach to Occupational Objectives.

4. An Agriculture Occupational Manpower Survey is in rough copy and is being developed in cooperation with the Bureau of Agricultural Education.

5. A questionnaire regarding use of the metric system and need for inservice programs was developed and pretested. It has been mailed to BOCES and community colleges for comparison.

6. The publication Individualizing Occupational Objectives is being revised for a new edition and field testing.

7. Meetings were held with occupational directors and practical nursing coordinators to secure approval for testing of the ESCOE system.

8. A staff member was involved in the development of a software package for an ESCOE Computer Delivery System.

9. A study on the New York City Industrial Arts Publishing Center effect on reading was begun. Arrangements were made to conduct the study with the NYC Bureau of Industrial Arts.

10. A staff member is doing data analysis of industrial arts teacher training.

11. Progress continued on the EPDA study. Objectives of 18 participating institutions were collected.

12. A proposal entitled Research in Educational Careers for the Handicapped--Project REACH was developed.

13. Data analysis of the Health Occupations Facilities Survey was completed.

14. A total of 17 site visits were made to career education projects throughout the State. Visits were made for evaluation purposea.

15. A staff member assisted in the writing of a proposal for a consumer homemaking institute.

16. A staff member monitored the evaluation of SPICE (Special Programs in Career Education) in New YOrk City.

17. Meetings were held with City University of New York Research and Development Center staff to discuss ongoing proposals.

RESEARCH RELATED ACTIVITIES:

1. During the past sixt months, staff members provided consultative services to the following institutions and organizations:

   a. Japanese Ministry of Education
   b. Georgia Department of Education
   c. Cooperative Education High School Program, New York City Board of Education

d. Roosevelt Public School System
e. Culinary Institute of America.

2. Staff members provided consultative services to the following New York State agencies:

   a. Project Redesign
   b. Department of Civil Service

3. Staff members attended the following conferences and seminars and/or made presentations to the following:

   a. New York City Junior High School Principals Association
   b. New York State Educational Communications Association Conference
   c. Workshop for Teachers of Quantity Foods and Culinary Arts
   d. Workshop for Teachers of Trade Electricity and Electronics
   e. Workshop for High School Industrial Arts Faculty
   f. Workshop for Teachers of Health Occupations Education
   g. Fifth Annual Conference of the Council of Practical Nurse Programs of New York State
   h. Council of Practical Nurse Programs, Mid-Hudson Subcouncil
   i. Executive Council of Practical Nurse Programs, Curriculum Committee
   j. Elementary School Publishing Activities Awards Program
   k. National RCU Conference
   l. Institute for Adult Home Economics Education
   m. EPDA Conference
   n. Career Guidance Workshop (in connection with National Alliance of Manufacturers and Industry)
   o. Meeting of Association of Vocational Guidance Personnel
   p. Conference on Futuring for Health Occupations
   q. Presentation to SED Monitors of Career Projects on Status of Career Education in New York State
   r. New Jersey State College (ESCOE speech)
   s. Nassau County Community College
   t. Syracuse University Research Center
   u. Syracuse BOCES

New York

PROJECTS AND ACTIVITIES PLANNED:

1. Implementation of Teacher Certification Model using Licensed Practical Nursing ESCOE program.

2. Material to be developed with the Bureau of Testing in the area of performance (hands-on) tests for occupational educators.

3. In cooperation with the Bureau of Inservice Education, three packages of materials are in the planning stage to assist inservice educators develop workshops that contribute directly to classroom learner success.

4. An extensive evaluation is being planned for the Educational Communications Conference to be held in November 1974.

5. A survey of ESCOE users is being planned in order to evaluate the system.

6. The design of an evaluation scheme to evaluate student achievement when exposed to a performance objectives-based curriculum is being planned.

7. Mini Grant Followup Study.

8. Begin a study entitled The Development of a Model for the Installation of Reading Instruction in a Vocational Education Area.

9. Begin a study on the Effectiveness of an Objectives-Based Curriculum on Pupil Services.

10. Development of a paper on criteria for selecting a computer-based evaluation system.

11. Continuation of Career Education site visits.

12. Assist in planning consumer-homemaking conference for the fall.

13. Continue work with Health Occupations Teacher Competency Study.

14. Continue work with Apprenticeship Program in Trade and Technical Education.

NORTH CAROLINA

Charles J. Law, State Director of Vocational Education
Charles Rogers, RCU Director

PROJECTS COMPLETED:

1. The Dissemination of Local-Level, Long-Range Planning Systems to North Carolina Technical Institutes and Community Colleges, Department of Community Colleges, Raleigh

2. The Establishment of an Instructional Materials Dissemination Process Serving the Division of Occupational Education, State Department of Public Instruction, Raleigh

3. The Revision and Field-Testing of Materials for Implementing an Individually Scheduled Cluster Curriculum in Occupational Education, Sanford/Lee County Schools, Sanford

   The Development of an Occupational Education Model for the Primary Grades, Frank Porter Graham Child Development Center, University of North Carolina at Chapel Hill

NEW PROJECTS FUNDED:

1. Profile of Students in North Carolina Community Colleges and Technical Institutes, 1974, North Carolina State University, Raleigh

2. Student Communications and Occupations Related Experiences, Edenton/Chowan Schools

3. The Development of a Model to Expand Employment Options and Occupationsl Education Opportunities for Women in North Carolina, State Department of Public Instruction

RESEARCH RELATED ACTIVITIES:

1. Developed a new communication tool entitled SIGNAL - 2000 have been published reporting on six different projects.

North Carolina

2. Development of a Project Director Workbook.

3. Participated in Congressional Hearing on vocational legislation.

4. Three members participated in the National RCU Conference.

5. Three members participated in the Spring meeting of the Southwide Research Council on Occupational Education.

6. Produced 30-minute documentary film of research activities in North Carolina - shown on Statewide ETV.

7. Assisted Division of Occupational Education in procuring and reviewing individualized curriculum materials.

8. Developed research priorities for FY 1975.

9. Assisted in Statewide assessment of third-graders.

10. Assisted in the conduct of six Regional Career Education Conferences in North Carolina.

11. Participated in evaluation of North Carolina pilot optional schools.

PROJECTS AND ACTIVITIES PLANNED:

1. Develop a slide-tape presentation on the projects and activities of the Occupational Research Unit.

2. Plan and conduct an annual research dissemination conference.

3. Solicit proposals and fund five new research projects.

4. Develop and fund a project for development of individualized curriculum materials in middle grades occupational exploration.

5. Begin work on a project to develop and evaluate alternative teacher education arrangements.

6. Explore various rationale for use in designing a Statewide assessment of occupational education.

7. Develop a long-range plan for the occupational research unit.

NORTH DAKOTA

Carrol E. Burchinal, State Director of Vocational Education
Donald Eshelby, RCU Director

PROJECT COMPLETED:

1. Development of Instructional Course of Commonalities for Home Economics and Office Education, Harriet Shurr

2. Phase one: Followup Stude of Office Education and Distributive Education Graduates, Roger Bloomquist

3. Inservice Training Program for Telecommunications Technicians, Dale Peterson

4. Program, Planning, Budgeting and Evaluation System, Harold Gulbrondson

5. A Developmental Project for PreSchool Through Adult in Career Education for North Dakota (Third Year), Harry Weisenberger

6. A Developmental Project for PreSchool through Adult in Career Education for North Dakota (Second Year)

7. Student Identification and Determination of Factors that Influence Sound Career Selection and Achievement Decisions (Second Year), Lyle Sorum

8. Dickinson Diversified Occupational Program for Area Schools, Ted Renner

9. Student Identification and Determination of Factors that Influence Sound Career Selection and Achievement Decisions, Lyle Sorum

10. West Fargo Career Education, Laurel Thoreson

11. Dickinson Diversified Occupational Program for Area Schools, Ted Renner

12. A Project to Provide Career Education Services to Special Need Students, Jim Horton

North Dakota

13. Establishment of a Multi-district Vocational Education Center (Minn-Dak Vocational Center), Tony Kochenash

NEW PROJECTS FUNDED:

1. Development of Learning Activity Packages in Agribusiness, Wayne Berry

2. Industry Evaluation of Junior College Vocational Education Programs, James Wright

3. Model Store Curriculum - A Developmental Model for North Dakota Schools, Todd Goschen

RESEARCH RELATED ACTIVITIES: NONE

PROJECTS AND ACTIVITIES PLANNED: NONE

OHIO

Byrl R. Shoemaker, State Director of Vocational Education
R.D. Balthaser, RCU Director

PROJECTS COMPLETED:

1. Career Development, Akron City Schools
2. Career Development, Benton-Carroll-Salem Local Schools
3. Career Development, Canton City Schools
4. Career Development, Cincinnati City Schools
5. Career Development, Clear Fork Valley Local
6. Career Development, Cleveland City Schools
7. Career Development, Columbus City Schools
8. Career Development, Dayton City Schools
9. Career Development, E. Muskingum Local Schools
10. Career Development, Geneva Area City Schools
11. Career Development, Kirtland Local Schools
12. Career Development, Lorain City Schools
13. Career Development, Mad River-Green Local Schools
14. Career Development, Mansfield City Schools
15. Career Development, Minford Local Schools
16. Career Development, Orrville City Schools
17. Career Development, Parma City Schools
18. Career Development, Princeton City Schools
19. Career Development, South-Western City Schools
20. Career Development, Springfield City Schools

Ohio

21. Career Development, Toledo City Schools

22. Career Development, Warren City Schools

23. Career Development, Willoughby-Eastlake City Schools

24. Career Development, Youngstown City Schools

25. Agriculture Teacher Competency Survey, Ohio State University

26. Pre-Postsecondary Program Evaluation, Kent State University

27. Commissioner D Career Development Process Evaluation, Susan Wong Assoc., NYC

28. Development of Pre-Postsecondary Education Program in Health Occupations, and others for High School Students in Grades 11 and 12, Springfield-Clark County JVSD

29. Development of Pre-Postsecondary Education Program in Engineering and Health Occupations for High School Students in Grades 11 and 12, Akron City Schools

30. Development of Pre-Postsecondary Education Program in Health Occupations for High School Students in Grades 11 and 12, Penta County JVSD, Perrysburg.

31. Development of Pre-Postsecondary Education Program in Business, Health, Engineering, and Social Science Occupations for High School Students in Grades 11 and 12, Great Oaks JVSD, Hamilton County area

32. Development of Vocational Education Curricula Especially Adapted to Continual Adult Penal Education Programs, Ohio Department of Corrections

33. To Plan for Cable Television as a Means for Career Education (Probably inoperative), Dayton City Schools (consortium)

Ohio

34. Assessment of the Performance Capabilities of Graduates of Vocational Agriculture, Ohio State University

NEW PROJECTS FUNDED:

RESEARCH RELATED ACTIVITIES:

1. Commissioner I Transportation Curriculum Project, Ohio Department of Education

2. Automation of Accounting System for Interface with Reporting System - Phase II (Moving to immediate retrieval), Ohio Department of Education

3. Program Review for the Improvement, Development and Expansion of Vocational Education and Guidance (PRIDE) - 5th year completion of cycle with 21 Vocational Education Planning Districts including continued cost analysis, Ohio Department of Education

4. Converting statistical and fiscal system to "real" time operation for management activities of staff including:
   Linked EPDA project to develop labor market forecasting system,
   MBO forecasting system based on LEA training and reporting,
   Ohio Department of Education

5. Research Coordination Unit-continuation, Ohio Department of Education

PROJECTS AND ACTIVITIES PLANNED:

1. Career Development Program, Akron City Schools

2. Career Development Program, Benton-Carroll-Salem Local Schools

3. Career Development Program, Boardman Local Schools

Ohio

4. Career Development Program, Canton City Schools

5. Career Development Program, Carlisle Local Schools

6. Career Development Program, Cincinnati City Schools

7. Career Development Program, Clear Fork Valley Local Schools

8. Career Development Program, Cleveland City Schools

9. Career Development Program, Cleveland Heights-University Heights City Schools

10. Career Development Program, Columbus City Schools

11. Career Development Program, Dayton City Schools

12. Career Development Program, E. Muskingum Local Schools

13. Career Development Program, Geneva Area City Schools

14. Career Development Program, Kirtland Local Schools

15. Career Development Program, Lorain City Schools

16. Career Development Program, Mad River-Green Local Schools

17. Career Development Program, Mansfield City Schools

18. Career Development Program, Medina City Schools

19. Career Development Program, Minford Local Schools

20. Career Development Program, Orrville City Schools

21. Career Development Program, Parma City Schools

22. Career Development Program, Princeton City Schools

23. Career Development Program, Scioto-Darby City Schools

Ohio

24. Career Development Program, South-Western City Schools

25. Career Development Program, Springfield City Schools

26. Career Development Program, Stow City Schools

27. Career Development Program, Toledo City Schools

28. Career Development Program, Warren City Schools

29. Career Development Program, Willoughby-Eastlake City Schools

30. Career Development Program, Youngstown City Schools

31. Continuation of Pre-Postsecondary Education Program in Engineering and Health Occupations for High School Students in Grades 11 and 12, Akron City Schools

32. Continuation of Pre-Postsecondary Education Program in Health Occupations for High School Students in Grades 11 and 12, Penta County JVSD, Perrysburg

33. Continuation of Pre-Postsecondary Education Program in Business, Engineering, Health and Social Science Occupations for High School Students in Grades 11 and 12, Great Oaks JVSD

34. Researching and Developing a Program for High School Students in a Small Academic High School with Limited Vocational Diversification, Wyoming City Schools

35. Developing a Model Regional Vocational Education Planning Unit for Southwestern Ohio, Greene County JVSD

36. Conducting the Feasibility of a 5-Year Follow-up Study Utilizing IRS Information

37. 9-10th Grade Career Exploration Scheduling

Ohio

38. Home Economics (Part F) Follow-up Study

39. Design of a Data System for Vocational Education Economic Bases, Ohio University

40. Follow-up on Youth Leadership Development Workshop, Camp Muskingum

OKLAHOMA

Francis T. Tuttle, State Director of Vocational Education
William D. Frazier, RCU Director

PROJECTS COMPLETED:

1. Occupational Training Information System, Cycle VI, In-house

2. A Historical and Current Follow-up Study of Oklahoma Vocational-Technical Graduates, In-house

3. A Counselor Oriented Report of General Aptitude Test Battery Data, In-house

4. An Evaluation of 20% of Oklahoma's Secondary Vocational Programs, In-house

NEW PROJECTS FUNDED:

1. An Analysis of the Use of "Expressions." (This is a study of the State Department Newsletter), In-house

2. A Survey of Attrition Factors of Vocational Teachers, In-house

3. The Comparative Efficacy of Selected Manpower Demand Projection Techniques on Diversified Populations (Part C 131(a) project funded to the RCU), In-house

RESEARCH RELATED ACTIVITIES:

1. National MBO Project to initiate MBO system in 15 State Departments

2. Evaluated mobile guidance units in five counties and evaluated vocational programs in 60 public schools

3. Completed data collection of Ohio State University Task Analysis for Auto Mechanics, Computer Programmers, and General Secretary

4. Conducted 3 National MBO workshops in Oklahoma City; initiated MBO for a State college, a municipal government, and several high school administrative offices

5. Developed the FY 75 Oklahoma State Plan

6. Hosted representatives from USOE in review of State Department activities; California EPDA representative for overview of EPDA 552 & 553 programs; and delegations from Tennessee and Ohio for overview of MIS information system

7. Initiated use of SAS (Statistical Analysis System) programs for statistical analysis of research data by computer processes

PROJECTS AND ACTIVITIES PLANNED:

1. The following projects will be completed:
   A Proposal for the Initiation and Implementation of a Management by Objectives System in Selected States' Departments of Vocational-Technical Education (EPDA funded. Phase II will be initiated to add 12 more States.)

   A Parallel Follow-up Study to Establish Validity of the Follow-up Component of Oklahoma's Student Accounting System

   An Analysis of the Use of "Expressions"

   A Study of the Needs of Oklahoma Citizens for Information about Vocational-Technical Education

   A Survey of Attrition Factors of Vocational Teachers

   A Study to Identify Success Factors of Skill Training at Oauchita and Lexington Inmate Training Centers

2. The following in-house projects will be active:
   Occupational Training Information System, Cycle VII

   The Comparative Efficacy of Selected Manpower Demand Projection Techniques on Diversified Populations

   Development of an Evaluation Design for Vocational Curriculum Guides

Oklahoma

A Dropout Restoration Project

Research on the Evaluation of Oklahoma Vocational Programs

Development of an Accounting System for the RCU Based on Projects

OREGON

Leonard Kunzman, State Director of Vocational Education
Dave Fretwell, RCU Director

PROJECTS COMPLETED:

1. Integrated approach to Junior High School Career Education, Cal Young Junior High, Eugene

2. Exemplary Career Exploratory Program, Sherwood School District

3. Self-Learning Approach to Career Education in Teacher Preparation Programs, Oregon State University

4. Educational Career Awareness Program (Career Caravan), Central Point School District

5. Continuing Project in Career Awareness, Grades K-6, Union County IED

6. Integrated SUTOE Program, Oregon City School District

7. Health Career Exploration, Portland School District

8. Total Career Education Program, Pleasant Hill School District

9. Interdisciplinary Basic and Career Education Program, Vocational Village, Portland

10. Meeting Individual Needs in Clusters, Klamath Union High School

11. Systems Approach to Learning in Occupational Education, Clackamas

12. Consortium for Implementing an Industrial Arts Career Development Program, Oregon State University

13. Elementary Career Awareness, Eugene

14. Community-Based Career Exploration Program, Vale

15. Materials Development for Career Awareness, Linn-Benton

Oregon

16. Local Production of Relevant Awareness Media, Central

17. Proposal Planning Grant, Portland

18. Proposal Planning Grant, Clackamas

19. Proposal Planning Grant, Grants Pass

NEW PROJECTS FUNDED:

1. Project MUSIC - Career Exploration, Beaverton

2. Career Guidance and Counseling, Bend

RESEARCH RELATED ACTIVITIES:

1. Completion of Statewide followup of vocational high school students.

2. Initial development begun on a "Oregon Career Education Dissemination System."

3. "Career Program Planning System" became operational.

4. Planning continued for implementation of Statewide community college followup.

PROJECTS AND ACTIVITIES PLANNED:

1. Implementation of Statewide community college student followup system.

2. Funding of new 1975 fiscal year project - tentative selection complete pending award of Federal funds.

3. Ongoing development of Manpower/Curriculum Management System with use of Commissioners Part C funds beginning July 1, 1974.

PENNSYLVANIA

John W. Struck, State Director of Vocational Education
Carroll A. Curtis, RCU Director

PROJECTS COMPLETED:

1. School-Based Job Placement Service Model: Phase II, Pilot Implementation, Charles H. Matters, Reading-Muhlenberg AVTS

2. Research Study for County Wide Centralized Cooperative Education, William R. Silkman, Erie County AVTS

3. School-Based Job Placement Service Model, Robert H. Kifer, Greater Johnstown AVTS

4. Development of Individual Instructional Packages - Dental Technology, Merrill I. Hughes, Delaware County I. U. 25

5. Job Placement Model, Robert E. Eckrote, Columbia-Montour AVTS

6. A Comparison of Academic Achievement in Full-Time and Part-Time Area Vocational-Technical High Schools, Donald B. Zucco, Greater Johnstown AVTS

7. Development of Individual Instructional Packages - Machine Tool (Engine Rebuilding), Merrill I. Hughes, Delaware County I.U. 25

8. Development of Individual Instructional Packages - Materials Handling, Merrill I. Hughes, Delaware County I.U. 25

9. An Investigation of the Status of Selected Students of 1969-1973 Graduating Classes of Riverside High School, Taylor, Pennsylvania, June Willis, Riverside School District

10. A Comparative Analysis of Distributive Education Programs, Donald R. Lamuth, University of Pittsburgh

11. VEMIS Backup Facility and Transfer of Functions: Phase I, Pilot Implementation, L. Loyd Ruoss

Pennsylvania

12. Proposal Preparatory to Nursing and Auxilliary Nursing Articulation Program Study, John Bacon

13. Guidelines for the Establishment and Evaluation of Career Resource Centers in Pennsylvania, C. Robert Zimmerman

14. Career Development Guide Field Testing, Carl W. Pepperman

15. Doctoral Disertation of Norton Garfinkel, James O. Tule

16. Exemplary Career Resource Center for Grades 6-9 in Pennsylvania, Shari Rogers

17. Vocational Facilities Microfile System: Design and Implementation, Joseph F. Blake

18. Exemplary Career Resource Center for Grades 6 through 9 in Pennsylvania, Harry Scott, Jr.

19. Career Resource Center, Francis A. Voyten

20. Exemplary Career Resource Center, Kenneth W. Hoover

21. Exemplary Career Resource Center for Grades 6-9 in Pennsylvania, Kenneth R. Nusser

NEW PROJECTS FUNDED: NONE

RESEARCH RELATED ACTIVITIES:

1. Career Resource Center Implementation and Evaluation.

2. PENNscripts - Evaluative questionnaires were developed and piloted for the forthcoming comprehensive evaluation of PENNscripts. The evaluation will involve approximately 25,000 students across Pennsylvania in order to assess the effectiveness of the career information dissemination system. An appropriate sample of teachers and guidance counselors will also be surveyed.

3. A study to evaluate the first year vocational education projects in the eight State correctional institutions of Pennsylvania. The sample was comprised of 423 male and female prereleased offenders and 59 instructors. Survey data indicated that many of the offenders were enrolled in programs not related to career plans and high number said no one is helping them secure employment. Almost all the offenders enjoy their course work and have positive views about the importance of vocational courses to future jobs. Most instructors rate the quality of their programs as average.

4. Manpower Research Activities - The primary goal is to improve the manpower research and information efforts as they relate to occupational education planning and decisionmaking. Activities designed to achieve this goal include continuous and terminal type tasks.

   One activity focused on the development of occupational employment projects based upon the 1960 and 1970 census data. This effort has resulted in the development of a computer-based system for making occupational projections: to date, a set of interim employment projections by occupation by industry for the State and labor market areas within the State for the years 1975 through 1990 by five-year intervals; also, information describing the annual average growth by occupation and annual withdrawal (due to death, disability, retirement and women leaving and reentering the labor force). The following publications have resulted:

   - Historical Estimates, 1960-1970, of Occupational Employment for the State, SMSA's and Balance of State

   - Interim Report of Employment by Occupation for the State, SMSA's and Balance of State for 1975, 1980, 1985, 1990

   - Annual Occupational Withdrawal for Pennsylvania for Pennsylvania and Major Labor Market Areas

Pennsylvania

Another task involved the continuation and improvement of methods for documenting occupational graduate supply from formalized vocational education agencies. Information in the form of tables detailed the distribution of graduates by occupation by school and by geographic area.

A major task involving continuous efforts is the computerization of the manpower supply/demand model. During the past year, computer programs were transferred to the Department of Education computer facility. This will facilitate the handling of large quantities of data for analyses and will result in data reports to support program planning and decisionmaking.

Consideration was given to the development of strategies and procedures for working with users of supply/demand data and related information. Efforts were directed at definition of the use of these data for educational planning and programming. One activity was the sponsoring of a symposium on manpower research. The target audience included State Government personnel and postsecondary education people. As a followup to this symposium, a publication detailing the proceedings was produced and distributed to individuals concerned about manpower research as it relates to educational planning, programming and policymaking.

PROJECTS AND ACTIVITIES PLANNED:

1. Conduct the evaluation of PENNscripts.

2. Complete and forward to USOE the Second Annual Report of the Discretionary Part C career education projects.

3. Assist local educational agencies to implement approved research and emplary projects funded directly from USOE.

4. Assist local educational agencies to implement a model occupational placement service.

5. Participate in the evaluation of Pennsylvania's pilot distributive education curriculum project (LAPS).

6. Continue manpower activities.

RHODE ISLAND

Peter Bowen, State Director of Vocational Education
Jacqueline Nelson-Harrington, RCU Director

PROJECTS COMPLETED:

1. Vocational Education Gore Group, State Department of Education

2. MIS (Management Information Systems), State Department of Education, Donald Galamaga

3. Career Awareness in North Scituate (CANS),

4. What Can You Be?, North Smithfield, Paul Joyce

5. Project Environment, North Smithfield, Paul Joyce

6. Protective Services Careers, Providence, Charles Bernardo

7. Opening Doors to Awareness, Lincoln

8. Career Concepts Awareness Program, Cumberland

NEW PROJECTS FUNDED:

1. ICE (Investigating Career Education), Providence, Charles Bernardo

2. Management Information Systems (MIS), State Department of Education, Donald Galamaga

3. Career Orientation Education (COE) Mt. Pleasant, Providence, Charles Bernardo

4. A Developmental Program for preparing all students for the World of Work, Cranston

5. Career Education for 8th Graders, Warwick

6. Career Orientation Education (COE) Flynn, Providence

7. Career Education Program, East Providence

Rhode Island

8. Opening Doors to Awareness, Lincoln

9. COE, Providence, Charles Bernardo

10. Career Awareness Partnership, Cranston

11. A Developmental Program for Preparing All Students for the World of Work, Cranston

12. Career Awareness Project, East Greenwich

13. OEOE (Occupational Exploration, Orientation, and Exposure), Warwick

14. Career Education Program, East Providence

15. Bradley Pre-Vocational Program, Bradley Hospital

16. Career Concepts Awareness, Cumberland

17. Industrial Based Career Education, World of Construction and Manufacturing, Providence

18. Career Awareness Project II (CAP II), East Greenwich

19. Career Awareness in North Scituate (CANS), Scituate

RESEARCH RELATED ACTIVITIES:

1. The Research Unit at the Department of Education is developing a Vocational Education module of a Management Information System (MIS) designed to collect, process, and disseminate information about Vocational Education to enhance decisionmaking in this area at State and local levels, for the purposes of program control, program management, and planning.

2. The Vocational Office is also supporting the Diocese of Providence in their efforts to develop and pilot career education program for system-wide use among non-public schools, grades 7-12.

Rhode Island

PROJECTS AND ACTIVITIES PLANNED:

1. The Vocational Office plans to continue support of the development of the MIS and to expand Career Education efforts including non-public as well as public endeavors.

SOUTH CAROLINA

L. L. Lewis, State Director of Vocational Education
Gregory Morrison, RCU Director

PROJECTS COMPLETED:

1. Development of an "Orientation to Career Education" package, containing programmed materials for teacher/administrators, with a videotape presentation and an ideas booklet suggesting a variety of classroom activities.

2. Initiation of Phase II of the Career Cluster Analysis Planning Project to establish a model for the articulation of Vocational and Technical Education training programs, based on behavioral objectives. This phase was concerned with the development and sequential organization of the behavioral objectives and the preparation of the Phase III project plan.

NEW PROJECTS FUNDED:

1. Phase III of the Career Cluster Analysis Planning Project, which involves the adaptation of available self-paced curriculum materials and the development of additional materials to produce individualized, self-paced curriculum in the areas of Machine Shop and Heating, Air-Conditioning and Refrigeration.

RESEARCH RELATED ACTIVITIES:

1. Reproduction of self-instructional Graphic Communications materials for distribution.

2. The expansion of Project VIEW into the remaining non-participating area vocational centers, high schools and junior high schools.

PROJECTS AND ACTIVITIES PLANNED:

1. A series of inservice workshops for teachers/administrators, as an orientation to Career Education, utilizing the orientation package.

2. Develop an instrument to evaluate the VIEW program delivery system in the participating schools.

3. Plans are being devised to implement a vocational research information system.

4. Career Cluster Phase III Project curriculum materials will be developed and implemented for field testing in the vocational and technical centers in the six county Appalachian region of the State.

5. The VIEW project will expand the number of occupations in the deck to 300. Plans have been made to conduct an extensive publicity campaign, utilizing various forms of media.

6. Workshops have been planned for the guidance counselors, principals and superintendents in the fall, for the purpose of discussing innovative approaches for implementing VIEW programs and identifying remedies for problems encountered.

7. A Graphic Communications Teacher Training Workshop will be conducted to assist instructors in developing plans and strategies necessary for effective implementation and administration of the new curriculum materials.

SOUTH DAKOTA

E. B. Oleson, State Director of Vocational Education
E. B. Oleson, RCU Director

PROJECTS COMPLETED:

1. Occupational data for Table I and demographic data for Table II of South Dakota State Plan for FY 1975, University of South Dakota, Vermillion

NEW PROJECTS FUNDED:

1. Agreement for cooperative investigation, University of South Dakota, Vermillion

RESEARCH RELATED ACTIVITIES: NONE

PROJECTS AND ACTIVITIES PLANNED:

1. Continuation of previous agreement and preparing documentation data for Part II of State Plan.

TENNESSEE

W. M. Harrison, State Director of Vocational Education
Garry Bice, RCU Director

PROJECTS COMPLETED:

1. A Study of Student Satisfaction with Vocational-Technical Education Programs in Tennessee, Tennessee Advisory Council on Vocational Education

2. The Impact of the Vocational Education Amendments of 1968 on Vocational Education in Tennessee, Tennessee State Advisory Council on Vocational Education

3. Survey of Public and Private Postsecondary Schools, National Center for Education Statistics

4. Relationship Between Vocational Office Education Training in Sumner County and Employment Obtained After High School Graduation, Sumner County Schools

5. Developing Curriculum Materials in Health Education Careers for Partially Sighted Students, McGavock High School, Davidson County

6. An Emphasis on Student Vocational Education and a Study of Community Vocational Opportunities, Decatur County Schools

7. Developing Job Sheets and Related Aids for Individualized Instruction in Machine Shop, Rutherford County

8. Career Guidance Services and Placement, McNairy Central High School, McNairy County

9. A Followup of Green Brier High School Graduates for the Part Four Years and Survey of Their Places of Employment, Robertson County Board of Education

Tennessee

NEW PROJECTS FUNDED:

1. The Development of a Framework for Curriculum and Professional Personnel Development for Comprehensive Vocational-Technical Education in the State of Tennessee, Tennessee State Department of Education

2. Individualized Instruction: A Project Utilizing Interdisciplinary Learning Packets Correlating Career Education and High School English in the Secondary Schools of Clay County

3. Development of Transportable Instructional Materials on Careers for Robertson County Schools

4. Pre-Vocational/Career Guidance Grades 7-8, Gibson County

5. A Survey of Surgical Techniques of Selected Small Animal Hospitals in Tennessee and Colleges of Veterinary Medicine for the Purpose of Developing Curriculum Materials, Maury County

6. Development of an Office Model Simulation Guide, Memphis State University, Memphis

7. A Study of Tourism Careers Available to Tennessee Students, Memphis State University, Memphis

8. Followup on Secretarial Science Graduates of Jackson State Community College, Jackson, Tennessee from 1970 to 1973, Madison County

RESEARCH RELATED ACTIVITIES:

1. Product Utilization.

2. Tennessee Management Information System.

3. Occupational Information System.

4. Information Retrieval and Dissemination System.

Tennessee

PROJECTS AND ACTIVITIES PLANNED:

1. Information Retrieval and Dissemination System: A SDI subsystem for administrators, designed to serve State staff.

2. Product Utilization: Revise five instructional packets and develop two additional ones for use in workshops across the State.

3. Occupational Information System: Update and add to primary, elementary and secondary INFOE, and develop and pilot test junior high INFOE.

4. Management Information System: Add to manpower supply component, the supply from private schools and returning military personnel.

TEXAS

John R. Guemple, State Director of Vocational Education
Ray Barber, RCU Director

PROJECTS COMPLETED:

1. An Analysis of Student Followup Data for Administrative Decisionmaking, Bryan ISD, Bryan

2. Cooperative Education for American Indians in Dallas County, Dallas County Community College District, Dallas

3. College Curriculum for Correctional Instructional Personnel, Educational Personnel Development Consortium C, Houston

4. Search for Common and Unique Competencies Needed by Vocational Supervisors and Administrators, Educational Personnel Development Consortium D, Richardson

5. Search for Common and Unique Competencies Needed by Vocational Technical Guidance Personnel and Development of Performance-Based Training Modules, Education Service Center, Region 10, Richardson

6. Analysis of Employee Supply and Demand in Howard County - A Pilot Approach, Howard County Junior College, Big Spring

7. Development of a Community Career Counseling and Information Program, McLennan Community College, Waco

8. A Pilot Program in Residential Construction and Technology, Paris Junior College, Paris

9. Identification of Adult Vocational Education Needs, Paris Junior College, Paris

10. Analysis of the Effects of the Change in the Basis of Funding Apprenticeship Related Instruction in the Public Schools, Texas A&M University College Station

11. High School Career Interest and Information Survey, Phase III, Texas State Technical Institute, Waco

Texas

12. An Assessment of Remedial Programs for Vocational Technical Students in Selected Postsecondary Institutions, The University of Texas, Austin

13. Vocational Followup Study, Windham School District, Huntsville

NEW PROJECTS FUNDED:

1. College Curriculum for Correctional Instructional Personnel, Educational Personnel Development Consortium C, Houston

2. Analysis of Effects of the Change in the Basis of Funding Apprenticeship-Related Instruction in Public Schools, Texas A&M University, College Station

3. Statewide Survey of Current and Future Employment Levels of Licensed Dental Hygenists, Texas State Technical Institute, Waco

4. Development of Instructional Module, "Health Care Organizations, Facilities, and Personnel", Texas Woman's University, Denton

RESEARCH RELATED ACTIVITIES:

1. Ten research proposals were reviewed and evaluated during the six month period. Four projects were approved for funding. Eighteen projects initiated prior to January 1, 1974, were continued. Thirteen projects were completed.

2. Members of the staff continued to participate in the coordination of exemplary projects funded under Part D, Public Law 90-576, and the development and coordination of pilot-demonstration projects in occupational education for handicapped students funded under Section 122(c)(3).

3. Members of the staff continued to participate in the activities of a special interagency task force to develop and implement a comprehensive manpower supply/demand data system for the State of Texas.

4. Members of the staff participated in the development, organization, coordination, review, publication, presentation, and dissemination of the Texas State Plan for Vocational Education for Fiscal Year 1975.

5. Members of the staff continued to participate in a special project to computerize the statistics and financial inputs required for the preparation of the Annual Report for Vocational Education.

6. Members of the staff organized and participated in a research dissemination conference in Arlington

7. The staff participated in a wide variety of activities related to research and development in occupational education and other components of career education.

PROJECTS AND ACTIVITIES PLANNED:

1. Nine previously described projects will be continued during the next six-month period. Three new projects have been approved for initiation during the six-month period. Approval of approximately fifteen additional new projects is anticipated.

2. Emphasis will continue to be placed on curriculum development projects, manpower needs and development studies, evaluation projects, and followup and placement studies. Continued emphasis will be placed on the role of occupational education as an integral part of the total career education process.

3. Continued emphasis will be placed on the initiation of exemplary projects focused on career awareness, investigation, and exploration.

4. Development and initiation of pilot-demonstration projects in occupational education for the handicapped will be continued.

5. The Annual Report for Vocational Education for Fiscal Year 1974 will be completed and forwarded to the USOE.

6. The staff will continue to participate in a wide variety of activities related to research and development in occupational education and other components of career education.

7. The division's library facilities will continue to be improved. Continued progress will be made in the development of improved dissemination procedures.

UTAH

Walter Ulrich, State Director of Vocational Education
N. Craig Kennington, RCU Director

PROJECTS COMPLETED:

1. Study of Vocational Education Advisory Committees, State Department of Education

2. Sevier Valley Job Market Survey, Dewain Washburn, Sevier Valley Tech

3. Uintah Basin Job Market Survey, Marlin Johnson, Uintah Basin Vocational Center

4. Workshop for Planning Career Education Program, Sevier School District

5. Study of Coal Mining Occupations and Training Needs, College of Eastern Utah

6. Study of the Leadership Service and Control Function of the Utah State Board for Vocational Education Staff, State Department of Education

7. Evaluation of a Training Program for Teachers Implementing Career Education, Utah State University

NEW PROJECTS FUNDED:

1. Chamber of Commerce, Work Observation Program, Local school districts of Salt Lake City, Davis, Granite, Jordan, and Murray

2. A Study of the Incremental Learning Units Developed for Use in Distributive Education, State Department of Education

3. Development and Field Testing of the Instrumentation for Evaluating Secondary and Postsecondary Vocational-Technical Education Programs in Utah, State Department of Education

Utah

RESEARCH RELATED ACTIVITIES:

1. Administration, evaluation, consultation, State funded, "Career Development (Dropout Prevention) Program"..

2. Attendance, American Education Research Association meetings, Chicago, April 15-19, 1974.

3. Attendance, Regional Interstate Planning Project, "Workshop on Affective Measurement," Las Vegas, May 13-15, 1974.

PROJECTS AND ACTIVITIES PLANNED:

1. A study to determine the validity of the present weighting factors in Part B of the school finance formula for vocational education.

2. A study to determine the extent to which vocational certificates, Associate of Applied Science degrees and Associate of Science degrees enhance the employability of job seekers.

3. Develop and implement survey procedures that will yield accurate job demand information.

4. A study to determine criterion referenced instruction approach to teacher education.

5. A study to determine career education and implications for business education programs at the junior high school level.

6. Assess educational needs and occupational opportunities available to youth and adults in agriculture in Utah

VERMONT

Arthur W. Ericson, State Director of Vocational Education
Joseph P. Kisko, RCU Director

PROJECTS COMPLETED:

1. Identifying a Non-Verbal Aptitude Measure for Use in Counseling Secondary Level Mentally Retarded Pupils, William Halloran, State Department of Education, Montpelier

2. Postsecondary Followup Study, S. F. Hochschild, Secondary Access Study, Montpelier

NEW PROJECTS FUNDED:

1. Postsecondary Followup Study, S. F. Hochschild, Secondary Access Study, Montpelier

2. Review and Analyze Enrollment Trends at the Barre City Regional Vocational Technical Center, Thomas Sandham, New England Resource Center for Occupational Education, Cambridge

3. Development of Consumer Education Curriculum Guide, Elizabeth P. Carr, State Department of Education

4. Instructional System Development Model for Vermont Area Vocational Centers, John Faust, New England Resource Center for Occupational Education, Cambridge

RESEARCH RELATED ACTIVITIES:

1. Development of Consumer Education Curriculum Guide.

2. Instructional System Development Model for Vermont Vocational Centers.

PROJECTS AND ACTIVITIES PLANNED:

1. Complete other research projects. Request new proposals. Read research proposals and make recommendations for approval, change or disapproval.

VIRGINIA

George S. Orr, Jr., State Director of Vocational Education
Lloyd M. Jewell, Jr., RCU Director

PROJECTS COMPLETED:

1. A Central Machines Laboratory Serving Two Block-time Programs and Incorporating Flexible Scheduling with Independent Study, Manor High School, Portsmouth

2. A Student-Built House Project, Fairfax County Schools

3. Development of a Plan for the Design, Field Testing, and Implementation of a Curriculum for a Course Tentatively Entitled "Introductions to Vocations" or "Vocational Orientation" for the Schools of Virginia, Virginia Polytechnic Institute and State University, Blacksburg

4. An Evaluation System for Vocational Education in Virginia, Virginia Polytechnic Institute and State University, Blacksburg

NEW PROJECTS FUNDED:

1. Development of a Plan for the Design, Field Testing, and Implementation of a Curriculum for a Course Tentatively Entitled "Introductions to Vocations" or "Vocational Orientation" for the Schools of Virginia", Virginia Polytechnic Institute and State University, Blacksburg

RESEARCH RELATED ACTIVITIES: NONE

PROJECTS AND ACTIVITIES PLANNED:

1. To fund 14 mini-grant projects to local school divisions and other educational institutions.

2. To fund a career education project for the Delmarva area in cooperation with Maryland and Delaware.

3. To fund a project for the development and implementation of career education in Virginia's public schools.

4. To fund a project for developing a curriculum for a course in "Introductions to Vocations"

5. To continue the development of the career education projects at Radford and Petersburg with the use of State funds.

6. To fund three additional Student Job Placement projects.

WASHINGTON

Arthur A. Binnie, State Director of Vocational Education
George P. Pilant, RCU Director

PROJECTS COMPLETED:

1. CCOE Participation in the Pacific Northwest Educational Research and Evaluation Conference, Washington Educational Research Association

2. Walla Walla Area Vocational Needs Assessment, Walla Walla School District

3. A Cost-Benefit Analysis of Vocational Education in an Area Vocational-Technical Institute, Renton School District

4. Project EVA Dissemination Packet, Highline School District

5. To Develop an Individualized Instructional Package on the Basics of the Metric System, Renton Schools

6. Educational Needs Assessment of Eastern Lewis County

NEW PROJECTS FUNDED:

1. Highline Public Schools Placement Service Training Model

2. Inter/Institutional Cooperation in Parent Education, Longview School District

3. Marine Clusters and Vocational Education Opportunities, Peninsula School District

4. A Study to Determine an Acceptable Teaching Load in Vocational Agriculture, Washington State University

5. Small Schools Alternative in Vocational Education, Tri-District Coop Mossyrock

6. Articulation of Secondary to Postsecondary Vocational Education Programs, Central Washington State College

7. National Instructional Television "Bread and Butterflies", State Department of Education

RESEARCH RELATED ACTIVITIES:

1. RCU Director is a member of the advisory committee to the six-State curriculum center. A State advisory committee has been created to provide a link between the curriculum center and the vocational educators of the State. Meetings will be held quarterly. The other States in the consortium are being encouraged to create Statewide committees also.

2. An investigation is being made into the advisability of reinstituting a Statewide followup system. A recent project resulted in the development of a new format and delivery system for followup.

3. The RCU Director is Western States' representative to the National RCU organization, and is President of the Washington Education Research Association for the coming year.

4. Dissemination activities have included Statewide distribution of research project results, newsletter articles promoting use of the ERIC system and microfilm equipment, development of bibliographies and automated ERIC searches for inservice training groups, workshops and seminars, and the distribution of microfiche, at no cost to vocational teachers in the State. A pilot selective dissemination of information (SDI) distribution was initiated with the Home and Family Life Service Area. Computer searches are provided free of charge to all vocational educators in the State.

PROJECTS AND ACTIVITIES PLANNED:

1. A project to evaluate a number of vocational education delivery systems for small schools will be continued with emphasis on testing..

Washington

2. An articulation plan (secondary to postsecondary) may be piloted in a number of LEA's.

3. Plans are being made to compare several vocational education delivery systems including Coop, DO, CRT, and traditional approaches.

4. Expanded SDI activities are planned for next year. Computerized searches will be continued and on-line service is being investigated.

WEST VIRGINIA

Clarence E. Burdette, State Director of Vocational Education
Glenn E. Smith, RCU Director

PROJECTS COMPLETED:

1. The Systems Approach: An Emerging Behavioral Model for Guidance - Operation Guidance II, Kanawha County Board of Education, Charleston

NEW PROJECTS FUNDED:

1. Child Development Curriculum, West Virginia University, Morgantown

2. The Development of a Master Plan for the Financial Support of Vocational Education Programs in West Virginia, The Center for Vocational and Technical Education, The Ohio State University, Columbus, Ohio

RESEARCH RELATED ACTIVITIES:

1. Provided consultative services to local educational agencies.

2. Conducted manual and computer searches for ERIC system users.

3. Provided microfiche and hard copy items for users, upon request.

4. Assisted with further development of the West Virginia vocational education management information system.

PROJECTS AND ACTIVITIES PLANNED:

1. Continuation of Research Coordinating Unit information services including ERIC microfiche, hard copy and computer searches for users.

2. Monitoring of Part C projects.

3. Continue assisting with development and operation of the West Virginia Vocational Education Management Information System.

4. Conduct of inhouse research related activities as assigned by the Assistant State Superintendent of Schools.

5. Initiate a project to determine factors inhibiting student enrollment in vocational programs.

WISCONSIN

Eugene Lehrmann, State Director of Vocational Education
Roland J. Krogstad, RCU Director

PROJECTS COMPLETED:

1. Evaluation of Associate Degree Secretarial Science, UW-Whitewater

2. Articulation of Secondary/Post-Secondary Food Service Program, VTAE-Fennimore

3. Articulation of General Education/Occupational Competencies, VTAE-Fennimore

4. Career Decision Project II, VTAE-Fennimore

5. Student/Teacher Attitudes Toward Individualized Instruction, VTAE-Fennimore

6. Conceptual Framework for Conducting Cost-Benefit Studies, VTAE-Fennimore

7. Descriptive Cost-Benefit Study, VTAE-Fennimore

8. Update of District Professional Development Plan, VTAE-Pewaukee

9. Facilities Utilization Study, VTAE-Pewaukee

10. Food Service Survey, VTAE-Pewaukee

11. 1974 District Plan, VTAE-Pewaukee

12. Math Grades as a Withdrawal Factor form Mech. Design, VTAE-Green Bay

13. Feasibility of Health Related Occupations Curricula, VTAE-Rhinelander

14. Administrative Leadership Conference, CSVTE-UW-Madison

15. Telephone Career Information Service, VTAE-Kenosha

16. Pedagogy for Part-Time Call Staff, UW-South, Menomonie

Wisconsin

17. Leadership Conference for T&I Supervisors, UW-Stout, Menomonie

18. Handbook for Evaluation of School-Based Career Education, UW-Stout, Menomonie

19. Teacher/Industry Exchange, UW-Stout, Menomonie

20. Learning Styles, UW-Stout, Menomonie

21. Industrial Education Guide, UW-Stout, Menomonie

22. Evaluation of Vocational-Technical Education in Wisconsin, UW-Stout, Menomonie

23. Professional Growth Week-II, UW-Stout, Menomonie

24. Career Decision Project - Spanish Translation, VTAE-Pewaukee

25. A Day in the Life of the Working Man, VTAE-Pewaukee

26. Cost-Benefit Study of the Food Manufacturing Program, VTAE-Fond du Lac

27. Feasibility of Cooperative Education on Post-Secondary Level, VTAE-Fond du Lac

28. Communications Skills Workshop, UW-Stout, Menomonie

29. Graduate Student Research Grants, UW-Stout, Menomonie

NEW PROJECTS FUNDED:

1. State-Wide Civil Highway Technician Evaluation, VTAE-Green Bay

2. Cost-Benefit Analysis of Welding Program, VTAE-Green Bay

3. Self Concepts and Reality Factors of LPN's, VTAE-Green Bay

4. Staff Development Project, VTAE-Rhinelander

Wisconsin

5. Native American Resources Project, VTAE-Rhinelander

6. Individualized Employability Skills Education Program, CSVTE-UW-Madison

7. Model for Coordinated Comprehensive Placement System, CSVTE-UW-Madison

8. Simulated Office Learning Laboratory, VTAE-Kenosha

9. Cost-Benefit Study of Library Assistant Program, VTAE-Kenosha

10. Competencies for Communication Skills, VTAE-Wisconsin Rapids

11. Third-Party Evaluation of Part D Discretionary Project, UW-Stout, Menomonie

12. Cost-Benefit Study of Practical Nursing, VTAE-Pewaukee

13. Vocationally Coordinated Curriculum for General Education, VTAE-Fond du Lac

14. Simulated Office Learning Laboratory, VTAE-Cleveland

15. Cost-Benefit Study for Associate Degree Nursing, VTAE-Milwaukee

RESEARCH RELATED ACTIVITIES:

1. The RCU funded a project conducted by the Center for Studies in Vocational-Technical Education to "Demonstrate the Use of CRT's in 16 Post-Secondary VTAE Districts and State Board Office in Conducting Computer Searches of the ERIC and CIJE Document Files"

2. Improve individualized instruction management and processes relevant to student characteristic learning styles, alternative learning activities, learning environments, media usage and teaching styles

3. Expand state-wide impact of research program through updating of research priorities and improvement of an RFP system

Wisconsin

4. Graduate Student Research Grants - Phase IV, UW-Stout

5. Evaluation of Farm Training Program and Validation of Competencies, UW-Madison

PROJECTS AND ACTIVITIES PLANNED:

1. Implementation of Environmental Education Guidelines to Integrate Environmental Education Concepts into Post-Secondary Vocational-Technical Education Programs A cadre of trainers will conduct district in-service sessions

2. Expand and field test open entry/open esit delivery system in one VTAE district

3. Re-assess vocational-technical education staff supply and education needs and priorities on both secondary and post-secondary levels

4. Expand and improve articulation of secondary and post-secondary vocational-technical education programs by studying selected curricula and upgrading articulation capabilities of 150 secondary and 150 post-secondary staff through a series of district workshops

5. Develop alternative strategies and preliminary plans for development of a health occupations teacher education program in the state

6. Field test a vocational education teacher/industry staff exchange program

7. In-service Needs of Home Economics Teachers

8. Alternative Strategies for Delivery of Comprehensive Vocational Programs

9. State High School Senior Aspirations and Goals Survey

10. Professional Development for Part-Time Call Staff

WYOMING

Fred Black, State Director of Vocational Education
Fred Black, RCU Director

PROJECTS COMPLETED:

1. Career Exploration Curriculum Model, University of Wyoming

2. Agriculture Resource Media, University of Wyoming

3. Occupational Education Safety Manual, Natrona District #1

4. New Facilities Study - Basin High School, Basin, Wyoming

5. New Facilities Study - Pine Bluffs High School, Pine Bluff, Wyoming

6. Summer Training Model for Counselors, Thermopolis, Syoming

PUERTO RICO

Jose Lema Moya, State Director of Vocational Education
Vidal Velez, RCU Director

PROJECTS COMPLETED:

1. Six-week inservice training for 141 vocational industrial teachers to update their knowledge and skills and/or to obtain certification

2. In-service training to RCU Personnel in Basic Statistics, Evaluation Techniques and Research Design

3. Collect, tabulate and analyze vocational education staff data to support the existence of needs for preparing and developing vocational education professional personnel

4. Long-range plan for the improvement of regular teacher education programs for the preparation of vocational education personnel

NEW PROJECTS FUNDED:

1. Evaluation Project for the Business Education and Distribution and Marketing Programs, RCU-Contracted with Labbadie & Associates Economic & Management Consultants

2. Development of the Student Textbook in Principles of Selling for the Distribution and Marketing Program at the Secondary Level, Gladys Torregrosa, Director-Distribution and Marketing Program

3. In-service Training Program for 26 Curriculum Technicians and Administrative Personnel in the Preparation of Job-Analysis Sheets, New York State University

4. In-service Training Program for Teachers of the Vocational Industrial Occupation Program for 126 Teachers, Coordinated with University of Puerto Rico and University of Kentucky

5. Inservice Training Program for Up-Grading Teachers of Special Education Program for 31 Teachers, Coordinated with New York University

RESEARCH RELATED ACTIVITIES:

1. The Semiannual Report to the USOE for the period of July to December was prepared

2. Preparation of RCU Final Report to the Assistant Secretary for Vocational and Technical Education

3. Preparation of State Vocational and Technical Education Annual Plan for School Year 1974-75

4. Preparation of State Vocational and Technical Education Annual Report for School Year 1973-74

5. Statistical data gathering and analysis on Vocational and Technical Education Programs for All the VTE Programs

6. A report of the on-going projects for school year 1973-74, the proposals submitted and projects to be developed during school year 1974-75 coordinated by the Research Coordinating Unit were submitted to all program directors

7. Preliminary arrangement for the establishment of a Management Information System at the Research Coordinating Unit were initiated

8. Development of the following proposals:

   a. Proposal for the Development of a Student Textbook in Principles of Selling For the Distribution and Marketing Program at the Secondary Level

   b. Proposal For an In-Service Training to RCU Personnel in Basic Statistics, Evaluation Techniques and Research Design

   c. Proposal For the Creation of Four Curriculum Development and Utilization Components at the Area Vocational Schools in Puerto Rico

Puerto Rico

d. Proposal For Continuing the Project "Translation and Adaptation of Instructional Materials For Vocational and Technical Education in Puerto Rico"

e. Proposal for the Development of Occupational Coefficients to Analyze Manpower Supply and Demand Problems Relevant to the Puerto Rico Dept. of Education

f. Proposal for the Development of a Curriculum for Small Business Management Training in the Commonwealth of Puerto Rico

g. Proposal for the Development of a Curriculum in Fishing Techniques, Vessel Construction for Deep Sea Fishing and Seamanship in Puerto Rico

h. Proposal for the Development of a Curriculum and the Training of Vocational and Technical Education Curriculum Specialists

i. Proposal for the Development of a Curriculum in Hospitality and Recreation Occupations Cluster for Puerto Rico Public Schools

j. Proposal for the Development of an In-Service Training Program for the Teachers of the Vocational Industrial Education Sub-Program

k. Proposal for the Establishment of a Comprehensive Adult and Vocational Education Department at the College of Education of the University of Puerto Rico

l. Proposal for the Continuation of Vocational Offerings in Academic, Public and Private Schools and Rural Vocational Schools of the Commonwealth of Puerto Rico

m. Development of Vocational and Technical Offerings in Area Skill Centers

n. Proposal for An Internship in Industry for Revising and Validating the Graphic Analysis Chart Developed by the Curriculum Technicians at the Pedagogical Resources Center

o. Proposal for an In-Plant Training Program to Develop the Optimum Degree of Specialization in Area Vocational School Students

9. Development of a Curriculum Development Plan for four years

10. Development and submission to USOE of the Proposed Plan for Vocational and Technical Professional Development in the Commonwealth of Puerto Rico

11. Coordinate the implementation of different planned projects on Research, Curriculum Development and Professional Development

12. Evaluation of two proposals submitted by the Vocational Agriculture Program aimed at Evaluating the Effectiveness of the Vocational Agriculture Program

13. Contract Consultants and Coordinate the In-Service Training to RCU Personnel in Basic Statistics, Evaluation Techniques and Research Design conducted at the State Department of Education during the month of May

14. Continue the third year of cooperative pre-service training program for the development of 30 vocational industrial teachers, in cooperation with the Inter-american University of Puerto Rico, the San Juan Technological Institute, Industry and Secondary Schools

15. Continue the third year of a special training program for the development of 10 vocational industrial personnel, in cooperation with the Mayaguez Campus of the University of Puerto Rico, area vocational schools and industry

16. Coordinate last three phases of a leadership training program for industrial arts and vocational industrial personnel in leadership positions

17. Coordinate the short-term scholarships for college level studies to meet individual needs and aspirations of vocational education personnel to complete certification requirements

Puerto Rico

PROJECTS AND ACTIVITIES PLANNED:

1. Complete and prepare final report of the Research Projects Business Vocabulary Count in the Spanish Language and the Project Evaluation of the Occupational Home Economics Program in Puerto Rico 1970-71 and 1971-72

2. Continue coordinating the evaluation project of the Business Education and Distribution and Marketing Programs

3. Continue the evaluation project of the Business Education Program of the Mayaguez Educational Region

4. Continue sponsoring the development of a textbook "Principles of Selling" for the Distribution and Marketing Program

5. Continue sponsoring the project "Establishment of a Management Control System for the Vocational and Technical Education Program using the PERT System"

6. Initiate the Management Information System for Vocational and Technical Education coordinating its establishment with the Computer Center of the Department of Education

7. Conduct an evaluation study of the Vocational Agriculture Program

8. Initiate and conduct the Follow-up Study of vocational and technical education graduates, 1973-74

9. Conduct a study to determine the effectiveness of the vocational laboratories established under the clusters of occupations concepts in Vocational Industrial Education (Trades and Industry)

10. Conduct an evaluation study of the Health Related Occupations Program

11. Continue and complete the study of Training Needs for Specialized Vocational Agriculture Personnel in Puerto Rico

Puerto Rico

12. Up-date the Occupational Demand Analysis for the Vocational Technical Education Program

13. Up-date the Occupational Enrollment Projections in terms of Occupational Demand for the Vocational and Technical Education Programs

14. Continue providing support for the following exemplary projects:

    a. A Model State Pedagogical Resources Center for Producing Curriculum Materials for Vocational Education Programs

    b. Development of an Exemplary Career Education Comprehensive Program in the Regular and Vocational Technical Program

    c. Continue the development, revision and adaptation of curriculum materials in emergent occupations of the different programs

15. Continue improving the quality of vocational education programs by providing up-dated curriculum materials

16. Continue developing curriculum materials for a course to prepare Pharmacist Assistants

17. Create, revise, test or adapt the curricula to the different Island sites in the established curriculum units at the following four area vocational schools: Guayama, Carolina, Mayaguez and Rio Piedras

18. Develop curriculum materials in 40 occupations within the occupational clusters for the Vocational and Technical Education Program

19. Continue the support of a proposal for the development of guides and tests for self-study in Office Education for youth and adults in the following areas: Typing I and II, Business Spanish, Business English, Filing, Office Practice, Fundamentals of Business Education and Advanced Typing

Puerto Rico

20. Develop curriculum materials for Pilot "Model Agricultural Mechanization School," for the Residential Agricultural School and for the Young and Adult Farmer Educational Center

21. Develop curriculum for the training of individuals for employment in agri-business

22. Develop curricula for about 24 to 30 teaching curriculum modules in consumer education

23. Finish and test curricula prepared for the post secondary level in distribution and marketing

24. Continue supporting preservice and inservice training programs for professional development of vocational personnel

25. Develop a state and six regional conferences in the use of curriculum materials available at the State Pedagogical Resources Center - Ends in December, 1974 $22,250

26. Conduct six regional workshops on adaptation and use of curriculum materials for consumer education programs - starts August 1974 and finishes on December 1974, $4,800

INTRODUCTION

Section 131(b) of Part C of the Vocational Education Amendments of 1968 provides Federal funding for State-administered research and development activities in vocational education. These Federal funds can be used for paying up to 75 percent of the costs of the State Research Coordinating Unit (RCU) and for grants and contracts covering 90 percent of the costs of research and/or developmental projects. The funds are allocated to the States on the basis of a population formula prescribed in Public Law 90-576. In Fiscal Year 1974, for example, the State of Alaska received $12,068 while the State of California received $762,090.

The total funding appropriated for State use under Section 131(b) of Part C amounted to $17,872,215 in Fiscal Year 1972 and $9 million in each succeeding fiscal year. The States used a portion of this funding to assist in meeting the maintenance and operational costs of the State Research Coordinating Units. However, the major part of the funding was used to support grants and contracts with local school districts, universities, and other agencies within each State for the conduct of vocational research and development projects.

The purpose of this publication is to provide a listing of the projects supported in each State through grants and contracts funded by the States under Section 131(b) of Part C of the Vocational Education Amendments of 1968. The listing, which is arranged alphabetically by States, shows the title of each project, the name of the grantee or contractor conducting the project, and the amount of Section 131(b) funding obligated for the project. For any given State, the total amount of funds obligated in a particular fiscal year may or may not be equal to the State's allotment for that fiscal year. There are two reasons for this difference between funds allotted and funds obligated for grants and contracts. The first reason is that a State may at its discretion, reserve some portion of the State allotment for support of the State Research Coordinating Unit, using the remaining amount for the award of grants and contracts. The second reason is that, under the provisions of the Tydings Amendment, a State could carry unused funds over and obligate them in the following year.

This listing of State-administered research and development projects was compiled on the basis of information supplied to the U.S. Office of Education by each State. Additional descriptive information on each of the projects may be located in the "Research Projects in Progress" section of Abstracts of Instructional and Research Materials in Vocational and Technical Education (AIM/ARM), a journal which is published bi-monthly. Persons wishing more detailed information about a particular project than that contained in the Abstracts should correspond with the Director of the State RCU in the State concerned.

This publication has been prepared by Larry Braaten, Chief, Demonstration Branch and Annette Miller, Program Assistant, in the Division of Research and Demonstration.

TITLE: SEMI-ANNUAL REPORT ON STATE RESEARCH COORDINATING UNIT ACTIVITIES FOR THE PERIOD JULY 1, 1974 - DECEMBER 31, 1974.

PERSONAL AUTHOR: BRAATEN, LARRY; MILLER, ANNETTE

DESCRIPTOR: *ANNUAL REPORTS; *VOCATIONAL EDUCATION; *RESEARCH COORDINATING UNITS; *EDUCATIONAL RESEARCH; *RESEARCH PROJECTS

IDENTIFIER: VOCATIONAL EDUCATION AMENDMENTS OF 1968

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 132P.

ABSTRACT: THIS TENTH IN A SERIES OF REPORTS SUMMARIZES INFORMATION RECEIVED FROM STATE RESEARCH COORDINATING UNITS (RCU'S) REGARDING RESEARCH ACTIVITIES CONDUCTED UNDER SECTION 131(B) OF PART C OF THE VOCATIONAL EDUCATION AMENDMENTS OF 1968 FOR THE PERIOD JULY 1 THROUGH DECEMBER 31, 1974. THE PURPOSE OF THIS REPORT IS TO PROVIDE INFORMATION THAT WILL ASSIST THE STATES TO BE AWARE OF RESEARCH AND DEVELOPMENT CONDUCTED BY OTHER STATES, THUS FACILITATING EXCHANGE OF INFORMATION AND REDUCING DUPLICATION OF EFFORT. THE INDIVIDUAL STATE REPORTS INCLUDE THE PROJECTS COMPLETED, NEW PROJECTS FUNDED, RESEARCH RELATED ACTIVITIES, AND PROJECTS AND ACTIVITIES PLANNED. NAMES OF EACH RCU AND STATE VOCATIONAL EDUCATION DIRECTOR ARE INCLUDED. (AUTHOR/NJ)

FOREWORD

This report summarizes information received from State Research Coordinating Units (RCU's) regarding research activities conducted under Section 131(b) of Part C of the Vocational Education Amendments of 1968. This report covers the second six months of Fiscal Year 1974. The purpose of the report is to provide information that will assist States to be aware of research and development conducted by other States, thus facilitating exchange of information and reducing duplication of effort.

This Semiannual Report has been prepared by Larry Braaten, Chief, Demonstration Branch and Annette Miller of the Demonstration Branch of the Division of Research and Demonstration. This is the tenth in a series of reports on the activities of the State RCU's. The previous reports are listed below:

a. Annual Report on State Research Coordinating Unit Activities for Fiscal Year 1970 (ED-053-293)

b. Semiannual Report on State Research Coordinating Unit Activities for the Period July 1, 1970 to December 31, 1970 (ED-052-381)

c. Semiannual Report on State Research Coordinating Unit Activities for the Period January 1, 1971 to June 30, 1971 (ED-067-463)

d. Semiannual Report on State Research Coordinating Unit Activities for the Period July 1, 1971 to December 31, 1971 (ED-068-718)

e. Semiannual Report on State Research Coordinating Unit Activities for the Period January 1, 1972 to June 30, 1972 (ED-076-781)

f. Semiannual Report on State Research Coordinating Unit Activities for the Period July 1, 1972 to December 31, 1972 (ED-080-720)

g. Semiannual Report on State Research Coordinating Unit Activities for the Period January 1, 1973 to June 30, 1973

h. Semiannual Report on State Research Coordinating Unit Activities for the Period July 1, 1973 to December 31, 1973

i. Semiannual Report on State Research Coordinating Unit Activities for the Period January 1, 1974 to June 30, 1974

Copies of the above reports with assigned ED numbers can be obtained from the ERIC Document Reproduction Service.

Howard F. Hjelm
Director, DRD

May 1975

INTRODUCTION

The RCU's have continued to provide the leadership for the State's R&D programs in vocational education. In providing this leadership, the RCU's have given assistance to State vocational agencies and personnel, graduate students, teachers and a variety of other interested parties. They have also played a major role in long-range planning and the development of vocational research priorities. One of the most important activities of the RCU's is the disseminating of the results of research. In addition to the operation of their own dissemination efforts, the RCU's are a vital part of the national network of contributors to the ERIC collection.

For the first half of fiscal year 1975, career education again ranked high on the list of priorities for research projects. Other areas of emphasis included: followup studies, evaluations, competency studies, manpower studies, and programs related to health careers. In addition, the States have continued to fund projects for the expansion and improvement of their ongoing vocational programs.

The Semiannual Report which follows is a compilation of State Quarterly Research Activity Reports covering the first two quarters of fiscal year 1975 which have been received from the States. Additional information on projects listed under the category of "new projects funded" may be located in the "Research Projects in Progress" section of Abstracts of Instructional and Research Materials in Vocational and Technical Education (AIM/ARM) published bi-monthly. Final reports of the "projects completed" are abstracted in the monthly issues of Research in Education and/or in the bi-monthly issues of AIM/ARM. All reported research projects administered by the State educational agency were included in this report, whether or not they were funded under Section 131(b) of Part C.

ALABAMA

T. L. Faulkner, State Director of Vocational Education
Douglas Patterson, RCU Director

PROJECTS COMPLETED:

1. Joint Leadership Training Conference for Selected Students and Advisors of Alabama's Vocational Youth Organizations, John M. Patterson, State Technical College

2. Distributive Education Dissemination Project, John M. Patterson, State Technical College

3. Vocational Education Follow-up Project, Auburn University

4. Career Education Program for Appalachian Alabama, State Department of Education

NEW PROJECTS FUNDED:

1. Implementation of Career Education K-12 in the Phenix City Public Schools, Phenix City Board of Education

2. Career Education Project, Mobile County

3. A Program Designed to Provide Occupational and Educational Placement Services for all Existing Students of the Tuscaloosa County School System, Tuscaloosa County School System

4. Developing a Comprehensive Placement Program, Shelby County Board of Education

5. Cooperative Occupational Opportunities and Placement Program, Greene County Board of Education

6. A Comprehensive Placement Program for Covington County, Andaluisa City, and Opp City School Systems, Covington County Board of Education

7. Placement Implementation Project, Mobile County Public Schools

8. Coffee County's Approach to a Comprehensive Placement Program - Grades One Through College, Coffee County School System

9. Fashion Merchandising, Montgomery County Public Schools

10. Threshold of Education Reform, Restructuring Agriculture for Inner-City Related Motivation and Accomplishment (TERRA FIRMA), Anniston City Schools

11. Montgomery County's Approach to Career Education - Grades One Through Twelve, Montgomery County Public Schools

12. The Constitutional Convention for HOE Students and Secondary Teachers, John M. Patterson, State Technical College

13. Vocational Education Follow-up Project, Auburn University

RESEARCH RELATED ACTIVITIES:

1. Coordinated the assessment of state vocational education needs through visits to the local board of education

2. Collected enrollment data on all secondary students in vocational education and expanded existing fiscal data base

3. Evaluated Joint Leadership Training Conference

4. Developed proposal to support additional Management Information System Activities

5. Conducted manpower demand analysis for selected areas of the state

6. Prepared federal statistical, descriptive, financial and completions reports and state statistical report

Alabama

7. Conducted vocational facility needs study for a selected area of the state

8. Assisted in the planning and development of a curriculum workshop for state vocational education leaders

9. Assisted other vocational education division staff in the development of five research and development proposals. (OIS Preliminary, Alabama Occupational Information System, Local Government Training Needs Survey, Curriculum Designing and Implementation, and State MIS Proposal)

10. Staff members conducted on-site investigations of Occupational Information Systems in Oregon, Connecticut, and New Jersey

11. Installed and implemented the use of electronic data processing equipment for the management information system (OpScan 17, Mohawk 1101 Tape Unit, and two computer terminals)

12. Conducted follow-up data utilization seminars with service areas' staff.

13. Participated in the Regional Research Conference in Agricultural Education, Southwide Research Coordinating Conference, Regional Part D Evaluation Conference, and AVA Convention

14. Conducted study of experimental project in special post-secondary institution

15. Coordinated employer survey in one county.

16. Prepared report to the State Department of Education data processing section which projects the Vocational Education Division's computer needs over the next five years

PROJECTS AND ACTIVITIES PLANNED:

1. Develop State Plan for Vocational Education

Alabama

2. Resource Entitlement calculation and allocation

3. Local plan and request evaluation

4. Conduct research on the utilization of microfiche in a competency based instructional program

5. Plan for expansion of computer capabilities in cooperation with State Department Data Management section

6. Study computer upgrade plans of community colleges

7. Expand fiscal office computer files to include enrollments

8. Field test post-secondary subsystem of MIS enrollment

9. Participate in the National RCU Conference, National Part D Conference, Regional State Plan Development Conference, and State Educational Planning Conference

10. Computerization of state staff accounting, teacher training

11. Conduct study of local administrator roles

12. Complete report on vocational education facts in Alabama

ALASKA

Richard L. Spaziani, State Director of Vocational Education
Richard L. Spaziani, RCU Director

NO REPORT RECEIVED

ARIZONA

Eugene L. Dorr, State Director of Vocational Education
Beverly Wheeler, RCU Director

PROJECTS COMPLETED:

NONE

NEW PROJECTS FUNDED:

1. A Model for Evaluation of the D.E. Program in Arizona, Arizona State University

2. Development and Use of Challenge Exams for Clinical Lab, Nursing II, Part II, Pima Community College

3. Comparison of Three Media Presentations of Selected Home Economics Related Occupations, University of Arizona

4. A Classroom Training Conference for Youth Leaders of D.E., Washington High School

5. I Will, Monument Valley High School

6. A Survey to Determine the Adequacy of Vocational Information at Camelback High School as Perceived by 1974 Graduates, Camelback High School

7. Survey of Minority Businessmen and Support Programs, Arizona State University

8. Increasing Student Motivation and Retention, Eastern Arizona College

RESEARCH RELATED ACTIVITIES:

NONE

PROJECTS AND ACTIVITIES PLANNED:

1. Begin the planning for an expanded information dissemination system

Arizona

2. Begin the planning for a system for identifying available vocational education curriculum materials

3. Begin the planning for a survey of vocational educators on their perceived information needs and vocational education research priority needs in Arizona

4. Fund at least one project which will relate to the need of improved competence in proposal writing

ARKANSAS

Luther Hardin, State Director of Vocational Education
Jack D. Nichols, RCU Director

PROJECTS COMPLETED:

1. A Comparative Study of the Occupational Achievement of Vocational and Non-Vocational High School Graduates in the State of Arkansas Educational Planning and Evaluation Services, Magnolia

NEW PROJECTS FUNDED:

1. A Comparative Study of Alternative Methods and Techniques in Stenographic Training, Pulaski County School District, Little Rock

2. Ten Local Action Oriented Research and Development Mini-Grants, Statewide

3. An Education-Industry Exchange Program for Vocational Teacher Education Preparation, State College of Arkansas, Conway

RESEARCH RELATED ACTIVITIES:

1. A proposal has been submitted for funding consideration entitled "A Model for Developing Alternative Administrative Strategies for Maximizing Comprehensive Vocational Program Planning and Evaluation"

2. The project entitled "A Unified School-Community Approach to Remodel Guidance Services and Expand Next Step Placement and Follow-Up," has progressed satisfactorily and an inservice education component has been funded through EPDA

PROJECTS AND ACTIVITIES PLANNED:

1. Individualized Vocational Visual Media for Deaf Students

Arkansas

2. Curriculum development activities for state vocational personnel

3. Staff development and coordination for state vocational personnel

4. Inservice training for personnel involved in Research and Development projects

CALIFORNIA

Mr. Samuel Barrett, State Director Vocational Education
James Crandall, RCU Director

PROJECTS COMPLETED:

1. Field Test of Project 42-10421-C048-71-The Research and Evaluation of Follow-Up Studies of High School Graduates Using Sampling Techniques

2. Student Perceptions of the Link Between School and Work

3. Research on Application of a Self-Actualization Process in an Attempt to Improve Effort and Performance in Selected Vocational Programs

4. A Study of the Vocational Entitlement and Grants Mgt. System

5. Career Education Opinions of California Educators

6. Industry Validated Vocational Performance Objectives

7. Use of Need Assessment in Improving the Utility of Community College Advisory Committees

8. Improving Occup Student Follow-Up in California Community Colleges

9. Occupational Needs Assessment of the Elderly

10. Comparison of Listening-viewing Comprehension Levels of a Junior College Population Enrolled In Vocational Education compared to the Comprehension Levels of the Learning Methods Utilized in Vocational Education

11. The Effects of Providing Pre-Education Treatment to Handicapped Young Adults to Increase Their Readiness for College and Vocational Education Programs: A Controlled Research Study

12. Reasons for Drop-Out and Inhibitors to Training Related Job Placement of Vocational Education Trainees

California

13. A Study of Career Centers in the State of California

14. Involvement of Vocational Ag Students in Student Vocational Education Student Organizations

15. Third Party Evaluation of California Career Education Centers

16. Field Test Report of a Career-Oriented, Peer-Instructional Model in the Office Cluster of Business Occupations at the Clovis Adult School of Business

17. Evaluation of Self-Administration, Self, Scoring, and Self Intrepretation of the California Occupational Preference Survey

18. An Analysis of Vocational Education Administrators Perception of Curriculum Tasks and Competencies

19. Recommendations for the Operation of a Mobile Business Education Instructional Materials Resource Center

20. Concepts, Topics, & Objectives for Consumer Education K-Adult

21. An Empirical Comparison Between the Gregg & the Laurie Shorthand Systems

22. A Survey of Teacher Pupil Relationships of California Vocational Ag Teachers Trained by the Full Pay Intern Program

23. California Industrial Education Guide

24. Experiment to Determine the Effects of Repetition and Alternating Levels of Practice on Learning to Typewrite

25. The Measurement of Attitudes of Chicano Freshman Who are Preparing for a Criminal Justice Career

26. Compton-Minority Com Attitude Survey

California

NEW PROJECTS FUNDED:

1. System of Interactive Guidance and Information (SIGI)

2. Manpower Management Information System: Education Resources

3. Research Information Identification of Cultural Disadvantagement as a Key Segment of a Vocational Student Information System

4. COPES: Sub System for Work Experience Programs

5. A Study to Identify and Validate Beginning Voc Ag Teacher Tech Competencies in Beef, Sheep, Swine & Horse Husbandry

6. Recommendations for Operation of Mobile Business Ed Resource Center

7. Reasons Teachers Leave the Profession of Voc Agriculture Education

8. Concepts, Topics & Objectives for Consumer Education K-Adult

9. California Broadcast Employment Survey

10. An Assessment of the Occupational Programs for 11th & 12th Grade High School Students in Community College

11. The Impact of the Career Guidance Centers Upon Students at Santa Ana College

NEW PROJECTS FUNDED:

1. Delmarva Career Education Project, Seaford School District

2. Performance Based Self-Paced, Individualized Instructional System, Kent County Vocational-Technical District

3. About Face, Marshallton-McKean District

4. Industrial Arts in the Elementary School K-5, Appoquinimink School District

5. To Provide Career Opportunities to Elementary Children in Kindergarten Through Grades Four in Awareness and Explorative Activities, Capital School District

RESEARCH RELATED ACTIVITIES:

NONE

PROJECTS AND ACTIVITIES PLANNED:

NONE

DISTRICT OF COLUMBIA

Paul E. Cawein, State Director of Vocational Education
Jeannie H. Carter, RCU Director

PROJECTS COMPLETED:

1. Project Info - to determine the impact of readily accessible information in a Field Resource Center for program and curriculum development. The Project Info Center houses several microfiche library collections including AIM and ARM and other instructional and curriculum materials, Bruce Administration Center, Public Schools of the District of Columbia

NEW PROJECTS FUNDED:

NONE

RESEARCH RELATED ACTIVITIES

1. Wrote Research Proposal for Commissioner's Part C money which was designed to implement an automatic Student Information System and a Student Follow-Up Model

2. Prepared Annual Statistical and Descriptive Reports for submission to USOE

3. Prepared Amendments to the 1975

4. Began preparation of the 1976 State Plan

PROJECTS AND ACTIVITIES PLANNED:

NONE

FLORIDA

Joe D. Mills, State Director of Vocational Education
K. M. Eaddy, RCU Director

PROJECTS COMPLETED:

NONE

NEW PROJECTS FUNDED:

1. To meet third party career education evaluation guidelines as specified by USOE (D4-013), C. A. Bellum, Sarasota County School Board, Sarasota

2. Third-party evaluation of the C/E program in Manatee County (D5-004), Raymond Lee, Manatee County, Brandenton

3. Develop a catalog of objectives and criterion-referenced exercises for tax collector occupations (C5-003), David Groth, Broward Community College, Ft. Lauderdale

4. Research and Related Training Programs for Graduate Students (C5-002), R. Andreyka, Florida State University, Tallahassee

5. Survey of LOOM Needs by District Schools (D4-011), Ernest Berger, Florida State University, Tallahassee

6. To continue the reproduction and diffusion of LOOM throughout the State (D5-001), Ernest Berger, Florida State University, Tallahassee

7. Allocate additional resources to VTAE Project D4-002, Automotive Body Repair Assessment (D4-002), Paul Mohr, Florida A&M University, Tallahassee

8. Employment of a Technical Coordinator at FAMU, to provide assistance and direction to the development of V-TECS catalogs of objectives and criterion-referenced measures being conducted in universities and other institutions throughout the State (D5-003), Florida A&M University, Tallahassee

Florida

9. Pupil Personnel Services for Post Secondary (C5-001) Area Voc.-Tech. Centers, James Wattengarger, University of Florida, Tallahassee

10. Phase II of Workshops to Train Teachers in use of Valuing Materials and Teaching Techniques (D4-012), J. B. Hodges, University of Florida, Gainesville

11. To assist in the diffusion of Elementary Counselor Career Education Materials to Teachers and Counselors throughout Florida (D5-005), University of Florida, Gainesville

12. Evaluation of Career, Economic and Community Education Components EPIC Project (750-010) Contract, Florida Council of 100

13. A Feasibility Study in Curriculum Development (750-049) Contract, B. E. Childers, Southern Association of Colleges and Schools, Atlanta, Georgia

RESEARCH RELATED ACTIVITIES:

1. Preparation and implementation of Management by Objectives System including development of goals, mission statements, objectives and milestones for the bureau operation and for interdivisional responsibilities designed to this bureau.

2. Made presentations to the following groups concerning bureau activities: (a) the annual vocational, technical and adult educator's conference; (b) local administrators and community college deans, various vocational service areas and other interested groups, (c) directors of student personnel services, teacher educators and division staff meetings.

3. Prepared and submitted a proposal for a discretionary research project in 1975-76.

4. Attended and participated in the Fall Meeting of the Southwide Research Coordinating Council.

5. Prepared and submitted program materials for the National Research Coordinating Unit Personnel Conference.

Florida

6. Attended meetings of Bureau Chiefs, Vocational Administrative Council, DOE Administrative Council and other council and committee meetings

7. Hosted meeting of curriculum coordinators from curriculum network management centers and state coordination centers

8. Conducted a series of regional meetings in Florida on placement and follow-up for local school districts

9. Served on board of Directors for V-TECS and participated in all activities

10. Served on national committee to develop a Handbook on Dissemination

11. Developed a project for USOE on training of change agents

12. Worked with state agencies and other interested groups on placement and follow-up programs, i.e., Department of Commerce, Department of Health and Rehabilitative Services, American Vocational Association, Educational Supervisor's Conference, National Advisory Council for Vocational Education.

13. Worked with other state agencies to develop projects for curriculum management and occupational information systems

14. Participated in a Conference on Instructional Systems Development, and the national Distributive Education Consortium

15. Served as special consultant to several task forces and committees, such as: (a) Consumer Education Task Force for the purpose of state legislation implementation and subsequent evaluation of a statewide interagency conference on consumer education; (b) State Awards Committee, (c) curriculum advisory committees, (d) Title V ESEA Committee

16. Prepared research and exemplary components of the annual descriptive report for Florida

Florida

17. Reviewed, recommended and monitored for funding support the managerial aspects of research, exemplary, evaluation and dissemination projects funded in the State

18. Provided consultative assistance to projects in progress

19. Continued working on the development of a statewide accreditation program

20. Responded to requests for information including preparation of journal articles and newsletters

21. Prepared position paper and guidelines for review on dissemination systems

22. Coordinated the development of contracts for the Vocational Division, Department of Education

23. Attended meetings in the Atlanta, Region IV office for the purpose of orientation to project establishment, and receipt of guidelines for the third party evaluation of the discretionary, exemplary project

24. Coordinated the establishment of FY 74 research and exemplary discretionary projects

25. Prepared amendments to the discretionary research and exemplary projects

26. Monitored discretionary research and evaluation projects

27. Issued a Request for Proposals to conduct a third party evaluation for the exemplary career education program

28. Attended an orientation session held in Washington, D.C. for project staff having discretionary research projects

29. Provided information to Rand Corporation for evaluation of discretionary exemplary projects

Florida

30. Began final phases of the 1973 and 1974 career education models

31. Prepared the Statewide program of work for research, exemplary evaluation and dissemination activities

32. Assisted in conducting a Statewide Advisory Council Workshop

PROJECTS AND ACTIVITIES PLANNED:

1. Complete the current projects operating through the U.S. Commissioner's discretionary share of research and training and exemplary funds

2. Prepare specifications and recommendations for research and exemplary projects for 1975-76

3. Continue development of a diffusion/dissemination models for the Vocational Division

4. Establish new research and exemplary projects funded through discretionary and state administered monies

5. Continue developmental activities for:

   a. placement and follow-up
   b. career education
   c. curriculum
   d. program standards
   e. management by objectives for research and evaluation bureau

6. Continue liaison and coordination of vocational research and development efforts in and out of state

GEORGIA

Russell S. Clark, State Director of Vocational Education
Paul Scott, RCU Director

PROJECTS COMPLETED:

1. Walker County Project, La Fayette

2. Health Occupations and Health Coop Project, University of Georgia, Athens

3. Mini-Exploratory Project, University of Georgia, Athens

NEW PROJECTS FUNDED:

1. College Dissemination Project, Valdosta State College, Valdosta

2. Public Service Cluster, Gwinnett County

3. Fine Arts Cluster, Muscogee County

4. Arnold Project, Evaluation in conjunction with State Advisory Council, Atlanta

5. Career Education Program, Colquitt County

6. Basic Skills Through Practical Arts, Green County

7. An Occupational Structured Reading Program, Hancock County

8. Job Placement Program, Oconee County

9. Career Awareness, Ferrell County

10. P. E. C. E. Adoption

11. Basic Skills Through Practical Arts, Charlton County

12. Career Education, Effingham County

Georgia

13. Development of Performance Objectives and Task Analysis in Conjunction with V-TECS Project, West Georgia College, Carrollton

RESEARCH RELATED ACTIVITIES:

1. Renewed membership in the seven-state V-TECS Consortium

2. Organized a task force to work with a Cadet Teacher Project

3. Prepared a proposal for the development of a comprehensive vocational guidance model

4. Previewed commercial curriculum materials for possible use in career and vocational education programs

5. Worked with local school systems in the development of proposals

6. Review of environmental curriculum materials

7. Performed literature searches

8. Conducted workshops concerned with career and/or vocational education

9. Conducted a State of the Art Review for evaluation of vocational programs

10. Assisted in preparation of legislation and Congressional testimony

PROJECTS AND ACTIVITIES PLANNED:

1. Vocational Teacher Assessment Project

2. Expand Competency based certification/teacher education project

3. Work with Educational Testing Service to adapt the use of their skill competency tests to our certification procedures

Georgia

4. Continue a variety of diffusion/dissemination activities

5. Work with Glynn County School System to develop an alternative comprehensive high school centered around vocational education

HAWAII

Samson S. Shigetomi, State Director of Vocational Education
Sybil Kyi, RCU Director

PROJECTS COMPLETED:

NONE

NEW PROJECTS FUNDED:

1. A statewide Follow-up System of Secondary Level Program Graduates, FY 1974, Data Technical Associate Honolulu

RESEARCH RELATED ACTIVITIES:

1. A statewide enrollment data system for secondary level vocational-technical education programs

2. A statewide follow-up system of secondary level program graduates, FY 1974

3. A statewide comprehensive Career Development Continuum (K-14), Phase III

4. In-service experimental team programs at Waianae, Kaimuki and Konawaena high schools

5. ETV materials development for Career Development Program support at grades 4-6

PROJECTS AND ACTIVITIES PLANNED:

NONE

IDAHO

Roy D. Irons, State Director of Vocational Education
Kenneth Hanson, RCU Director

PROJECTS COMPLETED:

1. A comprehensive Career Education Program for Grades 7-9--Supplements Commissioners, V361033L, Pocatello #25, Pocatello

NEW PROJECTS FUNDED:

NONE

RESEARCH RELATED ACTIVITIES

1. Developing an Occupational Information System for the State of Idaho

2. Developing a statewide dissemination system for R&D materials

3. Development of a VIEW system with over 300 vocational occupations common to Idaho. The accessing system used in the keying of the Kuder 10 interest areas and the USOE career clusters

PRODUCTS AND ACTIVITIES PLANNED:

1. Development of a comprehensive Management Information System for Vocational Education. To include the following subsystem models:

   a. Student accounting
   b. Manpower supply and demand
   c. Financial accounting and resource allocation

2. Updating of VIEW system

ILLINOIS

Sherwood Dees, State Director of Vocational Education
Ronald D. McCage, RCU Director

PROJECTS COMPLETED:

1. Maximizing Human Resource Development in the Five County Tier Region of Southern Illinois - Phase II, Joel Jennings, Shawnee Community College, Karnak

2. Development of a Systematic Approach to Follow-Up Evaluation - Phase II, Joyce Felstehausen, Eastern Illinois University, Charleston

3. Cost Differential Analysis - Phase II, Dennis C. Nystrom, Southern Illinois University, Carbondale

4. Analysis of Current Manpower Labor Market Information in Illinois, Richard Hattwick, Western Illinois University, Macomb

5. Illinois Vocational Education Management Information System - Phase II, Robert A. Davis, Robert Davis Associates, Springfield

6. The Exemplary Program in Technical Industrial Engineering Technology Based on Integrated Measurably State Behavioral Objectives, Robert Van Raes, Moraine Valley Community College, Palos Hills

7. Nuclear Radiation Project Study - Phase II, William Phelps and Art Baker, Crystal Lake District 155, Crystal Lake

8. An Impact Assessment of the Demonstration Center as a Dissemination Technique, Joseph Ellis, Northern Illinois University, DeKalb

NEW PROJECTS FUNDED:

1. Career Education Resource Laboratory - Phase II, Carol Sanders, Eastern Illinois University, Charleston

Illinois

2. Illinois Vocational Education Management Information System - Phase III, Robert A. Davis, Robert Davis Associates, Springfield

3. Development of a Systematic Procedure for Collecting, Processing and Analyzing Supply/Demand Data on Occupational Education Teachers, Richard Hattwick, Western Illinois University, Macomb

4. Career Awareness Project: One Through Three, Larry Bailey, Southern Illinois University, Carbondale

5. A Study to Develop a Comprehensive Model Placement Center System for Adaption and Use by Community Colleges and High Schools, Connye Barrow, Triton Community College, River Grove

6. Revision of Construction Curriculum Skill Development Procedures and Relationships with Educational Institutions, Judy Greene, Chicago United, Chicago

7. Vocational Programs for Disadvantaged Students in Illinois, Lawrence Weisman, Southern Illinois University, Carbondale

8. Development of Materials and Procedures for Teaching Occupational Survival Skills, Robert Nelson, University of Illinois, Urbana

9. Comprehensive Occupational Orientation Cluster Program: Demonstration Stage, Royle Campbell, Springfield District #186, Springfield

10. The Development of Activities for Broadening the Scope of Involvement of Young Women in Occupational Education, JoAnn Steiger, Steiger, Fink & Smith, Inc., McLean, Virginia

11. An Action Research Model for Classroom Teachers, M. H. Jason & Henrietta Schwartz, Roosevelt University, Chicago

12. A Comparative Assessment of Secondary and Post Secondary Consumer and Homemaking Education Program (Part F), Gerald Matson, IBEX, Inc., Durham North Carolina

Illinois

13. A Comprehensive Analysis of the Organizational and Operational Patterns of Regular and Part G Cooperative Vocational Education (Part G), William Gooch, Southern Illinois University, Carbondale

RESEARCH RELATED ACTIVITIES:

1. East St. Louis Career Education Project, East St. Louis School District #189, East St. Louis

2. Third Party Evaluation of Six Career Education Projects, Success Research Consultants, Inc., Tinley Park

3. Multifarious, Student Based, Management Information System, DVTE-RDU, Springfield

4. CIOEDC Project, Site A, Elementary, Secondary, and Joliet Junior College District/Joliet Township High School District #204, Joliet

5. CIOEDC Project, Site B, Cumberland High School and Junior College/Cumberland Unit School District #77, Toledo

6. CIOEDC Third Party Evaluator, Educational Management Service Inc., Minneapolis, Minnesota

7. CIOEDC Project Headquarters - Research and Development Unit, Division of Vocational and Technical Education, Illinois Board of Vocational Education and Rehabilitation, Springfield

PROJECTS AND ACTIVITIES PLANNED:

1. To Operationalize an Occupational Education Demonstration Center (9-12) Utilizing Sequential Programs Developed by the Illinois Division of Vocational and Technical Education - Project SAMPLE, TBA

2. Tri-County Career Education Project - Phase II, Paul Musgrove, Tri-County Industry Education-Labor Council

Illinois

RESEARCH RELATED ACTIVITIES:

1. Restructuring of the Research Advisory Committee has been accomplished with representative members from:

   a. The Commission for Higher Education
   b. Local Vocational Directors
   c. Superintendents Association
   d. Indiana Vocational Technical College
   e. Labor

PROJECTS AND ACTIVITIES PLANNED:

1. Request writing of proposals

2. Selection of proposals

3. Meeting of project directors

4. Visitation of FY 1974 projects

INDIANA

Don K. Gentry, State Director of Vocational Education
Edgar Hornback, RCU Director

PROJECTS COMPLETED:

1. Subject Matter Content and Teaching Methods Appropriate For A Junior Agricultural Program, Harrison High School

2. The Construction, Validation, and Standardization of an Achievement Test for a Ninth Grade Couse in Consumer Education, Indiana University

3. Youth Leadership Development, Indianapolis Public Schools

4. Horticultural Research Seminar, New Albany-Floyd County School Corp.

5. Plotter Training Study, Vincennes University

6. A Feasibility Study of the Need to Establish a Student Organization to Serve Indiana Interdisciplinary Cooperative Education Students, Indiana University

7. An In-Depth Descriptive and Evaluative Study of the Vocational Horticulture Programs in the Secondary Schools of Indiana, Purdue University

8. Vocational Education for the Disadvantaged and Handicapped in Indiana, Indiana University

NEW PROJECTS FUNDED:

1. An Initial Systems Model for the Development and Implementation of a New, Comprehensive Health Occupations Education Program Management Plan for Students and Instructors in Indiana, Chrysler School Corporation

2. A Project to Develop and Field Test an Independent Study Program in Vocational Education, Indiana University

IOWA

William O. Schuermann, State Director of Vocational Education
Kenneth M. Wold, RCU Director

PROJECTS COMPLETED:

1. Assess Needs and Develop Plan for Career Education in Area X, Kirkwood Community College, Cedar Rapids

2. Determine the Career Education Needs for Area V, Iowa Central Community College, Ft. Dodge

3. Learning Activity Packages for a Distributive Education Learning System, and Addendum, Wisconsin Department of Public Instruction, Madison, Wisconsin

4. Third Party Evaluation of Iowa Central Community College Career Education Programs in Engine Mechanics, Office Education, and Secretarial-Clerical, Iowa Education Information Center, University of Iowa, Iowa City

5. Determine the Career Education Needs for Merged Area XII, Western Iowa Technical, Sioux City

6. Unifying a Career Education Theme in the Curriculum Through Teacher Inservice Activities, Mason City Schools, Mason City

7. Determining the Competency Needs of Sanitarian Aides - Phase I, Iowa Western Community College, Council Bluffs,

NEW PROJECTS FUNDED:

1. Developing a Long Range Master Plan for Implementing Career Education for Schools in Area VI, Iowa Valley Community College, Marshalltown

2. Determine the Competency Needs of Sanitarian Aides, Phase II, Iowa Western Community College, Council Bluffs

3. Career Education Needs Assessment for Merged Area IX, Eastern Iowa Community College, Davenport

Iowa

4. Area XVI Career Needs and Interest Study, Southeastern Community College, W. Burlington

5. Determine the Needs of Merged Area XIV in Relation to the Implementation of a Long Range Plan for Career Education, Southwestern Community College, Creston

6. Career Education Needs Information System (CENIS) Cycle II, Department of Public Instruction, Des Moines

RESEARCH RELATED ACTIVITIES:

1. The Career Education Needs Information system (CENIS) research project was approved as Cycle II for fiscal year 1975.

2. Staff continued to encourage research proposal development by local education institutions including area schools.

3. The Career Education Research Advisory Committee membership was updated and new members replaced tos those whose terms had expired or who had left the state. This committee reviewed proposals in advance of State Board action.

4. Visitations to on-going research projects continued.

5. Prepared the annual statistical, fiscal, and descriptive report for fiscal year 1974 for the U.S. Office of Education

6. Began work on the state plan for fiscal year 1976.

7. Printed and disseminated the following publications:

   a. Identification of Occupational Competencies in Services for the Electromechanical Cluster Occupations

   b. Goals and Objectives for Implementation of Career Education in Grades 7-12, Mason City Community School District, summer 1973

Iowa

PROJECTS AND ACTIVITIES PLANNED:

1. The Career Education Research Advisory Committee will meet to review research proposals

2. Progress on on-going research projects will be ascertained by means of a self-evaluation instrument and through follow-up visits

3. Consultative assistance will be provided proposal initiators and directors of research projects

4. Research priorities for fiscal year 1976 will be established

5. The State Plan for the Administration of Career Education for fiscal year 1976 will be prepared for State Board approval and then submitted to the U.S. Office of Education.

6. Revision of the Career Education Handbook to supplement the state plan will begin during this period

7. Staff will disseminate findings of research projects

8. Staff will continue to encourage statewide interest in additional research projects

KANSAS

John E. Snyder, State Director of Vocational Education
Wilbur A. Rawson, RCU Director

NO REPORT RECEIVED

KENTUCKY

Carl F. Lamar, State Director of Vocational Education
Robert M. Schneider, RCU Director

PROJECTS COMPLETED:

NONE

NEW PROJECTS FUNDED:

1. Two Hour Vocational Classes at the Laurel County Area Vocational Education Center -- Addendum, ROPES XIII, Barbourville

2. Vocational Education Public Information Program for the Pennyrile Region -- Continuation Phase II, Region II, Madisonville

3. Printing and Disseminating Career Education Documents, University of Kentucky, Lexington

4. Development of Performance Objectives and Criterion-Referenced Measures for V-TECS Project Areas, University of Kentucky, Lexington

5. Third Party Evaluation for Hazard Career Education, Region 12, SACS, Atlanta, Georgia

6. Developing Mini-Lessons on Video Tape for Use in Units of Instruction for Child Day-Care Center Personnel, University of Louisville, Louisville

7. Innovative Program for Achieving the Goals of Education in Human Relations and Occupational Competency (Grades &-12, Owensboro/Daviess Co. School System, Owensboro

8. A Triangular Teaching Process; Using Mass Communication, Daviess County, Owensboro

RESEARCH RELATED ACTIVITIES:

1. The Bureau of Vocational Education is currently developing Competency Based Education curriculum

materials based upon the catalogs of objectives developed through the Vocational-Technical Education Consortium of States (V-TECHS). In-Service education on the use of these materials is to be conducted during the spring and summer of 1975 with field testing being conducted during the 1975-76 school year.

PROJECTS AND ACTIVITIES PLANNED:

1. The Research Unit is conducting a Delphi type survey, using respondents of education and business and industry located in all geographical regions of Kentucky, to identify the major problems, concerns and needs for the advancement of Vocational Education in the State. This information will be combined with input from the State Advisory Council for Vocational Education, national priorities and other sources to develop the Research and Development priorities for Vocational Education in Kentucky for FY 1976 and, ultimately, the research and development program budget for FY 1976.

LOUISIANA

Kirby K. Awagain, State Director of Vocational Education
Florent Hardy, RCU Director

NO REPORT RECEIVED

MAINE

Elwood A. Padham, State Director Vocational Education
Charles W. Ryan, RCU Director

PROJECTS COMPLETED:

1. An In-School Job Placement Service for Secondary School Students, Mt. Ararat High School SAD #75

2. Development of Demonstration Modular Curriculum, Lewiston Comprehensive High School

3. The Effects of Selected Instructional Strategies on Learning Efficiency in Voc-Tech Educational Programs, College of Education, University of Maine

4. Career Education Within the University of Maine System, College of Education, University of Maine

5. National Instructional Television Career Education, College of Education, University of Maine

6. Student Characteristics & Success In Selected Voc-Tech Training Programs: Extended Analysis & Interpretation, College of Education, University of Maine

7. Career Awareness Curriculum Project, University of Maine

NEW PROJECTS FUNDED:

1. A Career Education Mini-Course In Health Occupations, Telstar Regional High School, Northern Oxford Voc. Area Region #9

2. Achieving Career Awareness, Boothbay Region High School

3. The Effects of Selected Instructional Strategies on Learning Efficiency in Voc. Tech. Education Programs: Phase II, SAD #9

4. STRIVE - Student Training REalized In Voluntary Exploration, Livermore Falls High School, SAD #36

5. Cooperative Vocational Education Training Programs for Cashiering, Orono High School

6. Development of Multi-Media Career Units for Use With Students In Higher Education, University of Maine

7. NOW - New Opportunities for Work, Lewiston Public School District

8. Career Education - Grades K-12, SDA #9

9. Affective Teaching for Learning Affective Skills Today: This program is designed to establish a set of attitudes for work for graduating high school seniors entering the job market, Capitol Reg. Voc. Tech. Center

10. COPE: The intent of this project is to develop on-going job development, placement and follow-up activities in an urban setting. A screening process will be used to match students with jobs who have gone through a 26 week program of pre-work education, Biddeford High School

11. Modular Curriculum: A series of individualized instructional approaches in specific content areas will be developed in vocational education; supported by video tapes made by the instructors and cross-articulated with the academic subjects of English, US history, science and math, Lewiston Regional Vocational Center Lewiston High School

12. Seniors at Mt. Ararat will be given career placement assistance. Follow-up activities on the graduating class of 1974 has begun with 75% participation from former students. A series of in-class activities will occur with each content area to assure that a set of pre-job skills have been acquired. A team of professional within the school will assist in selecting screening, referring and placing students to supplement the staff of the project, Mt. Ararat High School

13. A project with the Bureau of Labor Education at the

Maine

University of Maine will design a curriculum to teach high school students about labor laws which are designed to protect the worker. The finished curriculum will be taught to teachers in specific regions in Maine to familiarize them with instructional strategies to use in the teaching of the curriculum to high school students, Bureau of Labor Education University of Maine

RESEARCH RELATED ACTIVITIES:

1. Development and publication of a trainer's manual for career education - published in November, 1974.

PROJECTS AND ACTIVITIES PLANNED:

1. A series of inservice training seminars for school superintendents will be conducted in February and March, 1975. The purpose of these seminars will be to demonstrate career education materials and ideas for implementation in the schools.

2. Our two research projects will be funded to conduct follow-up studies of four vocational education programs. The programs to be selected will be from both the secondary and post secondary areas.

3. The development of an apprenticeship guide for school counselors will be contracted during this period.

4. A research project to identify new and emerging opportunities in Maine will be funded.

MARYLAND

James L. Reid, State Director of Vocational Education
Gary Green, RCU Director

NO REPORT RECEIVED

MASSACHUSETTS

Patrick J. Weagraff, State Director of Vocational Education
Jack Sweeney, RCU Director

PROJECTS COMPLETED:

NONE

NEW PROJECTS FUNDED:

1. Project E/D Model (A Diffusion Model for Adult Education), Assabet Valley Regional Vocational Technical School, Marlboro

2. Project CEDIS (Career Education Dissemination Services), Greater Lawrence Regional Vocational Technical School, Lowell

3. Project CAREER (Computer Assisted Research for Educational Relevance), Blue Hills Regional Vocational Technical School, Randolph

RESEARCH RELATED ACTIVITIES:

1. Provided resource material for Curriculum Development and Management to fourteen Occupational Competence Model Projects

2. Provided Resrouce Material for Curriculum Development and Management to twenty-seven Occupational Competence Planning Projects

3. Provided Technical Assistance to Division Staff Members for attaining the State Goal of Occupational Competence

4. Established Project for Third Party Evaluation of Occupational Competence Projects

PROJECTS AND ACTIVITIES PLANNED:

1. Establish and supervise three Exemplary Projects which offer an Interrelated Curriculum for grades seven through twelve, encompassing three or more Occupational Clusters and servicing students through a Collaborative Effort. One Project will be established in each of the following environments: a) Rural b) Suburban c) Urban

MICHIGAN

Addison Hobbs, State Director of Vocational Education
Stanley Rumbaugh, RCU Director

PROJECTS COMPLETED:

1. Career Achievement Skills Training Program (CAST), The School District of the City of Pontiac, Pontiac

NEW PROJECTS FUNDED:

NONE

RESEARCH RELATED ACTIVITIES:

1. Continued development and begin installation of the Vocational Education Information Support System, with emphasis on the program-course-section component and partial automation of the new/revised program applications evaluation process

2. Assisted in refinement of student followup system

3. Development of data collection instruments which will be used to collect information to improve the long range planning capabilities of community colleges in all areas of Vocational-Technical Education

4. Aid in the evaluation of a comprehensive instructional unit on competency based instruction

5. Development of a Planning Guide for Career Education

6. Development and testing of inservice materials (including publication and AV materials) for various audiences related to Career Education

7. Development of Resource publications related to the implementation of Career Education

8. Initiation of a Career Exploration Program development effort

Michigan

9. Assisted in the dissemination of Career Education, using many of the materials produced in the above activities (5-8)

PROJECTS AND ACTIVITIES PLANNED:

1. Assist in the operation and training programs for vocational educators in the use of local advisory councils

2. Assist in the operation and evaluation and workshops for vocational educators in the use of competency based instruction

3. Continue development of the Vocational Education Information Support System

4. Expand dissemination efforts in the area of Career Education

5. Enlarge the Planning Guide for Career Education to include program development and evaluation procedures

6. Expand the Career Exploration program development, plan for and conduct initial testing

MINNESOTA

Robert P. Van Tries, State Director of Vocational Education
Jerome Moss, Jr., RCU Director

PROJECTS COMPLETED:

1. Career Education in English, Roseville Area Schools; Roseville

2. Career Education for Urban Youth - Phase 2, Independent School District No. 625; St. Paul

3. International Vocational Studies in Advanced Culinary Arts, Independent School District No. 287; Suburban Hennepin County AVTI

NEW PROJECTS FUNDED:

1. Research Coordinating Unit for Vocational Education University of Minnesota

2. Area School Follow-Up System, University of Minnesota

3. Secondary Health (Exploratory) Occupations Program - Consultation and In-Service Training, Anoka-Hennepin School District No. 11

4. Curriculum for Occupational Education, Minneapolis Public Schools

5. Minnesota Instructional Materials Center, 916 Area Vocational Technical Institute

6. Addendum to the Work Plan for Technical Assistance to the Division of Vocational-Technical Education, Education Management Service, Incorporated

RESEARCH RELATED ACTIVITIES:

1. Procedure for Planning and Evaluating Senior High Vocational Education Programs, Division of Vocational-Technical Education, Minnesota Department of Education, funded from Commissioner's Discretionary monies, Part C,

Minnesota

1. of P.L. 90-576. This project is known within the state as S.P.A.C.E. - Student Placement and Counseling Effort. Phase I focuses on assisting 12th grade students in four pilot schools with educational and/or job placement, and acquiring the skills and knowledges necessary for placement.

PROJECTS AND ACTIVITIES PLANNED:

1. Activity will continue in all on-going projects. Vocational education research and development priorities within Minnesota will be reviewed and revised by the Minnesota Research and Development Review Committee so as to reflect current needs in Minnesota. The Research Coordinating Unit's work plan for fiscal year 1976 will be developed during this period.

MISSISSIPPI

Troy V. Majure, State Director of Vocational Education
James E. Wall, James F. Shill, RCU Co-Directors

PROJECTS COMPLETED: NONE

NEW PROJECTS FUNDED:

1. Mississippi Research and Curriculum Unit, Mississippi State University

2. Evaluation of an Urban Career Ed Project in MS Delta, Mississippi State University

3. Evaluation of N'East MS Career Opportunities Program, Mississippi State University

4. Evaluation of Louisville, McComb, & Winona School Systems Career Education Projects, Mississippi State University

5. Vocational-Technical Ed Consortium of States (V-TECS), Mississippi State University

6. Evaluation of a Career Ed Project on MS Gulf Coast, Mississippi State University

7. Evaluation of Three-Rivers Career Ed. Project EXPLORE, Mississippi State University

8. Louisville, McComb & Winona School Systems' Career Ed. Project, Louisville, McComb & Winona

9. Vocational Developmental Reading Project, University of Southern Mississippi

RESEARCH RELATED ACTIVITIES:

1. Assist in implementation and development of career education in the State

2. Development of performance objectives catalogs on plumbing and groundskeeping

Mississippi

3. Development of statewide system for determining vocational reimbursement for local programs

4. Evaluation and monitoring of funded research projects in Mississippi

5. Assist State Advisory Council in conducting evaluation of voc-tech education

6. Assist in development of EPDA plan

7. Assist in research proposal development for local school systems, junior colleges, and universities

PROJECTS AND ACTIVITIES PLANNED:

1. Activities planned are similar to those in the above section

2. Conduct regional EPDA project on Training State Departments of Education personnel

3. Mississippi Research and Curriculum Unit

4. Evaluation of an Urban Career Education Project in the Mississippi Delta

5. Evaluation of Northeast Mississippi Career Opportunities Program

6. Evaluation of Louisville, McComb, and Winona School Systems' Career Ed. Projects

7. Vocational-Technical Education Consortium of States (V-TECS)

8. Evaluation of a Career Education Project on Mississippi Gulf Coast

9. Evaluation of Three Rivers Career Education Project EXPLORE

MISSOURI

B. W. Robinson, State Director, Vocational Education
Glenn W. White, RCU Director

PROJECTS COMPLETED:

1. Read, Listen, and Learn About Work, Pattonville School District

2. A Proposal to Reproduce and Disseminate Individualized Business and Office Materials, and to Provide Technical Assistance to Four Selected Public Schools in Missouri, State Fair Community College

3. Establishing Vocational Skills in Severely and Profoundly Retarded Individuals, St. Louis State School and Hospital

4. Career Awareness Selection and Occupational Training in Agri-Business, Chillicothe R-II School

5. Analysis of Mathematical Skills in Mechanical Engineering Technology (MET) at Florissant Valley Community College

6. Analysis of Student Mathematical Skills in Civil Engineering Technology at Florissant Valley Community College, Florissant Valley Community College

7. Development of an Individualized Instruction Module: Use of the Metric System: Weight, Linear and Volume, Florissant Valley Community College

8. Phelps County Vocational Development Clinic, University of Missouri-Rolla

9. A Feasibility Study to Determine an Alternative Method of Cooperative Work Experience by Block Time in a Major Metropolitan Area for Community Colleges, Longview Community College

10. Feasibility Study on the Need for Developing a Curriculum for Corrections Personnel and the Type of Curriculum Necessary, Longview Community College

Missouri

11. A Slide/Tape Presentation on Computerized Accounting Applications

12. Investigation of the Needs of the City of St. Louis for Paraprofessionals in Home Economics, Forest Park Community College

13. Work Concepts of Children, University of Missouri-St. Louis

14. Preparation of a Sound-On Slide Tape as a Media for Effectively Communicating Career Information and Opportunities Available at the Two Vocationa-Technical Schools of St. Louis County, Special School District of St. Louis County

NEW PROJECTS FUNDED:

1. Preparation of a sound-on slide tape as a media for effectively communicating career information and opportunities available at the two vocational-technical schools of St. Louis county, Special School District of St. Louis

RESEARCH RELATED ACTIVITIES:

1. Conducted information retrieval and dissemination activities including a total of 478 searches resulting in the distribution of 1,695 microfiche.

2. Provided consultative assistance in carrying out project proposals.

3. Conducted eight MOTIS orientation workshops at various locations across the state.

4. Distributed and reported on the 120-day follow-up study of Vocational-Technical students completing occupational training programs within the state.

5. Collected enrollment and completion reports from all reimbursable vocational programs in Missouri.

Missouri

6. Coordinated the MOTIS activities with the two contracted agencies of the University of Missouri. These are the Statewide Testing Service and the Public Affairs Information Service (PAIS).

7. Developed various computer programs for the dissemination of MOTIS materials to meet various request both in the vocational-technical division and in the local education agencies.

8. Coordinated, distributed and collected the SAC-1's and SAC-CS's with approximately 450 school districts, state institutions, junior colleges, colleges, and universities.

9. Conducted a workshop for decision-makers and program planners in vocational education.

10. Held special conferences with public school personnel in St. Louis and Kansas City regarding MOTIS procedures and use of information collected.

11. Assisted local school districts with special problems concerning the MOTIS project.

12. Solicited Level I and II research projects on a statewide basis.

13. Chaired committee to revise the on-site evaluation procedures and report forms for evaluations of occupational programs in the area vocational schools and community junior colleges.

14. Appointed and met with a committee of consultants to review, analyze, and rate research proposals submitted to the Research Coordinating Unit for possible funding this fiscal year.

15. Participated in eleven regional workshops for vocational/technical education.

PROJECTS AND ACTIVITIES PLANNED:

1. Continued activities in information retrieval and dissemination.

2. Monitor approved research projects.

3. Continued development of materials, methods and procedures for the Demand Component, Student Accounting Component, Resource Inventory Component, and Manpower Supply Component.

4. Review and rate research prospectuses.

5. Continued activities in the information retrieval and dissemination.

6. Monitor approved research projects.

7. Review Level I and II research proposals to determine those which are to be approved.

8. Continue the development and implementation of materials and procedures for the Missouri Occupational Training Information System.

MONTANA

Benjamin Ulmer, State Director of Vocational Education
Robert Lehman, RCU Director

PROJECTS COMPLETED:

1. Management Information System for Vo-Ed, Finance, Planning and Evaluation Component, Office of Superintendent of Public Instruction, Helena

NEW PROJECTS FUNDED:

1. Identification of common competencies across related jobs in agriculture products and resources, Montana State University, College of Agriculture, Bozeman

RESEARCH RELATED ACTIVITIES:

1. We are continuing the process of building more parts of our Management Information System for vocational education. We are in the process of modifying the high school portion (completed earlier) to comply with the new Privacy Act which is expected to pass.

PROJECTS AND ACTIVITIES PLANNED:

1. We are contemplating developing guidelines for procedures to be used by classroom teachers in vocational education in Montana to apply for mini-grants.

NEBRASKA

Glen H. Strain, State Director of Vocational Education
Elton B. Mendenhall, RCU Director

PROJECTS COMPLETED: NONE

NEW PROJECTS FUNDED: NONE

RESEARCH RELATED ACTIVITIES:

1. Development of a proposal to implement and test the Nebraska Vocational Information System (U.S. Commissioner's Discretionary Part C)

2. Development of Operational Guidelines for the Nebraska RCU at University of Nebraska

3. Disseminated project report of "Business and Office Education Guide," a research competency study

4. Attended National Conference on Management Information Systems and Manpower Projection Systems

5. Recruitment, coordination, and review of research and exemplary proposals for fiscal 1975

6. Monitor and evaluation of ongoing projects

7. Identification of vocational research priorities for fiscal 1976

8. Employed RCU Research Assistant and additional secretarial assistance

9. Total Library Activity:
   a. Library materials checked out = 205
   b. Persons served = 144
   c. Computer Searches = 33
   d. Other documents distributed = 6,524

Nebraska

PROJECTS AND ACTIVITIES PLANNED:

1. Preparation of proposals for submittal to the Nebraska State Board for Vocational Education

2. Processing and coding of employer data for the 1975 Occupational Opportunities Study

3. Program monitoring and evaluation (research and exemplary)

NEVADA

R. Courtney Riley, State Director
Len L. Trout, RCU Director

PROJECTS COMPLETED: NONE

NEW PROJECTS FUNDED: NONE

RESEARCH RELATED ACTIVITIES:

1. Surveys: Meetings were held with representatives from the Washoe County School District, the Western Nevada Community College, the VEPDA Coordinator, REPC staff and the RCU Director. It was determined to develop a model for conducting a vocational education needs assessment within the geographic area served by the Western Nevada Community College. The study would be conducted by a person or persons who would develop a model and field test the same within the area. It was planned that this model would be adapted by the other two Community College areas in the state. Since many of the smaller districts do not have the job market potential of supporting their vocationally trained graduates, the larger geographical area would serve as the base. It is anticipated that the field testing would be done in the fall of 1975 and be available for support of the FY'77 State Plan.

2. Search Services: The RCU Curriculum and Resource Library had the following usage during this reporting period: 22 walk-in users; 19 phone and mail requests; 4 information search requests.

3. Dissemination: In addition to the search services, approximately 1,475 copies of the attached RCU Report was sent via mail to each vocational educator, administrator and board member in Nevada. In addition, a broad-based nation-wide RCU compiled list of prominent persons in vocational education received copies. Requests have been extremely heavy on Vol. 9 No. 3 and 4. Our present supply is exhausted. Copies of this RCU Report are attached.

4. Monitoring: The RCU Director has been in contact with the Part C and D projects in the state. The final report on the Elko project (Part C) is expected from the evaluation in February 1975.

5. Curriculum Resource Collections: The Collection has undergone an extensive remodeling. Additional shelf space was acquired (at no cost to the RCU) and a complete revamping of the Collection has been started under the direction of Dr. Evalyn Dearmin. This should be completed by summer of 1975. New additions to the Collection include: 120 microfiche; 67 documents; 14 subscriptions to periodicals. In addition to the above identified activities, the entire professional staff of the Research and Educational Planning Center, College of Education, University of Nevada, Reno was available to the State Director and the Director RCU for advice and consultation upon demand.

PROJECTS AND ACTIVITIES PLANNED: NONE

NEW HAMPSHIRE

Neal D. Andrew, State Director of Vocational Education
Lila Murphy, RCU Director

PROJECTS COMPLETED:

1. Task Analysis Development, Kennett High School, Conway

2. N.H. Career Model for Educationally Disadvantaged Adults - Technical Assistance, Project Second Start, Concord

3. Design of Four-Year Baccalaureate Program in Vocational Teacher Preparation, Keene State College

4. LPN/ADN Transition Project, N.H. Technical Institute

5. Follow-Up Study of Students Exited from Selected Vocational Education Programs in New Hampshire Schools, University of New Hampshire and N.H. RCU

6. Curriculum Revision Planning Research Grant, N.H. Vocational-Technical College-Claremont

NEW PROJECTS FUNDED:

1. Information System for Career Guidance, Manchester School Department

2. Concord Career Education Project-Implementing Computer Guidance and Resource Center Component, Concord School District

3. Project Challenge - Planning Grant, Claremont School District

4. Phase II - Needs Assessment Project, Keene State College

5. Statewide Curriculum Development Model, Keene State College

New Hampshire

RESEARCH RELATED ACTIVITIES:

1. Coordinate development of State Plan (Division of Vocational-Technical Education, Division of Post-Secondary Education and N.H. Advisory Council for Voc-Tech Education)

2. Completion of required Vocational Education Federal Reports

3. Cooperative development of proposal for State-wide Occupational Information System (Project to be funded by Department of Labor thru New Hampshire Manpower Affairs Office)

4. Wrote proposal for a State MIS System (Commissioner's Part C funds)

5. Designed instruments for state-wide collection of data on vocational education programs and services. Consolidated all data requested for locals into one format.

PROJECTS AND ACTIVITIES PLANNED:

1. Will collect reliable basic data needed for a comprehensive MIS and federal reports. (State funds to be used with hopes of receiving Part C funds in June, 1975 to continue project. Two additional components will be development of a state-wide program evaluation model and establishment of an occupational information resource center.)

2. Designing a model for long-term curriculum development in cooperation with the State of Vermont. Continue initial efforts to develop performance-based curricula.

3. Assisting agencies interested in applying for Part D 142(c) Exemplary funds

4. Continue to work with Part C 131(a) project designed to develop a state model for Career Guidance, Counseling and Placement

NEW JERSEY

Mr. Stephen Poliacik, State Director of Vocational Education
Joseph Kelly, RCU Director

PROJECTS COMPLETED:

1. Occupational Research Center, Edison Twp. Bd. of Education

2. Orientation to Work, Rutgers University

3. Management Information System, Asbury Pk. Bd. of Education

4. In-Service Teacher Education, Glassboro State College

NEW PROJECTS FUNDED:

1. Education for Occupations, Rutgers University

2. Fire Fightin, Burlington Co. Voc.

3. Technology for Children Study, Mansfield Twp. Bd. of Education

4. Management Training Program, Essex Co. Voc.

5. Curriculum Research, Hudson Co. Voc.

6. IACP, Trenton State

7. Occupational Research Center, Edison Twp.

8. Model for Cost Study, Rutgers University

9. Orientation to Work, Rutgers University

10. Management Information System, Asbury Pk. Bd. of Education

11. Career Maturity Among 8th Grade Disadvantaged, Lakewood Bd. of Education

New Jersey

12. Effectiveness of Videotape Instruction/Teaching, Kean State College

13. Articulation Project, Essex Co. Voc.

14. Career Decision Process, Edison Twp.

15. Career Development Articulation, Middlesex Co. CC

16. Career Resource Center, South Amboy Bd. of Education

17. Career Development, South Brunswick

18. Career Development Study, Middletown Twp.

19. Career Development, Middletown Twp.

20. Articulation Project, Ocean Co. Voc.

21. Articulation Project, Warren Co. Voc.

22. New Jersey Career Development Project, 29 Municipalities

RESEARCH RELATED ACTIVITIES:

1. Prepared Special Papers
   a. Feedback
   b. Career Education Progress
   c. Current Research

2. Conducted Workshops on Career Education
   a. Affective Domain
   b. Teacher and Student Made Media
   c. Introductory ERIC and Recent Developments
   d. Historic New Jersey Occupations

3. Conducted Workshops on Research Utilization and Dissemination

New Jersey

4. Coordinated Activities of the Northeast Regional Curriculum Network
   a. Conducted two Network meetings
   b. Published Network Newsletter
   c. Attended three National Network Council Meetings
   d. Developed New Jersey Curriculum in Progress publications

5. Assisted in development of a County planning and funds distribution model

PROJECTS AND ACTIVITIES PLANNED:

1. Continue operation and expansion of occupational resource centers.

2. Continue conferences and workshops in information dissemination and curriculum development.

3. Continue Northeast Network curriculum coordination and national council activities.

4. Assist in further development and refinement of County planning and funding system.

5. Support the development of the New Jersey Model for Career Development.

6. Prepare additional special papers and newsletters.

7. Continue application of State EPPBS for planning, administration and evaluation of career development activities.

8. Plan, initiate and support research, planning, evaluation, curriculum development, information dissemination and other innovative activities.

NEW MEXICO

James B. West, State Director of Vocational Education
Roger A. Labodda, RCU Director

PROJECTS COMPLETED:

1. Career Ladder (Nursing), Margaret Scarborough

NEW PROJECTS FUNDED:

1. Curriculum Development, George Amsbary
2. Vocational Guidance, Lena Castillo
3. Industrial Arts/Career Education, Waymond Smith

RESEARCH RELATED ACTIVITIES:

1. Renewed Penasco Project (2nd year)
2. Attended Western Regional RCU Conference
3. Attended Fifth Annual RCU Conference
4. Implemented EPDA Itinerant Teacher Program
5. Attended conference on "Women in the World of Work"
6. Coordinated New Mexico's portion of EPDA Region VI Conference
7. Started Vocational Education follow-up project
8. Submitted quarterly reports
9. Supplied manpower reports to program managers
10. Wrote Part C proposal
11. Monitored EPDA projects
12. Submitted Annual Report to Dallas
13. Collated completion forms into Annual Report

New Mexico

14. Expanded Public Relations duties for Vocational Education

15. Attended AVA Manpower Systems Presession in New Orleans

16. Researched vocational post-secondary funding for State Board of Education

PROJECTS AND ACTIVITIES PLANNED:

1. Meet with RCU Advisory Committee and EPDA Advisory Committee

2. Write State Plan for Vocational Education

3. Write EPDA, Part F, proposals

4. Write Part D proposal for manpower information

5. Disseminate publicity forms

6. Plan Western Regional RCU Conference

7. Continue manpower report to program managers

8. Plan Sixth Annual Vocational Education Conference

9. Submit quarterly reports to Dallas

10. Assist in writing and developing proposals originating outside the SDE

11. Monitor Parts C and D projects

12. Continue data retrieval for VTIS

13. Submit State Plan to State Advisory Committee for Vocational Education and State Board of Education

14. Print Annual Report

New Mexico

15. Work with Employment Security Commission on manpower information

16. Work on Special Projects as directed by Assistant Superintendent for Vocational Technical and Adult Education

NEW YORK

Robert S. Seckendorf, State Director of Vocational Education
Louis A. Cohen, RCU Director

PROJECTS COMPLETED:

1. How to Evaluate Inservice Workshops

2. New York Educators and the Metric System

3. Occupations Requiring Credentials

NEW PROJECTS FUNDED: NONE

RESEARCH RELATED ACTIVITIES:

1. "Bread and Butterflies" Evaluation - - Pretests distributed and completed; films distributed.

2. A staff member wrote a report on the distribution of postsecondary VEA funds. Final copy was prepared for editing and printing.

3. No progress on success criteria for practical nurse programs.

4. Meetings were held at CUNY R&D Center to discuss projects for year.

5. A staff member prepared a career education report for the Annual Report for Occupational Education.

6. A staff member collected objectives, developed categories, and developed leadership attributes that will serve as criteria for the development of criterion referenced observations.

7. A staff member developed career path training modules for Rockland Psychiatric Center.

8. An alternate plan for a single, united, Occupational Youth Organization was developed and discussed with state, regional, and local level club advisors.

New York

9. The "Values" position paper was revised and resubmitted to the Regents.

10. Multiple drafts of proposed research studies done on the basis of the State Plan recommendations were prepared.

PROJECTS AND ACTIVITIES PLANNED:

1. Design study and compile internal data for success criteria for practical nursing programs.

2. Preparation of an elementary career education inventory.

3. Prepare report for Annual Report upon completion (June 1975) of career projects.

4. Staff participation in structuring and development of New York State manual in career education.

5. Summarize data and write evaluation report for Consumer Homemaking Workshop.

6. Summarize data and write evaluation report for evaluation of Home Economics Module Workshop.

7. Complete EPDA Leadership Development Evaluation System.

8. Complete descriptive portion of Industrial Arts Mobility Study.

9. Begin inferential and multivariate analysis of Industrial Arts Mobility Study.

10. Analyze data from the study, "Effect of Dunning Letters on Response Rate of Survey Forms."

11. Participation in Bureau of Trade and Technical Education and Bureau of Health Occupations Education workshops.

NORTH CAROLINA

Charles J. Law, State Director of Vocational Education
Charles Rogers, RCU Director

PROJECTS COMPLETED:

1. "Summer Institute for High School Students: A Research in Pre-vocational Education", Pitt Technical Institute at Greenville

NEW PROJECTS FUNDED:

1. "Articulation of Occupational Education Programs Between Secondary Schools and Technical Institutes/ Community Colleges", James Sprunt Institute and Duplic County Schools at Kennansville

2. "The Development of Modular Instructional Materials for Physics for One-Year Vocational Students", Forsyth Technical Institute at Winston-Salem

3. "Criterion Referenced Evaluation of Administrators and Faculty in Technical Institutes/Community Colleges" Carteret Technical at Morehead City

4. "An Assessment Procedure to Determine the Effectiveness of Individual Instruction Approaches in the Technical Institutes and Community Colleges of North Carolina", University of North Carolina at Greensboro

5. "The Development of a Suggested Model for Keeping Vocational and Technical Education Teachers Updated in their Fields", Durham Technical Institute at Durham

6. "Curriculum Development in Occupational Exploration" Tarboro City Schools

RESEARCH RELATED ACTIVITIES:

1. Development of a Guide for Director of Occupational Research Projects

2. Conducted two workshops for the Southern Association of Colleges and School on Information Systems for Local Planning

3. Presented a paper entitled "Biographical and Academic Correlates of High School Completion" to the South-wide Research Coordinating Council on Occupational Education.

4. Served on the Planning Committee for the 1975 RCU Personnel Conference

5. Assisted with the planning and development activities for establishing a Marine Science Occupations program

6. Monitored 12 ongoing research projects

7. Assisted with the development and submission of 16 proposals for Part C (Commissioner's Share) funds

8. Made initial plans for our first ORU Dissemination Conference

PROJECTS AND ACTIVITIES PLANNED:

1. Determine occupation research priorities for 1975-76

2. Conduct the ORU's first annual statewide dissemination conference

3. Complete a slide-tape presentation on products of ORU research

4. Prepare three articles for national research journals

5. Help plan and make a major presentation at the National RCU Conference

6. Plan a project to investigate alternative teacher education delivery systems.

7. Fund four new projects in community college occupational areas

NORTH DAKOTA

Carrol E. Burchinal, State Director of Vocational Education
Donald Eshelby, RCU Director

PROJECTS COMPLETED:

1. Preparation of Study Guides and Audio-Visual material for Agribusiness and Natural Resources Courses., Fargo Public Schools John Nowatzki

2. The Development of Learning Activity Packages for Agribusiness Courses. UND-Williston Branch Wayne Berry

3. Model Store Curriculum - A Developmental Model for North Dakota Schools. Fargo Public School Todd Goschen

NEW PROJECTS FUNDED:

1. Career Development Institute Attendee Follow-up Survey, North Dakota State School of Science Richard Hauck

2. A Follow-up Study of Trade, Industrial, and Health Graduates, North Dakota State School of Science Wally Nordgaard

3. A Study to field Test a Supervised Occupational Experience Manual, Dickinson Public Schools Ted Renner

4. Agribusiness Learning Activity Audio-Visual Development, Bismarck Junior College Leonard Larshus

RESEARCH RELATED ACTIVITIES: NONE

PROJECTS AND ACTIVITIES PLANNED:

1. The Preparation of a Master Plan for North Dakota Industrial Arts Programs.

2. A series of Workshops on Research Proposal Preparation for North Dakota Teachers.

North Dakota

3. Development of a Safety Handbook for North Dakota Schools utilizing OSHA Legislation.

4. Occupational Foods Study.

5. A Study to determine the Feasibility of Computerized Searches of the AIM/ARM micro fiche collection.

OHIO

Byrl R. Shoemaker, State Director of Vocational Education
R. D. Balthaser, RCU Director

PROJECTS COMPLETED:

1. Model Legislation for Job Development, Training, and Placement, American Vocational Association Washington, D.C.

NEW PROJECTS FUNDED:

1. Model State-Wide Delivery System of Career Education (V361040L), Ohio Department of Education

2. 1974-75 Career Development Product Evaluation, Policy Studies in Education Education

3. Model Pre Postsecondary Education Program for Students in Grades 11 and 12 (V361040L), Ohio Department of Education

4. Three Pilot Career Education Programs for K-10 in Ohio (V361105, new #F5004VW), Ohio Department of Education

5. Career Orientation Student Materials (7-8) in 9 of 15 Clusters, Educational Research Council of America, Cleveland, OH

6. Supportive Vocational Education Thrusts in Career Development Delivery System (3phases) (V0126VZ), Ohio Department of Education

7. Career Development Program, Akron City Schools

8. Career Development Program, Benton-Carroll-Salem Local Schools

9. Career Development Program, Boardman Local Schools

10. Career Development Program, Canton City Schools

11. Career Development Program, Carlisle Local Schools

Ohio

12. Career Development Program, Cincinnati City Schools

13. Career Development Program, Clear Fork Valley Local Schools

14. Career Development Program, Cleveland City Schools

15. Career Development Program, Cleveland Heights-Univ. Heights City Schools

16. Career Development Program, Columbus City Schools

17. Career Development Program, Dayton City Schools

18. Career Development Program, E. Muskingum Local Schools

19. Career Development Program, Geneva Area City Schools

20. Career Development Program, Kirtland Local Schools

21. Career Development Program, Lorain City Schools

22. Career Development Program, Mad River-Green Local Schools

23. Career Development Program, Mansfield City Schools

24. Career Development Program, Medina City Schools

25. Career Development Program, Minford Local Schools

26. Career Development Program, Orrville City Schools

27. Career Development Program, Parma City Schools

28. Career Development Program, Princeton City Schools

29. Career Development Program, Scioto-Darby City Schools

30. Career Development Program, South-Western City Schools

31. Career Development Program, Springfield City Schools

32. Career Development Program, Stow City Schools

33. Career development Program, Toledo City Schools

Ohio

34. Career Development Program, Warren City Schools

35. Career Development Program, Willoughby-Eastlake City Schools

36. Career Development Program, Youngstown City Schools

37. Pre-Postsecondary Instructor Training, Kent State University

38. Continuation of Pre-Postsecondary Education Program in Engineering and Health Occupations for High School Students in Grades 11 and 12, Akron City Schools

39. Continuation of Pre-Postsecondary Education Program in Health Occupations for High School Students in Grades 11 and 12, Penta County JVSD

40. Continuation of Pre-Postsecondary Education Program in Business, Engineering, Health and Social Science Occupations for High School Students in Grades 11 and 12, Great Oaks JVSD

41. Researching and Developing a Program for High School Students in a Small Academic High School with Limited Vocational Diversification, Wyoming City Schools

42. Developing a Model Regional Vocational Education Planning Unit for Southwestern Ohio, Greene County JVSD

43. Conducting the Feasibility of a 5-Year Follow-up Study Utilizing IRS Information, Institute for Research Studies

RESEARCH RELATED ACTIVITIES:

1. Commissioner "I" Transportation Curriculum Project Phase II, Ohio Department of Education.

2. Automation of Accounting System ofr Interface with Reporting System - Phase II (Moving to immediate retrieval), Ohio Department of Education.

Ohio

3. Program Review for the Improvement, Development and Expansion of Vocational Education and Guidance (PRIDE) - 5th year completion of cycle with 21 Vocational Education Planning Districts including continued Cost Analysis, Ohio Department of Education.

4. Converting statistical and fiscal system to "real" time operation for management activities of staff including: Linked EPDA project to develop labor market forecasting system, MBO forecasting system based on LEA training and reporting, Ohio Department of Education.

5. Research Coordination Unit - continuation, Ohio Department of Education.

PROJECTS AND ACTIVITIES PLANNED:

1. FY 75 Pre-Postsecondary Program Evaluation, Kent State University.

OKLAHOMA

Francis T. Tuttle, State Director of Vocational Education
Wm. Don Frazier, RCU Director

PROJECTS COMPLETED:

1. An Analysis of the Use of "Expressions"

2. A Parallel Follow-up Study to Establish Validity of the Follow-up Component of Oklahoma's Student Accounting System

3. A Survey of Attrition Factors of Vocational Teachers

4. A Study to Identify Success Factors of Skill Training at Ouachita and Lexington Inmate Training Centers

5. The Development and Testing of a Linear Programming Technique for Optimizing Occupational Training Program Combinations Publications

6. A Composite Evaluation Report of the Mobile Career Development Program, 1973-1974

NEW PROJECTS FUNDED:

1. The Relationship of Selected Teacher Characteristics to Program Success in Oklahoma

2. A Study of the Validity of Selected Vocational Curriculum Guides

3. Tasks Performed by Diesel Mechanics With Less Than Two Years Experience in the Occupation

4. Development of a Plan for Criterion Referenced Testing of Curriculum Guides

5. A Survey of Manpower Needs in the Data Processing Occupations

6. A Statistical Analysis of Gross and Net Demand in Selected Occupations as Reported in Six OTIS Cycles

Oklahoma

RESEARCH RELATED ACTIVITIES:

1. Training in 12 additional state departments under an EPDA grant.

2. Proposal approved to implement in 40 agencies of state government in Oklahoma.

3. Training and implementation continuing in local education agencies.

4. Submitted "Emergency Medical Service Personnel Training Sysemt" proposal to the Division of Emergency Medical Services, Oklahoma State Dept. of Health.

5. Evaluated 118 programs in 39 local school.

6. Developed state budget proposal for FY 1976.

7. Funded eleven mini-grants (from exemplary funds).

8. Generated two research proposals (131 (a)).

9. Completed analysis and developed OTIS Cycle VII report.

PROJECTS AND ACTIVITIES PLANNED:

1. Complete proposal to EPA for construction of a wastewater employee-training facility together with an administrative plan for statewide occupational training in environmental protection.

2. Complete proposal to Labor Department for development of a comprehensive dissemination of occupational imformation system new.

3. Major activity will relate to the six-in-house projects listed on page 1, and to the projects reported previously but not yet completed.

4. MBO training at several levels, evaluation of local programs, dissemination of information, development of the FY 1976 State Plan, and preliminary study of needs for OTIS Cycle VIII are continuing activities of the Division.

OREGON

Monty E. Multanen, State Director of Vocational Education
Eugene Vinarski, RCU Director

PROJECTS COMPLETED:

1. PCE K-10 Portland Public Schools (Part C Commissioners), Portland Public Schools

2. SIXCO Halheur IED (Part C Commissioners), Malheur, IED

NEW PROJECTS FUNDED:

1. Implementation of Integrated Foreign Language and Career Education, Clackamas Community College

2. Utilization of Applied Research in Career Education Programs, John Adams High School

3. A Creative Career Ed. Language Arts Program for Disadvantaged, Portland Area III

4. Consortium for Planning, Developing and Implementing Exploratory Industrial Arts Careers, OSU

5. An approach to Changing Teacher Attitudes and Upgrading Teacher Information about Career Education, Grants Pass #7

6. Community Involvement with Disadvantaged Students, Klamath County SD

7. Guidance Awareness Program, Narrowing the Gap Between Home and School, Bend School District

8. Elementary Career Awareness, Eugene 4 J

9. Integration of Career and Consumer Ed. a Reading and Language Arts Program Level Goals, Protland-Area III

10. Improving Instruction in Innovative areas Through Improved Administration, Lane Community College

Oregon

11. Local Production of Relevant Awareness - Exploratory Media, Central S.D. 13 J

12. Refinement, Implementation and Dissemination of Career Exploratory, Vale High School

13. The Oregon Vo-Tech Math Project, Linn Benton C. C.

14. Interrelating Music and Career Education, Portland Public Schools

15. Utilizing Community Resources, Multnomah County IED

16. Exemplary and Innvoative Career Exploratory Program, Sherwood School District

RESEARCH RELATED ACTIVITIES:

1. Current status of Statewide follow-up of Vocational Students.

2. Current status of the "Oregon Career Education Document System".

3. Current status of Manpower/Curriculum Management System with use of Part C Commissioners funds.

PROJECTS AND ACTIVITIES PLANNED:

1. The Department of Education will publish two interim reports during the six month period ending June 30, 1975. One reflecting the high school follow-up information and a second reflecting the community college student follow-up information.

2. The Coordinator of Applied Research is developing request for Proposals (RFP) guidelines and procedures for maximizing effective use of state and federal funds within the Career/Vocational Division.

PENNSYLVANIA

John W. Struck, State Director of Vocational Education
Carroll A. Curtis, RCU Director

PROJECTS COMPLETED: NONE

NEW PROJECTS FUNDED:

1. The Interrelationships of Preadolescents Student Characteristics Influencing Selection of Career Exploration Courses

2. Development of a Job-Opportunity Based Planning Model for High School Vocational Agriculture Programs

3. A Study of Intraclass Grouping and Traditional Grouping on Student's Terminal Achievements During the Last Nine Weeks in First Semester Typewriting

4. Data Instrument Development for Accounting Program Improvement Study

5. An Examination of the Relationship Between High School Experiences of Youth and Success and Satisfaction in Postsecondary Endeavors

6. VEMIS Backup Facility and Transfer of Functions

7. Forecasting the Future Food Service World of Work

8. The Use of Infra Sound Therapy with Deaf and Hard-of-Hearing Adults

9. An Analysis of the In-Service Education Practices, Procedures and Perceptions of Vocational-Technical Teachers and Supervisory Leaders in AVTS of Pennsylvania

10. Continuation and Diffusion of a Model Occupational-Oriented Curriculum

11. A Career Approach to Natural Resource Management in Wildlife and Recreation

Pennsylvania

12. Nursing and Auxiliary Nursing Articulation

13. Home Health Management Assistant

14. Home Health Management Aide

15. Prevocational Education Resource Center

16. An In-Service, Preservice Vocational Development Strategy

17. School-Based Job Placement Service Model: Phase III, Implementation

18. Product Installation and Evaluation

19. School-Based Job Placement Service Model: Phase III

20. Vocational Education Curriculum Center for Pennsylvania

21. Job Placement

22. Implementation of the Cluster Concept in Two Vocational Areas in an Area Vocational-Technical School Setting

23. A Project to Improve Career Education

24. TIME SCHEDULING: A Method of Individualizing Instruction

RESEARCH RELATED ACTIVITIES:

1. Career Resource Center Implementation and Evaluation - An in-progress report was prepared synthesizing the activities of 17 career resource centers operating in Pennsylvania during fiscal year 1973-74. The purpose of the centers is to provide current and accurate career information to students, faculty, parents and others. Input for the development of the centers was derived from: 1) the evaluation by the Pennsylvania RCU of five pilot CRCs developed during the period 1970-73, 2) the RCU guidelines for

establishing CRCs and 3) the consultative services of the five pilot CRC directors. The report will be distributed to all local school districts in Pennsylvania as well as state-level personnel.

2. PENNscripts - The evaluative questionnaires are being revised as a result of piloting the original forms for the forthcoming comprehensive evaluation of PENNscripts. A sampling procedure is presently being developed to determine the students, teachers and guidance counselors to be involved in the statewide study.

3. Evaluation of Educational Programs in Correctional Institutions - Preliminary discussions were held with james Smith, Chief, Division of Corrections Education, relative to the RCU's responsibility in conducting an evaluation of vocational education programs in the state's correctional institutions. Previously developed instruments are being revised as a result of last year's initial evaluation. Additional evaluative activities will also be a part of the current year's effort.

4. Coordination of Commissioner's Share of Discretionary - Part C Proposals - The RCU was assigned the responsibility of disseminating information about the Discretionary - Part C monies to local educational agencies. The staff worked with some of the LEAS in the preparation of proposals. All LEA proposals were reviewed by RCU staff and prepared for the State Board of Education's approval. The RCU is currently working with the State Director of Vocational Education to determine if any of the proposals submitted to OE are duplications of ongoing state research activities.

5. Manpower Research Activities - The primary goal is to improve the manpower research and information efforts as they relate to occupational education planning and decision-making. Working with the Pennsylvania Department of Labor and Industry and the Governor's Office, a procedure was developed for soliciting opinions from knowledgeable people in the field of occupational training and employment.

Specifically, an attempt was made to obtain advice and suggestions for improving manpower information to better serve the needs of occupational and manpower planners. Assistance was provided to the Governor's Office in the preparation of a planning grant proposal for the development of an occupational information system. The proposal, submitted to the Manpower Administration, was approved. Presently, efforts are being directed towards assisting in the development of a proposal for a larger operational grant. In addition, in order to assist vocational education program planners at both the state and local level, members of the RCU have produced the following reports:

a) Annual Occupational Withdrawal Rates for Pennsylvania and the Major Labor Market Areas
b) Post-high School Activities of the 1973 Graduates by Rach and Sex
c) A Study to Determine the Feasibility of Establishing a Community College to Serve a Five-County Area in Pennsylvania

PROJECTS AND ACTIVITIES PLANNED:

1. Conduct the evaluation of PENNscripts.

2. Complete and forward to USOE the Second Annual Report of the Discretionary - Part C Career Education Projects.

3. Assist local educational agencies to implement approved Research (Part C) and Exemplary (Part D) projects funded directly from USOE.

4. Continue assisting local educational agencies to implement a model occupational placement service.

5. Continue participating in the evaluation of Pennsylvania's pilot distributive education curriculum project (LAPS).

6. Continue manpower activities.

Pennsylvania

7. Develop and secure approval of a research plan to utilize 1975 Part C and D funds to achieve research objectives that are based on established federal and state priorities and the State Plan for Vocational Education.

8. Provide staff assistance to the Governor's Office and the Bureau of Employment Security in the development of a comprehensive occupational information system proposal for the US Department of Labor.

9. Evaluate vocational programs in the eight state adult correctional institutions and the 16 youth development centers.

10. Plan and conduct an evaluation of three pilot job placement centers implementing a previously developed model. Develop procedures for implementing job placement activities in Pennsylvania's youth development centers.

11. Develop a forms manual for job placement activities in Pennsylvania.

12. Develop a preemployment course of study for youth development centers.

RHODE ISLAND

Peter Bowen, State Director of Vocational Education
Jacqueline Nelson, RCU Director

PROJECTS COMPLETED: NONE

NEW PROJECTS FUNDED:

1. Reading into Careers, Lincoln, Mr. Richard Sheehan
2. Career Awareness in Communication, Conventry, Mr. Thomas Roche
3. First Step Consumer Awareness, Cranston, Dr. Joseph Picano, Jr.
4. Basic Carpentry, Cranston, Dr. Joseph Picano, Jr.
5. HOPE, Mr. Albert Manning, North Scituate
6. Art Career Awareness/Exploration, Providence, Dr. Charles Bernardo
7. Project: Career Planning, Providence, Dr. Charles Bernardo
8. World of Work, Hope Valley, Mr. Richard Cobleigh
9. Focus on the Future, Hope Valley, Mr. Richard Cobleigh
10. Creating and Vocational Awareness, Ashaway, Mr. Richard Cobleigh
11. Career Opportunities in the Natural Environment, Ashaway, Mr. Richard Cobleigh
12. Printing Without Ink, Ashaway, Mr. Richard Cobleigh
13. Environmental Workings-Career Ed. in Natural Resources, Coventry, Mr. Thomas Roche
14. Let's Put Science to Work, Lincoln, Mr. Richard Sheehan
15. Project: H.E.L.P., Cranston, Dr. Joseph Picano, Jr.

Rhode Island

RESEARCH RELATED ACTIVITIES:

1. The Research Unit at the Department of Education is developing a Vocational Education module of a Management Information System (MIS) designed to collect, process, and disseminate information about Vocational Education to enhance decisionmaking in this area at State and local levels, for the purposes of program control, program management, and planning.

2. The vocational office is also supporting the Diocese of Providence in their efforts to develop and pilot career education program for system-wide use among non-public schools, grades 7-12.

PROJECTS AND ACTIVITIES PLANNED:

1. The Vocational Office plans to continue support of the development of the MIS and to expand Career Education efforts including non-public as well as public endeavors.

SOUTH CAROLINA

L.L. Lewis, State Director of Vocational Education
Gregory Morrison, RCU Director

PROJECTS COMPLETED:

1. Phase II of the Model Career Education Project, at Lexington School District #3, in Batesburg

NEW PROJECTS FUNDED:

1. The second of a two-phase Career Education Project was funded until June 1975, at Spartanburg School District #5, in Duncan, South Carolina. The program will provide opportunities for the development, demonstration and testing of a Career Education model suitable for state-wide implementation. The project activities are designed to complement the existing structure, resources and programs of Spartanburg District #5.

RESEARCH RELATED ACTIVITIES:

1. A series of workshops were conducted for inservice training pertaining to Career Education, utilizing the "Orientation to Career Education" package, which consists of programmed materials for teacher/administrators, with videotape and ideas booklet.

2. A Graphic Communications Teacher Training Workshop was conducted to assist instructors in developing plans and strategies necessary for effective implementation and administration of the new curriculum materials recently developed for their use.

3. An instrument was developed and plans were made to evaluate the VIEW delivery system by surveying approximately 8,000 students in grades 7, 9, and 11 at various locations throughout the state.

4. A plan and proposal were prepared to establish a non-statistical vocational information component for the existing State Department of Education information system. This effort would consist of a one-year pilot

to determine the need for such a system and would rely on resources from the ERIC, AIM/ARM systems.

5. The Career Cluster Phase III Curriculum Development effort is continuing, with emphasis on the preparation of LAP's consisting of self-paced student work sheets, complemented by slide-tape programs, in the areas of Machine Shop and Heating, Air Conditioning and Refrigeration.

6. Workshops were conducted for guidance counselors, principals and superintendents in the fall, for the purpose of discussing innovative approaches for implementing VIEW programs and identifying remedies for problems encountered.

7. Request for proposals were prepared and distributed in an attempt to secure a third party evaluation, to design a plan and construct instruments necessary to determine the effectiveness of the Career Cluster curriculum materials upon their implementation in the fall of 1975.

PROJECTS AND ACTIVITIES PLANNED:

1. Continuation of inservice workshops for teacher/administrators pertaining to Career Education

2. Continuation of the Career Cluster curriculum development project, Phase III.

3. The Career Development staff will revise and refine the South Carolina Department of Education "Position Paper."

4. A survey will be conducted to identify all programs in South Carolina operating under the banner of Career Education.

5. The VIEW delivery system will be evaluated, utilizing the instruments previously developed and a sample selected ramdomly.

6. The completion, reproduction and dissemination of the Career Cluster curriculum materials to vocational and technical education instructors

7. Orientation and teacher training workshops will be conducted to familiarize the instructors with and train them in the use of the newly developed Career Cluster curriculum materials

8. The preliminary phase (Phase I) of the Career Cluster evaluation effort will be initiated to design the evaluation plan strategies and establish the procedures that will be used during the 18 months' evaluation cycle. The test instruments will be prepared and validated prior to use in the fall of 1975.

9. A one-year pilot test effort will be initiated to determine the need for a non-statistical vocational information system that will complement the existing State Department of Education information system, utilizing ERIC, AIM/ARM as the primary information sources.

10. Workshops will be conducted to tap the experience and knowledge of the vocational student placement and adult project coordinators in gathering preliminary final project report information, opinions and recommendations. Final reports will be prepared and submitted upon conclusion of the Student Placement and Adult Projects in July 1975.

SOUTH DAKOTA

4. "Follow-up of Graduates at Columbia Central High School: Survey of Job Placement" - Columbia Central High School, Maury County

5. "Developing a Curriculum Guide for Vocational English at Green Brier School", Robertson County Board of Education

6. "Job Placement Services: An Exploratory Program, Hiwassee College 1972-73", Monroe County

7. "Career Information" An Experiment in the Sheffield Community, Memphis, Tennessee" - Memphis City Schools, Shelby County

NEW PROJECTS FUNDED:

1. "A Follow-up of 1973 Secondary Vocational Educational Students and Area Vocational Education Students", Tennessee Research Coordinating Unit

2. "Career Orientation/Career Guidance - Seventh Grade", Henry County

Tennessee

3. "Development of Materials for a Life Planning Curriculum for Summertown High School, Lawrence County

4. "A Comparative Follow-up Study of Vocational and Non-Vocational Graduates at Waverly Central High School from 1967-1974", Humphreys County

RESEARCH RELATED ACTIVITIES:

1. Tennessee Management Information System.

2. Occupational Information System.

3. Information Retrieval and Dissemiation System.

PROJECTS AND ACTIVITIES PLANNED:

1. Wage Data Survey: The Tennessee RCU has entered into an agreement with the State Department of Economic and Community Development to provide two quarterly reports on wage data for manufacturing type occupations. This project will involve the Department of Employment Security and will be conducted during the period January 16, 1975, through June 30, 1975. The first quarterly survey will be completed by April 1, 1975, and the update survey will be completed by June 30, 1975.

2. Project Interface: Under the Comprehensive Training and Education Act of 1974 and through the auspices of the Department of Economic and Community Development, interfacting tables are being developed that allow the articulation between and among various occupational classifications. These tables will be used to enable manpower forecasters to improve. Specifically, interface deals with the articulation of the Occupational Employment Security (OES) codes as used by the Department of Economic and Community Development with the (USOE) codes as used by the Tennesse State Department of Education, for classification of training of various occupational categories. It is anticipated that this portion of the

project will take approximately 4,000 hours of professional staff time as it requires a great deal of primary analysis. "Interface" is expected to produce a totally computerized articulation system for use by manpower planners throughout Tennessee and across the nation.

3. THEC: In April, 1974, the Tennessee Higher Education Commission performed a survey entitled "The Tennessee Education Monitoring Survey" (OEMS). This survey makes available a primary data base of approximately 43,00 students and includes such information as name, address, and zip code. The Higher Education Commission of the State of Tennessee also maintains an information base for both public and private institution (HIS). The Division of Vocational-Technical Education currently maintains a data base including the names and addresses of all students enrolled in area vocational-technical schools in Tennessee. THEC requested that the Research Coordinating Unit do a follow-up of the students occuring in the OEMS file but not in the "HIS' or "AVTS" files. Postcards and a letter will be mailed to students that were missed.

TEXAS

John R. Guemple, State Director Vocational Education
Ray Barber, RCU Director

PROJECTS COMPLETED:

1. Vocational Education in Texas High Schools - An Ethnic Comparison, University of Houston

2. A Study of Construction Technology Curriculum and Construction Industry Needs, Paris Junior College

3. A Study of Manpower Training Requirements for the Texas Agricultural Industry, Texas A&M University

4.

4. Statewide Survey of Current and Future Employment Lends of Licensed Dental Hygienists, Texas State Technical Institute

5. Evaluation of the Texas Supply/Demand System for Vocational Education, University of Texas

6. The Application of Systems Analysis to Vocational Occupational Curricula Planning, East Texas State University

7. Training in a Summer Camp Setting for Paraprofessionals Working with the Dear and Hard of Hearing, McLennan Community College

8. Occupational Orientation Projects, 37 project sites

NEW PROJECTS FUNDED:

1. Evaluation of the Texas Supply/Demand System for Vocational Education, University of Texas

2. The Application of Systems Analysis to Vocational-Occupational Curricula Planning, East Texas State University

3. Training in a Summer Camp Setting for Paraprofessionals Working with the Deaf and Hard of Hearing, McLennan Community College

4. Identification of Actual Tasks Performed and Relative Amount of Time Spent on Tasks by Vocational-Technical Personnel, EPD Consortium D

5. The Development of a Plan for a Competency Based Industrial Arts Curriculum with Direct Implications for Occupational Education Program Development, Southwest Texas State University

6. Employment Opportunities and Training Needs in Agribusiness, Texas A&M University

7. General Follow-up Study, Windham School District

8. Occupational Orientation (Investigation) Projects, 18 new project sites

9. Career Education Counseling Project, Corpus Christi ISD

10. Project RACE, Weatherford ISD

11. Career Guidance and Dissemination Center, Austin ISD

12. Career Exploration of Health Occupations, Port Arthur ISD

13. Improving Occupational Exploration and Career Planning Through the Development and Widespread Utilization of Career Development Resources, East Texas State University

RESEARCH RELATED ACTIVITIES:

1. Ten research proposals were reviewed and evaluated during the six month period. Seven projects were approved for funding. Five projects initiated prior to June 30, 1974, were continued. Seven projects were completed.

2. Members of the staff continued to participate in the coordination of exemplary projects funded under Part D, Public Law 90-576, and the development and coordination of pilot-demonstration projects in

occupational education for handicapped students funded under Section 122(c)(3).

3. Members of the staff continued to participate in the activities of a special interagency task force to develop and implement a comprehensive manpower supply/demand data system for the State of Texas.

4. Members of the staff continued to participate in a special project to computerize the statistics and financial inputs required for the preparation of the Annual Report for Vocational Education.

5. The staff participated in a wide variety of activities related to research and development in occupational education and other components of career education.

PROJECTS AND ACTIVITIES PLANNED:

1. Seven previously described projects will be continued during the next six month period. Two new projects have been approved for initiation during the six month period. Approval of approximately ten additional new projects is anticipated.

2. Emphasis will continue to be placed on curriculum development projects, manpower needs and development studies, evaluation projects, and follow-up and placement studies. Continued emphasis will be placed on the role of occupational education as an integral part of the total career education process.

3. Continued emphasis will be placed on the initiation of exemplary projects focused on career awareness, investigation, and exploration.

4. Development and initiation of pilot-demonstration projects in occupational education for the handicapped will be continued.

5. The Texas State Plan for Vocational Education for Fiscal Year 1976 will be completed and forwarded to the USOE.

6. The staff will continue to participate in a wide

variety of activities related to research and development in occupational education and other components of career education.

7. The division's library facilities will continue to be improved. Continued progress will be made in the development of improved dissemination procedures.

UTAH

Walter Ulrich, State Director of Vocational Education
N. Craig Kennington, RCU Director

PROJECTS COMPLETED:

1. Evaluation of Chamber of Commerce Work Observation Program, SLC, Davis, Granite, Jordan, Murray, UTCSL

2. The application of approved standards for Post Secondary Curriculum in Utah

NEW PROJECTS FUNDED:

1. Career Education in the Junior High School, Statewide

2. Industrial Arts Education in Career Education Setting, Selected districts

RESEARCH RELATED ACTIVITIES:

1. Evaluation of Vocational-Technical education at College of Eastern Utah.

2. Administration, evaluation, consultation for State funded, "Career Development (Dropout Prevention) Program.

PROJECTS AND ACTIVITIES PLANNED:

1. Evaluation of Vocational Technical Education at Skills Center (South), Sevier Area Vocational Center, and Snow College.

2. Skills Center (North) Intake-Assessment Program Evaluation.

3. A study to determine the extent to which Vocational Certificates, Associate of Applied Science degrees and Associate of Science degrees enhance the employability of job seekers.

4. Develop and implement survey procedures that will yield accurate job demand information.

5. A study to determine criterion referenced instruction approach to teacher education.

6. A study to determine career education and implications for business education programs at the junior high school level.

7. Assess educational needs and occupational opportunities available to youth and adults in agriculture in Utah.

8. Evaluation of home or related occupational programs.

VERMONT

Arthur Ericson, State Director of Vocational Education
Joseph P. Kisko, RCU Director

PROJECTS COMPLETED:

1. Identifying a Non-Verbal Aptitude Measure for Use in Counselling Secondary Level Mentally Retarded, Randolph

2. Post-Secondary Education Follow-Up Study, Montpelier

3. Review & Analyze Enrollment Trends at Barre City Regional Vocational Technical Center, Barre

NEW PROJECTS FUNDED:

1. Instructional System Development Model for Vermont Vocational Area Centers, NERCDE

2. Evaluation of Testing Materials for Use in Career Guidance and Education, Burlington

3. Twin State Educational Information System, Montpelier

RESEARCH RELATED ACTIVITIES: NONE

PROJECTS AND ACTIVITIES PLANNED:

1. Discussion and decisions on research needs with staff.

2. Request, evaluate and recommend proposals for approval that meet the needs of vocational education in the State.

3. Prepare annual reports.

VIRGINIA

George S. Orr, Jr., State Director of Vocational Education
Lloyd M. Jewell, Jr., RCU Director

PROJECTS COMPLETED:

1. Research and Development Project in Career Education, Richmond

NEW PROJECTS FUNDED:

1. Development and Implementation of Career Education in VA, State Dept. of Education

2. Further Development of the Voc. Education Management Information System, VPI & SU

3. The Design, Field-testing, and Implementation of a Curriculum for the Course 'Introductions to Vocations' for the Middle Schools and Junior High Schools of the Commonwealth of Virginia, VPI & SU

4. A Compilation, Preparation, and Distribution of Instructional Materials in Positive Work Ethics in Relation to Occupational Choice

5. A Study to Provide the Tidewater Area Industrial Arts Teachers with the Information, Equipment, and Coordinating Agencies Necessary for the Establishment and Operation of Secondary School Chapters of the Virginia Industrial Arts Students Association, Old Dominion University

6. An Evaluation of the Health Careers Program At Jefferson Senior High School, Roanoke City Schools

7. Design for a One Semester Curriculum for Exploratory Business, Portsmouth City Schools

8. Career Opportunities in Transportation, Harrisonburg City Schools

9. Vocational In-Service for Secondary Guidance Counselors, York County Schools

Virginia

10. Public Information on Vocational Education, Wise County Schools

11. Assessment of the Impact of Vocational Media on Russell County Sophomores, Russell County Schools

12. Activities Relating to Recruiting and Selecting Voc. Students, Henry County Schools

13. A Project to Provide Student Orientation and Public Information on teh Vocational Education Program in Appomattox County, Appomattox County Schools

14. Teacher Use of Career Counseling Modules in Developing Career Awareness, Alleghany County Schools

15. Five Year Follow-Up of Albemarle High School Graduates, Albemarle County Schools

16. Career Development Counseling with Video Tape Recordings, New Kent County Schools

17. The Establishment of Baseline Data on Students Leaving George Washington High School through Graduation or Dropping Out; 1970-74 as a Basis for Future Follow-Up Coordinated Curricular Strategies for a Countywide K-12 Vocational Program, Washington County Schools

18. Hampton Student Job Placement, Hampton High School

19. Alexandria City Student Job Placement, T. C. Williams High School

20. Harrisonburg/Rockingham Student Job Placement, Massanutten Voc-Tech Ctr

21. Delmarva Career Education Project, Northampton County Schools

RESEARCH RELATED ACTIVITIES:

1. Continued the research and development project in career education at Radford and Petersburg school division with state funding.

Virginia

2. Published an analysis of the follow-up study of secondary student completions 1972-73.

3. Conducted follow-up study of secondary and adult student completions for 1973-74.

4. Continued participation in V-TECS.

PROJECTS AND ACTIVITIES PLANNED:

1. Prepare an analysis of 1973-74 follow-up secondary and adult student completions.

2. Update and improvement of the Management Information Sysetm.

3. Receive, review, and evaluate proposals to consider for fudning during 1975-76.

WASHINGTON

Arthur A. Binnie, State Director, Vocational Education
Gene W. Bigger, RCU Director

PROJECTS COMPLETED:

1. Placement Service Training Model, Seattle

2. Surveying Restaurant Skills Needs to Establish a Food Service Class, Mercer Island

3. Articulation of Secondary to Postsecondary Vocational Education Programs, Ellensburg

NEW PROJECTS FUNDED:

1. Basic Mathematics Skills Laboratory Program for Adults, Tacoma Community College

2. Project REPRO, Edmonds Community College

3. Wildlife Conservation and Recreation Curriculum Guide, Selkirk High School

4. Specialized Career Guidance for Dropouts, Yakima School District #7

5. Recreational Area Management and Program Development, Wenatchee Valley College

6. Curricular Change for Teaching Teenage Parents, Yakima

7. Development of an Instrument for Prescribing Compensatory Education for Vocational Technical Trainees, Renton

8. Survey and Documentation of Vocational Skills/Needs and Corresponding Job Availability in the Ortin School District, Orting

9. Surveying Restaurant Skills Needs to Establish a Food Service Class, Mercer Island

10. Intensive Care for Nursing Personnel, Mt. Vernon

Washington

11. Occupational Education Occupational Student Attrition Study, Midway

12. Designing Data Gathering Instruments for Voc. Educators, Pullman

RESEARCH RELATED ACTIVITIES:

1. Participation in meetings of groups and agencies as host, member, or consultant:
   Common school districts
   Community colleges
   4-year institutions
   National RCU Conference

2. Addition of specialist to RCU staff to evaluate and disseminate R&D materials.

3. Statewide distribution of newsletter articles promoting use of ERIC System and Statewide distribution of newsletter articles promoting use of ERIC System and microfilm equipment, development of bibliographies and automated ERIC searches for inservice training groups, workshops and seminars, and the distribution of microfiche, at no cost, to vocational teachers in the state.

PROJECTS AND ACTIVITIES PLANNED:

1. Research Techniques.

2. Workshops in three or four geographical regions on the state.

3. Development of a Monograph (How to write a proposal).

4. Dissemination of project results.

5. Develop an index of projects ("C" and "D") funded in the state.

WEST VIRGINIA

Clarence E. Burdette, State Director of Vocational Education
Glenn E. Smith, RCU Director

PROJECTS COMPLETED:

1. The Development of a Master Plan for the Financial Support of Vocational Education Programs in West Virginia, Ohio State University

NEW PROJECTS FUNDED:

1. A Study of Factors Affecting Student Enrollment and Scheduling in Vocational Education Programs in West Virginia, Associated Educational Consultants, Inc.

RESEARCH RELATED ACTIVITIES:

1. Conducted a Task Force study on the availability of vocational education in West Virginia.

2. Developed and submitted a proposal for further development of the West Virginia vocational education mangement information system, under the Commissioner's Part C, Discretionary awards program.

3. Completed an EPDA project designed to acquaint vocational instructors with new curriculum materials.

PROJECTS AND ACTIVITIES PLANNED:

1. Determination of priority projects for Part C funding in FY 76.

2. Initiate a project to develop policy and procedure manuals for vocational education.

3. Establish a state vocational education curriculum laboratory for the identification, acquisition, storage and dissemination of curriculum materials.

4. Continue operation of the state management information system for vocational education.

WISCONSIN

Eugene Lehrmann, State Director of Vocational Education
Roland J. Krogstad, RCU Director

PROJECTS COMPLETED:

1. Evaluation of Civil Structural Curriculum, Eau Claire
2. Individualized Instruction for Rural Day Care Services, La Crosse
3. Attitudes Toward Instruction, Fennimore
4. Evaluation of Architectural Curriculum, Madison
5. Physics Requirements for Engineering Technicians, Kenosha
6. Computer Augmented Accounting, Milwaukee
7. Program Evaluation Model, Fond du Lac

PROJECTS COMPLETED:

1. Study to evaluate students achievement in the different business subjects at the Mayaguez Educational Region. No funds were allocated for year 1974-75.

2. Study to determine the consumer patterns of the Puerto Rican families. An abstract of the final report will be prepared and sent to Eric Clearinghouse Center.

3. Effectiveness of the Business Education Program in preparing Students for job Opportunities in the Caguas Region Final report is available.

4. Career Education Program at Palmarejo Rual Second Unit in Lajas School District to Acquaint Elementary and Junior High School Students with Career Possibilities. (No funds were allocated on FY 1974-75)

5. In service training program for teachers of the Vocational Industrial Occupational Program for 126 teachers.

6. In-service training to acquaint school directors and supervisors with the course Introduction to the Technology of Occupations.

7. Leadership training program for teaching personnel of the Industrial Arts Program and the Vocational Industrial Program.

8. Preservice training program for the preparation of assistant teachers for Home Economics, Industrail Arts, Vocational Industrial Education and Counseling and Guidance.

9. Preservice training program for the preparation of 28 Vocational Industrial teachers in coordination with the Inter American University.

Puerto Rico

10. Cooperative approach for the training of vocational education personnel under provisional contracts.

11. In-service training for Home Economic and Industrial Arts teachers in new concepts and techniques in the teaching for handicapped students.

NEW PROJECTS FUNDED:

1. Management Information System

2. Development of Occupation Enrollment Projection in terms of Occupational Demand

3. Evaluation of the Health Realted Occupations Program

4. Business Vocabulary Count in Spanish

5. Follow-Up Study of Vocational Graduates for the year 1973-74

6. Study on training needs on specialized Vocational Agriculture in PR

7. Establishment of a Management Control System for the Vocational and Technical Education Programs using PERT technique

8. Curriculum Development for the Vocational and Technical Education Programs adapted to the Extended Calendar School Year: a) Guides for the course Pharmacist Assistant b) Guides and Tests for self-study in Business Education c) Guides for the course "Principles of selling" for the Distribution and Marketing Program d) Curriculum development basic to the training of individuals for employment in agri-business e) Teaching modules in consumer education f) Curriculum Development in the areas of jewelry, hardware, home furnishings, real estate, ticket agent, and automobile parts sales g) Modules in the area of communications for Industrial Arts Junior High School Students h) Curriculum development for the areas of construction, manufacturing, and services for Vocational Industrial Education.

9. Development of an Exemplary Career Education Comprehensive Program in the Regular and the Vocational and Technical Education Program in Puerto Rico.

10. A Model State Pedagogical Resources Center for Designing, Producing, Testing, Revising and Disseminating Teaching, Audiovisual, and other Educational materials for students of Regualr, special and Post secondary Programs for Vocational and Technical Education in Puerto Rico.

11. Evaluation project for the Business Education and Distribution and Marketing Program.

12. Development of a comprehensive model for Career Education in Puerto Rico.

13. Establishment of a Vocational and Adult Education Department at the School of Education of the University of Puerto Rico.

14. Cooperative Program for the improvement of leadership in Vocational Education personnel.

15. In-service training program for industrial coordinators of the Vocational and Technical Education Program.

16. In-service training for educational personnel assigned to the new curriculum centers at the area vocational schools.

17. In-service training for Home Economic and Industrial Arts Teachers in new concepts and techniques in the teaching for handicapped students.

18. In-service training program for Distribution and Marketing teachers in sales promotion and merchandise display.

19. In-service training to acquaint school Directors and supervisors with the course introduction to Technology Occupations.

Puerto Rico

RESEARCH RELATED ACTIVITIES:

1. The semiannual report to the U.S.O.E. for the period of January to June 1974 was prepared.

2. The State Vocational and Technical Education Annual Plan for School Year 1974-75 was revised.

3. The State Vocational and Technical Education Annual Report for School Year 1973-74 was prepared in English.

4. The following federal reports were prepared: "Enrollment in Vocational Education Programs" (OE Form 346-3, 4/74) and Number of Teachers, Status of Teacher Training and Local Administrative Staff in Vocational Education (OE Form 346-2,4/74).

5. A final and an evaluation report of the translation and adaptation component was prepared in coordination with the Evaluating Office of the Department of Education.

6. The Curriculum Development Plan for the year 1974-75 was prepared and distributed.

7. The Four-year Curriculum Development Plan is in process.

8. A final report of the In-service training Program for teachers of the Vocational Industrial Occupation Program was submitted to the Federal Office of Education.

9. A training for the writing of modules and validation of job analysis charts was provided to Vocational Education teachers. Another training was offered to curriculum technicians in the use of these job analysis charts.

10. The annual report of the R.C.U. for the School year 1973-74 was prepared in English and Spanish.

11. A training related to the Management Information System operation was provided in the six Educational

Regions of the Island in coordination with the Computer Center of the Department of Education.

12. The Final Report of the E.P.D.A. project "TEchnical Assistance for the development and implementation of a long range master plan for the preparation of vocational industrial education" was prepared.

13. A revision of the proposal "Proposal for the Implementation of a Driver Education Program in the Public High Schools of Puerto Rico" was conducted.

14. Proposal for the development of a center for training in fishing techniques, vessel construction for deep sea fishing, and seamanship, in Arroyo, PR

15. Proposal for the training of vocational education personnel working under provisional contract with the Commonwealth Department of Education.

16. Proposal for the establishment of a vocational and adult education program at the College of Education of the University of Puerto Rico.

17. Proposal for the development of a Management Information System at the Puerto Rico Research Coordinating, Phase II.

18. Proposal for a pilot project to establish an Agribusiness Educational Service Center for the training of adult farmer in Naranjito.

19. Proposal for the Development of a Technological Institute in Ramey Air Base in Aguadilla.

20. Proposal for evaluating the effectiveness of the Health Related Occupation Program in preparing qualified personnel to serve different occupational demands.

21. Proposals for the organization of Area Vocational Schools using Mobile Units.

22. Proposal for an intensive training program for employment in the Northwestern Region of Puerto Rico.

Puerto Rico

23. Proposal for an In-Plant training program to develop the optimum degree of specialization of the Area Vocational School students of Carolina and Guayama.

24. Proposal for the development of a workshop for the training of vocational education personnel who will assume leadership roles in Vocational and Technical Education in Puerto Rico.

25. Proposal for an In-service training program for Marketing and Distribution teachers in Sales Promotion and Display of Merchandise.

26. Proposal for an In-service training program for industrial coordinators of the Vocational and Technical Education Program.

27. Proposal for the preparation of instructional materials for the vocational programs adopted to the extended calendar school year.

28. Proposal to offer a televised course in Basic Technology.

29. Proposal for an Occupational Training Information Delivery System for Puerto Rico.

30. Proposal for the Development of Occupational Enrollemtn Projections in terms of Occupational Deamnd for the Vocational and Technical Education Programs.

31. Proposal for the training in basic occupational English for Puerto Rican agricultural workers working in New Jersey and Connecticut farms.

32. Retraining of laborers displaced from the sugar cane industry to prepare them as artificial inseminators, milking machine operators and dairy cows caretakers.

33. Warehouse training project leading to the preparation of shipping and receiving clerks.

34. Training in marketing techniques for children and relatives of seasonal migrant agricultural laborers at the Ponce area.

127

35. Waiter-waitrees training geared to relatives of seasonal and migrant laborers.

36. Training of agricultural workers to be employed in the coffee harvest in agricultural mechanics, coffee machnie operator and coffee machinery and equipment maintenance.

37. Proposal for the training of niney agricultural migrant workers as chefs.

38. Proposal for the training of agricultural workers in the production of tobacco, minor crops and fruits.

39. Training for seasonal and migrant agricultural laborers.

40. Proposal for the training of coffee farm workers as nursery operators, ornamental plant productors and flower production.

PROJECTS AND ACTIVITIES PLANNED:

1. Implementation of the Management Information System in coordination with the Computer Center of the Department of Education.

2. Establishment of the Fishing school in the Arroyo school district.

3. Establishment of the Agriculture Residential School in Adjuntas.

4. Establishment of a Technological Institute in the facilities of the Ramey Base in Aguadilla.

5. Continue with the evaluation of the following Vocational Programs: Distribution and Marketing, Business Education, Health Related Occupations and Vocational Agriculture Program.

6. Proposal for the Development of a Comprehensive Curricula for Environmental Education in Puerto Rico.

Puerto Rico

7. Proposal for the Establishment of a Shipbuilding Skills Training Center in the Ponce Area.

8. Proposal for the Development of a Bilingual Occupational Education Comprehensive Program.

9. Development and submission of a proposal for a Demonstration Project in Safe Performance Secondary School Driver Education Curriculum to the National Highway Traffic Safety Administration through the Commonwealth Commission for Traffic Security.

TITLE: CAREER THRESHOLDS: A LONGITUDINAL STUDY OF THE EDUCATIONAL AND LABOR MARKET EXPERIENCE OF MALE YOUTH. VOLUME FIVE.

PERSONAL AUTHOR: ANDRISANI, PAUL; KOHEN, ANDREW I.

DESCRIPTOR: *EMPLOYMENT EXPERIENCE; *SALARY DIFFERENTIALS; LONGITUDINAL STUDIES; COMPARATIVE ANALYSIS; LABOR UNIONS; *COLLECTIVE BARGAINING; RACIAL DIFFERENCES; LABOR FORCE; YOUTH EMPLOYMENT; MALES; *BLUE COLLAR OCCUPATIONS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 101P.

ABSTRACT: PART OF A LARGER LONGITUDINAL STUDY BEGUN IN 1966 OF THE EDUCATIONAL AND LABOR MARKET EXPERIENCES OF YOUNG MEN, THIS REPORT FOCUSES ON THE IMPACT OF COLLECTIVE BARGAINING ON THE EMPLOYMENT EXPERIENCE OF YOUNG MEN (17 TO 27 YEARS OLD IN 1969) WORKING IN BLUE COLLAR JOBS. UNION-NONUNION DIFFERENTIALS IN LABOR MARKET EXPERIENCE AND IN PERSONAL AND SITUATIONAL CHARACTERISTICS WERE INVESTIGATED USING MULTIVARIATE ANALYSIS. OTHER VARIABLES CONSIDERED WERE RACIAL DIFFERENCES AND THE EFFECTS OF COLLECTIVE BARGAINING ON EARNINGS AND LABOR MARKET EXPERIENCE. FINDINGS INDICATE THAT COLLECTIVE BARGAINING COVERAGE HAS A SUBSTANTIAL NET IMPACT ON THE HOURLY EARNINGS OF BOTH THE WHITE AND BLACK WORKERS STUDIED. FURTHER, AMONG BLACKS THERE IS EVIDENCE THAT THE UNIONIZED EXPERIENCES LESS UNEMPLOYMENT THAN THEIR NONUNIONIZED COUNTERPARTS. APPENDIXES INCLUDE SUPPLEMENTARY TABLES, BIBLIOGRAPHY, GLOSSARY, INTERVIEWING AND ESTIMATING PROCEDURES, AND THE 1970 INTERVIEW SCHEDULE. (NJ)

CAREER THRESHOLDS:

A longitudinal study of the educational and labor market experience of male youth

Paul Andrisani
Andrew I. Kohen

VOLUME FIVE
April 1975

Center for Human
Resource Research
College of Administrative
Science
The Ohio State University
Columbus, Ohio

This report was prepared under a contract with the Manpower Administration, U.S. Department of Labor, under the authority of the Manpower Development and Training Act. Researchers undertaking such projects under Government sponsorship are encouraged to express their own judgment. Interpretations or viewpoints stated in this document do not necessarily represent the official position or policy of the Department of Labor.

This volume is an interim report on a longitudinal study of the educational and labor market experiences of young men. In early 1965, the Center for Human Resource Research, under a contract with the U.S. Department of Labor, began the planning of longitudinal studies of the labor market experience of four groups in the United States population: men 45 to 59 years of age, women 30 to 44, and young men and women 14 to 24. For each of these population groups, a national probability sample of the noninstitutionalized civilian population was drawn by the U.S. Bureau of the Census. These four groups were selected for study because of the special labor market problems that each faces. In the case of the young men, for example, the problems are those revolving around the process of occupational choice and include both the preparation for work and the frequently difficult period of accommodation to the labor market. As of this writing, the young men have been surveyed annually from 1966 through 1971 and again in 1973. (For information on the sampling design see Appendix E.)

While the more-or-less unique problems of each of the subject groups to some extent dictate separate orientations for the four studies, there is, nevertheless, a general conceptual framework and a general set of objectives common to all of them. Each of the studies views the experience and behavior of individuals in the labor market as deriving from interactions between the characteristics of the environment and a variety of economic, social, demographic and attitudinal characteristics of the individual. Each study seeks to identify and measure those characteristics that appear to be important in explaining variations in several facets of labor market experience: labor force participation, unemployment experience, earnings, and various types of labor mobility. Knowledge of this kind is expected to make an important contribution to our understanding of the way in which labor markets operate and thus to be useful for the development and implementation of appropriate labor market policies.

This report represents a significant departure from the earlier volumes in the series on young men,[1] each of which contained analyses

---

[1]Herbert S. Parnes, Robert C. Miljus, Ruth A. Spitz and Associates, Career Thresholds: A longitudinal study of the educational and labor market experiences of male youth, vol. 1, U.S. Department of Labor, Manpower Research Monograph no. 16 (Washington: U.S. Government Printing Office, 1970); Frederick A. Zeller, John R. Shea, Andrew I. Kohen, and Jack A. Meyer, Career Thresholds, vol. 2, U.S. Department of

of several topics using tabular data exclusively. In contrast, this report relies very heavily on multivariate statistical analysis to explore a rather narrowly defined problem for only a subset of the larger cohort. More specifically, the focus is the impact of collective bargaining coverage on the 1969-1970 labor market experiences of young men working in blue collar jobs. In addition to increasing our understanding of the labor market behavior of young adult workers, the findings of the study are relevant to the continuing research on the impact of unionization on the American economy.

Both the overall study and this report are products of the joint effort of a great many persons, not all of whom are even known to us. The research staff of the Center has enjoyed the continuous expert and friendly collaboration of personnel of the Bureau of the Census, which, under a separate contract with the Department of Labor, is responsible for developing the samples, conducting all of the interviews, and processing the "raw" data. We are indebted to Earle Gerson, Chief of the Demographic Surveys Division, and to his predecessor, Daniel Levine; to Robert Mangold, Chief of the Longitudinal Surveys Branch; and to Dorothy Koger, our principal point of contact with the Bureau. We also wish to acknowledge our indebtedness to Alvin Etzler, James Johnson, and the staff of the Field Division who were responsible for collecting the data; to David Lipscomb, Eleanor Brown and their staff for editing and coding the interview schedule; and to Barbara Wilson and Kenneth Kaplan for computer preparation of the data tape.

The advice and counsel of many persons in the Department of Labor have been very helpful to us both in designing the study and in interpreting some of the findings. Without in any way implicating them in whatever deficiencies may remain in this report, we wish to acknowledge especially the continuous interest and support of Howard Rosen, Director of the Office of Manpower Research and Development of the Manpower Administration, and the valuable advice provided by Stuart Garfinkle, Jacob Schiffman and Ellen Sehgal, our principal contacts in the Office of Manpower Research and Development.

Herbert S. Parnes, Director of the NLS Project, provided us with his invariably valuable insights, reactions and guidance. Other colleagues who gave us the benefit of their reactions to an earlier version of the

UNIONIZATION AND THE LABOR MARKET EXPERIENCES OF YOUNG BLUE COLLAR WORKERS

I INTRODUCTION

The effects of collective bargaining on the institution of work in America undoubtedly have been profound. Nonetheless, the magnitude of the effects of unionism on relative earnings is still subject to considerable controversy. In the classic study by H.G. Lewis (1963),[1] for example, the overall effect of unionism on earnings was estimated to be in the range of only 10 to 15 percent. Moreover, Lewis reported only occasional instances since the early 1930's in which the union advantage had been as high as 25 percent. The more contemporary evidence on the overall earnings effect of unionism is mixed, with some investigators presenting estimates higher than Lewis' and some calculating the effect about the same or smaller than Lewis did.[2]

On the other hand, most recent studies that have utilized data which are more disaggregated than those available to Lewis have concluded that in many segments of the economy the effect of unionization on earnings is larger than Lewis estimated. For example, focusing on men in blue collar jobs Ashenfelter (1972, 1973), Boskin (1972), Ryscavage (1974) and Stafford (1968) estimated a net union-nonunion earnings differential ranging from 15 to 40 percent, depending on the particular year to which the data apply, the occupation-industry group, and the time unit for measuring earnings (i.e., hourly, weekly or annually). This study brings new evidence to bear on this subject by utilizing the National Longitudinal Surveys' sample of younger males (17 to 27 years old in 1969). In addition, by focusing upon this particular cohort, we seek to gain important insights concerning the accommodation of younger workers to the labor market in general and to the trade union movement in particular. In addressing these issues the analysis is restricted to blue collar wage and salary workers and is confined to the period between the 1969 and 1970 survey dates.

Specifically, this study examines the effects of collective bargaining on five dimensions of labor market experience: (1) hourly rate of pay;

---

[1] All citations in the text and footnotes refer to items listed in the bibliography in Appendix B.

[2] For studies suggesting a larger overall effect of unions on earnings, see for example: Ashenfelter and Johnson (1969); Blinder (1971); Rosen (1970); and Throop (1968). For studies whose findings are more consistent with those of Lewis, see for example, Boskin (1972); Oaxaca (1973); Raimon and Stoikov (1969); Rosen (1969); and Weiss (1966).

(2) hours worked per week; (3) susceptibility to unemployment; (4) duration of unemployment; and (5) growth in hourly earnings. In contrast to all previous research with micro data, we are able to speak of the effect of collective bargaining rather than union membership on an individual worker's earnings, hours, etc. To the best of our knowledge, all other micro data sets merely indicate whether or not an individual is a member of a union or employee association. The effect of membership is an imperfect proxy for the effect of collective bargaining because some workers who are not union members are nonetheless covered by collectively bargained agreements.[3] Thus, for example, comparing the average wages of union members and nonmembers probably understates the impact of collective bargaining because the average of the nonmember group is artificially inflated by including the wages of covered nonmembers.

In addition, we examine the relationship between collective bargaining coverage and racial differentials in each of the measures of labor market experience. Throughout the analysis, we attempt to ascertain the effects of collective bargaining on "labor of a given relative quality."[4] Thus, for example, we define "relative earnings effects of unionism" as the extent to which unions raise the earnings of workers for whom they bargain above the earnings of comparable unorganized workers.

As previous studies have also noted, union-nonunion comparisons of wages or other dimensions of labor market experience almost always confound the effects of unionism with the effects of other forces that would have contributed to differentials in the absence of unions. According to Lewis, "the errors resulting from incomplete adjustment of the gross wage differences more frequently lead to overestimation than to underestimation of the effect of unionism."[5] It is therefore necessary to consider carefully and to control adequately for the influence of forces which may be correlated with both unionism and dimensions of earnings, and which may therefore lead to an overstatement of the effects of collective bargaining. Since the NLS data provide considerable detail in measuring differences in skills, abilities, and

---

[3] To a lesser extent the imperfection results from some union members working in firms without collective bargaining agreements.

[4] Lewis (1962), p. 327.

[5] Ibid.

situational characteristics, it is possible to control for a wide range of such differences between union and nonunion workers.

Ih the section which follows, "gross" union-nonunion[6] differences in several dimensions of labor market experience during the 1969-1970 period are highlighted by major occupation group and race. In addition to the five dimensions listed above, union-nonunion differences in total annual earnings, weeks worked, occupational status, overtime arrangements, job satisfaction, voluntary turnover, and incidence of layoff are also included. In Section III, we present and discuss data on union-nonunion differences in a wide range of personal and situational characteristics--some of which may act to confound the effects of unionism. Then, to capture the effects of collective bargaining on relative earnings, in Section IV we control for relevant personal and situational characteristics and focus directly on the remaining union-nonunion differences in each of the five dimensions of labor market experience noted above. In this process, we investigate the relationship between unionization and racial differentials by comparing racial differences in the union sector with racial differences in the nonunion sector. The study is concluded with a brief summary.

II GROSS UNION-NONUNION DIFFERENCES IN LABOR MARKET EXPERIENCE, 1969-1970

In examining the effects of unionism, the importance of focusing on labor of a given quality cannot be overemphasized, for there is considerable reason to suspect that unionized blue collar workers have different characteristics than their unorganized counterparts and, therefore, would earn more and have more favorable labor market experiences even in the absence of unionism. Nonetheless, it is useful to compare the labor market experience of the unionized with that of the unorganized within each race and major skill category. First, a comparison of "gross" union-nonunion differences in experience during the period of this study places the subsequent and more intensive analysis of earnings in clearer perspective. Second, it highlights some important aspects of the process whereby young men are accommodated to the labor market and the trade union movement. Third, it provides an overview of how young blue collar workers fared during the course of the economic downturn of the 1969-1970 period.

Before turning to this comparison, however, the distribution of the sample according to occupation, collective bargaining coverage,

---

[6] With the exception of references to Table 1 below, we utilize the distinctions "union-nonunion" and "covered-noncovered" interchangeably for the sake of exposition. However, the reader is reminded that the latter is the accurate one.

union membership and race is presented in Table 1. Overall, slightly less than half of these young blue collar workers were employed in jobs in which their wages and working conditions were determined by collective bargaining agreements. For whites and blacks alike, operatives were more likely than craftsmen or laborers to be covered by such agreements. Of the covered workers, seven out of ten blacks and eight out of ten whites were members of the union or employee association which bargained on their behalf.[7]

That the 1969-1970 labor market experience of blue collar workers in this cohort differs markedly according to collective bargaining status is convincingly demonstrated by the data presented in Table 2. In particular, union-nonunion differences in earnings appear to be very substantial. Among craftsmen and laborers, for example, the differentials in average hourly earnings at both the 1969 and 1970 survey dates--and in total annual earnings during the 12-month interim--are particularly large. Although differences may not be attributable solely to the effects of unionism, it is interesting to note that in all cases the earnings differences are larger than the overall effect estimated by Lewis (1963) and within the range of estimates in more contemporary studies.[8]

The data also suggest, however, that the union hourly earnings advantage declined somewhat between 1969 and 1970. In each case where sample sizes permit confident comparison, relative growth in average hourly earnings was greater for nonunion than union workers and the ratio of union to nonunion wage rates declined demonstrably between 1969 and 1970. The fact that the union advantage in 12-month earnings is smaller than the advantage in 1969 hourly earnings partly reflects the reduction in the hourly wage advantage. However, it reflects other differences as well--e.g., in hours worked, weeks worked, overtime arrangements, mobility, and in the proportion who hold second jobs. Needless to say, considerable caution should be exercised in generalizing

---

[7]These data may be used to illustrate a point made more abstractly above. If we were to define union status in our study in the same way as in previous research on this subject, about 15 percent of those who would be classified as "nonunion" workers would, in fact, be covered by collective bargaining (i.e., for whites it would be 12 percent = (45) (1-.83)/(55 + 45 (1-.83)) and for blacks it would be 19 percent = (45) (-1.72)/(55 + 45(1-.72)).

[8]For example, Ryscavage (1974), p. 7, estimates a difference in usual hourly earnings which ranges from 20 percent among black male craftsmen to 38 percent among white men working as transportation equipment operators.

Table 1 Collective Bargaining Coverage and Union Membership in 1969 of Blue Collar Workers, by Occupation and Race[a]

trends from these movements over a single year, especially since many workers covered by collective bargaining agreements renegotiated in 1968-1969 received deferred wage increases in 1970 which were disproportionately small because of the practice of "front-loading" of new contracts.[9]

Although there are several instances--in particular among white craftsmen and operatives--where the hourly earnings advantage of the unionized may be somewhat offset by virtue of their having worked fewer hours per week, in the main the data suggest that the large union advantage in hourly earnings is not significantly counteracted either by fewer hours usually worked per week or by fewer weeks worked in a 12-month period. Furthermore, workers covered by a collective bargaining agreement are far more likely to receive a premium for working overtime, which would contribute to widening the differential in annual earnings.

Despite the similarity between the union and nonunion groups in the number of weeks worked, the data suggest that white union workers were more prone than their nonunion counterparts to layoff and unemployment during the 1969-1970 period and to a longer duration of unemployment when it occurred. Among blacks, however, union-nonunion differences are exactly the reverse, as the young men who were covered by collective bargaining were less prone to layoff or a spell of unemployment and--at least among the laborers--they averaged fewer weeks of unemployment on occasions when unemployment was actually experienced. The extent to which these racial differences may be explained by white-black differences in industrial affiliation is addressed at a later point in this study.

At least in part, the union-nonunion differential in earnings may be attributable to differences in the occupational distributions of the two groups within each of the major blue collar categories examined. Even within occupation groups, the data in Table 2 suggest that those covered by collective bargaining tend to be disproportionately employed in the higher status and typically better paying trades. To a certain extent, this may mean that the unionized tend to possess greater abilities and skills--as is suggested by the differences in the likelihood of receiving training--and that they perhaps command higher earnings as a consequence of their superior talents as well as through collective bargaining coverage.

Although the economic advantages of collective bargaining are further evidenced by the data on the incidence of overtime premiums and by the greater protection from layoff and dismissal among blacks, there is little to suggest that job satisfaction is higher for union

---

[9] Estey (1970).

than nonunion workers. On the contrary, the data provide some reason to suspect that covered workers are less highly satisfied with their jobs than are their noncovered counterparts. Since the unionized appear less prone to voluntary turnover, since they also possess a large advantage in earnings and status, and since unions are generally thought to increase "industrial democracy," one would expect that the unionized would be considerably more satisfied with their jobs than the nonunion workers.

On the other hand, the existence of a union is likely to make workers more aware than they otherwise would be of factors in the job situation that could be sources of discontent. In addition, to what extent the expressed dissatisfaction among these young workers is focused against unions themselves, rather than against employers, is a subject about which we have no direct evidence. Nevertheless, that our data indicate less satisfaction among covered than noncovered employees may be an important finding--especially in light of the growing concern for discontent among young blue collar workers.[10]

III UNION-NONUNION DIFFERENCES IN PERSONAL AND SITUATIONAL CHARACTERISTICS

Union-nonunion differences in earnings may stem from many sources, only one of which is the effect of collective bargaining. To repeat the example mentioned earlier, within a major occupation group such as craftsmen, union workers may have more favorable labor market experiences because they have brought to their trade greater abilities and skills and are therefore more productive. In such a case, they would have earned more than their nonunion counterparts even in the absence of unions. As another example, differences may reflect the fact that union jobs tend to be disproportionately concentrated in urban areas and in the North where wage rates tend to be higher.[11] Finally, union-nonunion

---

[10] This growing concern has been clearly presented in many recent studies. See, for example, Work in America (1972) and Sheppard and Herrick (1972). It is also well to note in this context that the extent to which covered workers are not union members (Table 1) may reflect dissatisfaction with the union or that many young workers are serving probationary periods of employment during which they are not required to join the union--even under a union-shop agreement.

[11] A recent BLS report clearly demonstrates the existence of substantial differences in the extent of unionization on the basis of both region and degree of urbanization. Selected Earnings and Demographic Characteristics of Union Members, 1970 (1972), Table 11, pp. 22-25.

differentials may reflect differences in the ways in which the unionized and nonunionized sectors determine wages, hours, and conditions of employment. That is, union-nonunion earnings differentials may indeed reflect the "pure" effects of collective bargaining.

This section of the study serves essentially to highlight differences between covered and noncovered workers which may distort the effects of unionism on earnings and other aspects of labor market experience.[12] Union-nonunion differences in several personal characteristics of our sample of young male workers are presented in Table 3. Most of these characteristics reflect differences in abilities and skills that may contribute to the differentials in labor market experience over the 1969-1970 period previously observed. To begin with, the nonunion blue collar workers in the sample are 15 to 20 percentage points more likely than their union counterparts to be high school dropouts. Put another way, this means that in most cases the nonunion workers are one-and-one-half to two times as likely as the union workers to have dropped out of school. Moreover, the differences in the proportions who had received post-school vocational training by 1969 are even greater and the training gap widens monotonically for both whites and blacks with increasing skill level. On the other hand, there are no systematic differences in the high school curriculum pursued by union and nonunion workers.[13]

---

[12] It should be made explicit at the outset, however, that it is not possible to control perfectly for all relevant union-nonunion differences. It is not possible, for example, to control for a spillover effect. That is, where union gains spill over into the nonunion sector--e.g., to prevent the organization of nonunion workers--differentials in wages, hours, and working conditions will inevitably understate the full impact of collective bargaining. See Rees (1962), p. 74. An institutionalized instance of the spillover effect is where the Davis-Bacon Act and/or its state-level counterparts operate to eliminate real union-nonunion differentials. Moreover, even if error-free measures of all relevant union-nonunion differences were available, it would not be possible to specify perfectly the exact functional relationships among the relevant variables. For these reasons, our estimates of the effects of unionism should be viewed as only approximations.

[13] Data not displayed here indicate that, in comparison to the nonunionized workers, the unionized came from families of higher socioeconomic status, where status is measured by a composite index based on five characteristics of the parental family. For details see Kohen (1973). This difference is consistent with contemporary hypotheses about segmented labor markets in which racial and ethnic minorities and those from lower social class backgrounds are disproportionately relegated to the worst jobs, which are also the jobs least likely to be organized.

Percent with no health limitations[f]						
Union	92	91	98	92	91	88
Nonunion	89	87	91	95	94	99

a Respondents 17 to 27 years of age, not enrolled in school and employed as blue collar wage and salary workers in 1969.

b The number of cases upon which any mean or percentage is based may vary slightly from this figure due to nonresponses on the particular variable.

c Post-school vocational training is defined here as training received outside of regular school and outside of military service.

d Defined as age minus years of school completed minus 5. Therefore, the variable represents potential labor market experience and treats civilian and military experience equivalently.

e Test scores range from 0 to 56.

f Based on the response to questions asked in 1970 concerning the existence and duration of health limitations on the kind or amount of work the respondent can perform.

Another relevant characteristic, years of labor market experience as of 1969, captures experience in the broad sense of the term--i.e., the number of years since leaving school. Among whites, the unionized craftsmen and laborers are somewhat more experienced on the average than their nonunion counterparts, while unionized operatives are slightly less experienced. Among blacks, however, the unionized workers are from 6 to 18 months less experienced than nonunion workers depending upon whether skilled, semi-skilled, or unskilled. Although these differences are not entirely systematic with respect to unionism, the observation of some differences along with the importance of experience as a determinant of labor market success, necessitate controlling for this variable in examining the net effects of unionism.

Although union-nonunion differences in tenure with current employer are nowhere large, in the case of whites and among black craftsmen the differentials may nevertheless work to overstate the positive effects of unionism. A similar conclusion may also be reached in the case of the next characteristic shown in Table 3--extent of labor market information. Measured by a battery of test items, the labor market information scale purportedly captures a worker's understanding of occupational differences in function, entry requirements, and earnings.[14] To some extent, and most notably in the case of blacks, the higher earnings of unionized young males may also reflect their greater awareness of the ways in which the labor market operates and/or their higher level of general mental ability.[15]

Health characteristics, on the other hand, might cause gross earnings differentials between covered and noncovered workers to overstate the net effect of collective bargaining for whites, while having the opposite effect for blacks. Blacks covered by collective bargaining agreements are on the average about 6 percentage points more likely to report some form of health limitation, either temporary or more permanent, which restricts the kind or amount of work they are capable of performing. Among whites, the unionized are 3 to 7 percentage points <u>less</u> likely to be constrained by a health limitation.

---

[14] There is evidence of a systematic relation between earnings and the extent of occupational information as measured by this scale. See Parnes and Kohen (1975). For a discussion of the reliability and validity of the scale itself, including a factor analysis, see Kohen and Breinich (1975).

[15] In the absence of a direct, independent measure of general mental ability it can be assumed that the measure of labor market information partially represents the effect of general ability on earnings. See Parnes and Kohen (1975) and Kohen (1973).

Because some situational characteristics may also account for some of the advantage of union workers, union-nonunion differences in industrial affiliation, region of residence, and size of community are presented in Table 4. Among whites, the unionized tend to be more concentrated in construction and manufacturing than their nonunion counterparts. Among blacks, the unionized craftsmen and operatives are substantially more likely to be in manufacturing industries, but they are somewhat less likely to be in the construction industry. It is quite possible, as these proportions indicate, that the white-black differences in susceptibility to layoff and unemployment may be partly attributable to racial differences in industrial distribution--since unionized blacks are 14 percentage points more likely than unionized whites to be in manufacturing and 8 percentage points less likely to be in construction. Finally, among both blacks and whites, the unionized tend to be disproportionately concentrated in the non-South and in large urban areas.[16] As a consequence, union-nonunion differences in wage rates may be overstated because of geographic differences in price level.

IV THE NET EFFECTS OF COLLECTIVE BARGAINING ON EARNINGS AND LABOR MARKET EXPERIENCE, 1969-1970

It has been demonstrated that numerous personal and situational characteristics must be controlled in order to ascertain the net effects of collective bargaining on earnings (Tables 3 and 4). These characteristics--which include industrial affiliation, education, training, experience, job tenure, extent of occupational information, health, region of residence, and degree of urbanization--reflect differences between union and nonunion workers which may confound the effects of collective bargaining. To control for these differences, multiple regression analysis has been applied, with separate analyses for whites and blacks within both the union and nonunion sectors.[17]

---

[16] Urban areas have been defined on the basis of labor force size in the local labor market where a respondent resides. Local labor markets--or metropolitan areas--with more than 300,000 persons in the labor force as of 1960 were classified as large urban areas.

[17] A series of statistical tests supported our hypotheses that significant interactions exist between race and other determinants of the several "dependent" variables on the one hand, and between collective bargaining coverage and those determinants on the other. More specifically, Chow tests of the regression coefficients forced us to reject the hypotheses of equality between the coefficients for different groups. For details on the statistical procedure see Chow (1960). Examples of the outcomes of the statistical procedure are as follows: (1) the

Table 4 Situational Characteristics of Blue Collar Workers in 1969 by Occupation, Race, and Collective Bargaining Coverage[a]

Union	67	49	42
Nonunion	32	26	18

a Respondents 17 to 27 years of age, not enrolled in school and employed as blue collar wage and salary workers in 1969.

b The South includes 16 states and the District of Columbia.

c Large urban areas are defined as those whose labor force (in 1960) contained at least 300,000 persons.

In addition to controlling for these differences in examining the effects of collective bargaining on hourly earnings, we have similarly examined the effects of unionism on four other dimensions of 1969-1970 labor market experience: relative growth in hourly earnings over the 1969-1970 period, the incidence of unemployment, number of weeks unemployed in a 12-month period, and number of hours usually worked per week. Hence, it is possible to examine the degree to which any net advantage of the unionized in hourly earnings may be offset by fewer hours of work, more unemployment, and/or less growth in earnings.

The importance of investigating the possibility of offsetting effects stems mainly from the fact that institutionalized seniority arrangements in the union sector may work to the disadvantage of the young. Especially in a period such as 1969-1970 when unemployment was rising, those lowest in seniority may have seen the effect of unionism on their hourly earnings eroded considerably by shorter hours of work and/or greater unemployment than might have occurred had these same individuals been employed in the nonunion sector. Although the gross union-nonunion differences in Table 2 with respect to usual hours worked and unemployment provide little consistent evidence that this was the case, it is not implausible that the gross differences may understate the adverse effects of unionism. That is, since in many respects the covered workers possessed greater abilities and skills than their noncovered counterparts (Table 3), one would have expected them to fare better than the noncovered if unionism had no disadvantageous impact whatsoever on these labor market experiences. Additionally, the hourly earnings advantage of the unionized at the beginning of the period may have been reduced by greater growth in earnings in the nonunion than union sector, because of the small (deferred) wage increases received by the unionized in 1970.[18]

The effects of collective bargaining on each of these five dimensions of 1969-1970 labor market experience--controlling for union-nonunion differences in personal and situational characteristics--are estimated for our sample of young blue collar workers by race and

---

value of the F-ratio in testing for equality between covered and noncovered white workers in the hourly earnings equation was 15.21, when the critical value ($\alpha < .01$) for rejection was 2.09; (2) the corresponding figures for blacks were 7.30 and 2.12; (3) the calculated and critical values of F in testing for racial equality among covered workers were 4.09 and 2.10, respectively; and (4) the corresponding figures among noncovered workers were 8.71 and 2.10.

[18] See footnote 9.

occupation in Table 5.[19] The actual regression results upon which these estimates are based are presented in Appendix A.

Craftsmen

The effects of collective bargaining on the earnings of young craftsmen were indeed substantial (Table 5). At the beginning of the period, unionized whites earned about 39 percent more per hour than comparable nonunion workers, although they worked almost two hours less per week and experienced less growth in earnings during the period. Furthermore, unionized whites were not dissimilar to the nonunionized in terms of unemployment experience. Among blacks, unionized craftsmen enjoyed a 26 percent advantage in hourly wage at the beginning of the period. Additionally, the effects of collective bargaining on average hourly earnings were not offset by shorter hours. In fact, young black craftsmen covered by a collective bargaining agreement worked about one hour more per week than their counterparts who were not covered. All in all, collective bargaining per se accounts for over 80 percent of the observed union-nonunion difference in earnings among white craftsmen and the corresponding proportion among black craftsmen is about 70 percent.

The effects of unionism on relative earnings also varies substantially according to major industry division, as can be seen by the differences in the regression coefficients for the dummy variable representing industry in Table A-1. Thus, for example, being covered by collective bargaining is far more advantageous in terms of earnings in the construction industry than in manufacturing. Among whites, unionized construction craftsmen enjoyed a 53 percent advantage over their nonunion counterparts and their earnings grew more rapidly during the 1969-1970 period as well (Table 6). Their unionized counterparts in manufacturing, however, enjoyed only a 23 percent differential, and even this declined during the period as manufacturing earnings apparently grew faster in the nonunion sector. In both industries the unionized craftsmen worked fewer hours than the nonunionized, and the unionized in manufacturing averaged slightly fewer than comparable union workers in construction.

In contrast to these greater union earnings advantages in the construction industry are the effects of collective bargaining on the incidence and duration of unemployment. In this case, union workers

---

[19]The estimate is calculated by evaluating the regression equation for respondents covered by collective bargaining at the mean values of the variables for those not covered--within each race-occupation group. Thus, the estimate represents what nonunion workers would experience or earn if they were in the union sector.

Net union effect [c-b]	- 1.6	0.9	- 1.5	- 0.1	0.6	2.1

a The differences shown are "net" in the sense of indicating the covered/noncovered difference after other characteristics have been held constant by regression analysis. These characteristics are industry group, education, race, occupational training, labor market experience, high school curriculum, tenure, occupational information, health, region of residence, and size of local labor market.

b The universe for the analysis of average hourly earnings in 1969 and usual hours worked per week is respondents 17 to 27 years of age, not enrolled in school and employed as blue collar wage and salary workers in the 1969 survey week. For the analyses of unemployment and change in average hourly earnings the universe is further confined to those employed at the time of the 1970 survey. Since nonrespondents on any of the variables included in the regressions are excluded, the "actual" means shown here may differ slightly from those displayed in Tables 1-4.

c The estimate is calculated by evaluating the regression equation for respondents covered by collective bargaining at the mean values of the variables for those not covered--within each race-occupation group. Thus, the estimate represents what nonunion workers would experience or earn if they were in the union sector.

d In addition to the description in footnote c, the estimate is based on evaluating the union equation at the estimated average hourly earnings (in 1969) of the nonunion workers, which are shown on line c of the first panel of this table.

e Means and differences not shown where the base represents fewer than 25 respondents.

a See footnote a, Table 5.

b For a general description of the universe, see footnote b, Table 5. The subgroups shown here are the only ones with sufficient sample cases of both covered and noncovered workers to provide reliable statistical estimates.

c The term "other" includes all nonmanufacturing and nonconstruction industries.

d See footnote c, Table 5.

e See footnote d, Table 5.

in manufacturing were better off than those in construction relative to their nonunion counterparts. In the construction industry white nonunion craftsmen were only slightly more likely (31 versus 29 percent) to experience a spell of unemployment than comparable union workers, and the unorganized actually averaged about one-half week less joblessness. In manufacturing, however, the nonunionized were one-third again as likely as the unionized (18 versus 13 percent) to have been unemployed and the nonunionized averaged about one-half week longer duration of unemployment during the 12-month period. Thus, the greater impact of unionism on relative earnings among construction workers is at least partially offset by the greater union impact on the stability of employment in nonconstruction industries.[20]

Operatives

Among both white and black operatives, the overall effects of collective bargaining on 1969 average hourly earnings are substantial, but noticeably smaller than the union effects observed among craftsmen (Table 5). Likewise, the effects of unionism on the incidence of unemployment and on growth in earnings are somewhat smaller among operatives than craftsmen. On balance however, the evidence suggests that unions have raised the earnings of operatives for whom they bargain considerably above those of comparable unorganized workers. Among whites, for example, the unionized enjoyed a net 30 percent hourly wage advantage at the beginning of the period. Furthermore, the unionized averaged about the same number of weeks of unemployment as their nonunion counterparts. Although they worked about one and one-half hours less per week, and although their earnings grew less rapidly than comparable nonunion workers, it is doubtful that their annual earnings advantage was appreciably diminished.

Among blacks, the effects of collective bargaining on 1969 hourly wages were on average about 21 percent (Table 5). While this effect was offset somewhat during the course of the period by the greater wage advancements in the nonunion sector, there were virtually no adverse effects of unionism on hours worked per week or on either the incidence or duration of unemployment. In fact, unionized black operatives averaged about one and one-half weeks less joblessness than their nonunion counterparts.

Among both white and black operatives the effects of collective bargaining on the various dimensions of earnings examined also appear to vary according to industry (Table 6). In manufacturing, for example,

---

[20] The small number of sample cases of unionized black craftsmen in the construction industry with data available on all relevant variables precludes an analysis comparable to that for whites.

the effects of unionism on hourly earnings are only slightly smaller for operatives than for craftsmen. The smaller effect observed among all operatives in Table 5 appears to be almost solely the effect of the construction industry. In industries other than construction and manufacturing--i.e., the service-producing sector--the wage effects of unionism are large and show little evidence of being offset through more unemployment or lesser growth in earnings. In manufacturing, however, the wage differentials between union and nonunion operatives--being somewhat smaller at the beginning of the period--may possibly be reduced to a level which is more consistent with the overall estimates of Lewis (1963).

As was found for craftsmen, among white operatives only a small proportion of the gross union-nonunion differential can be attributed to different personal and situational characteristics of covered and noncovered workers. In contrast, as much as one-third of the gross union-nonunion difference in hourly earnings among black operatives in manufacturing is eliminated when personal and situational characteristics are held constant--i.e., the wage differential declines from 34 to 23 percent (Table 6). This intercolor difference, of course, is consistent with the historically greater selectivity of the trade union movement among black workers than among white workers.

Laborers

The net effects of collective bargaining on the earnings of laborers were also substantial, but they varied considerably by race (Table 5). Among whites, the net union-nonunion differential in 1969 hourly earnings was 52 percent--13 percentage points greater than the effect among white craftsmen and more than 20 percentage points greater than the effect among white operatives. The comparable union advantage among blacks, in contrast, was only 14 percent--smaller than the effects among black craftsmen and operatives. The effects of unionism on other dimensions of total earnings, however, were working systematically to reduce union-nonunion differences in annual earnings among whites, and to widen the union advantage among blacks.

While white union laborers averaged 5.8 weeks of unemployment, for example--three weeks more than their nonunion counterparts--black union laborers averaged about one-half week of unemployment--almost five and one-half weeks less than their nonunion counterparts. Likewise, while white union laborers were a third (47 versus 34 percent) more likely to experience a spell of unemployment than comparable nonunion laborers, black union laborers were only half as likely as their nonunion counterparts to have experienced any unemployment (25 versus 47 percent). In addition, the data on hours usually worked per week suggest that

the union advantage among black laborers was larger than the 14 percent estimated on the basis of hourly earnings.[21]

V COMPARISON OF RACIAL DIFFERENCES IN THE UNION AND NONUNION SECTORS

In the preceding section it has not been possible to examine racial differences in earnings within the union and nonunion sectors of the labor market.[22] Nonetheless, it has been observed that unionism is often differentially effective for blacks and whites--e.g., in terms of reducing susceptibility to unemployment. Yet while unions may in some cases be more advantageous for blacks than whites, this does not mean that there are no racial differences in a particular dimension of labor market experience in the unionized sector. On the contrary, as Ashenfelter has also noted, it may simply mean that there is "less discrimination against black workers in the average unionized labor market than in the average nonunion labor market, but not that discrimination is absent from the former."[23]

The purpose of this section of the analysis is to compare racial differences in several dimensions of labor market experience among comparable whites and blacks in the union sector, with racial differences among comparable whites and blacks in the nonunion sector. The dimensions of experience that are examined are the same ones explored in the preceding section. It should be noted, however, that racial differences within the union sector cannot capture whatever effects unionism may have that result from discrimination in access to union membership.

Data displaying the estimates of gross and net racial differences in each aspect of labor market experience are presented by occupation and collective bargaining status in Table 7. The regression results from which these estimates were obtained, presented in Appendix A, are the same as those used for the calculation of the net effects of collective bargaining coverage. The procedure used to move from the

---

[21] The small number of sample cases of laborers covered by collective bargaining precludes our analysis of union effects within industry groups.

[22] In the preceding section our standardization for comparable characteristics was done <u>within</u>, not <u>across</u>, racial groups. Thus, for example, unionized whites were not made comparable to unionized blacks. For a more technical explanation, see footnote 24 below.

[23] Ashenfelter (1972), p. 462.

Table 7 Estimated Net[a] Racial Differences in Selected Earnings and Employment Experience, by Occupation and Collective Bargaining Coverage[b]

Earnings or employment experience	Craftsmen		Operatives		Laborers

Table 7 Continued

a The differences shown are "net" in the sense of indicating the white/black difference after other characteristics have been held constant by regression analysis. These characteristics are industry group, education, occupational training, labor market experience, high school curriculum, tenure, occupational information, health, region of residence, and size of local labor market.

b The universe for the analyses of average hourly earnings in 1969 and usual hours worked per week is respondents 17 to 27 years of age, not enrolled in school and employed as blue collar wage and salary workers in the 1969 survey week. For the analyses of unemployment and change in average hourly earnings the universe is further confined to those employed at the time of the 1970 survey. Since nonrespondents on any of the variables included in the regressions are excluded, the "actual" means shown here may differ slightly from those displayed in Tables 1-4.

c The estimate is calculated by evaluating the regression equation for white respondents at the mean value of the variables for black respondents--within each unionization-occupation group.

d In addition to the description in footnote c, the calculation is based on evaluating the white equation at the estimated average hourly earnings of the black workers, which are shown on line c of the first panel of this table.

e Means and differences not shown where base represents fewer than 25 sample cases.

gross racial difference to the net difference was identical to the one used to adjust the gross union-nonunion differences to net differences. Thus, for example, we estimate what a black craftsmen covered by collective bargaining would earn if his wages were determined in the same way as those of his white counterpart by evaluating the wage regression equation for white union workers at the mean values for black union craftsmen.[24] In contrast to the earlier presentation (Tables 5 and 6) in which we showed the net effect of collective bargaining, here we display the net effect of race (i.e., the net effect "of being white"). One may, of course, label this as the effect of racial discrimination.

Underlying all of the findings discussed below is a complex set of effects displayed in the individual regression equations (Tables A-1 to A-5). For example, while irrespective of collective bargaining coverage, the gain to the wages of blacks from living outside of the South is larger than for whites, the differential gain is larger among the unionized. This, of course, is consistent with unions in the North being more racially egalitarian than their Southern counterparts. Both labor market knowledge and experience yield greater payoffs for whites than for blacks, and the racial difference seems more pronounced among

---

[24] It must be noted that the procedure used here may yield rather different numerical estimates from those used to isolate the "pure" effect of collective bargaining. Thus, it is not legitimate to employ, say, the estimated earnings shown in Table 6 to assess racial differences, holding all other things constant. This may be demonstrated by reference to the following equations, using the hourly earnings equation as an example. Consider the four estimated equations for white union (WU), white nonunion (WNU), black union (BU) and black nonunion (BNU) workers, respectively.

(1) $\overline{WUE}\ (\bar{E}_1) = \Sigma\ \hat{\alpha}_i\ \bar{X}_{1i}$, (2) $\overline{WNUE}\ (\bar{E}_2) = \Sigma\ \hat{\beta}_i\ \bar{X}_{2i}$,

(3) $\overline{BUE}\ (\bar{E}_3) = \Sigma\ \hat{\gamma}_i\ \bar{X}_{3i}$, (4) $\overline{BNUE}\ (\bar{E}_4) = \Sigma\ \hat{\delta}_i\ \bar{X}_{4i}$. To assess the net impact of unionism (collective bargaining) on hourly earnings we compared $\bar{E}_1$ with $\bar{E}_2^* = \Sigma\ \hat{\alpha}_i\ \bar{X}_{2i}$ and $\bar{E}_3$ with $\bar{E}_4^* = \Sigma\ \hat{\gamma}_i\ \bar{X}_{4i}$ for whites and blacks, respectively. To calculate net racial differentials within the union and nonunion sectors, respectively, we compare $\bar{E}_1$ with $\bar{E}_3' = \Sigma\ \hat{\alpha}_i\ \bar{X}_{3i}$ and $\bar{E}_2$ with $\bar{E}_4' = \Sigma\ \hat{\beta}_i\ \bar{X}_{4i}$. Clearly, $\bar{E}_2^*$ and $\bar{E}_4^*$ cannot be used to examine the net racial differentials in the nonunion sector because they have not been calculated "holding all other racial differences constant." Furthermore, it is clear that $\bar{E}_4^*$ and $\bar{E}_4'$ will only be equal under very special circumstances, e.g., when each $\hat{\beta}_i$ equals its counterpart $\hat{\gamma}_i$.

workers not covered by collectively bargained agreements. In contrast, education appears to yield a greater monetary return among blacks than among whites in the unionized sector, while the opposite is true for the nonunionized. As a final example, among workers covered by collective bargaining, having completed a vocational curriculum in high school yields a much larger (nearly three times) advantage to blacks than to whites. Among the nonunionized there is no appreciable intercolor difference in the impact of high school curriculum on earnings.

Craftsmen

Gross racial differences in 1969 average hourly earnings are about 27 percent in favor of whites in the union sector of the labor market and 19 percent in the nonunion sector, and the respective net race effects are 25 and 18 percent. That is, within each sector, nearly all of the black-white difference in hourly earnings is due to differential treatment of (or "returns" to) the attributes of whites and blacks. Thus, the net racial differentials among craftsmen imply somewhat greater racial equality in the nonunion sector. This conclusion must be tempered by our inability to analyze racial differences (according to collective bargaining coverage) in other employment experiences because of the small number of sample cases of unionized black craftsmen for whom the relevant information is available.

Operatives

In terms of 1969 average hourly earnings, gross racial differentials among operatives are about the same size in the unionized and nonunionized sectors and are somewhat smaller than among craftsmen (Table 7). As was found in the case of craftsmen, in each sector the vast majority of the white wage advantage is attributable to racially unequal effects of the characteristics of workers. However, in contrast to the conclusion concerning craftsmen, the evidence on net racial wage differentials among operatives indicates greater racial equality among those covered by collective bargaining than among those not covered. That is, eliminating the racial differentials in treatment in the union sector would reduce the white wage advantage from 17 to 5 percent, but the same change in the nonunion sector would reduce it from 18 to 0 percent. This intersector difference is somewhat attenuated by the data relevant to hourly earnings growth insofar as the white wage advantage widened more between 1969 and 1970 among the unionized.

The data with respect to unemployment suggest that hourly earnings information probably understate the racial differentials in annual earnings, because black workers experienced more and longer spells of joblessness, irrespective of unionization status. Consistent with the wage data, the unemployment data imply greater racial equality in the union sector--i.e., the black-white difference is larger among those not covered by collective bargaining. In sum, among young operatives

it is clear that the relative annual earnings disadvantage of blacks is diminished by collective bargaining coverage.

Laborers

The evidence on racial differences in hourly earnings among nonfarm laborers yields nearly the same inference as was drawn for craftsmen, namely that racial equality seems to be more prevalent among workers not covered by collective bargaining agreements. Furthermore, it is only among these unskilled workers that we observe any narrowing of the black-white relative wage differential over the 1969-1970 period, with the narrowing being of about the same magnitude for union and nonunion workers. However, the unemployment data tell a different story than the wage data so that unambiguous conclusions are not possible. More specifically, among the unionized laborers susceptibility to and duration of unemployment are actually higher for whites than for blacks, whereas the opposite is true among the nonunionized.

VI SUMMARY AND CONCLUSIONS

The purpose of this study has been to examine the effects of collective bargaining on the relative earnings and employment experience of young blue collar males over the 1969-1970 period. Specifically, we have examined the effects of collective bargaining on five dimensions of labor market experience: (1) hourly rate of pay at the beginning of the period; (2) hours usually worked per week; (3) likelihood of being unemployed during the 12-month period; (4) duration of unemployment; and (5) growth in hourly earnings during the period. Additionally, we have examined the relationship between unionism and racial differentials in these measures of labor market experience. In all cases, we have attempted to ascertain the effects of collective bargaining on comparable workers within each race group.

As an introduction to this analysis, the study highlighted "gross" union-nonunion differences in several dimensions of labor market experience during the period. In addition to the five listed above, union-nonunion differences in number of weeks worked, occupational status, provisions for overtime pay premiums, level of job satisfaction, frequency of voluntary turnover, and incidence of layoff were presented by major occupational category and race. Union-nonunion differences in a wide range of personal and situational characteristics--i.e., education, training, amount of labor market experience, tenure, extent of occupational information, health, industry, region of residence, and size of community of residence--were also presented and discussed.

The findings of this study leave little doubt that collective bargaining coverage has a substantial net impact on the hourly earnings of both white and black blue collar males in the early stages of their work careers. Furthermore, among blacks, there is considerable

evidence that the unionized experienced a good deal less unemployment than their nonunionized counterparts. In terms of average hourly earnings, our estimates of the relative net advantage of the unionized range from 14 percent among black nonfarm laborers to 52 percent among white nonfarm laborers, with the figure for operatives and craftsmen falling in the 20-40 percent range. Our data suggest some net narrowing of these wage differentials during the 1969-1970 period, probably partly as a result of the small deferred wage increases built into union contracts renegotiated in 1968-1969.[25]

Within major occupational categories the union earnings advantage was found to vary substantially according to major industry division, being noticeably smaller in manufacturing than in construction. Although young black men working in blue collar jobs covered by collective bargaining clearly are better off than their counterparts in noncovered jobs, our analysis does not yield an unambiguous answer to the question of whether the disadvantage of blacks relative to whites is greater in the unionized or nonunionized sector. The data on hourly earnings among craftsmen and laborers (but not operatives) tend to support a hypothesis of greater racial equality in the nonunion sector. In contrast, the data on unemployment of operatives and laborers suggest greater racial equality in the union sector. Thus, we are not as confident about the impact of unionization on racial inequality in annual income as some writers, e.g., Hill (1974), seem to be.

Overall, our findings are in accord with several recent studies which have demonstrated greater effects of unionism on relative earnings than were estimated by Lewis (1963). Ashenfelter (1973) and Stafford (1968) used microeconomic data to estimate union effects on the earnings of blue collar workers during the 1960's which exceeded those of Lewis. Similarly, a study by Ryscavage (1974) using data on 1973 earnings contains estimates of union wage effects ranging from 20 to 45 percent among male blue collar workers.

Of course, our findings are not strictly comparable to those of previous research. For one thing, they are based on a restricted age cohort of blue collar males--young men who were between 17 and 27 years old in 1969--for whom the effects of unionism may well be below average because their generally short tenure leaves them relatively unprotected by the powerful seniority arrangements in the union sector. Thus, the findings are not necessarily generalizable to all blue collar males. On the other hand, for this particular cohort, our findings probably yield a better estimate of the impact of unionism since, to the best of our knowledge, ours is the only study based on micro data that uses collective bargaining coverage rather than union membership as the criterion of organization.

APPENDIX C

GLOSSARY

AGE

Age of respondent as of last birthday prior to April 1, 1970.

"ANNUAL" EARNINGS

The sum of wages, salaries, commissions and tips (before deduction) earned by the respondent during the 12-month period prior to the survey.

ATTRITION RATE

The attrition rate between year x and year y is the proportion of respondents interviewed in year x who were not reinterviewed, for whatever reason, in year y. The "noninterview rate" between year x and year y is the proportion of respondents in year x who were not interviewed in year y for reasons other than entry into the armed forces.

AVERAGE HOURLY EARNINGS: See HOURLY RATE OF PAY

CLASS OF WORKER

Wage and Salary Worker

A person working for a rate of pay per time-unit, commission, tips, payment in kind, or piece rates for a private employer or any government unit.

Self-employed Worker

A person working in his own unincorporated business, profession, or trade, or operating a farm for profit or fees.

Unpaid Family Worker

A person working without pay on a farm or in a business operated by a member of the household to whom he is related by blood or marriage.

COLOR

In this report the term "blacks" refers only to Negroes; "whites" refers to Caucasians. Thus, there is a difference in terminology between this report and the first two volumes of this series in which "blacks" referred to the group now referred to in U.S. Government reports as "Negro and other races."

EDUCATIONAL ATTAINMENT: See HIGHEST YEAR OF SCHOOL COMPLETED

EMPLOYED: See LABOR FORCE AND EMPLOYMENT STATUS

HEALTH

A binary variable assigned the value "1" if the respondent reported no work limiting health condition in 1970 or if a reported condition was of a shorter duration than one year, and the value "0" otherwise.

HIGHEST YEAR OF SCHOOL COMPLETED

The highest year finished by the respondent in "regular" school, where years of school completed are denoted in integer units (e.g., a high school graduate who did not enter college is coded as 12).

HOURLY RATE OF PAY

Compensation--in dollars--for work performed. This is limited to wage and salary workers because it is virtually impossible to ascertain to what extent the earnings of the self-employed are wages as opposed to other kinds of returns. If a time unit other than an hour was reported, hourly rates were computed by first converting the reported figure into a weekly rate and then dividing by the number of hours usually worked per week.

INDUSTRY

There are 12 one-digit-level classes of the Bureau of the Census' functional classification of employers on the basis of nature of final product. In this study, binary variables were used to distinguish, on the one hand, the construction industry from all others, and on the other hand, manufacturing industries from all others.

JOB

A continuous period of service with a given employer.

Current (or Last) Job

For those respondents who were employed during the survey week: the job held during the survey week. For those respondents who were either unemployed or out of the labor force: the most recent job.

KNOWLEDGE OF THE WORLD OF WORK: See OCCUPATIONAL INFORMATION TEST

LABOR FORCE AND EMPLOYMENT STATUS

In the Labor Force

All respondents who were either employed or unemployed during the survey week.

Employed

All respondents who during the survey week were either (1) "at work"--those who did any work for pay or profit or worked without pay for 15 hours or more on a family farm or business; or (2) "with a job but not at work"--those who did not work and were not looking for work, but had a job or business from which they were temporarily absent because of vacation, illness, industrial dispute, bad weather, or because they were taking time off for various other reasons.

Unemployed

All respondents who did not work at all during the survey week and (1) either were looking or had looked for a job in the four-week period prior to the survey; (2) were waiting to be recalled to a job from which they were laid off; or (3) were waiting to report to a new job within 30 days.

Out of the Labor Force

All respondents who were neither employed nor unemployed during the survey week.

LABOR MARKET EXPERIENCE

The total number of years between the time the respondent left school and 1969. For the purpose of this study the variable was computed as (AGE-EDUCATIONAL ATTAINMENT-5), and thus it actually is "potential" experience since it abstracts from discontinuities in formal schooling and from military service subsequent to schooling.

LARGE CITY

A binary variable denoting the size of the population in the area in which the respondent resided in 1969. The variable was assigned the value "1" if the area had a (1960) labor force containing at least 300,000 persons which corresponds approximately to areas with populations of 500,000 or more.

NONUNIONIZED: See UNIONIZED

OCCUPATION

The ten occupation groups are the ten one-digit classes used by the Bureau of the Census in the 1960 Census. The four types of occupation are white collar (professional and technical workers; managers, officials, and proprietors; clerical workers; and sales workers); blue collar (craftsmen and foremen, operatives, and nonfarm laborers); service; and farm (farmers, farm managers, and farm laborers).

OCCUPATIONAL INFORMATION TEST (measured in 1966 survey only)

A series of questions designed to measure the extent of the respondent's information about the labor market. First, the respondent is asked to choose one of several job descriptions that best matches each of 10 specified job titles. Second, he is asked to indicate the amount of regular schooling typically achieved by men in each of the occupations. Third, he chooses from a pair of occupations the one in which he thinks average annual earnings is higher. For scoring procedures see Kohen and Breinich, "Knowledge of the World of Work."

OCCUPATIONAL TRAINING OUTSIDE SCHOOL

Program(s) taken outside the regular school system for other than social or recreational purposes. Sponsoring agents include government, unions, and business enterprises. A training course sponsored by a company must last at least six weeks to be considered a "program."

PSU (PRIMARY SAMPLING UNIT)

One of the 235 areas of the country from which the sample for this study was drawn; usually an SMSA (standard metropolitan statistical area) or a county.

SATISFACTION WITH JOB, LEVEL OF

Respondent's report of his feelings toward his job when confronted with the following four alternatives: "like it very much, like it fairly well, dislike it somewhat, dislike it very much." When used as a binary variable, the first response is characterized as "highly satisfied" in distinction to all of the others.

SELF-EMPLOYED: See CLASS OF WORKERS

SOCIOECONOMIC STATUS OF OCCUPATION

An index devised by Duncan which assigns a two-digit status score to each three-digit occupational category in the Census classification scheme. For details see O. D. Duncan, "A Socioeconomic Index for All Occupations," in A. J. Reiss Jr., et al., Occupations and Social Status (New York: Free Press of Glencoe, 1961).

SOUTH

A binary variable characterizing the Census region of residence of the respondent in 1969. It was assigned the value "1" if the respondent lived in the District of Columbia or one of the following states: Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma or Texas.

SURVEY WEEK

For convenience, the term "survey week" is used to denote the calendar week preceding the date of interview. In the conventional terminology of the Bureau of the Census, it means "reference week."

TENURE

The total number of years spent by the respondent in the job in which he was employed during the 1969 (or 1970) survey week.

TRAINING: See OCCUPATIONAL TRAINING

UNEMPLOYED: See LABOR FORCE AND EMPLOYMENT STATUS

UNEMPLOYMENT

Rate

The proportion of the labor force classified as unemployed.

Spell of

A continuous period of unemployment of at least one week's duration.

Weeks of

Number of weeks during which the respondent reported that he was looking for work or on lay-off from a job.

UNIONIZED

As used in this study, the term refers to a worker whose wages (salary) were set by a collective bargaining agreement. It does not refer exclusively to workers who were members of the union or employee association that participated in reaching the collectively bargained agreement.

UNPAID FAMILY WORKER: See CLASS OF WORKER

VOCATIONAL TRAINING OUTSIDE SCHOOL: See OCCUPATIONAL TRAINING OUTSIDE SCHOOL

WAGE AND SALARY WORKERS: See CLASS OF WORKER

WAGE RATE: See HOURLY RATE OF PAY

WEEKS IN LABOR FORCE

Cumulative number of weeks that the respondent reported that he was either working, looking for work, or on lay-off from a job.

APPENDIX D

ATTRITION FROM THE SAMPLE

Of the 5,225 members of the sample interviewed in 1966, 3,993 were reinterviewed in 1970. The sample has thus diminished by about one-fourth (22 percent of the whites and 28 percent of the blacks) (Table D-1).[1,2] As has been noted in previous reports, this proportion considerably overstates the error involved in using the sample to represent the national civilian population of men 18 to 28 years of age in 1970 because about half of the noninterviewees had entered the armed forces.[3] About 4 percent of the initial sample refused (by 1970) to continue their participation in the survey, another 3 percent could not be located by Census interviewers, and an additional 4 percent were not interviewed for other reasons.[4]

As has been indicated in earlier volumes, the likelihood of dropping out of the sample for each of the several reasons mentioned above varies systematically according to a number of characteristics of the young men. Irrespective of color, young men who were students in 1966 were more likely than those out of school to have dropped from

---

[1]In this report the term "blacks" refers exclusively to Negroes; "whites" refers to Caucasians. This terminology is the same as that used in the third and fourth volumes in the series, but different from that used in the first two volumes, in which "blacks" referred to the group now shown in U.S. Government reports as "Negro and other races."

[2]This report departs from the format of earlier volumes by displaying only sample sizes, rather than population estimates. With the exception of the attrition discussion, all analyses have been performed by applying the appropriate population weight to each sample case.

[3]On the other hand, the national civilian population of men 18 to 28 in 1970 includes some men who were not surveyed in the initial sample, namely those who were 14 to 24 and in the armed forces in 1966.

[4]These reasons include temporary absence from the home, institutionalization, and death.

Table D-1 Interview Status 1970 by Interview Status 1967-1969 and Color: All Respondents in the Initial (1966) Sample[a]

Interview status 1970 and 1967-69	WHITES		BLACKS	
	Percent of total	Percent of subtotal	Percent of total	Percent of subtotal
Interviewed 1970	78	100	72	100
Interviewed last in 1969	73	92	63	88

Interviewed last in 1968	6	29	9	30
Interviewed last in 1967	6	26	7	23
Interviewed last in 1966	4	17	4	15
Total percent	100	---	100	---
Total number of respondents	3,734	---	1,438	---

a The total sample in 1966 consisted of 5,225 men 14 to 24 years of age. This table excludes 53 respondents who are classified as neither white nor black (e.g., Chinese Americans, American Indians).

the sample as of 1970. This is a function of the aging of the sample and the consequently greater eligibility for entrance to the armed forces of those who were students in 1966. Among 1966 students the attrition rate due to entrance into the armed forces was about four-and-one-half times the corresponding rate for 1966 nonstudents (Table D-2). In general, blacks have had a higher net rate of attrition from the sample than whites, despite the fact that blacks have exhibited a higher return-to-the-sample rate. As has been pointed out in previous volumes, this intercolor difference is not due to a different rate of entrance to military service, but to a higher rate of "disappearance" among blacks than among whites.

A detailed breakdown of the net attrition rate by selected demographic characteristics is presented in Tables D-2 and D-3. Above-average net attrition rates characterized the youngest (i.e., under 18) members of the sample, principally because of their susceptibility to the military draft. Among black respondents attrition has been particularly pronounced among youth residing outside of the South at the initial interview. Between the fourth (1969) and fifth (1970) surveys, attrition was disproportionately high among young men who left school between the third and fourth surveys and among those who changed county (SMSA) of residence between 1968 and 1969.

Several aspects of the gross changes in the sample over time are also noteworthy, because the net attrition rates do not reveal the entire picture of changes in the sample's size and composition. For example, more than 9 percent of those interviewed in 1970 had been noninterviewees in 1969 (Table D-1). In fact, over 5 percent of those interviewed in 1970 were not interviewed in either of the preceding surveys (i.e., 1968 and 1969). This phenomenon of recovering temporary absentees has grown, as we anticipated.[5] As can be seen from Table D-4, the decline in net year-to-year attrition has been produced principally by a steady increase in the proportion and number of respondents returning to the sample. These figures attest both to the diligence and expertise of the Census interviewers and to the cooperativeness of the respondents. Stated in somewhat different terms these facts are even more striking. Of the young men who were not interviewed in 1969 but were "eligible"[6] for interview in 1970, more than four-fifths were

---

[5]See Kohen, Career Thresholds, vol. 4, p. 5.

[6]For purposes of this discussion, those eligible for interview in 1970 were respondents who, in 1970, were in the civilian noninstitutional population and who had not been dropped from the sample due to (1) a refusal to participate previously or (2) two consecutive (nonmilitary) noninterviews previously.

Table D-2 Attrition Rate between 1966 and 1970 by Reason and Selected Characteristics of Respondents, 1966

b Between 0.1 and 0.5 percent.

Table D-4 Gross and Net Changes in Sample Size, by Race and Survey Year

Survey year and interview status	Total number of respondents	Percent of initial sample
	WHITES	
Interviewed 1966, not interviewed 1967	305	8.2
Interviewed 1967, not interviewed 1968	359	9.6
Not interviewed 1967, interviewed 1968	47	1.3
Net attrition 1967-1968	312	8.3
Interviewed 1968, not interviewed 1969	322	8.6
Not interviewed 1968, interviewed 1969	138	3.7
Net attrition 1968-1969	184	4.9
Interviewed 1969, not interviewed 1970	222	5.9
Not interviewed 1969, interviewed 1970	212	5.7
Net attrition 1969-1970	10	0.2
Net attrition 1966-1970	811	21.7
	BLACKS	
Interviewed 1966, not interviewed 1967	125	8.7
Interviewed 1967, not interviewed 1968	176	12.2
Not interviewed 1967, interviewed 1968	26	1.8
Net attrition 1967-1968	150	10.4
Interviewed 1968, not interviewed 1969	177	12.3
Not interviewed 1968, interviewed 1969	71	4.9
Net attrition 1968-1969	106	7.4
Interviewed 1969, not interviewed 1970	129	9.0
Not interviewed 1969, interviewed 1970	103	7.2
Net attrition 1969-1970	26	1.8
Net attrition 1966-1970	407	28.3

actually interviewed and this proportion rises to nine-tenths when one focuses on those who were in the armed forces in 1969.

Finally, it is of interest to note that some changes in the sample's composition as a result of selective attrition actually are smaller than they would have been in the absence of respondents returning to the sample. First, black respondents have had a higher return-to-the-sample rate than whites, partially offsetting the higher gross attrition among blacks. Second, as suggested above, many of the returnees are young men who entered military service subsequent to the initial interview, and entrance to the military during this period is closely related to several important demographic characteristics. For example, while net attrition has been above average among respondents 18 and 19 years of age in 1966, their return rate also has been disproportionately high.

APPENDIX E

SAMPLING, INTERVIEWING AND ESTIMATING PROCEDURES

The Survey of Work Experience of Young Men is one of four longitudinal surveys sponsored by the Manpower Administration of the U.S. Department of Labor. Taken together these surveys comprise the National Longitudinal Surveys.

The 1970 survey was the fifth of a series of six annual interviews conducted for the Survey of Work Experience of Young Men. The respondents were between the ages of 14 and 24 at the time of the first interview conducted in 1966; thus, the age range in 1970 was 18 to 28.

The Sample Design

The National Longitudinal Surveys are based on a multi-stage probability sample located in 235 sample areas comprising 485 counties and independent cities representing every state and the District of Columbia. The 235 sample areas were selected by grouping all of the nation's counties and independent cities into about 1,900 primary sampling units (PSU's) and further forming 235 strata of one or more PSU's that are relatively homogeneous according to socioeconomic characteristics. Within each of the strata a single PSU was selected by chance to represent the stratum. Within each PSU a probability sample of housing units was selected to represent the civilian noninstitutionalized population.

Since one of the survey requirements was to provide separate reliable statistics for Negroes and other races, households in predominantly Negro and other race enumeration districts (ED's) were selected at a rate three times that for households in predominantly white ED's. The sample was designed to provide approximately 5,000 interviews for each of the four surveys--about 1,500 Negroes and other races and 3,500 whites. When this requirement was examined in light of the expected number of persons in each age-sex color group it was found that approximately 42,000 households would be required in order to find the requisite number of Negroes and other races in each age-sex group.

An initial sample of about 42,000 housing units was selected and a screening interview took place in March and April 1966. Of this number about 7,500 units were found to be vacant, occupied by persons whose usual residence was elsewhere, changed from residential use, or demolished. On the other hand, about 900 additional units were found which had been created within existing living space or had been changed from what was

previously nonresidential space. Thus, 35,360 housing units were available for interview; of these, usable information was collected for 34,622 households, a completion rate of 98.0 percent.

The original plan called for using this initial screening to select the sample for all sample groups. On reflection it was decided to rescreen the sample in the fall of 1966 prior to the first interview of males 14 to 24. Males in the upper part of that age group are the most mobile group in the entire population and a seven-month delay between the initial screening and the first interview seemed to invite problems.

To increase efficiency, it was decided to stratify the sample for the rescreening by the presence or absence of a 14- to 24-year-old male in the household. The probability is great that a household which contained a 14- to 24-year-old in March will also have one in September. However, we had to insure that the sample also represented persons who had moved into sample households in the intervening period, so that a sample of addresses which had no 14- to 24-year-old males was also included in the screening operation.

This phase of the screening began in early September 1966. Since a telephone number had been recorded for most households at the time of the initial interview, every attempt was made to complete the short screening interview by telephone.

Following this screening operation, 5,704 males age 14 to 24 were designated to be interviewed for the Survey of Work Experience. These were sampled differentially within four strata: whites in white ED's (i.e., ED's which contained predominantly white households), Negroes and other races in white ED's, whites in Negro and other races ED's, and Negroes and other races in Negro and other races ED's.

The Field Work

Three hundred and twenty-five interviewers were assigned to this panel. Many of the procedures and the labor force and socioeconomic concepts used in this survey were identical or similar to those used in the Current Population Survey (CPS); all the interviewers selected to work on this survey had CPS experience and most of them (92.3 percent) had also worked on at least one of the earlier panels of the National Longitudinal Surveys. Consequently, the quality of the interviewing staff was high and at the same time, the time and costs required for training were reduced.

Interviewer training consisted of a home study, consisting of a set of exercises covering the procedures and concepts explained in the reference manual, which was reviewed by a survey supervisor. In addition, those interviewers who had no previous experience with the longitudinal surveys attended one day of classroom training conducted by a supervisor.

The supervisor was provided with a "verbatim" training guide which included lecture material and a number of structured practice interviews which were designed to familiarize the interviewers with the questionnaire. All training materials were prepared by the Bureau staff and reviewed by the Manpower Administration and the Center for Human Resource Research of The Ohio State University. Three hundred and twenty-five interviewers were trained in 22 training sessions held around the country. Professional staff members of the participating organizations observed the training sessions, and later, the actual interviewing.

Interviewing began October 19, 1970 and continued until early January. Completion of the field work was delayed for several reasons--the interviewers had to devote about one week a month to CPS, and a number of the interviewers had other surveys for which they were responsible. However, there were several other significant factors which affected the interviewer's ability to complete her assignment on time:

1. At least a year had passed since the respondent was last contacted and the listed addresses were obsolete for a number of the respondents. Therefore, a great deal of time was spent in locating respondents.

2. Most of the respondents were of draft age and some of them were in the armed forces, about to go in or had already completed their tour of duty and had been discharged.

3. Many respondents were attending school and/or working; thus, there were only certain times of the day that the respondent was potentially available for interviewing.

A preliminary edit to check the quality of the completed questionnaires was done by the Data Collection Center staffs. This consisted of a "full edit" of each questionnaire returned by each interviewer. The editor reviewed the questionnaires from beginning to end to determine if the entries were complete and consistent and whether the skip instructions were being followed.

The interviewer was contacted by phone concerning minor problems and, depending on the nature of the problem, was either merely told of her error and asked to contact the respondent for further information or for clarification, or, for more serious problems, was retrained, either totally or in part, and the questionnaire was returned to her for completion.

Estimating Methods

The estimation procedure implemented for this survey in 1966 was a multi-stage ratio estimate. The first step was the assignment to each sample case of a basic weight which took into account the over-representation of the Negro and other race strata, the rescreening

procedure, and the sampling fraction of the stratum from which it was selected. The sample drawn from the white stratum was selected at an eight-out-of-nine ratio, while the selection for the sample for the Negro and other race stratum was a seven-out-of-eight ratio. Thus, from the Survey of Work Experience of Young Men, there were four different base weights reflecting the differential sampling by color within stratum (i.e., white ED's) during both the rescreening and selection operations.

1. Noninterview Adjustment

The weights for all interviewed persons were adjusted to the extent needed to account for persons for whom no information was obtained because of absence, refusals, or unavailability for other reasons. This adjustment was made separately for each of 24 groupings: Census region of residence (Northeast, North Central, South, West), by residence (urban, rural farm, rural nonfarm), by color (white, Negro and other races).

2. Ratio Estimates

The distribution of the population selected for the sample may differ somewhat, by chance, from that of the nation as a whole, in such characteristics as age, color, sex, and residence. Since these population characteristics are closely correlated with the principal measurements made from the sample, the latter estimates can be substantially improved when weighted appropriately by the known distribution of these population characteristics.[1] This was accomplished through two stages of ratio estimation, as follows:

a. First-Stage Ratio Estimation

This is a procedure in which the sample proportions were adjusted to the known 1960 Census data on the color-residence distribution of the population. This step took into account the differences existing at the time of the 1960 Census between the color-residence distribution for the nation and for the sample areas.

b. Second-Stage Ratio Estimation

In this final step, the sample proportions were adjusted to independent current estimates of the civilian noninstitutional

---

[1]See U.S. Bureau of the Census, Technical Paper No. 7, "The Current Population Survey--A Report on Methodology" (Washington, D.C., 1963), for a more detailed explanation of the preparation of estimates.

population by age and color. These estimates were prepared by carrying forward the most recent Census data (1960) to take account of subsequent aging of the population, mortality, and migration between the United States and other countries.[2] The adjustment was made by color within five age groupings: 14 to 15, 16 to 17, 18 to 19, 20 to 21, and 22 to 24.

After this step, each sample person has a weight which remains unchanged throughout the five-year life of the survey. The universe of study was thus fixed at the time of interview for the first cycle. No reweighting of the sample is made after subsequent cycles since the group of interviewed persons is an unbiased sample of the population group (in this case, civilian noninstitutionalized males age 14 to 24) in existence at the time of the first cycle only.

Coding and Editing

Most of the data could be punched directly from the questionnaire, since many of the answers were numerical entries or in the form of precoded categories. However, the Bureau's standard occupation and industry codes which are used in the monthly CPS were also used for the job description questions and these codes are assigned clerically. In addition, the answers for all the "open-end" questions had to be clerically coded, using categories which were previously developed in conjunction with the Center for Human Resource Research from hand tallies of a subsample of completed questionnaires.

The consistency edits for the questionnaire were completed on the computer. A modification of the CPS edit was used for the parts of the questionnaire which were similar to CPS; separate consistency checks were performed for all the other sections. None of the edits included an allocation routine which was dependent on averages or random information from outside sources, since such allocated data could not be expected to be consistent with data from subsequent surveys. However, where the answer to a question was obvious from others in the questionnaire, the missing answer was assigned to the item on the tape. For example, if item 14b ("Do you have a scholarship, fellowship, assistantship, or other type of financial aid this year?") was blank, but legitimate entries appeared in 14c and d ("What kind?" and "How much is it per year?") a "Yes" was inserted in 14b. In this case, only if 14b was marked "Yes," could 14 c-d be filled; therefore, the assumption was made that either the key punch operator failed to punch the item or the interviewer failed to mark it.

---

[2] See U.S. Bureau of the Census, Current Population Reports, Series P-25, No. 352, November 18, 1966, for a description of the methods used in preparing these independent population estimates.

Further, some of the status codes which depend on the answers to a number of different items were completed using only partial information. For example, the current employment status of the respondent (that is, whether he was employed, unemployed, or not in the labor force) is determined by the answers to a number of related questions. However, if one or more of these questions is not completed but the majority are filled and consistent with each other, the status is determined on the basis of the available answers. This procedure accounts for an artifically low count of "NA's" for certain items.

I. EDUCATIONAL STATUS

1. Are you attending or enrolled in regular school? — 1. (314) 1 ☐ Yes – *ASK 2a* 2 ☐ No

When were you last enrolled? (317) _____ Month _____ Year – *SKIP to Check Item B*

2a. What grade are you attending? — 2a. (318) 1 Elementary 1 2 3 4 5 6 7 8; 2 High school 1 2 3 4; 3 College 1 2 3 4 5 6+

b. Are you enrolled as a full-time or part-time student? — b. (319) 1 ☐ Full-time 2 ☐ Part-time

CHECK ITEM A
Refer to item 96R on Information Sheet
☐ Respondent not in school in 1969 – *ASK 3a*
☐ Respondent in school in 1969 – *SKIP to Check Item C*

CHECK ITEM B
Refer to item 96R on Information Sheet
☐ Respondent in school in 1969 – *SKIP to Check Item F, page 3*
☐ All others – *SKIP to 22a, page 5*

3a. At this time last year, you were not enrolled in school. How long had you been out of school before returning? — 3a. (320) _____ Years

b. Why did you return? — b. (321) ☐

c. In what curriculum are you enrolled? — c. (322) ☐ _____ *SKIP to 5*

CHECK ITEM C
Refer to items 2a and 96R on Information Sheet
☐ Respondent in high school in 1969, college now – *SKIP to 5*
☐ Other – *ASK 4*

4. Are you attending the same school as you were at this time last year? — 4. (323) 1 ☐ Yes – *SKIP to 10* 2 ☐ No – *ASK 5*

5. What is the name of the school you now attend? — 5.

6. Where is this school located? — 6. (324) ☐ _____ City _____ County _____ State

7. Is this school public or private? — 7. (325) 1 ☐ Public 2 ☐ Private

8. When did you enter this school? — 8. (326) _____ Month _____ Year

CHECK ITEM D
Refer to item 2a or item 96R on Information Sheet
☐ Respondent in college 1 now – *SKIP to 16a*
☐ Respondent in high school 1 now } *SKIP to 22a, page 5*
☐ Respondent not in school in 1969 }
☐ Other – *ASK 9*

9. Why did you change schools? — 9. (327) ☐

10. Would you say you now like school more, about the same, or less than you did last year? — 10. (328) 1 ☐ More 2 ☐ Less 3 ☐ About the same

I. EDUCATIONAL STATUS – Continued

11. Are you enrolled in the same curriculum now as you were last year? — 11. (329)
- 1 ☐ Yes
- 2 ☐ College – *SKIP to 14a*
- 3 ☐ High school
- 4 ☐ Elementary
- 5 ☐ No – *ASK 12*

SKIP to 22a, page 5

12. In what curriculum are you enrolled now? — 12. (330) ☐☐

13. How did you happen to change your curriculum? — 13. (331) ☐

☐ Respondent not now in college – *SKIP to Check Item E*

14a. How much is the full-time tuition this year at the college you attend? — 14a. (332) $ _____

b. Do you have a scholarship, fellowship, assistantship, or other type of financial aid this year? — b. (333)
- 1 ☐ Yes – *ASK c*
- 2 ☐ No – *SKIP to Check Item E*

c. What kind? — c. (334)
- 1 ☐ Scholarship
- 2 ☐ Fellowship
- 3 ☐ Assistantship
- 4 ☐ Loan
- 5 ☐ Other – *Specify* _____

d. How much is it per year? — d. (335) $ _____

CHECK ITEM E

Refer to item 94R on Information Sheet
- ☐ Respondent in college 3–6 in 1969 – *ASK 15a*
- ☐ Other – *SKIP to 22a, page 5*

15a. Have you received a degree since last year at this time? — 15a. (336)
- 1 ☐ Yes – *ASK b*
- 2 ☐ No – *SKIP to 22a, page 5*

b. What degree was it? — b. (337)
- 1 ☐ Bachelor's (B.A., B.S., A.B.)
- 2 ☐ Master's (M.S., M.B., M.B.A.)
- 3 ☐ Doctor's (Ph.D.)
- 4 ☐ Other – *Specify* _____

c. In what field did you receive your degree? — c. (338) ☐☐

d. Why did you decide to continue your education after receiving this degree? — d. (339) ☐

_____

SKIP to 22a, page 5

CHECK ITEM F

Refer to item 94R on Information Sheet
- ☐ Respondent in high school 1–3 last year – *ASK 16a*
- ☐ Respondent in high school 4 last year – *SKIP to 17a*
- ☐ Respondent in college 1–3 last year – *SKIP to 19a*
- ☐ Respondent in college 4+ last year – *SKIP to 20a*
- ☐ Respondent in elementary school last year – *ASK 16a*

16a. At this time last year, you were attending your _____ year of high school. Did you complete that year? — 16a. (340)
- 1 ☐ Yes
- 2 ☐ No

b. Why did you drop out of high school? — b. (341) ☐

c. Do you expect to return? — c. (342)
- 1 ☐ Yes – *ASK d*
- 2 ☐ No – *SKIP to 20, page 5*

d. When do you expect to return? — d. (343)
- 1 ☐ This school year
- 2 ☐ Next school year
- 3 ☐ Don't know
- 4 ☐ Other _____

SKIP to 22a, page 5

I. EDUCATIONAL STATUS – Continued

17a. Did you graduate from high school? 17a. (340)
1 ☐ Yes – *SKIP to Check Item C*
2 ☐ No – *ASK b*

b. Why not? b. (341) ☐

CHECK ITEM 6 — *Refer to item 95R on Information Sheet*

(342)
1 ☐ Respondent had planned to enter college when last interviewed – *ASK 18a*
2 ☐ Respondent had not planned to enter college when last interviewed – *SKIP to 22a, page 5*
3 ☐ Respondent not asked about educational goal – *SKIP to 22a, page 5*

18a. When we last interviewed you, you said you planned to go to college. Have your plans changed? 18a. (347)
1 ☐ Yes – *ASK b*
2 ☐ No – *SKIP to c*

b. What caused your plans to change? b. (348)
1 ☐ Poor grades, lacked ability, wasn't accepted because of low grades, etc.
2 ☐ Economic reasons (couldn't afford, had to work instead, unable to obtain financial assistance)
3 ☐ Disliked school, lost interest, had enough school
4 ☐ Military service
5 ☐ Personal health reasons
6 ☐ Other – *Specify* _____
SKIP to d

c. Why are you presently not enrolled in college? c. (349)
1 ☐ Economic reasons (couldn't afford, have to work, unable to obtain financial assistance, etc.)
2 ☐ Was rejected or turned down
3 ☐ Waiting to be accepted by a school
4 ☐ Military service
5 ☐ Personal health reasons
6 ☐ Other – *Specify* _____

d. When do you plan to enroll in college? d. (350)
_____ Month _____ Year – *SKIP to 22a*
0 ☐ Don't plan to enroll – *SKIP to 24*

19a. Last year at this time you were in college. Why did you decide to drop out? 19a. (351) ☐
_____
0 ☐ Received degree – *SKIP to 21a*

b. Do you expect to return? b. (352)
1 ☐ Yes – *ASK c*
2 ☐ No – *SKIP to 24*

c. When do you think you will return? c. (353)
1 ☐ This school year
2 ☐ Next school year
3 ☐ Don't know
4 ☐ Other
SKIP to 22a

20a. Last year at this time you were in college. Did you receive a degree? 20a. (354)
1 ☐ Yes – *SKIP to 21a*
2 ☐ No – *ASK b*

b. Why did you decide to drop out? b. (355) ☐

c. Do you expect to return? c. (356)
1 ☐ Yes – *ASK d*
2 ☐ No – *SKIP to 24*

d. When? d. (357)
1 ☐ This school year
2 ☐ Next school year
3 ☐ Don't know
4 ☐ Other
SKIP to 22a

I. EDUCATIONAL STATUS – Continued

21a. What degree did you receive? 21a.

1 ☐ Associate (2 year course)
2 ☐ Bachelor's (B.A., B.S., A.B.)
3 ☐ Master's (M.S., M.B., M.B.A.)
4 ☐ Doctor's (Ph.D.)
5 ☐ Other – *Specify* _____

b. In what field of study did you receive your degree? b. ☐☐

22a. How much education would you like to get? 22a.

If "Other," *Specify* _____

High school: 1 ☐ 1 yr. 2 ☐ 2 yrs. 3 ☐ 3 yrs. 4 ☐ 4 yrs.
College:
5 ☐ 2 yrs. (complete junior college)
6 ☐ 4 yrs. (graduate from 4-year college)
7 ☐ 6 yrs. (master's degree or equivalent)
8 ☐ 7 + yrs. (Ph.D. or professional degree)
Other: 9 ☐ None, don't know, other responses

b. As things stand now how much education do you think you will actually get? b.

If "Other," *Specify* _____

High school: 1 ☐ 1 yr. 2 ☐ 2 yrs. 3 ☐ 3 yrs. 4 ☐ 4 yrs.
College:
5 ☐ 2 yrs. (complete junior college)
6 ☐ 4 yrs. (graduate from 4-year college)
7 ☐ 6 yrs. (master's degree or equivalent)
8 ☐ 7 + yrs. (Ph.D. or professional degree)
Other: 9 ☐ None, don't know, other responses

CHECK ITEM H

Refer to item 22a and item 910 on Information Sheet
☐ Educational goal different from when last interviewed – 410 & 23
☐ Educational goal same as when last interviewed } 1810P to 24
☐ Respondent not asked about educational goal

23. When we last interviewed you, you said you would like to get *(amount of education indicated in 910)*
Why have you changed your plans? 23. ☐

24. How much encouragement has your father given you to continue your education beyond high school? 24.

1 ☐ Much
2 ☐ Some
3 ☐ None
4 ☐ Does not live with father

25. How much encouragement has your mother given you to continue your education beyond high school? 25.

1 ☐ Much
2 ☐ Some
3 ☐ None
4 ☐ Does not live with mother

26. How much help in continuing your schooling after high school do you expect to get (have you received) from your parents? 26.

1 ☐ Much
2 ☐ Some
3 ☐ None

27. How much encouragement have (did) your teachers and other adults in your high school given (given) you to continue your education beyond high school? 27.

1 ☐ Much
2 ☐ Some
3 ☐ None

28. How many of your friends plan to go to college or are actually attending college? 28.

1 ☐ Many of them
2 ☐ Some of them
3 ☐ Few or none of them

Notes

I. EDUCATIONAL STATUS – Continued

☐ Respondent now attends school – *SKIP to Check Item I*

29a. Since this time last year have you taken any training courses or educational programs of any kind, either on the job or elsewhere?

29a. (068)
1 ☐ Yes – *ASK b*
2 ☐ No – *SKIP to Check Item I*

b. What kind of training or education program did you take? *(Specify below, then mark one box)*

_____

_____

b. (069)
1 ☐ Professional, technical
2 ☐ Managerial

8 ☐ School interfered
9 ☐ Other – *Specify* →

c. **Are you getting wages or salary for any of the time off LAST WEEK?**

(098)
1 ☐ Yes
2 ☐ No
3 ☐ Self-employed

d. **Do you usually work 35 hours or more a week at this job?**

(099)
1 ☐ Yes
2 ☐ No

(GO to 36a and enter job held last week)

Notes

II. CURRENT LABOR FORCE STATUS – Continued

(If "LK" in 31, ASK b)

34a. Have you been looking for work during the past 4 weeks?

(100) 1 ☐ Yes 2 ☐ No – *SKIP to 35*

b. What have you been doing in the last 4 weeks to find work?

(Mark all methods used; do not read list)

(101) 0 ☐ Nothing – *SKIP to 35*

Checked with:
- 1 ☐ State employment agency
- 2 ☐ Private employment agency
- 3 ☐ Employer directly
- 4 ☐ Friends or relatives

5 ☐ Placed or answered ads

6 ☐ School employment service

7 ☐ Other – *Specify – e.g., MDTA, union or professional register, etc.*

_____

c. Why did you start looking for work? Was it because you lost or quit a job at that time *(pause)* **or was there some other reason?**

(102)
- 1 ☐ Lost job
- 2 ☐ Quit job
- 3 ☐ Left school
- 4 ☐ Wanted temporary work
- 5 ☐ Enjoy working
- 6 ☐ Help with family expenses
- 7 ☐ Other – *Specify*

_____

d. (1) How many weeks have you been looking for work?

(2) How many weeks ago did you start looking for work?

(3) How many weeks ago were you laid off?

(103) _____ Weeks

e. Have you been looking for full-time or part-time work?

(104) 1 ☐ Full-time

2 ☐ Part-time

f. Is there any reason why you could not take a job LAST WEEK?

(105)

Yes →
- 1 ☐ Needed at home
- 2 ☐ Temporary illness
- 3 ☐ Going to school
- 4 ☐ Other – *Specify*

_____

5 ☐ No

g. When did you last work at a regular job or business lasting two consecutive weeks or more, either full-time or part-time?

☐ October 1, 1969 or later –

Specify

(106) | Month | Day | Year | – *SKIP to 41a*

3 ☐ All others – *SKIP to 42a*

35. When did you last work at a regular job or business, lasting two consecutive weeks or more, either full-time or part-time?

☐ October 1, 1969 or later –

Specify

(107) | Month | Day | Year | – *SKIP to 41a*

2 ☐ Before October 1, 1969 and "unable" now and "unable" in item 96R on the Information Sheet – *SKIP to 71a, page 18*

7 ☐ Other – *Specify* _____
8 ☐ Any pay

c. Are there any restrictions, such as hours or location of job that would be a factor in your taking a job? c. (323)
1 ☐ Yes – *ASK d*
2 ☐ No – *SKIP to 65, page 17*

d. What are these restrictions? d. (324) ☐
_____
_____
SKIP to 65, page 17

CHECK ITEM T

Respondent is currently in Labor Force Group A and –
☐ Was in Labor Force Group C last year *(Item 96R on Information Sheet)* – *ASK 58*
☐ All others – *SKIP to 59*

58. At this time last year, you were not looking for work. What made you decide to take a job? 58. (325)
1 ☐ Recovered from illness
2 ☐ Bored
3 ☐ Completed education
4 ☐ Needed money
5 ☐ Other – *Specify* _____

59. How do you feel about the job you have now? Do you like it very much, like it fairly well, dislike it somewhat, dislike it very much? 59. (326)
1 ☐ Like it very much
2 ☐ Like it fairly well
3 ☐ Dislike it somewhat
4 ☐ Dislike it very much

60. What are the things you like best about your job? 60.
(1) (327) ☐☐ _____
(2) (328) ☐☐ _____
(3) (329) ☐☐ _____

61. What are the things about your job that you don't like? 61.
(1) (330) ☐☐ _____
(2) (331) ☐☐ _____
(3) (332) ☐☐ _____

Notes

62. Suppose someone IN THIS AREA offered you a job in the same line of work you're in now. How much would the new job have to pay for you to be willing to take it? 62.

(If amount given per hour, record dollars and cents. Otherwise, round to the nearest dollar.)

(332) $ _____ . _____ per: →
(Dollars) (Cents)

(334) 1 ☐ Hour

(335) $ _____ _____ per: →
(Dollars only)

(336) 2 ☐ Day
3 ☐ Week
4 ☐ Biweekly
5 ☐ Month
6 ☐ Year
7 ☐ Other – *Specify* _____

(337) 8 ☐ I wouldn't take it at any conceivable pay
9 ☐ I would take a steady job at same or less pay
10 ☐ Would accept job; don't know specific amount
11 ☐ Don't know
12 ☐ Other

CHECK ITEM U
☐ Respondent is enrolled in school this year – *SKIP to 64a*
☐ All others – *ASK 63*

63. What if this job were IN SOME OTHER PART OF THE COUNTRY – how much would it have to pay in order for you to be willing to take it? 63.

(If amount given per hour, record dollars and cents. Otherwise, round to the nearest dollar.)

(338) $ _____ . _____ per: →
(Dollars) (Cents)

(339) 1 ☐ Hour

(340) $ _____ per: →
(Dollars only)

(341) 2 ☐ Day
3 ☐ Week
4 ☐ Biweekly
5 ☐ Month
6 ☐ Year
7 ☐ Other – *Specify* _____

(342) 8 ☐ I wouldn't take it at any conceivable pay
9 ☐ I would take a steady job at same or less pay
10 ☐ Would accept job; don't know specific amount
11 ☐ Depends on location, cost of living
12 ☐ Don't know
13 ☐ Other

CHECK ITEM V
Refer to item 96R on the Information Sheet
☐ Respondent in Labor Force Group A in 1969 – *ASK 64a*
☐ All other – *SKIP to 65, page 17*

64a. Would you say you like your present job more, less, or about the same as (the job you held) last year? 64a.

(343) 1 ☐ More } *ASK b*
2 ☐ Less }
3 ☐ Same – *SKIP to 65, page 17*

b. What would you say is the main reason that you like your present job (more, less)? b. (344) ☐☐

Notes

(345) _____
(346) _____
(347) _____

IV. FUTURE JOB PLANS

65. Now I would like to talk to you about your future job plans. What kind of work would you like to be doing when you are 30 years old? — 65. (348) ☐☐☐

(349) 1 ☐ Same as present job
2 ☐ Don't know

CHECK ITEM V — *Refer to Item 98R on the Information Sheet*

(350) 1 ☐ Respondent's future job plans are the same as when last interviewed – *(Entries in 65 and item 98R on the Information Sheet are the same) – SKIP to Check Item X*
2 ☐ Respondent's future job plans differ from when last interviewed – *(Entries in 65 and item 98R of Information Sheet differ) – ASK 66*

66. When we last interviewed you, you said you thought that you'd like to be *(Entry in item 98R of Information Sheet)*. Why would you say you have changed your plans? — 66. (351) ☐

V. HEALTH

CHECK ITEM X
☐ Respondent is currently in school – *ASK 67a*
☐ Respondent is not currently enrolled in school – *SKIP to 67b*

67a. Do you have any health problems that limit in any way your activity in school? — 67a. (352) 1 ☐ Yes – *SKIP to 68*; 2 ☐ No – *ASK b*

b. Do you have any health problems that limit in any way the amount or kind of work you can do? — b. (353) 1 ☐ Yes – *SKIP to 68*; 2 ☐ No – *ASK c*

c. Do you have any health problems that in any way limit your other activities? — c. (354) 1 ☐ Yes – *ASK 68*; 2 ☐ No – *SKIP to 69*

68. How long have you been limited in this way? — 68. (355) _____ Years

☐ Respondent not married – *SKIP to 71a*

69a. Does your wife's health limit the amount or kind of work she can do? — 69a. (356) 1 ☐ Yes – *SKIP to 70*; 2 ☐ No – *ASK b*

b. Does your wife's health limit the amount or kind of housework she can do? — b. (357) 1 ☐ Yes – *ASK 70*; 2 ☐ No – *SKIP to 71a*

70. How long has she been limited in this way? — 70. (358) _____ Years

Notes

VI. ASSETS AND INCOME

71a. In far as your overall financial position is concerned, would you say you are better off, about the same, or worse off now than you were at this time last year?	71a.	1 ☐ Same – *SKIP to Check Item 7* 2 ☐ Better off 3 ☐ Worse off *ASK b*
b. In what ways are you better, worse off?	b.	☐
CHECK ITEM 7	☐ Respondent is NOT head of household – *SKIP to 76a* ☐ Respondent is head of household – *ASK 72a*	
72a. In the last 12 months, did you (or your wife) receive financial assistance from any of your relatives?	72a.	1 ☐ Yes – *ASK b–c* 2 ☐ No – *SKIP to item 73a*
b. From whom?	b.	☐
c. How much did you receive?	c.	$ _____
73a. Is this house(apartment) owned or being bought by you (or your wife)?	73a.	1 ☐ Yes 2 ☐ No – *SKIP to 74a*
b. About how much do you think this property would sell for on today's market?	b.	$ _____
c. About how much do you (or your wife) owe on this property for mortgages, back taxes, home improvement loans, etc?	c.	$ _____ ☐ None
74a. Do you (or your wife) have any money in savings or checking accounts, savings and loan companies or credit unions?	74a.	1 ☐ Yes – How much altogether? $ _____ 2 ☐ No – *GO to b*
b. Do you (or your wife) have any – (1) U.S. Savings Bonds?	b. (1)	1 ☐ Yes – What is their face value? $ _____ 2 ☐ No – *GO to (2)*
(2) Stocks, bonds, or mutual funds?	(2)	1 ☐ Yes – About how much is their market value? $ _____ 2 ☐ No
75a. Do YOU (or your wife) rent, own, or have an investment in a farm, business, or any other real estate?	75a.	1 ☐ Yes – *ASK b–d* 2 ☐ No – *SKIP to 76a*
b. Which one?	b.	1 ☐ Farm 2 ☐ Business 3 ☐ Real estate
c. About how much do you think this (business, farm, or other real estate) would sell for on today's market?	c.	$ _____
d. What is the total amount of debt and other liabilities on this (business, farm, or other real estate)?	d.	$ _____ ☐ None
76a. Do you (or your wife) own an automobile(s)?	76a.	1 ☐ Yes – *ASK b–d* 2 ☐ No – *SKIP to 77*
b. What is (are) the make and model year?	b.	_____ Model year _____ Make _____ Model year _____ Make _____ Model year _____ Make
c. Do you owe any money on this (these) automobile(s)?	c.	☐ Yes – How much? $ _____ $ _____ $ _____ ☐ No
d. How much would this (these) car(s) sell for on today's market?	d.	$ _____ $ _____ $ _____
77. Do you (or your wife) owe any (other) money to stores, banks, doctors, or anyone else, excluding 30-day charge accounts?	77.	☐ Yes – How much? $ _____ ☐ No

VI. ASSETS AND INCOME – Continued

Now I would like to ask a few questions about your income in the last 12 months.

		RESPONDENT	WIFE ☐ Not married
78a. How much did you (and your wife) receive from wages, salary, commissions, or tips from all jobs, before deductions for taxes or anything else?	78a.	(W) $_____ ☐ None	(W) $_____ ☐ None
b. Did you (and your wife) receive any income from working on your own or in your own business or farm? $_____ (Gross income) less $_____ (Expenses) = $_____ (Net income)	b.	(W) ☐ Yes – How much? $_____ ☐ No	(W) ☐ Yes – How much? $_____ ☐ No
c. Did you (or your wife) receive any unemployment compensation?	c. (1)	☐ Yes → How many weeks? (W) _____	☐ Yes → How many weeks? (W) _____
	(2)	How much? (W) $_____ ☐ No	How much? (W) $_____ ☐ No
d. Did you (or your wife) receive any other income, such as rental income, interest or dividends, income as a result of disability or illness, etc.?	d.	☐ Yes – How much? (W) $_____ ☐ No	☐ Yes – How much? (W) $_____ ☐ No

CHECK ITEM Z	(W) 1 ☐ Respondent (and wife and children) live alone – *SKIP to 79b* 2 ☐ All others – *ASK 79a (If two or more RELATED respondents in household, ask 79a–b only once, and transcribe answers from the first to the other questionnaires.)*

79a. In the past 12 months, what was the total income of ALL family members living here? *(Show flashcard)*	79a.	(W) 1 ☐ Under $1,000 2 ☐ $1,000–$1,999 3 ☐ 2,000– 2,999 4 ☐ 3,000– 3,999 5 ☐ 4,000– 4,999 6 ☐ 5,000– 5,999 7 ☐ 6,000– 7,499 8 ☐ 7,500– 9,999 9 ☐ 10,000–14,999 10 ☐ 15,000–24,999 11 ☐ 25,000 and over
b. Did anyone in this family receive any welfare or public assistance in the last 12 months?	b.	(W) 1 ☐ Yes 2 ☐ No

Notes

VII. FAMILY BACKGROUND

80a. How many persons not counting yourself (or your wife) are dependent upon you for at least one-half of their support? — 80a.

398 _____ Number

0 ☐ None – *SKIP to Check Item AA*

b. Do any of these dependents live somewhere else other than here at home with you? — b.

☐ Yes – **How many?**

399 _____ Number – *ASK c*

0 ☐ No – *SKIP to Check Item AA*

c. What is their relationship to you? — c.

400 ☐

CHECK ITEM AA — *Refer to name and address label on cover page*

401 1 ☐ Respondent lives in same area (SMSA or county) as when last interviewed – *SKIP to 83*

2 ☐ Respondent lives in different area (SMSA or county) than when last interviewed – *ASK 81a*

81a. When we last interviewed you, you were living in *(city in address on cover page)*. **How many miles from here is that?** — 81a.

402 _____ Miles

b. How did you happen to move here? — b.

403 ☐

☐ Respondent currently in school – *SKIP to 82c*

82a. Did you have a job lined up here at the time you moved? — 82a.

404 1 ☐ Yes, different from job held at time of move
2 ☐ Yes, same as job held at time of move
3 ☐ Yes, transferred job in same company
} *SKIP to c*
4 ☐ No – *ASK b*

b. How many weeks did you look before you found work? — b.

405 _____ Weeks

0 ☐ Did not look for work

99 ☐ Still haven't found work

c. Since we last interviewed you, have you lived in any area (SMSA or county) other than the present one or the one in which you lived when we interviewed you last? — c.

☐ Yes – **How many?**

406 _____

0 ☐ No

} *SKIP to 84a*

83. Have you lived in any area (SMSA or county) other than the present one since we last interviewed you? — 83.

☐ Yes – **How many?**

407 _____

0 ☐ No

84a. What is your present draft classification? — 84a.

408 ☐☐

_____

0 ☐ Respondent is under 18 – *SKIP to 85*

b. *(If 1-Y or 4-F)* **Why were you rejected?** — b.

409 1 ☐ Failed both physical and written test
2 ☐ Failed physical test
3 ☐ Failed written test
4 ☐ Not accepted for other reasons
5 ☐ Don't know reason.

85. How many rooms are there in this house or apartment? Do not count bathrooms, porches, balconies, foyers, halls, or half rooms. — 85.

410 _____ Rooms

Notes

TITLE: GREATER MILWAUKEE METROPOLITAN AREA CAREER EDUCATION PROJECT. INTERIM REPORT.

DESCRIPTOR: *PROGRAM DEVELOPMENT; *DEVELOPMENTAL PROGRAMS; *CAREER EDUCATION

IDENTIFIER: MILWAUKEE; WISCONSIN

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 40P.

ABSTRACT: THIS REPORT OF THE SECOND PHASE OF AN EXEMPLARY CAREER EDUCATION PROJECT, CONDUCTED IN THE MILWAUKEE METROPOLITAN AREA, SUMMARIZES THE PROJECT ACTIVITIES FROM JULY, 1973 TO JUNE, 1974. THE OVERALL PURPOSE OF THE PROJECT WAS TO PROVIDE LEADERSHIP AND PROMOTE THE DEVELOPMENT AND COORDINATION OF CAREER EDUCATION PROGRAMS IN THE MILWAUKEE SCHOOLS AT ALL LEVELS. THE REPORT LISTS THE OBJECTIVES, DESCRIBES THE PROCEDURES, AND PRESENTS THE OUTCOMES OF THE PROJECT. PROJECT RESEARCH SURVEYS FURNISHED INFORMATION CONCERNING SUCH AREAS AS NEEDS ASSESSMENT, FOLLOW-UP STUDIES, AND THE CAREER EDUCATION NEEDS OF ADULTS. PROJECT EFFORTS TO ENCOURAGE LOCAL FUNDING OF CAREER EDUCATION PROGRAMS MET WITH SOME SUCCESS. SEVERAL PILOT PROGRAMS WERE INTIATED OR CONDUCTED WITH PROJECT ASSISTANCE. THE PROJECT ALSO PLANNED AND CONDUCTED A SERIES OF CAREER EDUCATION LEADERSHIP SEMINARS AND WORKSHOPS WHICH RECEIVED FAVORABLE EVALUATIONS FROM THE PARTICIPANTS. IN ADDITION, THE COLLECTION AND DISSEMINATION OF INFORMATION ON ALL AREA CAREER EDUCATION ACTIVITIES WAS CARRIED OUT AND CONTINUES VIA NEWSLETTER AND PROJECT LENDING LIBRARY OF FILMS AND MATERIALS. APPENDED ARE WORKSHOP EVALUATIONS, SURVEY INSTRUMENTS WITH TABULATED RESULTS, AND LISTS OF CAREER EDUCATION CONTACT PERSONS IN THE MILWAUKEE AREA. (NJ)

The research reported herein was performed pursuant to a grant or contract with the Wisconsin Board of Vocational, Technical and Adult Education, partially reimbursed from an allocation of Federal funds from the U.S. Office of Education, U.S. Department of Health, Education and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their professional judgment in the conduct of the project. Points of view or opinions stated do not, therefore, necessarily represent official CESA 19, MATC district (19), State Board or U.S. Office of Education position or policy.

CHAPTER 1

INTRODUCTION

The first phase of the Greater Milwaukee Metropolitan Area Career Education Project was completed on June 30, 1973 (See copy of INTERIM REPORT Project No. 09-082-154-223 GREATER MILWAUKEE METROPOLITAN AREA CAREER EDUCATION PROJECT OFFICE PROPOSAL). A proposal for a second phase had been sent to the State Board of Vocational. Technical and Adult Education and the Wisconsin Department of Public Instruction, however, the grant award was not accepted until October 23, 1974. During the interim period the Project received financial support from the Milwaukee Area Technical College sufficient to maintain the office and pay the director. Any other project activities requiring monetary expenditures were drastically curtailed.

After funding was received, a secretary was employed and the project resumed full operation. Project objectives for Phase II, as amended by the State Board of Vocational, Technical and Adult Education Staff Research Review Committee were:

1. To provide leadership for an area-wide Career Education Needs Assessment K-12 carried on at the local school level. To provide at the very least, a pilot Career Education Needs Assessment Project in the hope that all 24 school districts will provide the funds and personnel to make a thorough assessment of local programs.

2. To work with district high schools to find ways to eliminate unnecessary duplication of programs and facilities and explore ways of articulation and cooperation between high schools and between secondary schools and post-secondary schools.
3. To work with local school district and/or groups of districts in development of Career Education pilot programs at all grade levels. To also work with Career Education and Guidance Committees at Milwaukee Area Technical College to develop Career Education programs for post-secondary grade level students and adults in day and evening schools, at central and regional campuses.
4. To encourage local funding of Career Education programs as well as cooperative school and outside agency funding.
5. To involve secondary and post-secondary vocational-technical advisory committees in studying local manpower needs.
6. To cooperatively plan and conduct a continuing series of Career Education leadership seminars and workshops on an area wide basis or on a pod basis as well as to encourage local in-service programs of Career Education orientation.
7. To collect and disseminate on a periodic basis information on all Career Education activities taking place in the Greater Metropolitan Milwaukee Area for a period from February 1, 1973, to June 30, 1974.

Project policy development and implementation during both phases of the project has been provided by a steering committee of area superintendents, local vocational education coordinators and representatives of CESA 19 and Milwaukee Area Technical College. (See Appendix A).

CHAPTER 11

PROCEDURES

Procedures for accomplishing project objectives varied with the specific objective involved. To accomplish objective one a survey letter was sent to all area career education contact parsons (See Appendix B) asking two specific questions. These were: "has the district or any school within the district conducted any needs assessments within the last 2-3 years?" and "Has the district or any high school within the district conducted any follow-up studies on graduates and/or drop-outs within the last 2-3 years?" In the event of an affirmative answer to the first question respondents were asked to state the needs assessed and how the assessment had been conducted. Those responding positively to the second question were asked how they had conducted their follow-up study. Both groups of affirmative respondents were also asked to furnish the Project office with copies of any instruments used. A telephonic follow-up of non-respondents to the written query was conducted several months later to insure responses from all area school districts.

Information dissemination was conducted through a series of meetings and the use of the Career Education Newsletter. Project activities in this regard were coordinated with those of the Wisconsin Department of Public Instruction and CESA 19.

Objective two involved a series of meetings between representatives of high schools and the Milwaukee Area Technical College. This was done on a systematic district-by-district basis so that most area high school districts had been visited by the end of the 1973-74 fiscal year. These visits form the basis for further consultation between teachers and coun-

selors from the high schools and those from the technical college in the coming year.

In a similar fashion objective three required a series of meetings, this time between the Project Director and representatives of specific programs such as Project I.C.E., Project GEM or representatives of a specific institution or district such as MATC or the West Allis-West Milwaukee Schools. Objective three also required the use of a survey instrument developed and distributed in partnership with MATC. This instrument was distributed to persons attending MATC's adult evening classes in order to determine interest in adult career education and career counseling.

The procedures involved in objective four involve attending meetings to speak on career education and arouse local interest in it and the use of the NEWSLETTER for the same purpose.

Procedures used to accomplish objective five are identical with those used for objective one. A survey letter was sent to all area career education contact persons. Later a telephonic follow-up of all nonrespondants was conducted to insure complete responses. The survey asked whether the district used voc-tech advisory committees and whether those committees, if used, studied local manpower needs. In addition pod meetings were used as sites to discuss these questions.

Objective six involved travel in Wisconsin and Illinois and meeting with knowledgeable persons to learn about outstanding examples of career education in the schools. These schools were personally visited, where possible, for a first-hand view of the career education taking place. Achievement of this objective involved the use of consultants to present

programs in their area of expertise.

The procedures involved in objective seven are those of collecting and disseminating career education news through the monthly newsletter, and the project lending library. To facilitate use of the lending library a bibliography of project materials currently listing over 156 items has been sent to area educators. This bibliography includes curriculum guides, resource guides, career education newsletters from school districts throughout the country, current articles about career education, catalogs, handbooks, and films. Thus far three contemporary career education films have been purchased for the use of counselors and teachers in their classrooms, as well as in teacher workshops and in-services. All the materials in the library are available to area educators by contacting the project office.

CHAPTER III

RESULTS

OBJECTIVE I

A survey of 24 area school districts was conducted to determine the use of needs assessments and student follow-up studies. The results of the needs assessment and follow-up survey of area school districts are as follows:

Has the district or any school within the district conducted any needs assessments within the last 2-3 years?

Yes	58% (14)*
No	42% (10)

Has the district or any high school within the district conducted follow-up studies of graduates and/or dropouts within the last 2-3 years?

Yes	79% (19)
No	8% (2)
N/A	13% (3)**

*It is important to note that five of the districts conducting needs assessments did so only in an elementary school or schools while others assess on a programmatic basis. Complete community needs assessments were recently completed in Franklin, Greendale, Greenfield, and Whitnall. This survey indicates that the term "needs assessment" is one which is subject to different interpretations among area school districts.

**These are the three K-8 districts in the area who were not involved in the follow-up study survey.

Additional leadership activities included meetings with the Director

of Project I.C.E. to share needs assessment information and provide assistance. These meetings led to a Project I.C.E. Steering Committee meeting at which Dr. Sara Sherkow of the Wisconsin Department of Public Instruction (DPI) reviewed the needs assessment materials and discussed the assistance the DPI could provide. Project I.C.E. subsequently adopted the DPI materials for use in its four district needs assessment. To further disseminate needs assessment the September, 1973 issue of the project's Career Education Newsletter published an article on the topic by Dr. Sherkow. A complete set of DPI needs assessment materials was received for the project lending library and a file of such materials was established for use. The Project Director discussed needs assessments at pod meetings (See Appendix C) throughout the area, met with persons from other districts who had conducted needs assessments and attended several state and local meetings at which the topic was discussed.

The Project Steering Committee felt it unnecessary to sponsor a pilot needs assessment project in the area because of the needs assessment Project I.C.E. was conducting in Franklin, Greendale, Greenfield and Whitnall. It should be noted that Project I.C.E. did not exist at the time objective one for this project was written.

OBJECTIVE II

The second project objective involved a series of meetings held with individual school districts. During the 1973-74 project year meetings were held in a total of 18 districts. At these meetings the Project Director and/or Associate Director, generally accompanied by several Milwaukee Area Technical College faculty members, met with teachers, counselors, and administrators from the school district to explore methods of facilitating articu-

lation and eliminating unnecessary programmatic duplication. These frank exchanges led, in some cases, to exchange of curricula so that specific changes to facilitate articulation could be considered. In addition, the Project Director discussed this topic at every pod meeting.

OBJECTIVE III

Project objective three, as amended, was met through meetings, and a research survey which later resulted in a conference, pilot projects and in-service programs. A series of meetings has been held with Mr. Arne Engebretson, Director of Project I.C.E. in an effort to assist him with that program and coordinate, where possible, the efforts of the two projects. Meetings have also been held with CESA 19 Coordinator Richard Manske and research consultant David Krieger regarding Project GEM (Guidance and Counseling Evaluation Model).

During the winter several meetings were held with MATC personnel to discuss career education needs in adult education. These meetings ultimately led to a career education survey of the 26,967 persons attending MATC adult evening classes (See Appendix D) and a half-day "New Careers Conference" for adults co-sponsored by this career education project and MATC. The survey was directed toward learning about six topics: reasons for enrollment in evening classes; whether student felt the classes helped them achieve their objectives and if not, why; student interest in attending a workshop on entering the job market or changing jobs; student interest in career counseling; where students would turn for help if they had to change jobs; and, the age of the adult evening school population.

The survey elicited a 39 percent (10,557) return. Results indicated

that most adults were attending evening classes for personal improvement, recreation, to learn a skill or to help them get a better job. Only 10 percent (1,080) responded negatively when asked if their class had helped them achieve their objective, a strong vote of confidence in the evening program.

Respondents made clear their interest in acquiring more information about entering the labor market or changing jobs. Twenty-three percent (2,415) indicated an interest in attending a workshop for that purpose while a slightly larger number (2,591) indicated an interest in specific vocational counseling. In response to another question, thirty-five percent (3,735) indicated an interest in counseling if it were available at the evening center they were attending. Insofar as age is concerned, seventy-five percent (7,891) of the respondents fell between 21 and 50, the ages in which persons are most likely to be actively employed.

The New Careers Conference held on February 9, 1974, at MATC attracted some 140 participants. They heard three panels discuss the major components of career choice including self-awareness, employment trends and job opportunities and the best ways to gain employment once a choice has been made. Of the 140 persons attending, 25 percent (35) indicated an interest in guidance and/or testing assistance while 31 percent (44) indicated interest in group career counseling sessions. Thirty-four percent (47) said they were interested in acquiring more information about career opportunities.

Since that time the Project Director has cooperated with Dean Greeson of MATC in writing a pilot project proposal to extend career counseling services to Milwaukee area adults. Dr. McIntyre, the Project Director, assisted Mr. Robert Thompto of the West Allis-West Milwaukee Public Schools in writing a successful pilot project to evaluate processes and activities

for implementing the Wisconsin Design for Career Education K-12 and has met with personnel from other districts to discuss tentative project proposals. Teachers involved in the West Allis-West Milwaukee project have attended career education workshops which the Greater Milwaukee Area Career Education Project sponsors.

OBJECTIVE IV

Encouragement of local funding for career education programs as well as cooperative school and outside agency funding has been accomplished through an editorial in the July 1973, Career Education Newsletter and meetings with area educators, PTA groups and civic groups. Local support for career education in-service activities is now evident in such areas as Milwaukee, Cudahy, Greenfield, and Brown Deer. However, it should be noted that school districts facing increasing costs and declining enrollments are in a very difficutt position when contemplating extending financial support to a new educational concept such as career education.

OBJECTIVE V

A survey of area school districts concerning the existence of voc-tech advisory committees and their use to study local manpower needs produced the following results:

Does your district have a voc-tech advisory committee or committees?

n=21	Yes	13 or 54%
	No	8 or 33%
	N/A	3 or 13% (These are K-8 districts)

Does the voc-tech committee or committees study local manpower needs?

n=13	Yes	3 or 23%
	No	10 or 77%

Discussion with local vocational education coordinators indicates that while

some voc-tech advisory committees do provide guidance with regard to manpower needs, it is generally done on an experiential, non-systematic basis. Several area districts, however, do conduct periodic local surveys to elicit this information.

The Milwaukee Area Technical College also utilizes voc-tech advisory committees in a variety of learning areas. These committees are consulted concerning manpower needs in their area of expertise but not on a systematic, formalized basis. MATC's Placement Office does collect and annually summarize employer requests for various types of workers. The summary is then distributed in-house and sent to area high school counselors, the state employment services and other government agencies. Additional information on the job market is derived from student follow-ups conducted six months, two years and five years after graduation.

OBJECTIVE VI

Procedures for achieving this objective involved three general aspects: (1) meetings with and speaking before groups of educators regarding career education as either a single program or part of a larger in-service program; (2) planning and conducting career education workshops and conferences; and, (3) using these meetings, speeches, and workshops to encourage the creation of local in-service programs. During the 1973-74 fiscal year the Project Director has discussed the project and the general topic of career education before such groups as:

(1) Oak Creek elementary school teachers

(2) Germantown Public Schools career education workshop

(3) the state CESA Coordinators Conference

(4) the Cudahy All-City PTA

(5) Milwaukee Public Schools Career Education in-service program

(6) Oak Creek principals

(7) Teachers, counselors, and administrators at Cudahy Junior High-West

(8) Mukwonago K-6 career education in-service program

(9) MATC's Milwaukee Public Schools High School Principals Meeting

(10) Parents group - Greenfield Middle School

(11) Greenfield Public Schools administrators and central office personnel

(12) Marquette University's Institute for Elementary Principals

(13) Participants in project's 1974 Middle School/Junior High School Career Education Workshop

(14) the Shorewood Public Schools Career Education Committee

(15) West Allis-West Milwaukee Junior High teachers

In addition to these presentations, numerous meetings have been held with individual educators from throughout the area to try to interest them in career education and act as a resource person.

The project has co-sponsored the Adult "New Careers Conference" with MATC and has sponsored completely three one week career education workshops for area educators. The New Careers Conference was held at MATC's Continuing Education Building Auditorium on February 9, 1974. Approximately 140 adults were in attendance to hear three panels of experts discuss three basic areas of career education, self-awareness; job awareness and how to get the job. Participant evaluation forms indicated that the audience felt the conference was worthwhile and should be repeated.

Three one week career education workshops for area educators were planned, organized and supervised by the Project Director. Each workshop was aimed at a specific participant group; elementary, middle school/ junior high and senior high. Participants could choose to attend either morning or afternoon sessions, each lasting three hours per day. They could also elect to attend the workshops for University of Wisconsin credit by registering paying appropriate fees and performing extra assignments.

A total of 89 teachers, counselors, and administrators from nineteen school districts, private schools and MATC attended the workshops. (See Appendix E) In an effort to determine the status of their career education knowledge and the impact of the workshop on that knowledge, they were given a career education pre-test (Appendix F) when they initially entered the workshop. They were retested at the end of the final period of instruction for the week. The result indicated an increase in career education

knowledge over the course of the week of instruction in all three workshops. (See Appendix G) Evaluation instruments were distributed at the close of the workshops. Responses indicated that participants uniformly felt the workshops to be worthwhile experiences. (See Appendix H) These responses are on file at the Project Office.

In an additional effort to determine the impact of the workshop on participants, each was asked on the first day of the workshop to prepare a one-page statement of the career education needs of his class or school. On the last day they were asked to prepare a one-page statement concerning the personal impact of the workshop and what they felt they could do to meet some of the needs they had previously expressed. The statements indicate that there was an increase in the generalized awareness of what career education involves and a concurrent increase in plans to use specific techniques learned in the workshops in their own classes or schools. These statements will form a basis for an individualized follow-up of teachers and counselors to study the project's ultimate impact on students. These statements are on file at the Project Office.

OBJECTIVE VII

This objective was met by the continued publication of the Milwaukee Area Career Education Newsletter. Since publication began in April, 1973, the Newsletter's readership has expanded to approximately 880 per issue. The publication reaches every public and private school in the area served by the project and is distributed elsewhere to persons interested in career education. Multiple copies of the Newsletter are sent to any school requesting them.

A total of 26 public school districts and private educational centers

have borrowed materials from the project lending library. Many curriculum and resource guides have been utilized by districts for their own career education in-service activities. Teachers and counselors from 14 school districts have borrowed the project's films since April 1, 1974. Each borrowee was encouraged to assess the film by filling out evaluation forms. The response, both in written and verbal form, has been very favorable. Currently the Project has films reserved into the month of October 1974.

CHAPTER IV

COMPLETION OF OBJECTIVES

Completion of certain portions of the project objectives has taken place, However, most are of a continuing nature such that completion in a total sense does not take place. For example, the project provided leadership and acted as a vital resource for career education needs assessments in this area. The actual pilot assessment, however, was conducted by Project I.C.E. as part of its program, not this project. While some area districts, particularly West Allis-West Milwaukee, are working on needs assessments, much remains to be done in other districts.

Much progress has been made in the articulation program which is closely coordinated with MATC and area high schools. However, time and circumstances did not permit articulation visits to all area high school districts during this project year. It is anticipated that this will be completed during the next phase of the project.

The Project Director has worked closely with several schools in the development of career education pilot programs K-adult. A project proposal written in conjunction with West Allis-West Milwaukee has been accepted while that written with MATC remains pending.

Steps have been taken to encourage local funding of career education programs and several are now underway. The fiscal constraints in which local school districts find themselves do act to restrict this type of activity despite the recognition of need.

Three successful one-week career education workshops and one New Careers Conference have been planned and conducted. The project director

has attended, given and participated in speaking engagements and in-service meetings. The circulation of the Career Education Newsletter has more than tripled since the beginning of the 1973-74 fiscal year. In addition persons from 26 area schools have used publications and films from the project lending library. All of these are continuing project activities.

CHAPTER V

CONCLUSIONS AND RECOMMENDATIONS

The project's leadership role in Milwaukee Area career education became more evident during the 1973-74 fiscal year. Requests for assistance from public and private schools increased as did opportunities for public speaking engagements. The nature of the requests, moreover, tended to indicate a deepening interest in career education as more school districts requested in-service assistance rather than simply a talk about the general topic of career education. Still another indication of interest is the circulation of the Career Education Newsletter which rose from a few hundred to almost nine hundred in the space of a year. The Newsletter is sent to every Milwaukee area public and private school as well as to interested individuals here and elsewhere in the Midwest. Attendance at project-sponsored conferences and workshops also demonstrated increased interest in career education. Some 140 Milwaukee area adults attended the New Careers Conference held in February. Later in the year, 89 area educators attended the three one-week career education workshops which the project sponsored. The positive responses received from conference and workshop participants indicate a continued need for this type of activity in the Greater Milwaukee area. More efforts in this area are included in the Phase III project proposal.

Project research surveys have furnished information concerning such areas of interest as needs assessments, follow-up studies, the existence of voc-tech advisory committees, and their use to study local manpower needs and on the career education needs of adults. The survey of needs assessments and follow-up studies revealed that the term "needs assessment"

needs clarification in the Milwaukee area since responses were widely divergent in terms of scope and procedures. Project efforts regarding needs assessments were directed toward publicizing and disseminating information, in conjunction with the DPI and CESA 19, rather than conducting a pilot program because such an activity would have unnecessarily duplicated the needs assessment effort of Project I.C.E. The change of project focus on the needs assessment objective in order to prevent unnecessary duplication and waste indicates one of the benefits to be derived from having a central clearing house for career education information such as this project within a given geographic area. Otherwise there could have been two pilot needs assessment efforts conducted virtually side-by-side in the Milwaukee area.

Results of the survey of student follow-up studies indicates that almost every K-12 district is conducting some type of follow-up of its graduates. While some are more extensive than others, these studies do provide the basis for a data base which could be expanded in the future. Their existence provides an indicator of school district interest in receiving feedback from graduates concerning programmatic effectiveness.

A survey of high school vocational-technical advisory committees and their use to study manpower needs showed that a significant number, 38%, of area school districts lack such committees. Of those districts possessing committees, only three used them to study local manpower needs. Conversations with local vocational education coordinators (LVEC's) indicate that when such committees furnish some manpower information it is on an informal, personal knowledge basis. The lack of voc-tech advisory committees in the area goes hand-in-hand with the lack of LVEC's. Excluding the three K-8

districts, only eleven of the 24 school districts in the area which this project serves currently have LVEC's. With no LVEC's there can be no CAPSTONE programs where voc-tech advisory committees are normally used. There would seem to be a need for more emphasis on vocational education in many Milwaukee area schools. The use of voc-tech committees to study manpower needs also seems to be precluded, in part, by the size and complexity of the employment picture in Milwaukee, a major metropolitan area. A knowledge of the employment picture in the local area may be too narrow to effectively serve districts whose graduates can seek employment throughout the entire Greater Milwaukee Metropolitan Area.

The survey of adult career education needs conducted in cooperation with MATC provided a clear indication of the need for career counseling among Milwaukee area adults. This, in turn, provided the basis for a project proposal which would fund a traveling counseling van which could visit evening schools and other areas to reach adults who are working during the day. The results of this survey are also in accord with national career education priorities as leadership at the federal level seeks to discern and then meet adult career education needs. Further work in this area has been included in the project's Phase III proposal.

Considerable progress has been made in exploring methods of articulation between secondary schools and the Milwaukee Area Technical College. The fruits of meetings held this year should begin to show during the coming school term. Articulation too, is included as a continuing item in the Phase III project proposal.

Encouragement of local funding for career education programs is a slow process. Nonetheless progress has been achieved as some area school districts begin to implement career education in-service programs funded

wholly or in part from district funds. The attendance of 89 local educators at our career education workshops would tend to indicate an interest in the topic which is likely to be reflected in increased activity at the local school district level.

Several pilot programs have been initiated or conducted with project assistance. West Allis-West Milwaukee has begun a Title III project with which this project is cooperating. Milwaukee Area Technical College has written a proposal to fund a mobile adult career counseling van to bring counseling help to adults at convenient times and locations. The project director has been in contact with the directors of other area career education projects in order to coordinate activities and act as a resource person. An area-wide resource person and coordinator is in a position to provide this assistance by acting as a knowledgeable referral agent to persons working on purely local projects.

Project sponsored conferences and workshops have proven to be very successful. Evaluations indicate that most participants found them to be worthwhile experiences which would be of definite benefit to others. Such activities enable the project to make a significant impact on the area in terms of publicizing career education and spreading techniques for its implementations. Further publicity and information dissemination is carried on via the Career Education Newsletter and the project lending library of films and materials. The increased circulation of the Newsletter and increased usage of the library films and materials demonstrates the response that career education is getting in this area. These activities are included in the Phase III project proposal and would seem to be well worth continuing after the project is completed.

APPENDIX A

STEERING COMMITTEE MEMBERS 1973-74

Chairman: Dr. William Knapp, Superintendent
Greendale School District

Mr. Nicholas Cupery, Superintendent
Glendale UHS District

Dr. John Fochs, Superintendent
Wauwatosa School District

Mr. Gilbert Grosenick, Superintendent
Oak Creek School District

Mr. James Murray, Superintendent
Grafton School District

Dr. Raymond Waier, Superintendent
Brown Deer School District

Dr. Jack Marcussen, LVEC
Milwaukee School District

Mr. Robert Thompto, LVEC

MILWAUKEE ADULT CAREER EDUCATION SURVEY

Population -- all persons attending evening classes in Milwaukee Area Technical College Adult Evening Schools in January, 1974. N= 26,967. Responses = 10,557 for a 39 percent rate of return. Persons attending more than one class were instructed to complete only one survey form.

I. Why did you enroll for this class(es)? Please name the class(es) in which you are enrolled at this evening center.

QUESTIONS	RESPONSES	PERCENTAGE
1. To help me get a better job.	1972	19
2. For recreation (hobby)	2850	27
3. For personal improvement	4485	42
4. To help me become a better homemaker	901	8
5. To prepare for citizenship	52	.5
6. To learn a skill	2345	22
7. Other	991	9

* Note that the total of the responses is greater than the N for the study and that the percentages add up to more than 100 percent. The reason is because some respondents picked more than one choice.

II. Did this class help you achieve your objectives?

QUESTIONS	RESPONSES	PERCENTAGE
1. YES	8725	83
2. NO	1080	10
3. Did not answer	752	7

If your answer is "no" please check the reason(s) you think the class did not meet your needs.

QUESTIONS	RESPONSES	PERCENTAGE
1. Semester too short	499	46
2. I was absent too often	63	6
3. Class hours insufficient	91	8
4. Subject matter too advanced	54	5
5. Subject matter covered too fast	191	18
6. Subject matter not relevant to my goals	112	10
7. Other	276	25

** Note that the N being used is 1080, the number of NO responses. The total of the responses is greater than this N and the percentages add up to more than 100 percent because some respondents picked more than one choice.

III. We are planning a Workshop on Changing Jobs; would you be interested in attending? The workshop will be free of charge, half day long and will give you introductory information on who, where, when and how to go about choosing and/or making a change in your job.

QUESTIONS	RESPONSES	PERCENTAGE
1. YES	2415	23
2. NO	7151	68
3. Did not answer	991	9

IV. Would you take advantage of counseling if a guidance counselor were available to you at this evening center?

QUESTIONS	RESPONSES	PERCENTAGE
1. YES	3735	35
2. NO	5857	56
3. Did not answer	965	9

V. Would you be interested in talking to a guidance counselor at the Downtown Campus with regard to what is available for you in a second career and how to go about getting the training you need to make the change?

QUESTIONS	RESPONSES	PERCENTAGE
1. YES	2591	24
2. NO	7048	67
3. Did not answer	918	9

VI. If it became necessary for you to change your occupation, which of the following would you do?

QUESTIONS	RESPONSES	PERCENTAGE
1. Contact friends for tips as to other jobs	1624	15
2. Enroll in Vocational School	1515	14
3. Follow-up newspaper ads	3710	35
4. Contact employment agencies	2657	25
5. Take a short term course in a special field	2134	20
6. Take vocational aptitude test	1977	19
7. Talk to a vocational counselor	1976	19
8. Other	849	8

* Note that the total of the responses is greater than the N for the study and that the percentages add up to more than 100 percent. The reason is because some respondents picked more than one choice.

VII. What age group are you in?

QUESTIONS	RESPONSES	PERCENTAGE
1. Under 20	675	6
2. 21 - 30	4165	40
3. 31 - 40	2150	20
4. 41 - 50	1576	15
5. 51 and over	1504	14
6. Did not answer	487	5

Survey conducted by: Mr. Bernard Greeson, Dean of Career Education, Milwaukee Area Technical College and Dr. Calvin McIntyre, Director, Greater Milwaukee Area Career Education Project.

APPENDIX E

ELEMENTARY CAREER EDUCATION WORKSHOP PARTICIPANTS - JUNE 17-21,1974

Ann Marie Camacho, Teacher, Oak Creek-Franklin School District

Irene Fiend, School Counselor, Wisconsin Telephone Company, Milwaukee

Carol Fishman, Teacher, Milwaukee Public Schools

Kent Freeland, 6th grade teacher, Wauwatosa School District

Marikay Groh, Work-Study Coordinator, Elmbrook Schools

John Hedstrom. LVEC, Greenfield School District

Karen Murawski, Teacher, 1st grade, Cudahy Public Schools

John Phipps, Director of Research, Cudahy Public Schools

Marjorie Siegworth, 2nd grade teacher, Brown Deer

Nancy Wigdale, 5th grade teacher, Maple Dale-Indian Hills School District

Jane Bjoriem,Physically Handicapped Teacher, Irving School-West Allis

Muriel Fisher,Special Education Teacher, West Allis-West Milwaukee Public Schools

Mary Gemoll, 4th grade teacher, West Allis - West Milwaukee Public Schools

John Good, Principal, Oak Creek School District

Belle Keane,1st grade teacher, West Allis - West Milwaukee Public Schools

Jim Judkins, 6th grade teacher, West Allis - West Milwaukee Public Schools

George Mann,, 6th grade teacher, West Allis - West Milwaukee Public Schools

Marlene Migliaccio, teacher, Cudahy Public Schools

Carol Rowan, Art Teacher, West Allis-West Milwaukee Public Schools

Sue Smith, Teacher, Cudahy Public Schools

Sue Spector, 2nd grade teacher, Brown Deer

Lawrence Watt, Guidance Counselor, Milwaukee

Marty Wiley teacher, West Allis-West Milwaukee Public Schools

JUNIOR HIGH/MIDDLE SCHOOL CAREER EDUCATION WORKSHOP PARTICIPANTS

JUNE 17-21,1974

Douglas Bainbridge, Teacher, Industrial Arts, Greendale High School

Gabe Beckers,Teacher-Junior High, Cudahy Public Schools

Louise Berg, Teacher, Cudahy Public Schools

Dolores Grunke, Teacher, Milwaukee Public Schools

Gunther W. Heller, Guidance Director, Junior High, Milwaukee Public Schools

Richard Klein, Junior High Counselor, Milwaukee Public Schools

Kathleen Kral, Junior High Counselor, Milwaukee Public Schools

John Krause, Junior High Principal, Cudahy Public Schools

Marion Magin, Educational Representative, Wisconsin Telephone Company, Milwaukee

Neal Michel, Assistant Principal, Cudahy Public Schools

Robert Peterson, Assistant Principal, Cudahy Public Schools

Arnold Polisky, Teacher, Milwaukee Public Schools

Kathy Preston, Crestview Community Center, Milwaukee

William E. Roots, Principal, Fox Point-Bayside

Cory Rosencranz, Crestview Community Center, Milwaukee

Sister Angela Szopinski, 8th grade Teacher, West Allis Public Schools

Diane Alders, Counselor, Greenfield Public Schools

Dennis Bartel, Career Education Coordinator, West Allis-West Milwaukee Public Schools

Donald Bellile, Counselor, Greenfield Public Schools

Jill Carroll, Home Economics Instructor, West Allis-West Milwaukee Public Schools

John Cancellier, Teacher, Milwaukee Public Schools

Linda Elko, Reading Teacher, West Allis-West Milwaukee Public Schools

Gladys Howard, Reading Teacher, West Allis-West Milwaukee Public Schools

Caroline Knoteck, 7th grade Teacher,Maple Dale-Indian Hills District

Marilyn Larsen, 6th grade teacher, Brown Deer Public Schools

Nancy Pawlowski, Science teacher, West Allis-West Milwaukee Public Schools

John Weber, Principal, Greenfield Public Schools

HIGH SCHOOL CAREER EDUCATION WORKSHOP PARTICIPANTS

JUNE 24-28, 1974

Verne Appleman, Counselor, Port Washington

Alex Atlas, Vocational Guidance Counselor, Milwaukee Public Schools

David Bartz, Work-Study Coordinator, Hamilton-Sussex School District

Fred Casper, LVEC, Ozaukee High SChool, Fredonia

Rosemary Cook, Counselor, Port Washington

Wilbert Hermann, LVEC, Mukwonago High School, Mukwonago

Geraldine Jaworski, Business Education Instructor, Franklin High School

Pauline Kasper, Chairman- Math Department, Greendale High SChool

Joseph Katalinich, Industrial Arts Teacher, Greendale High School

Eleanor Lyon, Counselor, Greendale High School

Carol Pederson, Home Economics Teacher, Shorewood Public Schools

Betty Peterson, Home Economics Teacher, Shorewood Public Schools

Edward Race, Guidance Counselor, Cudahy High School

Henry Ross, Principal, Greendale High School

Mark Sanders, Guidance Director, Greenfield Public Schools

William Schaller, Power Mechanics Teacher, Greendale High School

John Van Slyke, Chemsitry/Physics Teacher, Fredonia

Gail Burrill, Math Teacher and Dep't. Chairman, Whitnall

Arne Engebretson, Project ICE Director, Greendale PUblic Schools

Ray Heard, LVEC, Greendale High School

Jerry Hitchler, Teacher, Greendale High School

Robert Johnson, Teacher Fine-Applied Arts, Nicolet High School

Cathy Kessler, Crestview Community Center, Milwaukee

Richard Kumbler, Teacher-Physics, Greendale High School

Barbara J. May, Crestview Community Center, Milwaukee

Donald Mikolajzak, Guidance Counselor, Milwaukee Area Technical College

Jim Morgan, Counselor, Nicolet High School

Gary Petersen, Counselor, Brown Deer High School

Lawrence Pfleger, Counselor, Greendale High School

Cheryl Smith, Art Teacher, Nicolet High School

Ben Szymaszek, Social Studies Teacher, Greendale High School

Kathy Stamm, Work Study Coordinator, Nicolet High School

Eva Wibracht, Milwaukee County Mental Health Center

Kitty Willkomm, Teacher, West Allis Central High School

APPENDIX F

WHAT IS YOUR CAREER EDUCATION QUOTIENT?

T	F		
_____	_____	1.	A career is the general course of action or progress of a person through life.
_____	_____	2.	A person's career is his/her work.
_____	_____	3.	Career Education is another name for vocational education.
_____	_____	4.	Every school should have a course in Career Education.
_____	_____	5.	Research has shown Career Education to be an effective vehicle for teaching basic subjects.
_____	_____	6.	Career Education is a vehicle for making classroom instruction meaningful and important for every student.
_____	_____	7.	Career Education tries to encourage elementary school children to make a career choice.
_____	_____	8.	Career Education at the middle school/junior high level focuses on career and self-exploration.
_____	_____	9.	Career Education doesn't apply to the student who wants to become a professional.
_____	_____	10.	Career Development is advanced through Career Education.
_____	_____	11.	The State of Wisconsin has a set of guidelines for Career Development.
_____	_____	12.	Students are very interested in acquiring more vocational information during their school years.
_____	_____	13.	Career Education is an important part of vocational education.
_____	_____	14.	Career Education is closely related to individualized education.
_____	_____	15.	Career Education requires a dramatic overhaul of the entire curriculum.
_____	_____	16.	Implementing Career Education in the classroom requires that teachers learn new methods of instruction.
_____	_____	17.	Career Education develops student respect for work,both paid and unpaid.
_____	_____	18.	Career Education doesn't involve Music, Art, and Physical Education teachers.
_____	_____	19.	Career Education is primarily for members of minority groups or disadvantaged youth.
_____	_____	20.	Career Education is concerned only with occupationally related information.

APPENDIX G

the 20 elementary school workshop participants who completed both the pre- and post-tests showed an increase in correct responses from 73% on the pre-test to 95% on the post-test. Among the 26 middle school/junior high workshop participants who completed both tests, the number of correct responses increased from 84% on the pretest to 90% on the post-test. Similarly the number of correct responses from those in the high school workshop who completed both the pre-test and post-test increased from 84% to 90%. The test, which contained only 20 questions, was not sufficiently lengthy to reveal differences between persons completing it. However it does indicate consistent progress in learning about career education on the part of all participants during the course of their workshop experience.

APPENDIX H

ELEMENTARY, JUNIOR HIGH AND HIGH SCHOOL
CAREER EDUCATION WORKSHOP EVALUATION

1. What workshop did you attend?

20	Elementary
27	Middle School/Junior High
30	High School

2. What workshop sessions did you attend?

ELEMENTARY

	Monday	Tuesday	Wednesday	Thursday	Friday	TOTAL
Morning	10	10	10	10	13	53
Afternoon	10	10	9	10	7	46
	20	20	19	20	20	99

JUNIOR HIGH/MIDDLE SCHOOL

	Monday	Tuesday	Wednesday	Thursday	Friday	TOTAL
Morning	16	16	14	16	17	79
Afternoon	10	10	10	9	10	49
	26	26	24	25	27	128

HIGH SCHOOL

	Monday	Tuesday	Wednesday	Thursday	Friday	TOTAL
Morning	15	16	16	15	15	77
Afternoon	13	14	14	14	15	70
	28	30	30	29	30	147

3. Which sessions did you feel was most worthwhile?

ELEMENTARY		MIDDLE SCHOOL/JUNIOR HIGH		HIGH SCHOOL	
Monday	10	Monday	1	Monday	8
Tuesday	13	Tuesday	5	Tuesday	9
Wednesday	5	Wednesday	8	Wednesday	1
Thursday	4	Thursday	} 15	Thursday	14
Friday	8	Friday		Friday	9
All	4	All	8	All	5

4. Which sessions did you feel was least worthwhile?

ELEMENTARY		MIDDLE SCHOOL/JUNIOR HIGH		HIGH SCHOOL	
Monday	0	Monday	11	Monday	8
Tuesday	0	Tuesday	4	Tuesday	4
Wednesday	4	Wednesday	1	Wednesday	8
Thursday	7	Thursday	1	Thursday	1
Friday	2	Friday	1	Friday	1
None	4	None	9	None	5
No Answer	2	No Answer	3	No Answer	3

5. What was your overall impression of the workshop?

ELEMENTARY

Very Good 6 (Excellent, good, great, well done)
Interesting and worthwhile 5 (Stimulating, absolutely fantastic, gratifying and fascinating, interesting and worthwhile, entertaining)
Well organized 3
Practical 4
Good ideas for fall 2
Informative 3
Good introduction to career education 1
Positive experience 1 (good for anyone beginning a career education program)
Would rather do things than be lectured to 1

MIDDLE SCHOOL/JUNIOR HIGH

Very good 14 (Excellent)
Practical 4
Well organized 3
Extremely beneficial 3 (interesting and worthwhile, informative and stimulating)
Fantastic, much work involved 2
Very good, but different from previous definition of career education 1
Good, but almost too guidance oriented 1 (reinforced concept of teacher as more than a presenter of facts)

HIGH SCHOOL

Worthwhile, very good, excellent, very interesting, great, very helpful - 25
Helpful in clarifying terms and concepts--got us to thinking in terms of career education
Very well put together
Part good, part bad, do feel career education can be a vital force in school systems.
I thought there should be more audience participation rather than a lecture series.
Somewhat valuable, but not extensively so-- think it more worthwhile for those completely unfamiliar with career education concepts.

6. Do you have any plans for change in your classes as a result of this workshop?

All responses to this question. were positive. The following statements are representative of those responses.

ELEMENTARY

Take better advantage of community and parents as resource people 4
Will use interview/guest speaker/field trip approach 4
Will use career development concepts set forth by the Wisconsin DPI 1
Will focus on people- in their life careers rather than just the job 1
Use Child of the Week concept 4
Will take ideas back to other teachers 3
Provides a basis for future in-service 1

JUNIOR HIGH/MIDDLE SCHOOL

Will encourage adoption in our school district K-12 1
Use more "circle" techniaues 5
Attempt to orient the faculty to creating interest in the area of self 1
Group guidance sessions 1
Steer away from occupational information and towards self-awareness 3
Will lay plans for a multi-family unit if funds materialize 1
Have begun compiling my own curriculum 1
Working with curriculum coordinator in the use of this material 1
Subtle presentation of careers 2
Become a more "human" teacher 2
As an administrator hope to include new ideas related to Achievement Motivation 1

HIGH SCHOOL

Further implement career education concepts in my department 8
Would like to try some innovative ideas and activites acquired during the workshop 8
Inform and encourage staff members to implement career education concepts--act as a catalyst within my school 6
Plan to implement a broader view in group guidance, extend guidance groups, change approaches to counseling 3

HIGH SCHOOL (continued)

Utilize more people outside the school to share occupational information 4
Will personally try to acquire additional career education materials 2
Realization that changes are both necessary and desirable. Feel strongly about the need for career awareness and education in the academic areas. 2
Develop own in-service workshops and career education program and
Write own objectives 2
More relevancy between subject matter and application to career development 1

7. Do you feel that it would be worthwhile to hold workshops like this for other teachers, counselors, and administrators?

All of the responses to this question in both the elementary and the junior high/middle school workshops were positive. The high school participants responded with 27 positive answers, one negative answer and two did not respond.

8. Did you attend the workshop for University credit?

ELEMENTARY	JUNIOR HIGH/MIDDLE SCHOOL	HIGH SCHOOL
Yes 9	Yes 7	Yes 10
No 11	No 19	No 18
	No answer 1	No answer 2

9. What is your position?

ELEMENTARY	JUNIOR HIGH/MIDDLE SCHOOL	HIGH SCHOOL
Teacher 14	Teacher 12	Teacher 14
Counselor 1	Counselor 8	Counselor 7
Administrator 4	Administrator 5	Administrator 3
Other 1	Other 1	Other 4
	No answer 1	No answer 2

ABSTRACT: COVERING THE TIME INTERVAL FROM SEPTEMBER, 1970 THROUGH AUGUST, 1973, THIS DOCUMENT SERVES AS THE FINAL REPORT OF A CAREER DEVELOPMENT PROGRAM DESIGNED FOR STUDENTS IN THE HIGH POVERTY CLEVELAND MODEL CITIES AREA SCHOOLS. THE GOAL OF THE PROJECT WAS TO BRIDGE THE GAP BETWEEN SCHOOL AND EARNING A LIVING THROUGH A DEVELOPMENTAL PROGRAM BEGINNING IN THE UPPER ELEMENTARY GRADES AND CONTINUING THROUGH THE COMPLETION OF HIGH SCHOOL. AT THE ELEMENTARY LEVEL STUDENTS WERE OFFERED A BROAD BASE OF VOCATIONAL INFORMATION AND ORIENTATION TO THE WORLD OF WORK, WITH SPECIAL STUDY UNITS BASED ON THE USE OF OCCUPATIONAL CLUSTERS INJECTED INTO THE SOCIAL STUDIES CLASSES. AT THE JUNIOR HIGH LEVEL THE PROGRAM MOVED INTO AN EXPLORATORY PHASE. THE EXPLORATORY PREPARATION PHASE AT THE SENIOR HIGH LEVEL INVOLVED A WORK STUDY PROGRAM, JOB PLACEMENT UPON LEAVING SCHOOL, AND GUIDANCE TOWARD FURTHER TRAINING. CURRICULA WAS DEVELOPED FOR EACH OF THE LEVELS. THE PARTICULAR ACCOMPLISHMENTS OF THE PROGRAM INCLUDE THE DEVELOPMENT OF SOUND-SLIDES FOCUSING ON CLEVELAND, THE USE OF THE CLUSTER CONCEPT TO PROVIDE AN ORGANIZATIONAL OVERVIEW, AND THE DEVELOPMENT OF CURRICULUM GUIDES. THIS REPORT SUMMARIZES THE PROJECT, DEFINES THE PROBLEM AREA, DESCRIBES THE PROJECT DESIGN, AND PRESENTS THE RESULTS AND ACCOMPLISHMENTS ALONG WITH CONCLUSIONS AND RECOMMENDATIONS. APPENDICES CONTAIN A BIBLIOGRAPHY, THE THIRD PARTY EVALUATION REPORT, AND SAMPLE INSTRUMENTS. (NJ)

SUMMARY

Covering the interval from the beginning of the Developmental Vocational Education Program September 1, 1970, through the termination of the program on August 31, 1973, this report serves as the final report of the project.

The overall goal of the program was to bridge the gap between school and earning a living through a Career Development Program beginning in elementary school and continuing through the completion of high school.

To facilitate the attainment of this goal, specific objectives were delineated at the beginning of the program. The objectives included the following:

1. To improve the elementary students' knowledge of occupational clusters. Students in upper elementary grades will be able to identify and describe a significantly greater number of occupational classifications than children in control schools as measured by locally constructed tests.

2. To improve the elementary students' knowledge of the basic operations and uses of basic industrial and business equipment. Children in upper elementary grades will demonstrate a significantly greater knowledge of the operation and uses of basic shop tools than children in control schools as measured by locally constructed tests.

3. To improve the junior high students' knowledge of the interrelations between different functional areas of business and industry.

4. To improve the junior high students' level of knowledge of requirements and operations involved in a variety of occupations.

5. To improve the junior high students' ability to perceive the relation between specific vocational education activities and "real" occupations.

6. To improve the senior high students' attitude toward vocational education.

7. To increase the number of students completing Grade 12.

8. To increase the number of graduates attaining and holding jobs that promise room for advancement.

The vocational education program was developmental in nature and pyramidal in design, beginning in the upper elementary grades and continuing through high school. At the upper elementary level students were offered a broad base of vocational information and orientation to the world of work. At this level the special study units based on the use of occupational clusters were injected into the social studies classes.

Students learned of the broad range of occupational areas in business and industry, the role of different work areas in society, and were exposed to actual operations involved in different types of jobs.

At the junior high level the program moved into an orientational exploratory phase. The student analyzed his interests and proved his abilities and aptitudes. Students learned the processes by which goods and services were produced and the inter-relationship between the production, management and service areas of business and industry. At this level and at the senior high level the material was injected into each of the disciplines offered at the schools.

On the senior high level the student progressed to an exploratory preparational phase. Students continued the exploratory experience initiated in junior high by sampling various skill areas and finally selecting one for intensive training. A work study program enabled the students to use their major skill area in gainful employment. Services to the senior high students included job placement upon leaving school and guidance toward further training.

On all three levels career guidance was related to the special study units on the world of work, films, slides and other visual aides. Speakers from local companies and businesses were used for reinforcement. Field trips were taken to local companies and businesses. Appropriate classroom activities were developed such as simulation games, time organization problems, and role playing. Each school had a career information center which included books, pamphlets, brochures, films and filmstrips. Curricula was also developed for each of the levels.

The project has been evaluated twice prior to this final evaluation. The regional evaluation was conducted in the summer of 1971 while the local evaluation was conducted during the summer of 1972. The third and final evaluation has been compiled and serves as Appendix C of this report.

Although hindered by several problems, the project was implemented and has several accomplishments to its credit. These accomplishments include the development of sound-slides focusing on Cleveland, the use of the cluster concept which gave the student an organizational overview, the use of the discipline concept which facilitated relating the various school subjects to earning a living, and the development of a curricula guide which

includes materials from the elementary-level as well as the junior and senior high levels.

In the future, the program should be expanded to include all grades, K-12. The expansion of this program and its accompanying activities would allow the elementary students more opportunities to enhance their self-images as well as gain useful knowledge and build positive attitudes for future use.

The materials that have already been developed will continue to be used in the school attendance center in which the Developmental Vocational Education Project was first implemented. This attendance center includes all the elementary schools and junior high schools that feed into the one high school. These materials will be used as part of an ongoing career education program.

The materials used will be continually up-dated as the need arises as will the career information centers already established. These career information libraries will serve all students whether they are directly enrolled in the career education program or not, and as such render even greater service.

6 A.

The Developmental Vocational Education Program was formulated on the premise that getting a job was the next major step in the lives of over 60% of the students graduating from high school within the Model Cities area. In its role of preparing today's youth for lives as productive citizens, the schools have often failed to make the students' school experience relevant to the occupational work area that the students enter upon graduation. The Developmental Vocational Education Program has been an effort to bridge the gap between school and earning a living through a career development program beginning in elementary school and continuing through high school.

The schools involved in the project serve the Model Cities area of Cleveland (See figure 1). The number of children in these schools whose families are on public assistance averages 53%. The high poverty index underscores the need of the children in these schools for knowledge and skills that will enable them to secure gainful employment upon leaving the public school system. The schools served by the project also reflect a poor attendance rate. The rates of attendance declined from the elementary through the secondary grades (See figure 2) supports the contention that as the children progress through the public schools, they increasingly view the education offered as irrelevant to their needs. The need for measures is vital to enable them to see the relationship between what the schools offer and earning a living after leaving school.

At the time the Developmental Vocational Education Program was conceived, no elementary school in the Cleveland system had a vocational information program. Only one junior high was involved in a pilot project of a similar nature although career information had traditionally been provided through the junior high guidance programs. The need for occupational information and developmental programs at the elementary level had been expoused by Ginsburg[1] as early as 1951 and by Super[2] in 1957. Also at this time the junior high programs were structured so that the students were taking a group of skills courses but the skills acquired were not necessarily related to the students' preferred career choices.

With the Georgia Plan[3] in mind, the original proposal for the Developmental Vocational Education Program intended that youngsters in the upper elementary grades would be provided with multi-faceted, child centered program that would result in a demonstrably greater knowledge of occupational areas and a broader range of career aspirations.

The junior high vocational program envisioned by the DVEP proposal was to be restructured. Bateson and Stern[4] had advocated the use of model industries within a school so that the students could be made

Figure 1

Participating Schools within the Model Cities Area

11

Percents indicated the percent of the students from each school that "Feed" into the indicated schools on the next level.

12

aware of what role or function each facet played in the functioning of the entire industry. The use of this model industry, implemented with field trips to work sites, and employee-student interaction, would provide the students with first-hand knowledge of job conditions, requirements and wages.

Under the proposed Developmental Vocational Education Program the occupational skill sampling approach that has been successful in the Pittsburgh Occupational Vocational and Technical Program[5] was to be implemented in the senior high. This approach would facilitate the student in acquiring different skills and eventually narrowing his occupational options on the basis of his sampling experience. A second stage of the senior high implementation would be to work-study experience of attending school for 1/2 day and holding a part-time job with a cooperating firm for the remainder of the day.

Campbell's idea[6] was to be implemented also. Campbell's idea was to guide students in career choices and underscore the relation between the students' vocational education activities and the real occupational world.

As originally proposed and generally implemented, the Developmental Vocational Education Program was developmental in nature and pyramidal in design (See figure 3). The pyramidal design has been endorsed by the National Advisory Council on Vocational Education[7]. In accordance with this approach, a student who entered the program in the fifth grade and continued in it until graduation from senior high would move successively from a broad informational orientational approach at the elementary level to an orientational-explorational approach at the junior high level and then to an exploratory-preparational approach in senior high. This approach would give the student the opportunity to make better informed and broader-ranging choices at each level.

6 B.

The overall goal of the Developmental Vocational Education Program was to bridge the gap that exists between the schools and world of work through a career development program that begins in the elementary schools and continue through the students' completion of high school. Objectives were specified that would facilitate achieving this overall goal.

Objectives

The program was designed to achieve the following objectives:

1. Students in upper elementary grades will be able to identify and describe a significantly greater number of occupational classifications than children in control schools as measured by locally constructed tests.

2. Children in upper elementary grades will demonstrate a significantly greater knowledge of the operation and uses of basic shop tools than children in control schools as measured by locally construction tests.

3. Students at the junior high level will demonstrate a significantly greater knowledge of the different func-

tional areas of business and industry than children in control schools as measured by locally constructed tests.

4. Students at the junior high level will demonstrate significantly greater knowledge of the requirements of an operations involved in a wide variety of occupations than students in control schools.

5. Students at the junior high level will demonstrate a significantly greater ability to describe the relation between specific vocational education activities and "real" occupations than students in control schools.

6. Students at the senior high level will demonstrate significantly more possitive attitudes toward their vocational education than students in control schools as measured by locally constructed tests.

7. A significantly greater proportion of students enrolled in vocational education at the senior high level will complete grade 12 than in control schools as determined by project records.

8. A significantly greater number of students graduating from high school will obtain and hold jobs with room for advancement than students in control schools as determined by a follow-up study.

Other objectives implied by the project rationale and operations included:

1. The Developmental Vocational Education Program will broaden the occupational aspirations and opportunities of the Model Cities area youth.

2. Cooperation between schools and local manpower agencies will be promoted by visits of the students to company work sites.

3. Students will be more aware of the relation between what they learn in school and earning a living upon graduation.

Specific procedural objectives for each level of instruction were delineated:

Elementary Level

1. Special units on the world of work will be injected into social studies and language art classes.

   The units will introduce the students to a broad range of occupational areas and the value of each to society. The emphasis will be on occupational areas rather than on specific jobs, including new occupational areas that are expected to emerge in the future as a result of improving technology.

2. A career information center will be created in the library of each participating elementary school.

   The centers will include books, pamphlets, and films describing different occupational areas and on choosing a career.

3. A floating work orientation team will be provided to work with the elementary school teachers on developing appropriate classroom activities such as role playing, simulation games, time organization problems.

   The work orientation team will be responsible for developing the career information centers in the schools and organizing field trips.

4. Field trips to local companies and speakers from the same will be provided for a first hand exposure to the real world of work, to reinforce classroom units on the variety of occupational areas, and to see the actual operations involved in different work areas.

5. Students will participate in field trips to junior high and high school vocational education facilities to perform a number of simulated work tasks in different occupational areas.

   These activities will be organized by the work orientation team with the assistance of students at the junior and senior high levels. The use of older students will help elementary age children identify with a work role model.

Junior High Level

Grade 7

1. All students in Grade 7 will take vocational education.

Students will continued to learn the full range of occupational opportunities along with the requirements and advantage of each. Instruction will be organized around how different occupations fit into the production-management-service cycle of business and industry so that students will see business and industry as a totality.

2. A model industrial system will be established with management, production, and service components to enable the students to relate the concepts they have learned to actual experience in planning and managing the production of a product. A production line will actually produce the product and a service department will service and repair the product. Each student will spend 12 weeks learning the operations of each of the three areas.

3. A series of field trips to company work sites will enable the students to spend time with and talk to employees working in different areas to get a feel of the actual duties performed, working conditions, wages, job requirements, and advantages of the occupation.

4. The work orientation team will conduct group and individual counseling sessions in which students will discuss their reactions to the field trips and the role they play in the model industrial system. The team will assist the students in a self-evaluation procedure where the students begin analyzing their own abilities, aptitudes, and the interests in the context of future employment possibilities. Counseling will be coordinated with activities of the Guidance Department. The team will be responsible for the organizing and conducting of field trips, model industrial system activities, and instruction in the way of an economic system functions.

5. A career information center will be established in the library of participating junior high schools. The centers will contain books, pamphlets, brochures, and films on the opportunities available in different occupational areas.

6. Parent-pupil clubs will be formed for after school or evening meetings using school facilities in which the parents will join their children in working on projects of interest to the students. The clubs will be organized and conducted by the work orientation team.

Grade 8 and 9

1. The vocational course of study will become optional to the student at grades 8 and 9.

2. On the basis of his sampling of a broad range of occupations and his exposure to and experience with some of the operations involved, the student with the aid of the work orientation team will choose areas that are of interest to him for further study and experience.

3. Counseling, field trips, industrial speakers, use of the career information center, participation in the model industrial system, and parent-pupil clubs will continue as in grade 7, but more time will be spent on instruction and experiences in narrower work areas. The orientation will remain exploratory, but on a deeper level and within a more restricted range. Students will begin to build competance in a number of skill areas. Instruction will be offered in the following areas:

   a. Woodwork
   b. Mechanical Drawing
   c. Printing
   d. Metal Shop
   e. Materials and Processes
   f. Typing
   g. Introduction to Management
   h. Retailing
   i. Home Economics (Food and Clothing)

4. Students will participate in instructing children from the elementary schools in the operations of various shop tools and machinery.

High School Level

1. A career information center will be established in the senior high school with a broad array of information on job opportunities, post graduate training programs, job requirements, and career planning.

2. At each grade level the work orientation team will provide intensive occupational counseling to help the student analyze his interests, aptitudes and abilities,

make decisions as to the next step to take in his career development. Such counseling will be coordinated with the activities of the Department of Guidance.

3. At grade 10 the students will sample among different job skills. Guided by the work orientation team student will choose four occupation areas among which to rotate on a nine-week basis. Instruction will be offered in the following areas:

   a. Typing, Shorthand, and Office Practice
   b. Bookkeeping
   c. Retailing and Sales
   d. Wood Shop
   e. Metal Shop
   f. Drafting
   g. Appliance Mechanics

4. In grade 10 the work orientation team will instruct the student in how the particular skills they are learning form the basis for the operations involved in particular occupations. This instruction will be supplemented by work site visits to observe the operations involved in related occupations and by demonstration visits by tradesmen and other employees from cooperating companies to reinforce the idea that the skills being learned bear a real relation to the opportunities available in the world or work.

5. At grade 11, on the basis of their previous experiences and with the guidance of the work orientation team the students will choose one major occupational skill in which to major for intensive training. Instruction will be offered in the following areas:

   a. Cooperative Office Education (typing, shorthand, bookkeeping, office programming)
   b. Merchandizing, Retailing and Sales
   c. Banking
   d. Home Economics (foods and food service, home nursing, vocational homemaking)
   e. Carpentry
   f. Appliance Mechanics
   g. Auto Mechanics

h. Machine Shop
i. Mechanical Drawing and Drafting
j. Graphic Arts and Printing
k. Building Maintenance

6. In grade 11 students majoring in different work areas will continue to make work-site visits to observe how the skills they are learning match those used by employees working in different occupations. They will also observe at work and talk to students in grade 12 who are involved in a work-site program, so that they may see first-hand that the skills they learn in school are saleable skills and form the basis for earning a living.

7. At grade 12, the students will enter a work-study program in which they will attend school for 1/2 day and hold a part-time job with a cooperating company for the other half. The job will enable them to earn money while putting their training to use in a real work situation. Placement for work-study will be the responsibility of the work orientation team, who will monitor the students' performance on the job, provide guidance and support and assist the student in interpreting his work experience in terms of what his next step in career development will be.

8. The work orientation team will play a large role in helping the student find employment or plan for further vocational training following graduation. These efforts will be coordinated with the job placement program operated by the Job Development Project, a program currently operating under state funds which has record of placing 95% of its student clientele in jobs after graduation.

6 C.

Being pyramidal in design and developmental in nature, the program was to facilitate the natural progression of the student from one phase to another with a maximum of continuity and a minimum of disruption. Upon completion of the multi-faceted program offering information and orientation to the gamut of occupations, the fifth and sixth grade pupil was to progress naturally to the next plateau in the design.

At the junior high level the student was to embark upon an orientational-explorational course of study. Within this framework the student was acquiring skills to add to his previously gained knowledge about the various occupational clusters (See figure 4). The acquisition of these skills was not to be in the traditional project-centered junior high industrial arts program. Instead a "model" industry was to be used to illustrate to the student the inter-relations between production, management and service areas of business and industry. In one junior high, the production woodshop achieved a fair amount of success.

Upon entering senior high, the student is at the threshold of the last major phase of the pyramid. The culmination of this program will be graduation from high school with enough skills to obtain and retain a job that offers opportunities for advancement (See figures 5-7). In strving for this end the student found the program narrowing from a career-orientation-explorational one to a career-preparational one. Having allowed the student to sample various skills, his school program now provided for intensive training in one skill area of his choice. The student's school program in his senior year was supplemented with a half-day work experience that not only provided on-the-job experience but offered the incentive and satisfaction of earning a wage.

The line of administrative authority and responsibility is represented by figure 8. Solid lines represent a line relationship and broken lines a staff relationship. Provision had been made for advisory input from Model Cities at all administrative levels.

In addition, there was established a Developmental Vocational Education Committee composed of seven members: Four representatives of the Cleveland Model Cities Association and three representatives of the Cleveland Board of Education, one of which was the Project Manager of the program. The Committee made recommendations for effective implementation of the program. Recommendations were carried to the administration of the Cleveland Public Schools through the Model Cities Cleveland Public Schools Liaison person.

The staff that implemented the Developmental Vocational Education Program involved three work orientation teachers, 10 vocational aides and the project director. During the second year there were staff additions that resulted in four work orientation teachers, and 13 vocational aides. At the end of the third year, however, the number of vocational aides had been reduced to seven. Participating teachers within the Cleveland School System totaled 215 while teacher participation in the non-public schools totaled eight.

In the public school system, the 10 participating elementary schools had a total of 5,182 students. Of this total 1,353 students par-

DEVELOPMENTAL VOCATIONAL EDUCATION PROGRAM

ticipated in the fifth and sixth grade program. The three participating non-public schools had 241 students participating.

METHODS AND MATERIALS

Elementary Level:

1. The program was injected into social studies classes using fifteen occupational clusters as guides. The clusters introduced the students to a broad range of occupational areas and the value of each to society.

   The emphasis on the elementary level was on introduction to the occupations rather than detailed facts about them. Between September and November, 1971, five occupational clusters were introduced to the elementary schools. In the period of December, 1971 to March, 1972, two more clusters were added to the list. By June of 1973 the list had been expanded to include a a total of 15 (See figure 9). Using the 15 clusters as a guide, role-playing and simulation games were used. Also curriculum for the various clusters were developed (See accompanying Career Development Curriculum Guide).

2. In each elementary school a career information center was established. Each center contained books, pamphlets and similar materials.

3. To each elementary school a vocational aide was assigned to work with classroom teachers in the development of appropriate activities. One such activity manifested itself as "Operation Shoebox".

4. Speakers were scheduled to address classes within the schools on various topics related to careers. From December 1, 1970 through June 30, 1971 students at Mary B. Martin and John W. Raper Elementary Schools heard several speakers on several different subjects (See figure 10). Subsequently students were addressed on the communication and manufacturing clusters.

5. Field trips were scheduled to local business for first hand exposure to the real world of work. Again, various clusters were dealt with during the period of December, 1970 and June, 1971 (See figure 11). Other field trips were taken throughout the program (See figure 12).

6. The sound-slides, films, filmstrips, transparencies, posters and bulletin boards served as audio-visual aids in illustrating various occupational areas (See figures 13-17).

Junior And Senior High Levels:

1. At the junior and senior high levels the program was injected in all areas (See figures 18-25). The occupational clusters were related to the subject being studied through lesson plans that included objectives, activities, materials needed and tests (See accompanying Career Development Curriculum Guide).

2. As at the elementary schools, career information centers were created in the libraries, speakers and work-site visitations scheduled, along with the use of appropriate level audio-visual aids.

3. A specialized aspect of the junior and senior high levels was the individual/group counseling. Conducted by members of the program staff and co-ordinated with the guidance department, these sessions were to serve as a period for student reactions to the activities of the career programs and to assist the students in self-analyzation of their own abilities, aptitudes and interests in the context of a career choice.

4. Father and son vocational courses at the East High Annex used.

6 D.

The results of the program can best be highlighted by the strengths and weaknesses of the program. Following this highlight section the results and accomplishments will be dealt with in greater detail.

Strength 1:

The use of a developmental program with a pyramidal design which started in the upper elementary grades and continued until graduation from senior high school.

Result

Provisions were made for the student to start with a broad career informational base and move successively to a career-explorational phase and then to a career-preparational phase.

Strength 2:

The use of the cluster and discipline concepts.

Result

Through the use of the cluster concept the children were equipped with the organizational advantage of grouping. Through the use of the discipline concept, students were able to grasp the relation between what they were studying and occupational choices.

Strength 3:

The opportunity of students to develop positive attitudes toward the world of work in general and various specific occupations.

Result

Evaluative evidence indicated that student attitudes were changed by being in the program. DVEP students exhibited occupational preferences different from those of the control students and specifically were more willing to express positive attitudes to lower prestige jobs.

Strength 4:

Senior high students involved in on-the-job training.

Result

Through the work-study program the students were able to use the skills acquired in the classroom, develop good work habits, and enhance their self-image through earning a wage.

Strength 5:

Program designed as a child-centered activity.

Result

With this approach, the child's needs were more profitably met than had the approach been in a teacher-dominated, teacher-orientated room in which teacher preferences might have been a hinderance.

Strength 6:

Enrichment of Model Cities area students' world through speakers, field trips and other supplemental activities.

Result

The speakers provided the students with face-to-face presentations and served as models for the students. The field trips not only provided at-the-site information and stimulation, but served to make the students more aware of the world around them and within their grasp. Above all, these activities helped to break

the routine of a teacher-dominated classroom and arouse student interest in the program.

Strength 7:

The development of audio-visual aids, many of which centered on Cleveland and highlighted the opportunities that are here rather than far away.

Result

Through this method the students' awareness of what is real and within their reach was reinforced. In addition these aids served in lieu of field trips in which some students could not participate due to are requirements or illness.

Strength 8:

Establishment of a career information center in each of the participating schcols.

Result

The career information center served not only the students participating in the program, but it was available for all the students in the participating schools to use. Further, the career information library can serve as a permanent resource center for student inquiry and its materials can be readily updated.

Weakness 1: Late funding.

Result

Late funding got the program off to a slow start. If funding had been received earlier, manypitfalls could have been avoided.

Weakness 2: Insufficient number of personnel.

Result

The program could have been implemented with greater ease had there been a co-ordinating teacher for the junior high level and another co-ordinating teacher for the senior high level.

The scope of the program was such that a project director should have been employed whose only responsibility was the success of the DVEP.

Weakness 3: Lack of in-depth orientation of staff prior to program implementation.

Result

Lacking a substantial orientation prior to entering the classroom,

the vocational aides found themselves lacking teaching skills, clarity about their role, and certain vocational skills necessary for the various supplementary activities of the program.

Weakness 4: Insufficient orientation of participating teachers.

Result

The teachers often misued or under-utilized the vocational aides. Various sources implied that some teachers may have felt imposed upon in taking part in the program and that their role as "The Teacher" was threatened.

Weakness 5: Insufficient time allotted for junior and senior high operations prior to project termination.

Result

As it developed, the DVEP had only one year's operation at the junior and senior high level. It proved to be an insufficient amount of time. A two-year minimum of time was needed for this phase of the program.

Weakness 6: No provision for the evaluation of participating teachers.

Result

If participating teachers had been evaluated as part of the DVEP and had known that such an evaluation would be made it is probable that several things would have resulted: (1) Better class records would have been kept that would have yeilded valuable data for the complation of this report and (2) The knowledge that they were being evaluated with the DVEP as an integral part of their performance and not as something extra would have changed the less than positive attitudes of some.

Weakness 7: Little or no parent participation.

Result

More parental participation would have enhanced the program. The parents' positive attitudes would have reinforced the program's materials and activities.

In the implementation of the Developmental Vocational Education Program several problems arose. The problems encountered and the manner in which they are dealt with can be decisive factors in a project's success. For this reason the Developmental Vocational Education Program's "problems" of the first year in particular must serve as a backdrop for the accomplishments of the program.

The basic problem of the first year was lack of funding until the Fall of 1970. This, in turn, created difficulties in the recruitment of staff, orientation of staff, procurement of materials, reuctancy of participating teachers to disrupt their semester plans and hesitancy of some teachers to become involved with the child-centered activity the Developmental Vocational Education Program offered.

Of the above mentioned first-year problems, most of the detrimental effects of late funding had been dealt with an erased according to the regional evaluation by July, 1971. As it pointed out, the previous semester (and summer of '71) would allow sufficient time for the procurement of materials and development of teacher guides.

While the procurement of materials and the development of teacher guides could be accomplished with more time, the problems of orienting and fully preparing the vocational aides and the participating teachers proved to be a bit more difficult.

Problems with the participating teachers centered around a lack of communication. To some of these teachers the manner in which the Vocational Aides and program materials were to be used was unclear. Some teachers misued or under-utilized the aides by having them just sit through sessions in their classrooms where the aides should have been involved in some supervisory responsibilities and tutoring capacities that would have bolstered the aide's skill areas. Other teachers under-utilized the aides in that the aides' role was limited to the presentation of Developmental Vocational Education Program materials. Still other teachers who were not particularly enthusiastic about the Developmental Vocational Education Program failed to give the aides the positive reinforcement necessary to build the aide's self-confidence in the early stages. This failure inpart, seemed due to teachers feeling "threatened" by the aides presence.

The other major program problems which the teachers centered around Developmental Vocational Education Program materials. In this case the problem was two-fold. The lesser of the two problems was the teachers' misconception that Developmental Vocational Education Program audio-visual materials should be left with the teachers for use in the absence of the aides. Also, this misconception about audio-visual materials caused a reluctance on the part of some teachers to either present an entire Developmental Vocational Education Program lesson in an aide's absence or to conclude a lesson that an aide had started but time had prevented him from finishing. In short, not all participating teachers had been sufficiently "sold" on the Developmental Vocational Education Program in that completing a lesson was looked upon as "extra work".

The second problem was particularly cited in the local evaluation in regard to program delivery in the elementary schools. This involved

the somewhat tenuous relationship between the Developmental Vocational Education Program materials and the elementary social studies curriculum. In this evaluation the vocational aides voiced a difficult in relating and justifying any single presentation to the current social studies unit. The difficulty was that the program was limited to one class session (40 minutes) a week and the time to complete a given occupational cluster often required several sessions to complete. It became readily apparent that the two sets of materials increasingly diverged from one another and would follow independent courses.

The teachers substantiated the aides view of injecting Developmental Vocational Education Program material into the elementary social studies curriculum. The justification for relating the two sets of materials to one another seemed somewhat artificial.

As stated above the second major enduring problem centered around the vocational aides. Some of the difficulties in this area have been referred to and are comparable to the "teacher" problems.

Initially, the original ten aides hired were not given sufficient orientation. This, in part, was due to the late funding of the program. The aides felt that not only the quantity of traning they had received but the quality of it had hindered program delivery.

In lieu of observing the participating teachers at the beginning of the program, the aides felt they needed more substantive training in regard to their teaching skills. This deficiency of teaching skills had been noted by several teachers and principals. Also, when those aides attempted to learn the necessary skills, those who were working with less enthusiastic teachers found it more difficult to do, possibly due to less positive feedbacks. The aides voiced this discontent as a dependency on the teachers.

During the course of the program several aides for various reasons resigned giving short notice before doing so. This caused several problems. First of all, if the aide left in the middle of the school quarter, because he had to be a college student, his replacement had to wait until the following registration period. Because most of the work in the program, heretofore, had been carried on by the aide, many teachers felt reluctant to carry it on during his absence as they regarded it as "extra work". Some teachers, on the other hand, agreed to carry the program themselves and were reluctant later to accept a new aide who might suddenly leave the program.

The second problem triggered by aide resignations involved their replacement. When a replacement was obtained, circumstances necessitated a limited orientation period. Then the aide faced being accepted

as new personnel in the schools by principals and teachers. Then, too, there was a time lapse between aides and this lapse might have caused some students to lose interest or to have difficulty in getting acquainted with a new aide.

The aides designated one other area as a problem. The problem was of an administrative scheduling nature within the Developmental Vocational Education Program project, the individual schools and between both. A frequent problem, for example, involved scheduling and co-ordinating field trips.

Other problems were encountered by the Developmental Vocational Education Program. One of these was the problem of obtaining first-hand materials from various industries. Many industries refused to issue information regarding the established union agreed-upon wage scale for various positions. Some industries do not have pamphlets or other printed information available, and invariable some companies are slow about filling out and returning questionnaires.

Another problem concerned the number of staff. At the junior and senior high levels, the co-ordinating teacher felt he was spreading himself too thin. He found himself being responsible for a section of the program that involved 3,358 students. Also, the Developmental Vocational Education Program was such that it needed a fulltime director who could devote all of his capabilities and energies to the program's success.

Endeavoring to take elementary-age students on certain field trips caused some difficulties. Many industries refused to admit students of this age because they feel that too much danger is involved. Also, field trips, in some occupational endeavors, are limited by the short operational season.

One of the keys to the success of any educational endeavor is parental participation. For the most part, this project seemed to lack this key ingredient. Certain teacher guides were designed to secure parental participation through the use of TV, radio and newspapers (See figures 26-29). For example, a parent and child might view a TV medical show together trying to identify the various medical occupations that were presented in that show. Although no data was collected regarding parental participation, it is worthy to note its absence.

As for parental involvement at the junior and senior high levels, the co-ordinating teacher did not note any. The Father-Son activities did provide some involvement, and as such, was an exception.

It is against the above background of problems that the accom-

FIGURE 26

TELEVISION PROGRAMS RELATED TO DISCIPLINES

FIGURE 27

TELEVISION PROGRAMS RELATED TO OCCUPATIONAL CLUSTERS

FIGURE 28

RADIO PROGRAMS RELATED TO OCCUPATIONAL CLUSTERS

FIGURE 29

NEWSPAPER RELATED TO OCCUPATIONAL CLUSTERS

plishments must be weighed. By the summer of 1971, when the regional evaluation had been compiled it found that those elementary teachers and the school administrator who had been interviewed and who had been involved with the program voiced strong support for the elementary school component and praised highly the past efforts of the DVEP's teachers and vocational assistants.

Father-Son activities and vocational courses, such as automotive mechanics and building maintenance were established at the East High Annex. Activities included the establishment of career clubs and enrollment of the students in vocational courses.

The local evaluation, conducted in 1971-72 using a control group and a multiple-factor analysis various design, obtained significant results in testing the objective that DVEP students would demonstrate greater knowledge of certain occupational clusters (See figures 30 a-f).

Also tested were the attitudes of DVEP students and control students to certain jobs. In the areas of knowledge, DVEP schools obtained significantly higher achievement than any control schools.

Concerning attitudes, it was found that DVEP males and females were more willing to express more positive preferences for lower prestige jobs and less willing to express high positive preferences for higher prestige jobs.

The evaluation also included information on the organizational aspects of the program. Most teachers and principals who were interviewed at this time indicated a favorable reaction to the concept of developmental education and were favorably impressed with program delivery despite and handicaps mentioned earlier.

In summary of this evaluation the following three results were stated:

1. The empirical investigation indicated that the DVEP did result in significantly greater occupational knowledge for students participating in the program.

2. Program participation affects the perceived preferability of certain jobs. Particularly, the DVEP students were more willing to choose lower prestige jobs. Regarding the students' attitudes toward work-related concepts, the data did show more positive attitudes toward certain specific job concepts.

3. In conclusion, the DVEP project successfully impacted on the target population based on the results for the two outcome objectives.

Also during the summer of 1972 a liaison worker was hired to assist the Developmental Vocational Education Program staff. He was to be the link between the program and the community by planning meetings with the PTA members who had children in the participating schools. The liaison worker also was instrumental in gathering information and meeting with persons who helped to implement the non-public school phase of the program.

During the fall of 1972, the non-public school phase of the program went into operation. By February, 1973 these schools offered data that indicated increases of the participating students knowledge in certain presented clusters from pre- and - post - test results (See appendex D).

"Operation Shoebox" was implemented in one elementary school. As a hands-on project, the construction of the shoebox enabled the students to utilize many subjects they were studying including math, spelling, English, reading, writing and gave them the opportunity to express their creative abilities.

The project was of an assembly line nature, giving each student the chance to work independently, and to learn skills such as measuring, sanding, glueing, hammering, varnishing and painting. The simple tools involved in these tasks were employed by the student.

The boxes were on display at the school and parents were invited to view them. Occupational clusters related to this project included construction; fine arts and humanities; communication media; marketing and distribution; and business and office.

In the two junior highs and the senior high, field trips, speakers, audio-visual aids and the career information library were made available as they were in the elementary schools. Also, at one junior high a production woodshop achieved some success.

The major accomplishment of the junior and senior high schools involved the injecting of the project into the various disciplines. Thus, the students were able to relate the subjects they were taking to real occupations. Also the co-ordinating teacher and his aides were available to give the students individual and/or group career information and counseling.

In the three upper level schools a total of 3,358 students participated in the program.

Accomplishments of the Developmental Vocational Education Program project must necessarily consider the curricula and materials developed to implement the program. Elementary, junior and senior high curricula were developed for most of the fifteen occupational clusters. The elementary curriculum includes lesson plans and pre-and post tests. The junior and senior high curricula include lesson plans along with some pre-and post-tests.

To facilitate different aspects of the curricula, field trips were taken which not only helped with the presentations but enriched the lives of the Model Cities area students.

In appreciation of these field trips "Certificates of Appreciation" (See figure 31) were sent to the various companies' representatives who assisted in these endeavors.

As an audio-visual aid for general use and substitute for certain field trips, sound-slides were developed for the clusters.

Transparencies were developed to aid in the orientation of staff. Others were developed for class presentations at the various levels.

To supplement the field trips, sound slides, transparencies, and curriculum, posters were developed and appropriate filmstrips made available.

As the Developmental Vocational Education Program was set up, the vocational aides were to be enrolled in Cuyahoga Community College on a part-time basis during the school year and full time during the summer in order to advance their knowledge and skills. The Developmental Vocational Education Program was to pay the aides tuition.

As a requirement for being involved with the program, the aides had to be successfully working on their college program. While most of the aides experienced some difficulty in college, only one found it necessary to withdraw from the Developmental Vocational Education Program due to failing grades.

Some material that was used in the various curricula included information that had been prepared from the use of the advertising section of the telephone book.

Other material reflected information compiled from a survey of a Cleveland newspaper (See figure 32). The results of the newspaper survey supplied supplemental data for curricula development. It was noted that the jobs people are willing to do, do not coincide with the availability of positions and that students would have to be made aware of the

occupational areas in demand in order to train for jobs that offer employment.

Finally, basic to all levels and each of the schools was the establishment of a career information center. These centers served as a reference for pupil inquiry in addition to the aide or in his absence.

6 E.

Evaluation of Project-Prepared by Third Party (See Appendix C).

6 F.

Generally it can be said that in spite of the problems incurred, the Developmental Vocational Education Program had more successes than failures in improving the occupational knowledge and attitudes of participating youth. The program had impact in the elementary schools. As for the junior and senior high levels, while the program achieved some successes at these levels, it needs more than a one year trial. Certainly if the program had been in operation longer, more definite conclusions could be drawn.

In the future, the "people" of the project should be expanded to include all grades, K-12. At the elementary level the project should not be limited to the social studies curriculum as not all students might be enrolled in it. If the program were expanded to a K-12 basis, starting in the elementary grades the children could be involved in simple hands-on projects that would build skills, co-ordination, enhance their self images through production and help form their concepts about work having an inherent dignity. As the child progressed on to graduation and a job, these concepts, skills and information could be added to with the result being a better equipped citizen with more specialized skills and knowledge than one who had not taken part in the total program.

A problem that needs to be resolved and that has implications for future projects is the need for early funding. Earlier funds would allow sufficient time to procure materials, develop teacher guides and start the orientation of staff.

A similar problem to be resolved would be the hiring of personnel. One of the stipulations in the project design was that the vocational aides be hired from residents within the Model Cities Area. With this stipulation in mind, the aides were hired from said area. In the future, more time and funds should be expended in order to secure more experienced and/or better qualified staff members.

The personnel would need more time for orientation and an orienta-

tion more substantive in nature than just observing teachers. The vocational aides need not only teaching skills, but vocational skills that will allow them to initiate more "hands-on" project.

Another problem with personnel needs to be resolved in the future. The work load at the junior and senior high level is too much for just one co-ordinating teacher. Considering the number of students involved and relating work and responsibilities, in the future, it might be best to have two co-ordinating teachers, one for each level.

The Developmental Vocational Education Program involved a sufficient amount of work to have employed a full-time project director. This is not meant as an aspersion on the project's director. It just points out that because of his other duties, he was not able to devote his full time, capacities and energies to the project's success.

Better orientation of the participating teachers and administration is also required. This group really needs a high-powered presentation (s) that will "sell" them on the project and clarify misconceptions concerning the use of the aides. If this group is enthusiastic, it can give the vocational aides the support they need. Also, if "sold", the teachers will enhance and expand aide presentations for the students' betterment and assist in securing parent participation.

As a recapitulation the basic strengths and weaknesses of the program can be stated as follows: Strengths of the Program.

1. The use of a developmental program which started in the upper elementary schools.

2. The use of the cluster and discipline concepts.

3. The opportunity of the students to develop positive attitudes toward the world of work in general and various specific occupations.

4. Senior high students involved in on-the-job training.

5. Program designed as a child-centered activity.

6. Enrichment of Model Cities area students' world through speakers, field trips and other supplemental activities.

7. The development of audio-visual aids, many of which centered on Cleveland and highlighted the opportunities that are here rather than far away.

8. Establishment of a career information center in each of the participating schools.

Weaknesses of the Program:

1. Late funding
2. Insufficient number of personnel
3. Lack of in-depth orientation of staff prior to program implementation
4. Insufficient orientation of participating teachers
5. Insufficient time allotted for junior and senior high operations prior to project termination.
6. No provision for the evaluation of participating teachers
7. Little or no parent participation

The Developmental Vocational Education Program materials that have been developed and the equipment purchased shall continue to be used. The materials will be used for supportive service to an on-going career education program in one attendance center in Cleveland. This center includes one senior high school, all junior high schools and the elementary schools. These supportive services will be extended to all students participating in the education program of that school attendance center.

The equipment as well as the materials (See appendices A & B), will be used in the staff orientation and implementation of a career education program. Additional sound slides and other materials will be provided as the need arises. The career information center in the library of each school will also be maintained to provide an on-going reference for students.

APPENDIX A

BIBLIOGRAPHY

APPENDIX A

BIBLIOGRAPHY

Occupational Outlook Handbook
U.S. Department of Labor
Bureau of Labor Statistics
Washington, D. C.

This handbook is a guide to employment opportunities in a broad range of occupations that covers all the principal areas of work. It brings together information of significant for those who are planning a career. Service as a basic tool in the vocational guidance process. We use this guide to gather comprehensive information on career opportunities.

Career Opportunities
New York Life Insurance Company
Box 51, Madison Square
Station New Yor, N.Y. 10010

Soft back book compared of a series of articles designed to help guide young people to a better future. These books are easy reading materials. They are used as a part of our careers library. We fine it good in that our students can easily relate to it, each article is based on the experience of one who has distinquished himself in his respective field.

English On The Job
Jerome Carlin
Golbe Book Company, Inc.
New York 10, New York

This book capitalizes upon that interest by organizing the English activities around a core of vocational guidance. We use it because it not only improve the students own english expression; they also gain insight into knowledge of some of the problems he will face in choosing his course. The students learning proceeds simultaneously in two directions: Toward a better understanding of his potentialities in the world of work and toward a better command of the communication skills needed in all phases of everyday living.

The Story Steel
United State Steel Corporation
600 Grant Street
Pittsburgh, Pa. 15219

A pamphlet style book which describe how steel was made. We use it to stress the importance of steel, it takes you from smelting of metal in prehistoric through the fascinating development of the iron

making processes.

The Epic of Steel
United State Steel
Public Relations
100 Erieview Plaza
Cleveland, Ohio 44114

This is a resource book used to get more detailed information about the steel industry.

Your Future In Daily Newspapers
American Newspaper Publishers
Association Foundation
750 Third Avenue
New York, New York

This is an easy to read material describing the jobs in the newspapers field. It is used as a part of our career library.

Hospitality Program
(Food Service & Lodging Ed.)
Council on Hotel, Restaurant and
Institutional Education (1970)
1522 K. Street, N. W.
Washington, D. C. 20005

This book is used to gain information in the area of good service and lodging. It explains the requirements one need if he or she is interested in managing a large hotel or motel. It also explain how one might go about getting into the areas of food catering.

Health Careers
The Greater Cleveland Hospital Association
1001 Huron Road
Cleveland, Ohio 44115

This guide provides minimum basic entry information about allied health education programs in Northeast Ohio. We have used this booklet as a reference tool for seeking information about an approved health career program. It explain in details the jobs available, the requirements, the grants available and suggestive places for training.

Aim High Vocational Series
Richards Rosen Press, Inc.,
New York, New York

The Aim High Vocational Guidance series is for the young person who is looking for a job. All of the books are written by experts in the occupations who know what the jobs are about. The series covers all those occupations have opportunities for young people and will help them to make decisions concerning them.

Careers In Depth
Richards Rosen Press

This series covers all the careers in practical terms for the young man or woman who is interested in more than just a job. All books were written by prominent men and women who are successful in their chosen fields.

Handbooks Of Job Facts
Scientific Research Associates

An occupational summary which helps to pin point the basic features and trends of a variety of significant occupations; contains concise summaries of basic data on 300 major occupations.

Industrial and Commerical Wiring
Kennard C. Graham
American Technical Society - Chicago, U.S.A.

This book has been rewritten to reflect the latest developments in the electrical field; covering new techniques and materials, and incorporating the latest additions and changes in the National electrical code. Its especially good that it begins with basic lighting terms and principles. Study guide also accompanies the book.

Electrical Construction Wiring
Walter N. Alerick
American Technical Society, Chicago, Ill 60637

This book includes the latest accepted changes in wiring, also the more traditional wiring precedures that are still recognized by the NEC. The text is very suitable for self-study. Questions are found at the end of each chapter for personal check up, classroom discussion, or assignments. They are designed to reinforce the information given in the chapter and to aid in giving directions for the review of the material in the chapter.

Related Mathematics For Carpenters
L.S. Chamberlain
American Technical Society

This book deals with mathematics as it relates to a practical occupation. The authors teaching experience demonstrated that students found it easy to learn mathematics when the materials consisted of realistic problems such as one might encounter on a job.

Automotive Maintenance and Trouble Shooting
Leslie F. Goings and Edward D. Spicer
American Technical Society
Chicago, 60637

This hard back book is based upon three main objectives (1) To show how to prevent most troubles; (2) to find out how to quickly and acquately locate cause of any trouble; (3) once it is known what is wrong, to show how to restore the car to satisfactory operations.

A Guide To Professional Careers
Walter Duckat
Julian Messner, a division of Simon & Schuster Inc.
New York, New York, 10018

This book is as it said a guide to professional careers. Many careers are mentioned in this book for college-bound students. The requirements, training, duties, salaries and future outlook for each career are clearly detailed, with helpful cross references to other closely related professional careers. The book is unique in that each career description includes questions to determine the reader's interest in and capabilities for the profession.

How To Plan A House
G. Townsend & J. Dalzell

A multi-purpose book written in a practical and authoritative manner. Designed to instruct the layman on house planning intelligently, the books is also written to be of value to builders, developers apprentices and students wishing basic information on planning. The book provides an entire course in design in the residential field presenting plans, how plans are made, and factors involved in shoping plans?

Machine Shop - Operations & Setups
Porter Lascoe, & Nelson

A text written by professionals in the field, with the purpose of providing basic training in conventional machine operations and information regarding the lastest developments and machine book business. The book also includes the student with innovations which will come into use in the buture using illustrations and language basic to the trainee.

Concrete Block Construction: For Home & Farm
J. Dalzell, Townsend

A guide written by professionals working in the field which carries the reader step by step through experience tested methods of erecting a structure designed to eliminate common errors in the use of concrete blocks, this book is filled with instruction valuable to the beginner as well as the mason inexperienced with the concrete blocks.

Steel Square
Townsend

A "how to do it" book with detailed instructions and illustrations for the carpenter or helper on the use of the steel square. This book is compiled in such a way as to explain lines and angles in a simple and practical manner; answering questions from "what is a steel square" to "how to building a roof". A valuable look in any carpenter's handbook.

APPENDIX B

INSTRUMENTS USED

APPENDIX B

INSTRUMENTS USED

S. R. A. Occupational Exploration Kit
Science Research Associates
Chicago, Illinois 60611

The occupational kit provides tudents with a systematic approach to job investigation. One important part of his kit is the scanner. The scanner is a coding device which help the student chose an occupational area that he will most likely qualify for in accordance to interest, ability, and education. This kit also include illustrated occupational briefs describing specific career areas.

S. R. A. Work (widening occupational kit)
Science Research Associates
Chicago, Illinois 60611

The Work Kit is used to help students expand their knowledge of the world of work, to recognize families of related jobs, to develop a deeper understanding of his own abilities and interests, and to learn about the type and extent of education needed to prepare adequately for various occupations. This kit also has five colored filmstrips that we used as an introduction to the world of work and to the many types of people who are a part of it.

Title of filmstrips

(1) Who Are You?
(2) What Do You Like To Do?
(3) What Good Is School?
(4) What Is A Job?
(5) What Are Job Families?

Language Development Kit (S. R. A.)
Chicago, Illinois 60611

This kit is composed of many large charts. Each chart depicts a differenct vocational area. Each set of charts has a space for new words to be added. Pens with erraseable ink are also included. Each set of charts provided pictures that students can easily related to and very readily write themes on.

3M Sound - Slide Machine
Minnesota Mining and Manufacturing Company

The 3M Brand Sound-Slide concept provides a complete automatic presentation which characterizes slide tape or slide talk programs. The

machine is easy to operate and maintain, it combines in one compact unit all the features of a 35MM slide projects and a magnetic disrecord and sound play back. We are using this machine to show slides we took of local agencies. With the machine comes a impact tray which holds up to 36 slide frames. The machine is good in that it stops, repeats and records depending on the person operating it and the material being stressed. The most important facts is that we show our own slides and narriate our own sould discs.

Camera Konica C. 35
Appliance City
Cleveland, Ohio

This camera is pocket size automatic that we've used to photograph local vocational industries. The photographs are developed in the form of a slide. Each slide is mounted on a single strudy frame and its accompanying magnetic sound track. They are later used on our 3M Sound-Slide Machine.

Chronicle's Occupational Library
Chronicle Guidance
Publications, Inc.
Morauia, New York 13118

This library consist of a collection of occupational information field in an unique system based on D.O.T ("Dictionary of Occupational Titles").

Occupational Briefs	The briefs are revised frequently to keep all information current. Our four hundred titles are now available.
Reprints	Reprints are taken from many technical publications. They give word pictures of occupations as seen by people working in them.
Posters	Posters deal either with occupations described in the briefs or with career and educational topics.
Other Materials	Include booklets, pamphlets, and brochures from government and business sources.

Cassette Tape Player & Recorder
Rheem Califone AV 80
Harpster Audio Visual Equipment Inc.
Cleveland, Ohio

This instrument was used to record classroom activities and discussion to be retained for playback. Complete talk shows were recorded during a class seccession. Commericals and all were entitled in this talk show, this done in connection with our communication cluster. This instrument was also use to transer voice into our sound slide system.

Educational Resources Division: The World of Work
Educational Design Inc.
47 West 13th Street
New York, New York 10011

The instrument consists of three kits of materials:

1) On The Job, 2) Getting A Job, and 3) Cross Vocational Skills and information. Each kit contains lesson and discussion cassette tapes along with student work books. The lesson tapes and student work books work equally well on an individual or group basis. The discussion tapes serve as spring boards for class discussion and role-playing. We used these kits in the senior high classes.

Overhead Projector: Buhl 80/14

We used this instrument to show transparencies during staff orientations and classroom presentations.

Thermofax Transparency Maker - 3M
Minnesota Mining & Manufacturing

With this instrument we produced many of the transparencies that were used in staff orientation and classroom presentations.

16MM Projector: Singer Graflex 16

This machine was used to show the various films available to the students.

Dukane Sound Filmstrip Projector: A-V Matic

This automatic sound filmstrip project has a TV style screen and plays the record which accompanies the filmstrip. It was used for individual and small group instruction at all levels.

SRA Knowledge Needed To Obtain Work (KNOW)
Science Research Associates
Chicago, Illinois 60611

This teacher-counselor guide included transparencies to help students obtain their first job. Units included: filling out an application, where to seek work and taking a test.

Career Education Series: Popeye Comic Books
King Features
235 East 45th Street
New York, N. Y. 10017

The comic books cover each of the various fifteen clusters. This materials combines high interest information with elementary school vocabulary. While we have used these primarily in the elementary grades, they can readily be used in the junior and senior highs for the slow or non-reader.

APPENDIX C

EVALUATION

Human Services Design Laboratory

School of Applied Social Sciences
Case Western Reserve University
CLEVELAND, OHIO 44106

83

AN EVALUATION OF THE DEVELOPMENTAL VOCATIONAL EDUCATION PROGRAM

August, 1973

Lawrence Pitterman

Vashti Adger

Gregory O'Brien

Summary of Final Report

The Human Services Design Laboratory (HSDL) performed an independent evaluation of the impact and effectiveness of the Developmental Vocational Education Program (DVEP) in cooperation with the Division of Research and Development, Cleveland Public Schools.

The overall goal of the DVEP project was to create a bridge between school and earning a living for students in the Model Cities area. This would be done through a career development program beginning in elementary school and continuing through high school. It would provide students with a broad base of vocational information and exploratory experiences on which to base career decisions; with skill training to enable them to secure employment or to undertake future training in the field of their choice; and with actual job placement. Thus, the program was designed to increase options for making occupational decisions; to eliminate real and imagined barriers to attaining job skills; and to enhance learning achievement in all subject areas and at all educational levels for the youth in Model Cities area schools.

The evaluation effort involved three distinct phases:

(1) Specification of the appropriate program outcome objectives to be evaluated and examination of the organizational processes required for program delivery.

(2) Development of meaningful and reliable measurement instruments to assess program outcomes.

(3) Empirical evaluation investigation in which students from the participating DVEP schools were compared with a "matched" sample of students from non-DVEP schools.

Evaluation Objectives

Based on a review of the proposed program objectives and their applicability to the status of program implementation in May, 1972, two evaluation objectives were identified:

Objective 1: Experimental (DVEP) and control students will be compared on their specific and general knowledge relating to certain occupational clusters. Successful program implementation should result in significantly higher scores for the experimental (DVEP) students on achievement measures of this knowledge.

Objective 2: Experimental (DVEP) and control students will be compared on their preferences for certain jobs and on their attitudes toward the world of work. Successful program implementation should result in significantly more positive attitudes for experimental (DVEP) students toward the world of work. Significant differences in the expressed job preferences also should be obtained.

Instrument Development

Since the assessment of the DVEP project involved both achievement and attitudinal evaluation objectives, instrument development was directed toward obtaining meaningful and reliable measures for these objectives.

The primary emphasis of the data analysis for the content measures was on obtaining high internal-consistency reliability. Using two types of item analysis, item-difficulty and item-total correlation, two achievement measures

were developed. The internal-consistency reliability for both measures was approximately .85. This is well above the required level of acceptability.

The data analyses for the attitudinal portions of the evaluation instrument first examined the administrative applicability of the measurement techniques. Although a departure from typical attitude measures, the alternation ranking procedure yielded differential information about job preferences. A more conventional measure, the semantic differential, was employed to obtain attitudes toward worldof work concepts. Revised on the basis of factor analysis data, its final form included eight work related concepts which were rated on eight bipolar adjective scales. The use of a single summed score for these scales also resulted from the factor analyses.

The evaluation instruments both called the Job Information Questionnaire, included content, ranking and semantic differential measures.

Empirical Evaluation

The evaluation instruments were administered to the fifth and sixth grade students who had participated in the first year of the DVEP project (experimental group), and to a comparable group of students who were not in the program (control group) on three separate occasions: June, 1972; February, 1973 and June, 1973. Using this pre- and post-test, "matched" control group research design, the program objectives were evaluated.

Key Results - Objective 1

1. Employing a multiple-factor analysis of variance design, the main factor of program participation was significant, Experimental (DVEP) schools obtained significantly higher achievement than control schools. This was true for the entire evaluation period.
2. The same design also indicated that the main factor of grade level was significant. Sixth graders obtained significantly higher scores than fifth graders. This was also true for the entire evaluation period.
3. Beyond the effect of each of these main factors, the combination of both factors also was found to be significant in the initial project evaluation. The difference in obtained scores between fifth and sixth graders was smaller in the experimental (DVEP) schools than in the control schools for the June, 1972 testing.
4. The level of performance on the achievement measure was not consistent across all the experimental (DVEP) schools. A large variation in mean scores was obtained.

Key Results - Objective 2

Job preference comparisons between experimental (DVEP) and control groups were made using male and female subgroups. Mann-Whitney U tests were performed to identify differences in the distribution of ranks given to each job. Attitudes toward various world of work concepts in a semantic differential were analyzed with a factor analysis of variance design.

1. Experimental (DVEP) males assigned significantly higher ranks to the jobs of Policemen, Executive Secretary, Garbage Collector, Cook, Teacher (second administration) and Waiter (third administration) than did control males.

2. Control males assigned significantly higher ranks to the jobs of Lawyer, Actor (second administration), Electrician (second administration) and Doctor (third administration).

3. Experimental (DVEP) females also assigned significantly higher ranks to the jobs of Garbage Collector (first and second administration) and Cook, Policeman (second administration), and Airplane Pilot (third administration) than did control females.

4. Control females assigned significantly higher ranks to the jobs Doctor, Actress, Electrician, Executive Secretary (second administration) and Model (second administration).

This data pattern may suggest that both experimental (DVEP) males and females were more willing to express more positive preferences for lower glamour jobs, e.g. Cook, and less willing to express high positive preferences for higher glamour jobs. These job preferences were not stable, and this conclusion is quite tentative.

5. Significant effects for the main factor of program participation were obtained for the semantic differential concepts of Reporter Mail Carrier and Telephone Installer (second administration). Experimental (DVEP) students expressed more positive attitudes toward these concepts than did control students. Again these effects were present in no more than one evaluation phase.

Organizational Evaluation

A secondary goal of this project evaluation was to examine the current status of program implementation and the organizational processes required for program delivery. In general, program implementation has adhered to the original program proposal. Certain external constraints placed on the project restricted a more complete implementation of activities in the academic year beginning September, 1972 .

Most teachers and principals with whom interviews were held indicated a favorable reaction to the concept of developmental education and were favorably impressed with program delivery. However, discussions with the DVEP staff and on-site observations, in addition to these interviews, identified two issues in the first year's program delivery. The first involved the skill development of the Vocational Aides and their role in the classrooom beyond the actual DVEP presentations. The second involved the relationship between the DVEP material and the Social Studies curriculum into which it is injected. The increase in the Coordinating Teachers' field activity the following year seemed to address the first issue.

The knowledge of the termination of the DVEP project in October, 1972 reduced the real effectiveness of the project by a substantial period of time. The combination of project "gear-up" and project "phase-down" probably limited the real impact of the DVEP program to the Spring, 1972 and early Fall, 1973. Whether the increasingly negative organizational climate in the second year had an effect on the magnitude of the empirical outcome cannot be judged.

Summary and Conclusions

The primary goal of the DVEP evaluation was to assess the effectiveness of the program in meeting two outcome objectives. The first objective was based on an outcome originally defined for program implementation at the upper elementary school level: Successful program implementation would result in greater knowledge relating to certain occupational clusters. The empirical investigation indicated that the DVEP project does result in significantly greater occupational knowledge for students participating in the program. However, this result was not uniform in each of the participating schools.

The second outcome objective identified for evaluation was that successful program implementation would result in more positive attitudes toward work related concepts and differences in expressed job preferences. While differences in job preferences were obtained between the experimental and control groups, these differences were not stable for the entire evaluation period. This was also true with regards to the student's attitudes toward work-related concepts. While the data did show more positive attitudes toward the specific job concepts of Reporter, Mail Carrier and Telephone Installer for the DVEP students, these results did not occur through the entire period of evaluation. Most of the

significant attitudinal results occurred in the first evaluation period.

In conclusion, the DVEP project successfully impacted on the target population for only knowledge outcome objective.

INTRODUCTION

The Division of Research and Development, Cleveland Public Schools, contracted with the Human Services Design Laboratory (HSDL) to evaluate the impact and effectiveness of the Developmental Vocational Education Programs (DVEP). The evaluation activities occurred over an eighteen month period from late February, 1972 to August, 1973. Three major components of the evaluation can be identified:

(1) Specification of evaluation objectives and organizational overview: The goals of this initial evaluation phase from February, 1972 to April, 1972 were to determine the program outcome objectives appropriate for evaluation and to examine the organization processes required for program delivery. Evaluation tasks included reviewing written DVEP materials, interviewing DVEP staff, participating classroom teachers and school principals, and conducting on-site observations of program delivery. Contact with the DVEP staff during the second full academic year of the project, September, 1972 to June 1973, yielded additional information regarding the effectiveness of program delivery.

(2) Instrument development: In order to assess program outcomes, meaningful and reliable outcome measures were required. The first development of evaluation instruments occurred in May, 1972. Subsequent revision of these instruments occurred in December, 1972.

(3) Empirical evaluation investigation: The evaluation instruments were administered in June, 1972, February, 1973, and June, 1973 to assess the impact and effectiveness of the DVEP project. The data obtained from

students participating in the DVEP project was compared to the data obtained from students not participating in the DVEP project. The comparison groups were similar in age, socio-economic status, and previous educational background. An interim report based on the results from the June, 1972 administration was submitted in September, 1972. (See Appendix A for the summary abstract of the report.)

Evaluation Objectives

Two program outcomes -- which would result from successful program implementation -- were selected for empirical evaluation to assess the impact and effectiveness of the DVEP project. The identification of these evaluation objectives was based on a review of the proposed program objectives and their applicability to the implementation status of the DVEP program.

Objective 1: Experimental (DVEP) and control students will be compared on their knowledge of specific and general information relating to certain occupational clusters. Successful program implementation should result in significantly higher scores for the experimental (DVEP) students on an achievement measure of this knowledge.

Objective 2: Experimental (DVEP) and control students will be compared on their preferences for certain jobs and on their attitudes toward the world of work. Sucessful program implementation should result in significantly more positive attitudes for experimental (DVEP) students toward the world of work. Significant differences in the expressed job preferences also should be obtained.

The following sections present the overall DVEP program description on which these evaluation objectives were based. An overview and evaluation of the organizational processes employed in program delivery is also presented. The commitment of the HSDL team to process observations and their evaluation represent a secondary goal of this evaluation effort.

PROGRAM DESCRIPTION

DVEP Objectives

The overall goal of the DVEP project is to create a bridge between school and earning a living for students in the Model Cities area. This would be done through a career development program beginning in elementary school and continuing through high school. It would provide students with a broad base of vocational information and exploratory experiences on which to base career decisions, with skill training to enable them to secure employment or undertake future training in the field of their choice and with actual job placement. Thus, the program is designed to increase options for making occupational decisions; to eliminate real and imagined barriers to attaining job skills; and to enhance learning achievement in all subject areas and at all levels of education for the youth in high poverty Model Cities area schools.

The program is developmental in nature and pyramidal in design. It begins with a broad informational/organizational approach at the elementary level, which narrows to an exploratory/preparational approach at the senior high level. Such an approach is designed to put the student at each level in a position to make informed decisions as to the next step in his career development and successively narrow his vocational preference.

Beginning at the upper elementary school level, students in grades five and six would acquire reliable and valid information on the broad range of available occupations and their requirements. The emphasis would be on occupational clusters rather than on specific jobs, and would include future occupational areas which are expected to emerge as a result of new technology. The students would become oriented to the world of work through multi-faceted experiences including field

trips, work simulation games and role playing, and would obtain experience in basic job skill operations.

At the junior high school level, the explorational aspect of the program involves learning the functional interrelationships among the production, management and service areas of business and industry. Students would sample the operations and skills required in a number of occupations through work site tours and actual experience.

Finally, at the senior high level the program orientation is toward the preparation for actual job placement beyond school. Students would move from exploratory experiences in a number of occupational areas to intensive training in one skill area of their choice. High school students would get on the job experience in a work study program.

Several specific outcome objectives relative to this program design can be identified. These are:

(1) increased ability to identify and describe a variety of occupations in in a broad array of occupational areas (elementary school level).

(2) increased knowledge of the operation of basic tools and equipment in various occupations and their utility (elementary school level).

(3) increased knowledge of the operations of and functional interrelationships among management, production and service areas of business and industry (junior high school level).

(4) increased knowledge of the operations involved in a wide variety of occupations (junior high level).

(5) increased ability to describe the relationship between specific vocational activities and "real" occupations (junior high school level).

(6) increased positive attitudes toward vocational education (senior high school level).

Two additional objectives specific to the senior high school level were in the original proposal for the program but were subsequently renegotiated and eliminated.

DVEP Personnel and Responsibilities

The following personnel are involved in the service delivery of the DVEP project. The Project Manager directs and supervises the entire project. Four Coordinating Teachers are responsible for developing workable outlines and lesson plans for the occupational clusters which are presented through the Social Studies and Language Arts curricula. This involves obtaining detailed information on the job families for classroom activities, developing appropriate sound slides, purchasing occupational films, arranging for classroom speakers organizing and supervising field trips, and providing other materials as needed by the Vocational Aides and classroom teachers. The Coordinating Teachers also serve as supervisors for the Vocational Aides. This responsibility includes duties relating to both achieving specific DVEP objectives and acting as a resource for Aides' career development. Finally, the Coordinating Teachers are responsible for interpreting the project proposal and relating it to the Aides, school principals and classroom teachers.

It is through the Vocational Aides that the actual contact between the program and the students is made. In conjunction with the classroom teachers, they present the study units on the world of work, direct appropriate classroom activities such as simulation games, show films and sound slides and stimulate classroom discussion. To prepare for their classroom presentations, the Aides team with their respective Coordinating Teachers (three or four Aides per Teacher) in developing the occupational cluster study units and classroom activities and assist in securing outside speakers. Both the Aides and Co-ordinating Teachers also develop and administer pre- and post-tests to evaluate the students after the completion of each occupational cluster.

The use of Vocational Aides represents a unique and critical aspect of the DVEP project. An organizational objective for the project is to provide an opportunity for career upgrading for these individuals. Specifically, the DVEP project would provide a system for training individuals from the Model Cities area to become teachers. The Aides would obtain practical classroom experience from working with the DVEP classes while enrolled at Cuyahoga Community College for night and summer courses leading to a degree in education. Thus, their training would result in educators equipped to work with Inner City children and who will choose to continue their careers in disadvantaged area shcools.

Project Implementation

The DVEP project was implemented at the upper elementary school level, grades 5 and 6, during the academic year of September, 1971, to June, 1972. The Aides were assigned to the ten elementary schools to be served by the DVEP and, in

early October, 1971, began class presentations. Project implementation at the junior high school and senior high school levels was delayed until September, 1972 due to the temporary dissolution of the Model Cities board, whose approval was required for the necessary additional staff.

ORGANIZATIONAL OVERVIEW AND EVALUATION

The initial activities of the HSDL team were directed toward obtaining a general overview of the DVEP project as it had been implemented during the academic year beginning September, 1971. These initial activities also served the important function of introducting the HSDL team in its role as the independent evaluator. Further contact during the second academic year of the evaluation, September,1972 to June, 1973, served to monitor on-going program status from the perspective of the DVEP staff. The follwoing sections describe these organizational evaluation activities and the key issues relating to effective project implementation which were identified. A final section reviews the scope of the empirical evaluation as it was defined by the program status.

DVEP Staff Activities

A preliminary meeting in late February, 1972 with one of the DVEP Coordinating Teachers and the three Vocational Aides assigned to her, proved to be informative to both the HSDL team and the DVEP staff. The HSDL team was able to obtain a clear and representative picture of the activities required for the DVEP project implementation at the fifth and sixth grade levels and an insight into the processes used in program delivery. For the DVEP staff, the meeting did much to clarify the nature and objectives of the evaluation and hopefully allayed some of their concern about being "evaluated".

The perceptions and descriptions of both the Coordinating Teacher and the Vocational Aides of their job duties and responsibilities were highly consistent with the job summaries presented in the original project proposal.

While there was variability in the number of classes for which the Vocational Aides were responsible at their respective schools, each Aide spent a minimum of one school day a week with each class. Beside the actual presentation of the career development information, the Aides participated in a variety of other activities during the school day. The Aides assisted the teacher in supervision of the class during other school activities; they provided tutorial assistance for students in either English and/or Math; and they spent time in the development of future career development presentations. The Aides also met with the Coordinating Teacher every Monday to share classroom experiences, knowledge and to develop future presentations for new job clusters. They discussed alternative methods of presenting the material including role playing exercises, lecture and visits to appropriate facilities, e.g. Hopkins Airport.

The Aides indicated that much of their initial classroom time in the Fall, 1971 was spent in observing the teachers' behavior in order to further develop their own teaching skills. As the school semester progressed, their experience and the assistance of their teachers resulted in an increase in their teaching competencies. They included skills such as generating class discussion about the topics presented; maintaining order during the presentations; and, in general, utilizing the class time more effectively.

This initial contact also yielded information about difficulties encountered in program delivery. The basic issue identified by the Aides was their dependency on both their particular teacher and the Social Studies curriculum. They felt that their effectiveness and maximum utilization could be, and was, in fact, enhanced by greater teacher interest. In those classes in which the teacher expressed interest and support of the concept of career development, the Aides were

able to benefit greatly from the teacher's constructive criticism and active participation in the class presentations. Insofar as the career development program was tied to the Social Studies curriculum, the Aides indicated that this created a need to relate and justify any single presentation to the current Social Studies unit. Since the program was limited to one class session (40 minutes) a week, and the time to complete a given occupational cluster would progress at a slower rate than the Social Studies unit, this relationship became strained at times.

On-Site Observations and Teacher Perceptions

Following the discussion with the Coordinating Teacher and the three Aides, the initial overview of the existing processes and relationships needed to implement the DVEP program was completed with on-site observations of the Aides and interviews with their respective school teachers and principals.

In general, most of the teachers and principals indicated a favorable reaction to the concept of developmental vocational education for elementary school level children and were also favorably impressed with the delivery of the program. There were, however, two criticisms voiced by the teachers and principals.

The most prevalent criticism on the DVEP project, in terms of service delivery was the lack of skill development for the Aides in their role as class instructors. This was particularly true at the beginning of the program in the Fall, 1971. At that time, the Aides were almost completely inexperienced in preparing a lesson for presentation. It was readily apparent to the teachers that more in-service training would have benefitted the Aides. In fact, several of the Aides indicated that their initial enthusiasm for classroom instruction waned for a period of time at the beginning of the year. They became discouraged

by their inexperience and had doubts about their effectiveness. This pattern was reversed as the school semester progressed, yet it most certainly detracted from effective program delivery.

Related to this criticism, both the teachers and principals indicated that they were initially unclear about the role of the Vocational Aide in the classroom beyond the Aides' actual presentation of career development information. The subsequent development of role definitions varied with the particular teacher-Vocational Aide relationship. In some cases , the Vocational Aide evolved into a teacher-assistant. That is, during the day the Aide would assist the teacher in other presentations and in running the classroom. This particular role definition most closely approximates the goal of the DVEP project to develop the Aides' career upgrading. Here the Aides become more familiar and more confident with the role of the teacher. This however, was not the case for all of the teachers. In many cases the Aides were under-utilized and left to themselves to occupy their time during the school day. In general, however, the teachers felt that the Aides gave them some much needed assistance in running the classroom.

The second major criticism by the teachers of the DVEP program involved the relationship between the career development material and the Social Studies units to which this material was to be related. It became readily apparent that the two sets of materials increasingly diverged from one another and would follow independent courses. The justification for relating the two sets of material to one another seemed somewhat artificial to the teachers. This observation reinforced the difficulties expressed by the Aides concerning the direct injection of the DVEP program into the Social Studies curriculum.

DVEP Staff Feedback

A feedback meeting was held with all the Coordinating Teachers and Vocational Aides to present the HSDL team's overview of the program and to obtain their reactions. The key processes and relationships required for effective program implementation were discussed.

While there were differences in the degree and type of in-service training provided to the Aides, most indicated that they would benefit from more substantive training rather than merely observing teachers for a short period of time .

The entire group noted differences in their utilization by the teachers. Most had developed enriched relationships with the teachers, in which the role of the Vocational Aide had evolved into something more. Some had not. These individuals were limited to their DVEP responsibilities, or even worse, mis-utilized by teachers so that they were performing clerical or "clean-up" duties.

Also mentioned as a difficulty in program delivery by Aides (as well as teachers) were administrative scheduling problems. These administrative problems existed within the DVEP project, the individual schools and between both. A frequent problem for example involved scheduling and coordinating field trips.

The overall consensus of the Aides was that the DVEP project had, within the relatively short implementation period from October, 1971 to April, 1972 significantly impacted on the target population.

Organizational Overview - October, 1972 - June, 1973

The commitment to observation of the organizational processes required for program delivery continued through the second academic year of the DVEP evaluation. However, the HSDL team's activities were less structured and less formal than the efforts in the previous academic year. A number of factors contributed to this shift in the team's approach. First, the previous evaluation efforts resulted in acceptance of the team by the DVEP staff. Thus it was possible to elicit staff perceptions, especially those of the Coordinating Teachers, through more casual contact. Second, initial staff comments suggested that the delivery process had developed to the extent that staff roles and program procedures were stabilized. Finally, the primary emphasis of the evaluation effort in the second year was directed toward assessing the empirical outcome objectives for the project activities at the upper elementary school level.

A modification which did occur in the program delivery process should be noted, however. This involved a fuller utilization of the Coordinating Teachers directly in the participating schools. Under this revised process, the Coordinating Teachers conducted three types of field visits:

(1) Visits to individual Vocational Aides to improve classroom instruction techniques;

(2) Visits, of a supportive nature, to schools to conduct workshops and attend faculty meetings and other group sessions;

(3) Visits, of a noninstructional nature, to schools to perform administrative activities, deliver instructional materials, etc.

Clearly, this increase in the Coordinating Teacher's activities responded to the difficulties encountered in program delivery during the previous year. By directly engaging in classroom instruction, the Coordinating Teachers improved the skill development of the Aides. This would both reduce the Aide's dependency on individual classroom teachers for learning experiences and clarify the Aide's classroom roles. That is, there would be less likelihood of misutilization by the classroom teachers in the presence of the Coordinating Teacher. The supportive service activities would also result in greater understanding of the classroom role of the Vocational Aides. Even more important such activities would more effectively communicate the goals and needs of the DVEP project. Finally, any administrative difficulties in program delivery, e.g. scheduling field trips would be more efficiently resolved through direct contact with the participating schools.

This organizational overview would not be complete without indicating that as early as October, 1972, the DVEP staff was aware that the project would not receive Federal re-funding for the next academic year. While the possibility of alternative funding sources existed and in fact were explored, this knowledge resulted in a significant loss of morale among the DVEP staff. Many Aides and several of the Coordinating Teachers began looking for new jobs within several months. Four Aides resigned from the staff in April and May, 1973 prior to the end of the academic year. While it is true that these and other resignations cannot be directly attributable to the "phase out" of the project, there was certainly a real loss in the overall effectiveness of program delivery. No program can achieve optimal effectiveness anticipating its own termination.

Specification of Empirical Evaluation Objectives

DVEP project implementation in May, 1972 required that the outcome objectives for evaluation be those appropriate for the upper elementary school level. While two outcomes for this level were originally proposed, the "hands-on" experiences necesssary for increased knowledge of the operation or basic tools and equipment (the second objective) had not been systematically implemented. Therefore, this objective was not considered for evaluation. Rather, the attitudes of the target population toward specific jobs and the world of work were identified as an outcome of the program to be evaluated. Therefore, the outcome objectives to be empirically evaluated were:

Objective 1: Successful program implementation will result in greater knowledge of a variety of occupations in a broad array of occupational areas.

Objective 2: Successful program implementation will result in more positive work attitudes and differences in job preferences.

In May, 1972, between three and five occupational clusters had been either partially or completely presented by the Vocational Aides. The two completed clusters common to all the Aides were Transportation and Communication. For the first outcome objective, the program evaluation for the first academic year focussed on the content of these clusters. Program evaluation for the second academic year beginning in September, 1972 assessed the impact and effectiveness of the DVEP project using the same empirical outcome objectives. However, the program content for the first objective was expanded to include the Health, Public Service, Aerospace, Apparel, Business and Office, Heavy Industry and Natural Resource occupational clusters.

INSTRUMENT DEVELOPMENT

Pilot Instrument Development - May 1972

In order to ensure the content validity of the first evaluation instrument a preliminary outline of its content was developed. Since this type of validity requires a rational approach to the adequate coverage of important content, the outline was reviewed by both the HSDL team and the DVEP staff. In addition to the content, the outline suggested the types of items to be employed, the approximate number of items, method of administration and scoring.

Several sources were utilized to develop the content for the instrument outline. The primary content source was the Quarterly Report (June 30, 1971) submitted by the DVEP Project Director. From this report, job classifications and descriptions specific to the common occupational clusters covered by the Aides up to May, 1972 were obtained. Further content information for these common clusters, specifically the Transportation and Communications clusters, was obtained from the pre-tests given by Vocational Aides prior to the class presentations of the material. The choice of item format was not only based on the content of the specific questions but also on the on-site visits by the HSDL team. It was felt that the level of presentation in class should dictate, in large measure, the level of presentation of the items.

This preliminary content outline evolved into two pilot instruments to evaluate program effectiveness. The content of the first instrument, the Job Information Questionnaire, reflected the knowledge of specific occupations transmitted through the program. Additional items in the instrument involved "general," or common knowledge information which was presented as part of the DVEP material. However, the knowledge required to complete these items was

also available to students from sources other than the DVEP presentations. "Name of Cleveland's largest airport" is an example of these general information items which relate to the program content.

The second instrument resulting form the preliminary content outline was the Job Attitude Questionnaire which had two parts; an alternation ranking format to obtain information on job preferences and a semantic differential format to measure attitudes toward the world of work.

The use of an alternation ranking technique in this instrument involved a risk since it was not known whether fifth and sixth graders would be able to follow the unusual instructions. Nonetheless, it was decided that the obtained rankings could provide significant insights into the value which the students placed on specific jobs.

The alternation ranking procedure requires the student to examine a list of eighteen jobs and then think about how much he or she would like to work on each of the jobs. The individual is asked to identify the "Best" (most preferred) and then the "Worst" (least preferred) jobs on the list. An alternating choice procedure, "Next Best" and "Next Worst," is repeated until the list is exhausted. This procedure allows the individual to make choices of extreme preferences first. It is easier to distinguish between "Second Best" and "Second Worst" than it is to distinguish between "Second Best" and Third Best." While more administratively complex, the students should experience less difficulty in making their preferences.

The eighteen jobs used in this section were, for the most part, chosen from a list of ninety jobs used in study of occupational prestige in the United States (Hodge, Siegel and Rossi, 1966). The list was modified to eliminate any sex bias in the job titles. It was felt that these eighteen jobs reflected

a complete range of high and low prestige jobs.

The semantic differential component of the Job Attitude Questionnaire is a more conventional approach for assessing the feelings of elementary school age children toward various concepts relating to the world of work. Those concepts included in the questionnaire were: GETTING A JOB, PLAY, CAREER EDUCATION, UNEMPLOYMENT, MAIL CARRIER, NEWSPAPER REPORTER, TELEPHONE OPERATOR and TELEPHONE INSTALLER. The latter four concepts are specific job titles with which both the experimental and control groups should be familiar. Each concept was then rated on nine scales anchored by bipolar adjectives. The nine adjective pairs used in the pilot instrument were taken from a semantic differential employed by the Cleveland Public Schools, Division of Research and Development.

Previous research (Osgood, 1962) has shown that three major factors are invariably defined by different semantic differential scales: evaluation, potency and activity. These factors are constructs which describe an underlying similarity among several scales. However, the factors do not always have the same content (the defining adjective scales) since the meaning of the semantic differential scales often depends on the concept being rated. Therefore, the underlying factor structure of a particular set of scales for a particular concept should be identified, rather than depending on previously defined factors for those scales.

Once the specific factors are defined, the scores on the component scales (in this case, obtained on a 5 pt. rating scale) are summed. These summed scores represent the measure of the individuals attitude toward the concept. From these group comparisons can also be made.

Pilot Instrument Field Testing

Both instruments, the Job Information Questionnaire, and the Job Attitude Questionnaire were field tested at Daniel E. Morgan Elementary School in May 1972. Two sixth grade (N=58) and one fifth grade (N=54) classes were used for the field testing sample. There were thirty-nine (N=39) males in the sample and fifty-three (N=53) females in the sample. The questionnaires were administrated over a two day period in order to determine the maximum possible amount of time needed for the completion of the questionnaires.

Oral instructions were given for each questionnaire. The following points were included in the oral instructions for the Job Information Questionnaire:

(1) This questionnaire will be used to compare fifth and sixth graders in the city of Cleveland with regard to their knowledge about certain jobs.

(2) This is not a test, but should be taken like a test. Therefore, please do not look at your neighbor's paper and try to do the work by yourself. If you do not know the answer, please guess. Try not to leave any answers blank. Do not worry about spelling when you answer fill-in questions.

(3) If you do not understand something as I am reading the questions, please raise your hand and I will try to answer your question.

(4) When I read a question and you know the answer, do not yell the answer out loud. Write or underline the right answer.

(5) Your answers will be confidential and will not be used for your grades in this class. We are not interested in your individual score. Remem-

ber we want to compare fifth and sixth graders throughout the City of Cleveland.

The questionnaire was then distributed. The test administrator, a member of the HSDL team, then read each item in the questionnaire to the class. The next item was read when all the students indicated they had completed the previous item.

The oral instructions for the Job Attitude Questionnaire were quite similar. However, they were modified to indicate that this was a measure of the students feelings toward certain jobs rather than their knowledge about certain jobs. For the alternation ranking procedure, the students also were told that all the jobs could be performed by either men or women, i.e., were no "male jobs" or "female jobs."

Again, in administering the questionnaire, all efforts were made to allow each student to complete the entire questionnaire. For both the alternation ranking and semantic differential sections, the test administrator demonstrated the proper procedure for completing the items with step-by-step instructions.

Data Analysis for Job Information Questionnaire

The Job Information Questionnaire data was analyzed with the objective of obtaining a reliable measure of both general and specific knowledge relating to particular occupational clusters. Since the content and purpose of this pilot instrument defined it as an achievement test, two types of item analyses were performed: item difficulty and item-total correlation. (See Appendix B for an explanation of the item analyses used)

The item difficulty and item-total correlation data were examined for each item in the pilot instrument. Those items with the highest item-total correlations and with item difficulties between 40% and 60% were retained. Additional items with acceptable item-total correlations but with "p" values somewhat below 40%, e.g., 30% were also retained. The rationale for including these additional items was that the field test subjects, like the control subjects in the actual comparison study, should be less likely to pass the test items. Thay had not been exposed to the DVEP material and the items should be expected to be more difficult for them.

The score distributions for some of the "fill-in" items indicated an artifically high weighting of these items in the total scores. A revised scoring key for these items was also developed.

The revised achievement measure (see Appendix C, pages 1-3 of Job Information Questionnaire) consisted of thirty-eight (38) items with a maximum score value of fifty (50). Table 1 shows the obtained item difficulties and item-total correlations for each item after the revised instrument was administered to the experimental students (those in the DVEP project) and a control students (comparable students not in the project). With respect to the three conditions which maximize internal-consistency reliability, the following can be observed:

(1) The obtained item-total correlations, in place of item intercorrelations, were all positive and with two exceptions (item 9p and 9q) were above .20 for the total group. In fact, twenty-six (26) of the thirty-eight (38) correlation coefficients (index of the relationship between passing an item and obtaining a high score) were above .30. Given the total number of items, these relationships between item

Table 1

Comparison of Item Difficulties (p) and Item-Total Correlations (r) for Questionnaire Items

Questionnaire Items	Experimental Group (N=492*)		Control Group (N=314)		Total Group (N=806*)	
	Item p	Cor. Coef. (r)	Item p	Cor. Coef. (r)	Item p	Cor. Coef. (r)
1 (Fa. Occ.)	39%	.26	32%	.30	37%	.29

15b ("Odd" Job)	55%	.37	41%	.29	50%	.3[illegible]
15c	56%	.42	43%	.25	51%	.3[illegible]

scores and total test scores can be considered statistically significant.

(2) The average item difficulties for the experimental, control and total groups were 56.9%, 44.2% and 52.4%, respectively. These values, particularly the average item difficulty for the total group, closely approximate the requirement of 50% average item difficulty.

(3) The condition of equal item difficulty for all items was only partially fulfilled. Seventeen (17) of the thirty-seven (37) items had "p" values between 40% and 60% for the total group. Here, the primary concern was to minimize excessively difficult items. While some easy items are desirable from the point of view of reducing test anxiety, too many such items reduce the score distribution. There were only five (5) whose difficulty level was above 80%.

Beyond these observations, the key index to assess the results of the item analyses was the actual internal-consistency reliability for the revised instrument. By obtaining split-half scores for each individual (half the items were randomly selected, their item scores summed and then compared to the summed item scores for the other items) estimates of reliability can be obtained. However, the split-half approach only represents an estimate of the reliability for half of the test. While the full-length test is not twice as reliable as the half test, its reliability is greater and can be obtained using the Spearman-Brown correction. The reliabilities of the total test using the Spearman-Brown correction of the split half reliability were .86, .77, and .84,

for the experimental (DEVP), control and total groups, respectively. These corrected split half reliabilities equal or exceed the acceptable level of reliability in test construction (Nunnally, 1967).

Data Analysis for Job Attitude Questionnaire (Alternation Ranking)

The first section of the Job Attitude Questionnaire consisted of the alternation ranking of eighteen jobs to obtain information on the relative prestige or value of these jobs. As previously discussed, this procedure represents a departure from conventional attitudinal measures. Not only the data from the pilot instrument, but the actual process of administering this technique were examined to determine whether the alternation ranking should be included in the revised instrument. No specific objectives were identified in assessing the data; the analysis simply was exploratory.

The field testing of this section required a more structured test administration by the DVEP team. Step-by-step instructions were provided for the first six rankings; by then, almost all the field test subjects understood the ranking procedure and the nature of the information desired, i.e., which jobs they preferred more. The percentage of missing data for this section was comparable to the Job Information Questionnaire and the semantic differential section. Thus, the alternation ranking procedure was considered to be administratively acceptable.

In order to examine the field test data, the median rank for each of the eighteen jobs was determined. Consecutive values from 1 to 18 were assigned to the rankings of "Best Job" to "Worst Job." Then, a frequency distribution of these values for each job was obtained. The median rank was then defined as the

value above which were exactly half the field testing rankings and below which were the other half. For example, the median rank for the job of Doctor was 6.33. This indicates that half the students rank this job either 1,2,3,4,5 or 6 while the other half ranked the job between 6 and 18.

Table 2 presents the median rank data for the total sample and for males and females. The numbers in the parentheses are the ranks of the median rank data, e.g. for Teacher the median rank for the total group was 4.60 and this was the highest value obtained for all the jobs. As is clearly evident, certain jobs were preferred by males and others by females. This obtained sex bias in the preferences of certain jobs was obtained in spite of the instructions which specified that all the jobs were equally available to males or females.

Since no administrative difficulties were encountered and there was potential for meaningful data, the alternation ranking section was included in the revised instrument (See Appendix C, page 3 of Job Information Questionnaire). However the obtained sex bias suggested that differences in the median ranks for experimental (DVEP) boys as compared to control boys and experimental girls as compared to control girls should be examined. The underlying hypotheses would be that the DVEP project would effect the perceived preferability of certain jobs.

Data Analysis for Job Attitude Questionnaire (Semantic Differential)

The second section of the Job Attitude Questionnaire consisted of a semantic differential format (a group of nine bipolar adjective rating scales) for nine concepts relating to the world of work. Again, this approach represented a standard method of obtaining measures of attitudes and sentiments. The primary objective of this data analysis was to identify a common factor(s) among

Table 2

Median Rank Data for Males, Females and Total Field Testing Sample

Job	Male		Female		Total	
Doctor	4.30	(4)	9.10	(10)	6.33	(4)

Cook	13.85	(17)	6.70	(7)	8.40	(8)
Disk Jockey	7.50	(9)	10.60	(11)	10.20	(11)
Stewardess	12.50	(14.5)	7.60	(8)	10.90	(14.5)
Electrician	5.40	(5.5)	12.50	(14.5)	10.50	(12.5)
Airplane Pilot	5.50	(5.5)	13.90	(16)	12.60	(17)

the nine scales within each of the world of work concepts. With the identification of the common factor(s), it would be possible to meaningfully sum the appropriate scale scores to measure the meaning each concept evokes for an individual.

In order to identify the common factor(s) within each concept, a factor analysis was performed. For each adjective scale, a numerical score was assigned to the subject's rating. Since 5-point scales were employed; a value of 5 was assigned to the positive pole of each scale and a value of 1 to the negative pole. For example, on the Good-Bad scale a rating next to Good received a score value of 5 and a rating next to Bad received a score value of 1. The meanings of each step on the scale were carefully defined and illustrated for the field testing sample. Each scale score was then correlated with each of the other eight scale scores for all the concepts. Positive correlations would indicate high ratings on one scale, e.g. scores of 4 and 5, were associated with high ratings on the other scales.

Based on the correlations among the semantic differential scales, a "principle components method" factor analysis was performed for each concept. This factor analytic method is simply a mathematical procedure which takes the correlations among the scales and attempts to account for the various relationships in terms of fewer underlying hypothetical variables. These hypothetical variables are called factors. In other words, factors are redefinitions of the interrelationships among the scales in terms of fewer variables. The interpretation of a given factor depends on which scales relate to it most strongly, i.e. scales correlating with factors.

For all the nine concepts, the respective factor analyses resulted in one factor, Factor I, which clearly accounted for a majority of the correlations among the scales. In fact, with one exception, all the adjective scales related to Factor I more than any other factor obtained. Only one scale consistently related more strongly with other underlying factors. Since eight of the semantic differential scales define the content of Factor I, it was considered to be an "evaluation" factor. In the revised instrument (see Appendix C, pages 4-6), the semantic differential section employed these eight scales defining Factor I. The ninth scale was not included since it would yield only one scale score for the comparison between the experimental and control schools and this would be insufficient. The sum of the eight remainint scales provided a measure of attitudes with regard to each of the work concepts.

In the data analysis for the semantic differential, an additional series of factor analyses were obtained to compare the work concepts on additional series of factor analyses were obtained to compare the work concepts on individual adjective scales. That is, the ratings on one scale were correlated across all nine concepts. This was done for each adjective scale, separately. The factor analyses of the scales yielded several factors that were consistently defined by the same concepts. Factor I was defined by the concepts REPORTER, TELEPHONE OPERATOR, MAIL CARRIER and TELEPHONE INSTALLER. A second factor was consistently defined by the concept of PLAY. The remaining concepts, GETTING A JOB, CAREER, EDUCATION and UNEMPLOYMENT, served to define two other factors. However, the combination of these concepts was not uniform

in all the factor analyses of the scales.

These data indicated that the concepts relating to specific jobs elicit attitudes, as measured by scale scores, different than the attitudes toward the other concepts. Since the concepts were highly related, the concept of TELEPHONE OPERATOR was not included in the revised instrument due to questionnaire design considerations, particularly test length. It was felt that there would be a minimal loss of attitudinal information.

Instrument Development - November, 1973

The program evaluation for the academic year beginning in September, 1972 used the same empirical outcome objectives as the first evaluation. However, the program content to be evaluated under the knowledge achievement objective was expanded for the second year evaluation. It was therefore necessary to develop new items for the content portion of the Job Information Questionnaire. The instrument development procedure was again performed to obtain a meaningful and reliable achievement measure for the expanded content.

A preliminary content outline was developed and reviewed by the HSDL team and DVEP staff. The sources utliized to develop this content were the same as those used previously: the Quarterly Report (June, 1970) and pre-tests administered by the Aides prior to class presentations. In addition to concent on the Transportation and Communication clusters, information concerning the Health, Public Service, Aerospace, Manufacturing (Apparel), Business and Office, Heavy Industry and Natural Resource clusters were represented in the content of the questionnaire.

The expanded content portion of the Job Information was field tested at Alfred A. Benesch Elementary School in December, 1972. Two fifth grade (N = 42) and two sixth grade (N = 56) classes comprised the field testing sample. There were forty-four (N = 44) males and thirty-four (N = 34) females in the sample. The oral instructions employed in this field testing were the same as those given in the first field test administration (see p20)

Job Information Questionnaire Data Analysis - December, 1972

The data obtained from the field testing was item analysed using both item difficulty and item - total correlation statistics. This procedure resulted in a forty-one (41) item achievement measure which had a maximum score value of 49 (see Appendix D, pages 1 - 4 of Job Information Questionnaire II) Table 3 shows the obtained item difficulties and item - total correlations for each item after the evaluation instrument had been administered in February, 1973. This was the second administration of an evaluation instrument to assess the empirical program objectives. The following conditions regarding internal - consistency reliability were observed:

(1) The obtained item-total correlations were all positive. Thiry-four (34) of the correlation co-efficients were above .20 for the total group. Twenty-six (26) of these in fact, were above .30. All the relationships between item score and total test score above .20 can be considered statistically significant.

(2) The average item difficulties for the experimental control and total groups were 49.2%, 45.8% and 48.2% respectively. These average item

difficulty values closely approximate the desired 50% average item difficulty.

(3) Again, the condition of equal item difficulty was only partially fulfilled. Eighteen (18) of forty (40) items had "p" values between 40% and 60% for the total group. Only one item could be considered too easy (6 e) and no items could be considered excessively difficult. ("p" values below 20%).

The Spearman - Brown correction of the split-half reliability yielded internal consistency reliability co-efficients .88, .75 and .86 for the experimental (DVEP) control and total groups, respectively. Clearly, the expanded content portion of the Job Information Questionnaire II, was statistically comparable to the version employed in the first empirical evaluation.

While not specifically instrument development, the Job Information Questionnaire , was modified in one additional respect. Based on the data from the empirical evaluation performed in June, 1972, four of the semantic differential concepts were not included in the Job Information Questionnaire II, used for the second and third test administrations. The concepts of Career, Play, Unemployment and Education did not yield significant score differences between the experimental (DVEP) and control groups in the June, 1972 administration. To pursue the lack of attitudinal differences in the second and third evaluations did not seem appropriate.

Summary

The assessment of the DVEP project involved both achievement and attitu-

dinal evaluation objectives. Instrument development was, therefore, directed toward obtaining meaningful and reliable measures in both these areas. The primary emphasis of the data analysis for the content questions was on internal-consistency reliability. Using two types of item analysis, item difficulty and item-total score correlation, a two achievement measures were developed. The second content measure was required to meet the increased level of project implementation. The internal-consistency reliability for both measures was approximately .85 which is well above the required level of acceptability.

The data analyses for the attitudinal portions of the evaluation instrument also, examined the test administration constraints of the measurement techniques. Although a departure from typical attitude measures, the alternation ranking procedure yielded differential information about job preferences. The more conventional measure, the semantic differential, was slightly revised based on factor analysis data. The use of a single summed score for the semantic differential scales also resulted from the factor analyses.

The first evaluation instrument, the Job Information Questionaire, included the content, ranking and semantic differential measure. A second instrument, the Job Information Questionnaire II, included a revised content, a ranking and a shortened semantic differential measure.

EMPIRICAL EVALUATION

The impact of the DVEP project as defined by the evaluation objectives was assessed by comparing the data obtained from achievement and attitudinal measures for students who has participated in the program (experimental group) with the same data for students who had not (control group). The comparisons were performed in June,1972, using the Job Information Questionnaire, and in February, 1973 and June, 1973 using a revised form of this questionnaire.

Sample

The Division of Research and Development, Cleveland Public Schools identified three (3) elementary schools whose student populations were comparable to those of the experimental (DVEP) schools in terms of socio-economic background and learning potential. Differences between the experimental and control schools with respect to teacher skills, classroom conditions, etc. also were not considered to be significant. These schools thus provided a "matched" group of fifth and sixth grade students for testing. The specific sample sizes, both experimental and control, for the three administrations of the evaluation instruments were:

(1) First Administration (June, 1972) - One fifth and one sixth grade class from each of the ten elementary schools in the DVEP program. The total number of students in the experimental group was 492. There were 259 fifth graders and 233 sixth graders.

The test sample in the control schools included all the fifth and sixth grade students present in class on the days the questionnaire was administered (N=314). There were 140 fifth and 174 sixth graders.

(2) Second Administration - February, 1973 - All the available fifth and sixth grade students participating in the program in the experimental schools were

tested. The total number of students in the experimental group was 740. There were 338 fifth grade and 402 sixth grade students tested.

The control school sample also represented all the fifth and sixth grade students available for testing at the time the questionnaire was administered. The total sample was 292 students; there were 140 fifth graders and 152 sixth graders.

(3) Third Administration June, 1973 - Due to staff turnover among the Vocational Aides and program discontinuation the students in only six (6) DVEP schools were tested (N=236). There were 141 fifth graders and 95 sixth graders in the sample.

Only one control school was tested for this administration. All the fifth graders (N=48) and sixth graders (N=52) available were tested.The total sample was 102. It was felt that the small test score variability obtained among the control schools in the previous administrations assured the representativeness of the smaller sample in this administration.

Questionnaire Administration Procedure

Since it was not logistically feasible for one or two administratérs to test all students, the DVEP Vocational Aides administered the questionnaires in their respective schools. The HSDI team administered the questionnaires in the control schools. The Vocational Aides were given a training session on both versions of the evaluation instrument to standardize the test procedures. While the issue of bias can be raised with regard to the use of the Aides, it should be noted that they had previously tested their students on DVEP material. Since the program was being evaluated, the obtained scores should have reflected more typical classroom conditions. Therefore, the use of the Aides was considered appropriate and acceptable.

The oral instructions for both questionnaires were quiet similar to those given

for the pilot instruments. However, the questionnaires were introduced as both a measure of job information and a measure of their feelings about certain jobs. Again, each item was read to the students and time allowed for completion by all the students. For both the alternation ranking and semantic differential sections, the test administrators illustrated the proper procedure for completing the items and also provided step-by-step instructions. The questionnaire administrations typically required one class periods. However, extra time was allocated and if neccessary, used to insure that the students would be able to fully complete the questionnaire.

A problem was encountered in the first administration when one DVEP school principal felt that the first two questionnaire items (Father's and Mother's Occupation) were not appropriate as a measure of job knowledge and requested these items not be completed. The students in this school were not scored on these items, although the mean score for this group was weighted so they would not be compared unfairly. These items were not included in the revised evaluation instrument. All the teachers and school principals, in both experimental and control schools, were extremely cooperative and facilitated the three administrations of the questionnaires.

Results (Objective I)

A multiple-factor analysis of variance model was used to determine whether experimental (DVEP) students had more general and specific knowledge relating to particular occupational clusters than did control students. Total score on the content portions of the evaluation instruments represented the measure of general and specific knowledge. While the key variable for this evaluation was participation in the DVEP project, other factors could effect the test data. Of particular concern, were the effects of grade level (5th vs. 6th) and of sex (male vs. female). That is, would fifth graders perform differently than sixth graders?; would boys do better than girls?; would there be score differences between fifth graders in the experimental schools and those in the control schools?; etc.

Thus, three variables were incorporated onto the statistical model: sex, grade level and, most important, program participation. For each of these variables or factors, there were two conditions: male vs. female, fifth vs. sixth grade and experimental vs. control school. The appropriate analysis of variance model was a 2 x 2 x 2 design (read as "two by two by two") which incorporates three factors each having two levels or conditions. In this design, the factors and their respective conditions define the different subgroups which were tested, e.g.girl. 5th graders.

Tables 4, 5 and 6 present the mean or average scores obtained by students in each of the different subgroups examined for each test administration.

Given these mean score values, the analysis of variance model tested whether the score differences for each factor and combination of factors were sufficiently large to indicate significant effects due to these variables. For the analysis of variance of the first administration data, the computational program employed required proportional or equal cell frequencies. It was therefore necessary to randomly sample an equal number test subjects in each of the different subgroups examined. The analyses performed for the remaining administrations substituted a comparable computional program which did not require the random sampling procedure. Tables 7, 8 and 9 present the summary data for these analyses. In the tables, the F-ratio represents the statistic from which probability estimates are obtained. The larger the value of F, the less likely that the distribution of score differences occurred by chance. F-ratio's were obtained for each of the three main factors, Sex, Grade and School, and for the various combinations of the factors.

For the first administration, three of the obtained F-ratio's were sufficiently large to indicate that they were not due to chance. Using levels of significance of .01 and .05 (one chance in a hundred and five chances in a hundred), the factors of GRADE, SCHOOL and a combination of both can be considered to have meaningfully affected the obtained scores. Examining Table 4, it can be seen that the students in the

sixth grade classes obtained significantly higher scores than fifth grade students, regardless of sex or program participation. Further, and most important, those students in experimental (DVEP) schools obtained significantly higher scores than students in control schools, regardless of sex or grade level. Finally, when both factors were combined e.g. fifth grade-control, there was an additional affect on the obtained scores. Specifically, the difference between the mean scores of fifth and sixth grade students in control schools was greater than the score difference between grade levels in experimental (DVEP) schools. This suggests that the experimental students equally retained the information presented in the classroom regardless of grade level. This was not true of the control students where effects of grade level were more pronounced.

Analyses of the data from both the second and third test administrations yielded significant F-ratio's for the factors of GRADE and SCHOOL. The sixth grade students continued to have significantly greater knowledge of DVEP information than fifth grade students. More relevant to the evaluation objectives was the continued significant difference between the obtained scores of DVEP students and those of the control students. Thus, program participation resulted in significantly greater knowledge, both general and specific, of a broad array of occupational clusters.

This conclusion, however, does not uniformly apply to all the schools which participated in the DVEP project. Table 10 presents the mean scores obtained from the first administration of the Job Information Questionnaire for each of the experimental control schools. The mean scores for the three control schools were highly consistent. This indicated that the evaluation instrument was validly measuring knowledge about particular occupational clusters since students in these schools should be equally naive about this material. On the other hand, the mean scores for the experimental schools showed a high degree of variability. The range of these mean scores extended from a low of 20.48 to a high of 37.06. The magnitude of this difference cannot be accounted for by chance testing factors or slight differences in the number of fifth and sixth grade students in the school samples, i.e. sixth graders score higher than fifth graders.

N.A. - Not Available

Several alternative explanations were considered. The first, and most obvious, is that real differences in learning potential of the students in the various schools existed. While superficially convenient, such an explanation was not supported when the mean Pupil Learning Rate (PLR) for each school is examined (see Table 10). While differences certainly occur, they do not correspond to the differences obtained on the achievement measure. The second possible explanation involved the idea of differential impact in the delivery of the DVEP material. Within this idea such factors as the relative competence and enthusiasm of the Vocational Aides, time spent with students beyond classroom presentations and degree of cooperation with classroom teachers might affect the responsiveness of student to DVEP presentations.

Assuming such a "differential impact" explanation to be accurate, achievement score differences among the experimental schools would be maintained over a period of time. Table 11 indicates that the magnitude of mean score differences continued through the academic year beginning September, 1972. The range of mean scores obtained from the second test administration extended from a low of 18.51 to a high of 40.00. While the absolute levels of performance between the two administrations should not be compared due to differences in the measurement instruments, the relative performances among the schools can be examined. An examination of the ranks ("1" is lowest) of the schools for the first and second administration indicates a relatively stable ordering in the performance of the schools. The shift in the ranking of schools 3 and 10 account for most of the differences observed. The existence of an on-going difference in program delivery process among the schools gains credence with the stability of these inter-school performance differences. It should be noted that these differences occurred in spite of the increase field activity of the Coordinating Teachers.

Results (Objective 2)

The alternation ranking section of the evaluation instruments provided data to compare the attitudes of the experimental and control groups toward specific occupations. In particular, the data analysis sought to obtain information regarding differ-

ences in the students preferences for certain jobs. However, the pilot instrument data indicated a direct experimental-control group comparison would be heavily biased by the identification of certain jobs as "male" jobs and/or "female" jobs. In order to control for this bias, comparisons were made using male and female subgroups. Thus, the preferences of experimental-males were compared to control-males and likewise, experimental-females were compared to control-females.

No effort was made to control for grade level since the pilot instrument data resulted in no real differences in the rankings of fifth and sixth graders.

For each of the jobs which were ranked, comparisons were made between the distributions of ranks given that job by the various subgroups. A simple summary statistic such as "median rank" can provide a rough description of the distribution of ranks. However, similar median ranks do not necessarily reflect similar patterns of rankings. For example, two groups of 10 subjects rank a job; for one group the ranks given are 1,2,3,4,5,6,7,8,9, and 10 and for the other, the ranks 1,1,1,1,5,6,6,6,6 and 6. Obviously, the job is being percieved differently, yet the median rank for both groups is 5.5.

The Mann-Whitney U Test was performed for each of the eighteen jobs comparing the rank distributions for experimental and control males and for experimental and control females, for each a test administration.

Table 12 presents the median job ranks and the Mann-Whitney U Test results comparing the rank distributions for the male groups. While a number of jobs were percieved differently by the experimental and control groups, no single job was so percieved for any more than one test administration. Boys in the DVEP program (experimental male group) expressed greater preference for the jobs of POLICEMAN, EXECUTIVE SECRETARY, GARBAGE COLLECTOR, COOK, TEACHER (Second Administration) and WAITER (Third Administration), than did the control school boys. For the control school boys, the jobs of LAWYER, ACTOR (Second Administration), ELECTRICIAN (Second

Administration), and DOCTOR (Third Administration) were perceived more favorably.

Table 13 presents the job ranking data and analysis for the experimental and control female groups. One job, Garbage Collector, was percieved more favorably by the DVEP girls in both the first and second test administrations. The jobs of Cook, Policeman (Second Administration), and Airplane Pilot (Third Administration) were also given significantly higher ranks by the DVEP girls than the control girls. On the other hand, the control girls expressed more positive preferences for the jobs of Doctor, Actress, Electrician, Executive Secretary, (Second Administration) and Model (Second Administration).

In general, the median ranks for all the jobs were remarkably stable over the evaluation period. Almost all the jobs retained the same relative preferability within each comparison group for all test administrations. For example, the median rank of Beautician remained approximately 13.5 for males and 6.5 for females regardless of whether they were in the DVEP project or not. This suggests that job preferences are developed early and are not easily susceptible to change.

With respect to those jobs where differences in preference were obtained, these data seem to suggest that both males and females in the experimental groups found some less glamorous jobs, for example, Garbage Collector and Cook, more acceptable than males and females in the control groups. While these jobs were still perceived as having less desirability than the other jobs, more individuals did express a greater willingness to rank these jobs higher. The control groups, on the other hand, showed higher preferences for high glamour jobs such as Lawyer, Doctor, Actress and Model. It may well be that the DVEP presentations resulted in more realistic decisions in job preferences. That is, DVEP students showed a greater willingness to prefer jobs with negative stereotypes and to prefer to a lesser degree jobs with positive images. Realistically, Garbage Collectors earn excellent money. On the other hand,

these data can also be interpreted from the view that the DVEP project lowered the aspiration levels of the participating students. However, neither interpretation can be fully substantiated by these data since the differences were not stable over time.

The second attitude measure in the evaluation instruments was the semantic differential. This format was designed to examine the feelings work-related concepts elicit for the experimental and control groups. A sum score for eight bipolar adjective pairs represents the evaluative connotation for each concept. Again, a 2 x 2 x 2 analysis of variance design was employed to compare score differences (the rationale for this design has been previously discussed; also refer to Table 7) for each concept. The results obtained for each concept were:(See also Appendices E - P)

(1) GETTING A JOB - For the first administration, no significant score differences were found for the main factors of Sex, Grade and School. A significant F-ratio (probability level beyond .01) was obtained for the interaction of grade level and program participation. That is, sixth grade students in the experimental schools had more positive attitudes toward the concept than fifth grade students, while fifth grade students in the control schools showed more positive attitude than sixth grade students.

For the second administration, significant F-ratios (probability level beyond .05) were obtained for the factors of Sex and Grade: Girls reported a more positive attitude toward the concept than did boys; sixth graders showed more positive attitudes than fifth graders. No significant score differences were obtained for the third test administration.

(2) NEWSPAPER REPORTER _ Significant score differences (F-ratio significant beyond .01 level) were initially found for the factor of School. Students participating in the DVEP project viewed this concept more favorably than control school students.

While no significant score differences were found in the data from the second test administration both the factor of Sex and a Sex x School interaction were significant (F-ratio significant beyond .05) in the third administration. Boys, regardless of grade or program participation showed more positive attitudes to this job than did girls. Experimental (DVEP) girls, however, showed more positive attitudes than did girls in the control schools.

(3) CAREER - No significant score differences were obtained in the first test administration and the concept was not used in subsequent administrations.

(4) MAIL CARRIER - Significant score difference (F-ratio significant beyond .01 level) were found for the variable of program participation. Students in the experimental schools viewed this concept more favorably than control school students when initially tested in June, 1972. Subsequently only the factor of Grade was found to be significant(at the .05 level in the third administration). Sixth graders had more positive attitude toward this concept than did fifth graders.

(5) PLAY AND UNEMPLOYMENT - No significant score differences were initially obtained and both concepts subsequently were not used.

(6) TELEPHONE INSTALLER - While no significant score differences were obtained in the first test administration this concept was included for the remaining evaluation since the other two job title concepts did have significant results. The data from the second testing yielded significant score differences (at .05 level) due to program participation. DVEP students showed more favorable attitudes to this job than did students in the control schools.

(7) EDUCATION - Significant score differences (F-ratio significant beyond .05 level) were initially found for the factor of Sex. Girls showed more positive attitudes toward this concept than boys. This concept however, was not included in subsequent testing due to design considerations.

These data indicate that positive attitudes toward two world of work concepts were significantly increased by initial participation in the DVEP project. Both these concepts, REPORTER and MAIL CARRIER, are jobs which were identified, described and discussed in the first year of DVEP presentations for all the participating schools. Attitudes toward a third concept, TELEPHONE INSTALLER, were also effected by program participation in the later testing. It therefore, is possible to assume that the students' increased knowledge and awareness of these jobs resulted in significantly more positive attitudes toward these jobs. However, these more favorable attitudes were not maintained for the period of time between administration of the evaluation instruments.

It becomes tenuous to conclude that the DVEP project resulted in more favorable work related attitudes when the factor of time is considered.

Summary

Using a multiple-factor analysis of variance design, the main factors of grade level and program participation, were found to have a significant effect on achievement scores over the total evaluation period. A combination of these factors also had an effect on the obtained scores beyond the effect of either main factor in the initial evaluation of June, 1972. With respect to the first evaluation objective, the main effect of program participation indicated that the experimental (DVEP) schools obtained significantly higher scores than did the control schools on the achievement measures. Thus, the expectancy that the DVEP students would show greater knowledge of specific and general information relating to the occupational clusters presented in the classroom for a two-year period was realized.

In retrospect, the additional main effect of grade level should have been expected. It seems quite reasonable to expect that sixth grade students would perform better than fifth grade students as a result of greater maturation. It is, noteworthy, that for the first evaluation period the combined effect of grade level and program participation reduced the impact of grade level alone. That is, the difference in scores between fifth and sixth graders was smaller in the experimental schools than the control schools.

One note of caution must be introduced. The mean scores on the achievement measures were not uniform for all the experimental (DVEP) schools. Although several explanations for the large variation in mean scores were possible, the stability of the relative ordering of these differences from June, 1972 to February, 1973 reflected an on-going difference in the program delivery process among the DVEP schools.

With respect to the second evaluation objective, significant differences in the distribution of preference rankings for certain jobs were obtained. In order to control for sex bias in preferences, comparisons were made between experimental and control males and between experimental and control females. The significant Mann-Whitney U tests indicated that both the experimental males and females were more willing to express more positive preferences for less glamourous jobs, e.g. Cook, and less willing to accord consistently high ranks to higher glamour jobs, e.g. Lawyer, Actress. This pattern primarily occurred in the initial evaluation phase and was not maintained over time.

The semantic differential portion of the attitude measure also yielded significant data regarding the impact of the DVEP project. Again using a multiple-factor analysis design, the factor of program participation had significant although temporary effect on the attitude scores for the concepts of Reporter, Mail Carrier and Telephone Installer. The data indicated that the DVEP students had more positive evaluative feelings for these concepts than did control school students but only for one evaluation period. While these concepts represent specific jobs described in the class presentations, the results cannot wholly support the second outcome objective of the program. The inability of these favorable attitudes to be maintained over a long period of time does not reflect a true attitude change process.

OVERALL PROGRAM EVALUATION

The primary goal of the DVEP evaluation was to assess the effectiveness of the program in meeting two project objectives. The first objective was based on the outcome objective originally defined for the upper elementary school level: the program would result in greater knowledge of occupations within an array of occupational clusters. Since the second originally defined objective could not be meaningfully evaluated due to external constraints placed on the DVEP project, an alternative outcome objective was identified. This revised objective was that the program would result in more positive attitudes toward specific jobs and the world of work.

Using a multiple test, "matched" control group research design, the empirical evaluation was performed. The results indicate that the DVEP project does yield significantly more occupational knowledge and, less conclusively, does affect attitudes positively. The program, therefore, can be considered to be fulfilling this objective.

There are, however, several qualifications to the above conclusion. First, impact of the DVEP presentations was not uniform for all the participating schools. There was a substantial difference in the achievement measure performances across the project shcools. The identification and elimination of the cause(s) of these discrepancies would further maximize future program effectiveness. Second, significant differences were not continously obtained in the job preferences or attitudes toward world of work concepts for the entire evaluation period. While differences in the attitudes toward specific job concepts were obtained for at least one testing, the program cannot be considered fulfilling the second outcome objective.

A secondary goal of the DVEP evaluaton was to examine the organizational processes required for program delivery. Based on discussions with the DVEP staff, on-site observations and interviews with participating school principals and teachers, several initial problem areas in program delivery were identified. During the early period of program implementation, both the Vocational Aides and the classroom teachers were unclear about the role of the Aides in the classroom beyond their actual presentations. Given the program goal of career upgrading for the Aides, it seemed that the Aides should be seen in the role of "teacher assistants" or "student teachers." The acceptance of such a role definition on the part of the classroom teachers would depend, in large measure, on the skill development of the Aides. This related directly to another criticism of the program delivery raised in the initial discussions - that of insufficient in-service training. While the Aides are required to take education courses as part of the program, they were also required to make classroom presentations almost immediately at the onset of the program. This placed an undue strain on both the Aides and the classroom teachers. The increased responsibilities of Coordinating Teacher in the following year seemed to be directed at meeting these issues.

Although its impact on program delivery is difficult to assess, the knowledge that the DVEP project would not be refunded did have an effect. This information was known by the DVEP staff as early as October, 1972. The decreasing morale of the staff could be felt by the HSDL during the second evaluation phase in February, 1973. While it cannot be documented, the large turnover among the Aides in the Spring, 1973 could be attributable to the program termination. In general, the organization climate which resulted from knowing the project would terminate (although alternative funding sources could be and were explored), reduced the real effectiveness of the program by a substantial period of time. In fact, the

combination of "gear up - adjustment" time and project "phase down" time probably limited the impact of DVEP project to the Spring 1972 and early Fall, 1973.

In summary, the implementation of the DVEP project was shown to have successfully impacted on students based on the achievement outcome objective. Students participating in the program were shown to have significantly greater knowledge of specific and general information relating to occupational clusters presented in classrooms. Students in the program also temporarily showed more positive attitudes toward specific job concepts which also were part of the program presentation. Similarly, these students temporarily showed a difference in their preferences for jobs with varying levels of occupational glamour. In the initial evaluation period, they were more willing to express preferences for jobs having less glamour but which may be more realistic and viable occupational choices.

In general, the program implementation has adhered to the original program proposal. The organizational processes required for program implementation can be considered effective using the criteria of increased knowledge and that the DVEP staff and classroom teachers felt the program meaningfully impacted on the student. The degree to which an increasingly negative organization climate in the second year of the evaluation effected the magnitude of the empirical outcomes of the program evaluation cannot be judged.

AN EVALUATION OF THE DEVELOPMENTAL VOCATIONAL EDUCATION PROGRAM

Lawrence Pitterman, Vashti Adger and

Gregory O'Brien, Project Director

SUMMARY ABSTRACT

The Human Services Design Laboratory (HSDL) performed an independent evaluation of the impact and effectiveness of the Developmental Vocational Education Program (DVEP) in cooperation with Division of Research and Development, Cleveland Public Schools.

The overall goal of the DVEP project is to create a bridge between school and earning a living for students in the Model Cities area. This will be done through a career development program beginning in elementary school and continuing through high school. It will provide students with a broad base of vocation-

al information and exploratory experiences on which to base career decisions; with skill training to enable them to secure employment or to undertake future training in the field of their choice; and with actual job placement. Thus, the program is designed to increase options for making occupational decisions; to eliminate real and imagined barriers to attaining job skills; and to enhance learning achievement in all subject areas and at all education levels for the youth in Model Cities area schools.

The evaluation effort involved three distinct phases:

(1) Obtaining an overview of the DVEP project to determine the appropriate program outcome objectives to be evaluated and to examine the organizational process required for program delivery.

(2) Developing meaningful and reliable measurement instruments to assess program outcomes.

(3) Performing and reporting the empirical evaluation investigation by comparing a sample of students from the participating DVEP schools with a "matched" sample of students from non-DVEP schools.

EVALUATION OBJECTIVES

Based on a review of the proposed program objectives and their applicability to the current status of program implementation, two evaluation objectives were identified:

Objective 1: Experimental (DVEP) and control students will be compared on their specific and general knowledge relating to certain occupational clusters. Successful program implementation should result in significantly higher scores for the experimental (DVEP) students on an achievement measure of this

knowledge.

Objective 2: Experimental (DVEP) and control students will be compared on their preferences for certain jobs and on their attitudes toward the world of work. Successful program implementation should result in significantly more positive attitudes for experimental (DVEP) students toward the world of work. Significant differences in the expressed job preferences also should be obtained.

INSTRUMENT DEVELOPMENT

Since the assessment of the DVEP project involved both achievement and attitudinal evaluation objectives, instrument development was directed toward obtaining meaningful and reliable measures for these objectives.

The primary emphasis of the data analysis for the content measure was on obtaining high internal-consistency reliability. Using two types of item analysis, item-diffulty and item-total correlation, a revised achievement measure was developed. The internal-consistency reliability for this measure was approximately .85. This is well above the required level of acceptability.

The data analyses for the attitudinal portions of the evaluation instrument examined the applicability of the measurement techniques. As a departure from typical attitude measures, the alternation ranking procedure yielded differential information about job preferences. A more conventional measure, the semantic differential, was employed to obtain attitudes toward world of work concepts. Revised on the basis of factor analysis data, the final form included eight work related concepts which were rated on eight bipolar adjective scales.

The use of a single summed score for these scales also resulted from the factor analyses.

A revised instrument, the Job Information Questionnaire included the content, ranking and semantic differential measures.

EMPIRICAL EVALUATION

The Job Information Questionnaire was administered to fifth and sixth grade students, who had participated in the first year of the DVEP project (experimental group),and to a comparable group of students who were not in the program (control group). Using this post-test, "matched" control group research design, the program objectives were evaluated.

KEY RESULTS - OBJECTIVE 1

1. Employing a multiple-factor analysis of variance design, the main factor of program participation was significant, Experimental (DVEP) schools obtained significantly higher achievement than control schools.
2. The same design also indicated that the main factor of grade level was significant. Sixt graders obtained significantly higher scores than fifth graders.
3. Beyond the effects of each of these main factors, the combination of both factors also was significant. The difference in obtained scores between fifth and sixth graders was smaller in the experimental (DVEP) schools than in the control schools.
4. The level of performance on the achievement measure was not consistent across all the experimental (DVEP) schools. A large variation in mean scores was obtained.

KEY RESULTS - OBJECTIVE 2

Job preference comparisons between experimental (DVEP) and control groups were made using male and female subgroups. Mann-Whitney U tests were performed to identify differences in the distribution of ranks given to each job. Attitudestoward various world of work concepts in a semantic differential were analyzed with a factor analysis of variance design.

1. Experimental (DVEP_ males assigned significantly higher ranks to the jobs of Policeman, Executive Secretary, Garbage Collector and Cook than did control males.
2. Control males assigned significantly higher ranks to the job of Lawyer than did experimental males.
3. Experimental (DVEP) females also assigned significantly higher ranks to the jobs of Garbage Collector and Cook than did control females
4. Control females assigned significantly higher ranks to the jobs Doctor, Actress,and Electrician.

This data pattern suggests that both experimental (DVEP) males and females were more willing to express more positive preferences for lower prestige jobs, e.g. Cook, and less willing to express high positive preferences for higher prestige jobs.

5. Significant effects for the main factor of program participation were obtained for the semantic differential concepts of Reporter and Mail Carrier. Experimental (DVEP) students expressed more positive attitudes toward these concepts than did control students.

ORGANIZATIONAL EVALUATION

A secondary goal of this project evaluation was to examine the current status of program evaluation and the organizational processes required for program delivery. In general, program implementation has adhered to the original program proposal. Certain external constraints placed on the project restricted a more complete implementation of activities.

Most teachers and principals with whom interviews were held indicated a favorable reaction to the concept of developmental education and were favorably impressed with program delivery. However, discussions with the DVEP staff and on-site observations, in addition to these interviews, identified two problem areas in program delivery. The first involved the skill development of the Vocational Aides and their role in the classroom beyond the actual DVEP presentations. The second involved the relationship between the DVEP material and the Social Studies curriculum into which it is injected. Both these problem areas seem to be transitory and should not be major sources of difficulty as the program achieves greater stability.

SUMMARY AND CONCLUSIONS

The primary goal of the DVEP evaluation was to assess the effectiveness of the program in meeting two outcome objectives. The first objective was based on an outcome originally defined for program implementation at the upper elementary school level; successful program implementation would result in greater knowledge relating to certain occupational cluster. The empirical investigation indicated that the DVEP project <u>does</u> result in significantly greater occupational knowledge for students participating in the program. However, this result was not uniform in each of the participating schools.

The second outcome objective identified for evaluation was that successful program implementation would result in more positive attitudes toward work related concepts and differences in expressed job preferences. Differences in job preferences were obtained between the experimental and control groups. These suggested that program participation affect the perceived preferability of certain jobs. Regarding the students' attitudes toward work-related concepts, the data did show more positive attitudes toward the specific job concepts of REPORTER and MAIL CARRIER, for the DVEP students. Since both concepts represent jobs described in the program presentations, the obtained differences support the desired outcome. A longer period of implementation may be necessary for differences in attitudes toward more global concepts to become manifest.

In conclusion, the DVEP project successfully impacted on the target population based on the results for the two outcome objectives.

APPENDIX B

ITEM ANALYSES

In performing the item analyses, the first type of item statistic examined was the difficulty level of each item. The basic index of difficulty level the percentage of individuals passing an item (anwering in the correct direction). In test construction, item difficulty ("p" values) is important for several interrelated reasons. First, the "p" values influence the shape and dispersion (spread) of the test scores. If the average "p" value is far removed from 50% correct responses in either direction, the distribution of test scores will tend to be biased with either very high or very low scores and the variability among these scores will tend to be very small (Nunnally, 1967). Since it is desirable to have an approximately symmetrical distribution of scores, an average "p" value of about 50% for the test items should be obtained.

The second reason for using the "p" values in the data analysis is that they relate directly to internal-consistency reliability. Internal-consistency reliability is most appropriately applied to homogeneous tests, i.e., tests composed of items which all measure the same quality to about the same degree. This type of reliability indicates how closely an obtained score comes to the score the person would have attained if the measuring instrument was perfect. Internal-consitency reliability is greatest when:

(1) The item intercorrelations are greatest.

(2) The dispersion of item scores (variance) is greatest. This occurs when the average item difficulty is approximately 50% (as discussed above).

(3) The items are of equal difficulty (Guilford, 1965)

In an effort to achieve the desirable statistical conditions of normal score distribution and high test reliability, an effort was made to select pilot instrument items whose item difficulty was between 40% and 60%.

However, the use of the item difficulty approach as the only means for selecting test items is insufficient. More important than the matter of item difficulty is the issue of whether a test item discriminates individuals in the same manner as the other test items. When items correlate positively (discriminate individuals in a similar direction; "passing" one item means "passing" other items) with one another, those items with the highest average correlations are the best items. Since such item intercorrelations are highly related to the correlations of item score with total test score, those items with the highest item-total correlations (the degree to which those individuals who "pass" the item get higher test scores) similarly can be considered the best items. More specifically, when compared to items with relatively lower correlations with total score, those items with high item-total correlations account for a greater percentage of score differences in terms of a common content factor. Thus, choosing items with the higher item-total correlations has the effect of increasing the homogeneity (internal consistency) of the test. The legitimate substitution of high item-total correlations for item intercorrelations has the additional benefit of insuring that the psychological variable measured (knowledge of occupational clusters) is uniform for all items.

APPENDIX C

JOB INFORMATION QUESTIONNAIRE

NAME: _____ SEX: _____

SCHOOL: _____ GRADE: _____

1. FATHER'S OCCUPATION _____

2. MOTHER'S OCCUPATION _____

3. WHAT ARE THE NAMES OF THE NEWSPAPERS IN CLEVELAND? _____

_____

4. WHAT ARE THE TELEVISION STATIONS ON WHICH YOU CAN WATCH T.V. SHOWS?

_____

5. NAME THE LARGEST AIRPORT IN CLEVELAND? _____

_____

6. NAME THREE AIRLINES THAT FLY TO AND FROM CLEVELAND? _____

_____

7. WHAT KIND OF CARD WOULD YOU NEED BEFORE YOU CAN GET A JOB?

_____

8. HERE ARE SOME THINGS YOU NEED TO DO IF YOU WANT TO FIND AND GET A JOB. SHOW THE ORDER THAT YOU WOULD DO THESE THINGS BY PUTTING A 1 NEXT TO THE FIRST STEP, A 2 NEXT TO THE SECOND STEP, ETC.

_____ GO TO AN EMPLOYMENT SERVICE

_____ DECIDE WHAT KIND OF JOB YOU ARE ABLE TO GET

_____ READ THE HELP WANTED ADS

_____ GO FOR AN INTERVIEW

_____ TELEPHONE THE EMPLOYER

9. UNDERLINE THE PLACE WHERE EACH OF THESE JOBS WOULD MOST LIKELY BE FOUND.
FOR EXAMPLE: A REPORTER WORKS AT A NEWSPAPER.

REPORTER	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
SPECIAL DELIVERY MESSENGER	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
COPY EDITOR	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
INSTALLER	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
LINEMAN	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
TRAFFIC MANAGER	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE

SERVICE REPRESENTATIVE	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
PARCEL POST CARRIER	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
ENGRAVER	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
PRESSMAN	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
MAKE-UP ARTIST	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
CHIEF ENGINEER	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
BROADCAST TECHNICIAN	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
SALES REPRESENTATIVE	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
DIRECTORY CLERK	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
DISTRIBUTION CLERK	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
FOREIGN CORRESPONDENT	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE
WINDOW CLERK	NEWSPAPER	POST OFFICE	TV & RADIO	TELEPHONE

10. WHO TAKES YOUR MONEY WHEN YOU WANT TO FLY ON AN AIRPLANE: ?

_____A. RESERVATION AGENT

_____ B. TICKET SALES AGENT

_____C. AIR TRAFFIC CONTROLLER

_____D. AIRLINE DISPATCHER

11. WHO TRIES TO MAKE YOU FEEL COMFORTABLE ON BOARD AN AIRPLANE?

____A. FLIGHT OFFICER
____B. CO-PILOT
____C. STEWARDESS
____D. AIRLINE DISPATCHER

12. WHO LOADS AND UNLOADS THE BAGGAGE ON AN AIRPLANE?

____A. FLIGHT OFFICER
____B. RESERVATION AGENT
____C. AIRLINE DISPATCHER
____D. RAMP SERVICEMAN

13. WHO HELPS THE PILOT AVOID HITTING OTHER FLYING AIRPLANES BY GIVING HIM INFORMATION OVER HIS RADIO?

____A. AIR TRAFFIC CONTROLLER
____B. CO-PILOT
____C. FLIGHT ENGINEER
____D. AIRLINE DISPATCHER

14. WRITE THE NAMES OF DIFFERENT JOBS IN A HOSPITAL. FOR EXAMPLE: A DOCTOR WORKS IN A HOSPITAL.

_____ _____
_____ _____
_____ _____

15. WHICH JOB DOES NOT BELONG WITH THE OTHERS?

____A. TELEPHONE OPERATOR
____B. PROGRAM DIRECTOR
____C. SERVICE REPRESENTATIVE
____D. INSTALLER

____A. FLIGHT ENGINEER
____B. RAMP SERVICEMAN
____C. CHIEF ENGINEER
____D. PILOT

____A. PRODUCER
____B. EDITOR
____C. REPORTER
____D. PUBLISHER

16. THIS IS A LIST OF TWENTY JOBS ON WHICH MEN AND WOMEN WORK FOR A LIVING. READ THROUGH THE LIST TO MAKE SURE YOU KNOW ALL THE JOBS AND THINK ABOUT HOW MUCH YOU WOULD LIKE TO WORK ON EACH OF THESE JOBS. NOW, DECIDE ON ONE JOB THAT YOU WOULD REALLY LIKE TO HAVE MORE THAN ANY OTHER. WRITE THE NAME OF THAT JOB IN THE SPACE NEXT TO "1 - BEST JOB." NOW, DECIDE WHICH JOB YOU WOULD REALLY NOT LIKE TO HAVE. DO NOT WORY ABOUT THE REASON YOU DON'T WANT THE JOB. WRITE THE NAME OF THIS JOB IN THE SPACE NEXT TO "1 - WORST JOB." CONTINUE TO ALTERNATELY CHOOSE BETWEEN THE "NEXT WORST" JOBS UNTIL YOU YOU HAVE WRITTEN THE NAMES OF ALL THE JOBS IN THE SPACES. AS YOU SELECT EACH JOB, DRAW A LINE THROUGH IT SO YOU DON'T CHOOSE IT TWICE.

DOCTOR
ACTRESS/ACTOR
NURSE
MECHANIC (CAR)

NAME: _____ SEX: _____

SCHOOL: _____ GRADE: _____

1. WHAT ARE THE NAMES OF THE NEWSPAPERS IN CLEVELAND? _____

_____

2. NAME THE LARGEST AIRPORT IN CLEVELAND. _____

3. NAME THREE AIRLINES THAT FLY TO AND FROM CLEVELAND. _____

_____

4. WHAT KIND OF CARD WOULD YOU NEED BEFORE YOU COULD GET A JOB? _____

_____

5. THESE ARE SOME JOBS IN THE APPAREL INDUSTRY. SHOW HOW A DRESS OR SUIT CAN BE MADE BY PUTTING THESE JOBS IN THE ORDER THEY WOULD BE NEEDED TO MAKE THE PIECE OF CLOTHING. PUT A 1 NEXT TO THE JOB WHICH MUST BE DONE FIRST, A 2 NEXT TO THE JOB WHICH SHOULD BE DONE SECOND, ETC.

_____ SEWING MACHINE OPERATOR

_____ DESIGNER

_____ CUTTER

_____ PATTERN MAKER

_____ PRESSER

6. CIRCLE TRUE FOR THE STATEMENTS WHICH ARE CORRECT AND CIRCLE FALSE FOR THE STATEMENTS WHICH ARE NOT CORRECT.

TRUE FALSE FIREMEN GIVE FIRST AID TO PEOPLE IN THEIR HOMES.
TRUE FALSE POLICEMEN DECIDE IF PEOPLE ARE GUILTY WHEN THEY ARREST THEM.
TRUE FALSE POLICEMEN HAVE TO GO TO LAW SCHOOL IN ORDER TO BE HIRED.
TRUE FALSE FIREMEN HAVE TO INSPECT BUILDINGS TO FIND OUT IF THEY ARE SAFE.
TRUE FALSE POLICEMEN HAVE TO PASS A PHYSICAL EXAMINATION WHEN THEY ARE HIRED.
TRUE FALSE FIREMEN GET THEIR BASIC TRAINING ON THE JOB.

7. MATCH EACH JOB WITH THE CORRECT DESCRIPTION OF ITS MAJOR DUTIES. WRITE THE LETTER NEXT TO THE JOB THE DUTIES DESCRIBED. THERE IS ONLY ONE DESCRIPTION THAT IS CORRECT FOR EACH JOB.

_____ PRACTICAL NURSE

_____ NURSING AIDE

_____ MEDICAL TECHNOLOGIST

_____ PHYSICAL THERAPIST

_____ NUTRITIONIST

A. CONCERNED WITH THE BEDSIDE CARE OF PATIENTS. FOR EXAMPLE, TAKES THEIR PULSE, TEMPERATURE, AND BLOOD PRESSURE.

B. PERFORMS LABORATORY TESTS AND PROCEDURES. FOR EXAMPLE, EXAMINES BLOOD SAMPLES.

C. GIVES MEDICINE TO PATIENTS. REPORTS AND RECORDS THE PATIENTS' DAILY CONDITION.

D. WORKS WITH PATIENTS WHO HAVE BONE OR MUSCLE INJURIES.

E. APPLIES KNOWLEDGE OF "GOOD" FOOD TO IMPROVE PATIENTS' HEALTH.

F. PERFORMS DAILY TASKS NEEDED TO MAKE PATIENTS COMFORTABLE. FOR EXAMPLE, MAKES BEDS AND KEEPS ROOM NEAT.

8. WHICH JOB DOES NOT BELONG WITH THE OTHER?

1.

____ A. FLIGHT ENGINEER
____ B. RAMP SERVICEMAN
____ C. CHIEF ENGINEER
____ D. PILOT

2.

TO: Mr. William Sims, Director
Developmental Vocational Education Program

FROM: Sister Mary Owen, S.N.D., Diocesan Curriculum Director
Local Co-ordinator of the Program

RE: The One-Year Participation by the Catholic Schools

This report on the Developmental Vocational Education Program was done under my direction. Hopefully, we had envisioned a continuation of the program of sufficient duration to make it an integral part of our curriculum. The June 15th termination date lost us the opportunity of further development during the summer months. We feel, however, that what has been accomplished in so short a time by two most capable aides, Jane Ozello and Jean Dzurilla, can be used as excellent resource material as we continue to work toward a total education program.

To this end we have edited and duplicated the accompanying materials. In addition to the copies sent to you, we placed a copy in the curriculum library here at the Central Office as well as in the curriculum libraries of our regional offices.

At least the beginnings of a total career education program have been briefly outlined in the rationale and 1-8 objectives on pp. 18-20 of the accompanying materials.

Although the lesson plans on pp. 21-86 were used in grades 4-6 by the two aides, they can be adapted to use in other grades as has been indicated in the upper right hand corner.

Developmental Vocational Education Program
School Year 1972-1973 November - June
Catholic Schools: St. Francis, Immaculate Conception, St. Vitus
Vocational Aides: Jane Ozello, Jean Dzurilla

Goals Met:

1. Student should find school more meaningful through focusing on career choices.
2. Student should develop positive attitudes toward work and become sensitive to the dignity of work.
3. Student should develop respect for an individual's capabilities
4. Student should develop a concern for responsibility

Objectives Met:

1. Student should identify and describe a greater number of occupations
2. Student should compare and contrast occupations before deciding a field of interest
3. Student should distinguish job opportunities that are available for each individual.
4. Student should demonstrate his knowledge of the mechanics for applying for a job
5. Student should recognize the importance of each job

Clusters Covered:

Transportation
Public Services
Health
Construction
Apparel
Communication
Business and Office

Lesson plans, Materials used, and Bulletin Board outlines are attached.

Total number of students involved -- 241
St. Vitus -- 131
St. Francis -- 55
Immaculate Conception -- 55

LESSONS

A. Transportation (11 total)

1. Slides - Orientation D.V.E.P.
   Bulletin Board - pictures

2. Shipping
   a) Play-acting - occupations
   b) Film: "Seaport" -- Visual Aide Center

3. Shipping
   a) Reports by the students
   b) Slides -- Cleveland Port -- Cleveland World Port Booklets

4. Trains
   a) Song on trains: Silver Burdett, Record #6, "This Train"
   b) Booklet of Railroads -- Assn. of American Railroads
      Penn Central Railroad
      Penn Central Station
      Pittsburgh, Pa. 15222
      --Approaching 1970; A progress report on Penn Central Trans.
      --A Sharp Deal for Uncle Sam
      --The Human Side of R.R.
      --Railroads Unlimited
   c) Crossword Puzzles
   d) Built train: use of flashcards and construction paper cut-outs

5. Review lesson - trucks
   a) Riddle Bulletin Board
   b) Pamphlets on trucks
      White Motors Corp.
      79th and St. Clair
   c) Table Presentation - construction paper models and model cars, trains and environment

6. Trucks
   a) Game: Tell what's inside the bag (4 trucks representing different jobs)
   b) Film: "Lifeline on Wheels"
      White Motors Corp.
      431-2000
      Mr. G. Garret
   c) Flash Cards

7. Trucks
   a) Mimeograph Sheets -- fill out freight form (White Motor Corp.)

8. Airplanes
   a) Sheet on airplane and airport occupations
   b) Slides -- 3M Machine
      United Airlines
         --flight career qualifications
         --pamphlet "Join the Friendly Skies of United Airlines"
   c) Matching Game

9. Transportation
   a) Field trip: Auto Aviation Museum
      Western Reserve Historical Society
      10825 East Blvd.
      721-5622

10. Transportation
   a) Panel discussion
      Maps, magazine pictures

11. Review — Riddle Board
   "Educational Opportunities", Women's Army Corps

B. Cluster of Public Services

1. Police and Fire, Postal Services
   a) Scramble Cards at board
   b) Problem-solving situation
   c) Slides - 3M Machine
   d) How to address a letter
   e) Secret message code sheets

2. Telephone
   a) Teletrainer: Ohio Bell
      --a communications telephone program
      --pamphlet "Especially For YOU"
      --Charts
   b) "Wonderful World of Cleveland"
      Ohio Bureau of Unemployment Compensation, 1965

3. Telephone
   a) Speakers: Lt. Morgan of Fire Dept.
      (Call Main Fire Station)
      Officer Kaitsburg of Police Dept.
      (Call Main Station)

4. Gas and Water
   a) Maps, meter reading
   b) Game: Tic-Tac-Toe
   c) Bulletin Board -- T.V. Tube

C. Cluster of Health

1. Health
   a) Problem-solving situations
   b) Film - "Health Careers"
      Visual Aide Center
   c) X-rays -- various hospitals
   d) Word scramble
   e) Bulletin Board
   f) Crossword Puzzle

D. Cluster of Construction

1. Construction
   --viewed pictures
   --blue prints
   --Bulletin Board -- built house in relationship to jobs
   --Construction slides - D.V.E.P.

E. Apparel Industry (1 lesson)
   --used materials (fabrics)
      crocheting needles
      patterns
   --apparel slides -- Richman Brothers
   --handout on jobs (construction and apparel)

F. Communication (6 lessons)
   --newspaper - wrote an article about school
      viewed newspaper
      field trip -- Cleveland Plain Dealer (2 schools)
      -- Emerson Press (1 school)
   --television - T.V. guide
      Slides - D.V.E.P.
      Game
   --radio - tape recording of students as disc jockey
      handout -- Job/Description/Skills

G. Getting A Job (1 lesson)
   --Social Security Card
   --Job Application form -- White Motors Corp. - handout

H. Fine Arts and Humanities (1 lesson)
   --related jobs to T.V. programs
      ex. Partridge Family - Singers, Musicians
      Bewitched - Commercial Artist
   --role play game
      students acted out job and class guessed

I. Consumer Homemaker (1 lesson)
   --students defined job and illustrated them as a cartoon
   --dictionaries

J. Manufacturing -- preparation for NASA -- field trip
--films: "Airplanes Work For Us"
"Airplanes And How They Fly"
--NASA - 2 schools

K. Review lessons
--Popeye comic book series on jobs -- excellent -- D.V.E.P.
--Games - riddle boards
bulletin boards
bag full of riddles
--Panel discussions
--Trip: Goodtime Cruise Lines (3 schools)
(final trip)
U.S.S. Cod (1 school)

L. Business and Office (Banking) (1 lesson)
--Film: "Money In the Bank", D.V.E.P.

STUDENTS COMMENTS

At the beginning of the year we took a survey of the students career choices at this time in their life. Many chose public service: health, teacher, sports, construction, and transportation jobs. The students tended to follow their parents careers. In June, we asked the same question and very little change was made on their choices but their awareness level of jobs was increased.

The students comments on career education's likes and dislikes were voiced. Most were pleased with the information received and lessons as they were presented. They commented on the diversity of material and the range of interests it covered. Activity was the key to holding their interest.

Student's quotes:

"It helped us learn things we did not know"
"We can decide better what we want to be in the future"
"It was interesting finding out about other persons' jobs"

DEVELOPMENTAL VOCATIONAL EDUCATION

Period from Oct. 23, 1972 - Feb. 9, 1973

Major Activities and Accomplishments

a) Orientated to D.V.E.P.

b) Orientated to Catholic Curriculum with Sr. Owen - 10-10-72
Incorporated D.V.E.P. into Catholic Curriculum that week.

c) Orientated D.V.E.P. to classroom teachers and principals of schools involved. Described and explained the goals, objectives, and procedures. Week of 10-16-72.

d) Orientated students to D.V.E.P. with presentation of the meaning of the program and the clusters. 10-23-72.

e) Covered clusters of Transportation: air, train, ship, and truck
Public Services: police, fire, postal services, and telephone services
Health

f) 2 field trips with the schools of Immaculate Conception (5th and 6th) and St. Vitus (one 5th grade and one 6th grade) to Auto-Aviation Museum to culminate cluster of Transportation.

g) Speakers brought into 2 schools
Police - Immaculate Conception
Fire - St. Francis

h) Mrs. Mosley from telephone company observed a class at St. Vitus (grade 6)

i) Places contacted for more information, pamphlets or books
1. Cleveland Port - handbooks
2. White Motor - pamphlets, film, and trucking forms
3. Police Dept. - Lt. Kreitsburg
4. Fire Dept.
5. Telephone Co. - Mrs. Mosley - use of the teletrainer
6. Received x-rays from hospital
7. Interviewed by Catholic Universe Bulletin. Pictures taken at the schools with the children. This was supposed to be in Feb. 2 edition. It was not, but will be placed in one of the future editions.

j) Lessons have consisted of a variety of techniques: discussions, plays, films, slides, table representations and projects, bulletin boards were made and placed in rooms, actual participation in doing some aspect of the job, reports, filling out business forms, role-playing, cross-word puzzles, codes, problem solving.

RESULTS:

Since we were going into the classroom only once per week, we felt that a lot of time would be stolen from our lesson if we gave a pre-test and post-test before each area in the cluster of transportation. Therefore we combined the pre-tests of the four areas omitting questions and then administered the pre-test. After we completed the cluster, the post test was given. We also did the same with the clusters of Public Services and Health. We combined the occupations involved with the areas of police, fire, postal services, telephone and health. The post-test concerning Public Services and Health has not been given yet so the results are not listed.

PROBLEMS IN ADMINISTERING:

There were no major problems in administering the tests. The questions were read aloud and time was allotted for answering. We have studied 3 clusters so some of the questions on the test could be answered with the knowledge they received from the study. Some of the questions were confusing because those points were not stressed in our lessons. Also the titles given to certain occupations were different. We used the title DIETICIAN instead of NUTRITIONIST. Although the material was presented in class, I feel a drill would be necessary to really answer some of the questions. For instance, the Health Occupations. They were familiar with most of the jobs on page 6. Page 7 was hard for us. Maybe more explanation was needed. I think only 3 lines were needed and would have been better for us. Good ___; ___; ___; Bad, etc.

EVALUATION:

We entered the classroom during the last week of October, 1972. We gave a presentation of the program to the students then, and the week after, started in to the cluster of Transportation. We covered the four areas: shipping, trains, truck, and plane. We took in a field trip relating to this cluster. The cluster that followed was Public Services. We discussed police, fire, postal services and the telephone company and its services. We had speakers come from the police and fire to explain and demonstrate in better detail their job and equipment they use.*

We have been well-accepted at all 3 schools. The students have commented that they now know more about Cleveland and can relate better to the material in the news. It has increased their vocabulary knowing the correct terminology for the occupations. They have said they like career education better than their social studies class. The teachers like our approaches in discussing occupations. They themselves have found our lessons to be interesting, knowledgeable, and enjoyable. I feel that most of the teachers do follow-up and review the material covered in our classes (career ed.) during their own class time. When we first started, it took us a long time to cover a cluster. We were going in to a lot of detail with the jobs in our one-day-a-week-45-minute period and it would take 2 to 3 weeks to cover one aspect of the cluster. I feel it necessary that the regular classroom teacher keep in mind the material covered and include it with their lesson. The student will benefit more and more clusters can be introduced and covered.

*The cluster of Health Occupations has also been discussed.

CAREER EDUCATION

A Correlated Instructional Program for Grades 1-8

R A T I O N A L E

This career education program has been adapted from a pilot government project. The Developmental Education Program has been taught in our schools, 1972-73 school year.

Although it has been set up to correlate with the social studies curriculum, it can easily be incorporated into other subject areas.

This program is intended to meet the needs of the students in our schools with their present organizational framework. The program is flexible enough to allow emphasis to be placed on specific career choices in a particular area.

Career education has not been an integral part of our academic instruction. Incorporating this into our curriculum will enable students to choose a career not by chance but by design. It will play a part in almost every facet of the students' educational experience, beginning in the earliest grades continuing throughout his future. Rather than being limited to job skill training, it seeks to engage the student across a broad spectrum, including his attitude toward work, his awareness, his own talents, potential, interests, and his ability to make an informed and intelligent decision.

The development of the program was influenced by the following considerations:

--an unbiased positive view toward all occupations is essential to the selection of an appropriate occupation.
--an attitude of appreciation for God's gift of individuality and distinctive qualities given to all is essential.
--the objectives and activities are selected to coincide with the developmental stages of intellectual growth.

At the primary level the student will become aware of the community, systems and services available. The emphasis at the intermediate level will be on providing the student with a broad base of occupational information and orientating them toward the world of work. The program at the junior high level will move into an orientational exploratory phase, where the students will continue to learn about the wide range of occupational choices available but will begin to sample different occupational areas more deeply, and participate in actual experiences. The activities are designed to enable the student to begin a better position to make the next step in their career development.

INSTRUCTIONAL GOALS

To assist the children in understanding and profiting from their living experiences as they become aware, explore in, and prepare for their career choices, this program has the following instructional goals:

Through the experiencing of an organized developmental program of career education, the students should:

--develop positive attitudes toward work and become sensitive to the dignity of work.

--accept responsibility for developing good work habits.

--use effectively their understanding of reciprocal relationships involving women, men, work, and the environment.

--find school more meaningful through focusing on career choices.

--analyze occupations to relationship to their specific career.

--develop a respect for each individual's capabilities.

INSTRUCTIONAL OBJECTIVES

In order to reach these goals, the student should:

Grade 1

1) state some services provided in her community.
2) recognize the services as occupations.

Grade 2

1) recall present (past) knowledge of occupations and group into occupational families.
2) recognize differences in occupational families.

Grade 3

1) be aware of occupational families.
2) be conscious of the differences in abilities pertaining to each occupation.
3) discuss the effects of developing potential to its fullest.

Grade 4

1) identify and describe a greater number of occupations.
2) recognize the importance of each job.
3) distinguish job opportunities that are available for each individual.

Grade 5

1) Indicate the kinds of education needed for a specific career.
2) investigate more thoroughly 7 of the 15 clusters.
3) identify some tools and equipment needed for these occupations.

Grade 6

1) expand present knowledge to include remaining 8 clusters.
2) develop greater knowledge of the operation and uses of basic tools and equipment.
3) compare and contrast these occupations before deciding a field of interest.
4) demonstrate knowledge of the mechanics for applying for a job.

Grade 7

1) expand knowledge of the requirements of occupations.
2) increase knowledge of the operations involved in a wider variety of occupations.

Grade 8

1) acquaint self with the materials used in a range of occupations.
2) experience actual occupations through manipulation of these materials.
3) accept the responsibility of selecting fields of interest.

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Orientation to D.V.E.P.

Goal: Students should develop an interest in D.V.E. Program

Objectives: Students should derive general information about D.V.E.P.

(a) students should be acquainted with program
(b) student should define occupation and cluster
(c) student should recognize 15 clusters

Obj.	Learning Experience	Materials	Evaluation
a	1. Introduction of program.	Developmental Vocational Education is written on board.	
b,c	1. Pass out pictures, child will view and discuss 2. Oral description by student. Place on bulletin board relating to specific cluster. 3. Define occupation. (What are these people doing). Meaning of D.V.E.P.	Pictures Bulletin Board	
a,b,c	1. Survey Adult - occupation place cluster Interest - occupation cluster	Mimeograph sheets	Were the student able to relate to the cluster?

(1) An adult in my family _____
(occupation, place of employment, and cluster if possible)

(2) I would like to be _____
(occupation, and cluster if possible)

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Shipping

Goal: Student should develop an interest in shipping occupations.

Objectives: Student should identify and describe a greater number of occupations in shipping.

(a) student should define the term, transportation
(b) student should describe the following occupations from the film; pilot, engineer, mater, deck hand, shipping clerk, and longshoreman.
(c) student should describe management of harbor traffic, maintenance of a ship, and handling/distribution of cargo.

Obj.	Learning Experience	Materials	Evaluation
a	1. Review past lesson	Cluster and Occupation written on board.	Can student recall?
a	2. Define transportation		Can student define?
a	3. Intro. into shipping Who traveled and settled here? How? Type of Trans.?		
	4. Pre-test	Mimeograph sheet	
	5. Role Play - Captain Breakfast, sir? - cook, galley Refuel? - deck hands, engineer Travel N or S? - navigator Cargo movement? - longshoreman		
b,c	6. Film; Seaport 7. Discussion	Film Written on board management of harbor traffic, maintenance of ship, handling/distribution of cargo - bulk, general, other jobs.	Were the students able to answer the questions about the film and describe other jobs?
b	8. Assign reports on shipping occupations		

DEVELOPMENTAL VOCATIONAL EDUCATION

Film: Seaport

Introduction: President Cleveland, name of ship, arrives and the captain of this ship explains many of the seaports operations. Other ship employees and seaport workers explain how their own jobs contribute to the life of the seaport - management of harbor traffic, maintenance of ships and the handling and distribution of cargo.

Discussion: Management of harbor traffic - calm waters and tugboat

Maintenance of ships - dry dock; for repairs

Handling and distribution of cargo - longshoreman; two kinds of cargo; bulk and general

Other jobs - truckdriver, longshoreman, ship captain, ship engineer, navigator, custom officer, etc.

NAME _____ DATE _____

Part I. True or False

_____ 1. Shipping employees work only on the ships.

_____ 2. Engineers pilot ships.

_____ 3. Ship officers work their way up from the bottom.

_____ 4. Deck hands perform manual tasks.

_____ 5. The mate assists the pilot.

Part II. Multiple Choice

1. The shipping industry is __(A)__ a) growing b) closing down c) only for men.
2. Transportation or cargo by ship costs __(C)__ a) more than it does by truck b) just as much as it does by truck, train, or plane c) less than it does by truck, train, or plane.
3. Engineer's are responsible for the ship's __(A)__ a) power b) food c) navigation
4. A ship's kitchen is called the __(C)__ a) deck b) crew c) galley
5. Most ships on inland waterways are inspected by the __(A)__ a) Navy b) Army c) Coast Guard

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Shipping

Goal: Same as lesson #2

Objectives: Same as lesson #2

Obj.	Learning Experience	Materials	Evaluation
c	1. Student reports 2. Cleveland port 3. Chart facts	Slides Mimeograph sheet (copy attached)	Was child able to use resource

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Shipping

Goal: Same as lesson #2

Objectives: Same as lesson #2

Obj.	Learning Experience	Materials	Evaluation
c	1. Student reports		Was student able to use resources
	2. Cleveland Port	Slides	
	3. Chart facts and jobs	Mimeographed sheet	
	4. Sing song on shipping	Record	

Transportation -- Shipping

Facts

Employees work on land and ship

Industry is growing

Cost less than it does by train, truck, plane

Ships are inspected by the Navy

Ship's kitchen is called a galley

International port

Tugboat tows ships

Jobs

Pilot -- navigates ships

Engineer -- responsible for operating and maintenance of ship

Mate -- assists pilot in operation of ship

Deck hand -- performs manual tasks of involved in running of ship

Shipping clerk -- keeps records of goods

Stevedore -- hires people, a company

Longshoreman -- transfers cargo from ship to dock, loads the ship.

Merchant seaman -- maintain decks and other areas of the ship

* officers are promoted as experience and knowledge increase.

DEVELOPMENTAL VOCATIONAL EDUCATION

NAME _____ DATE _____

*TRANSPORTATION -- SHIPPING

Facts	Jobs

NAME _____ DATE _____

Part I. True or False

__F__ 1. Shipping employees work only on the ships.

__T__ 2. Engineers pilot ships.

__T__ 3. Ship officers work their way up from the bottom.

__T__ 4. Deck hands perform manual tasks.

__T__ 5. The mate assists the pilot.

Part II. Multiple Choice

1. The shipping industry is __A__. a) growing b) closing down c) only for men

2. Transportation of cargo by ship costs __C__. a) more than it does by truck b) just as much as it does by truck, train, or plane c) less than it does by truck, train, or plane.

3. Engineer's are responsible for the ship's __A__. a) power b) food c) navigation

4. A ship's kitchen is called the __C__. a) deck b) crew c) galley

5. Most ships on inland waterways are inspected by the __A__. a) Navy b) Army c) Coast Guard

2. Transportation of cargo by ship costs _____. a) more than it does by truck b) just as much as it does by truck, train, or plane c) less than it does by truck, train, or plane.

3. Engineers are responsible for the ship's _____. a) power b) food c) navigation

4. A ship's kitchen is called the _____. a) deck b) crew c) galley

5. Most ships on inland waterways are inspected by the _____. a) Navy b) Army c) Coast Guard

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Trains/Railroads

Goal: Student should develop an interest in railroad occupations

Objectives: Student should identify and describe a greater number of occupations in the railroad system.

(a) student should recognize the importance railroad past and present
(b) student should describe the following occupations; trackman, locomotive engineer, brakeman, conductor, station agent, clerk, carman, firemen, and bridge workers.

Obj.	Learning Experience	Materials	Evaluation
	1. Song about R.R.	Silver Burdett Record #6 "This Train"	
a.	2. Introduction relating to the history of the R.R. -importance of R.R. and growth of U.S. -first R.R.	Booklet - R.R. of America	Can student describe importance of R.R. to America
a,b	3. Describe individual jobs -pass out card and describe job (ask questions) in sequence by building a train 1. trackman 2. bridge workers 3. carman 4. locomotive engineer 5. fireman 6. conductor 7. brakeman 8. station agent 9. clerk	Flash cards Chalkboard	Was student able to relate to each job?
b	4. Definitions 5. Supplementary - for students individual research if so desires	Crossword puzzle Booklet-R.R. of America	Could student define each job?

Build a Train

PURPOSE: Students should build trains bearing that each job is interdependent on another. Flash cards with Nationalities

Given to students to put on board. Also introduce on board in a humanistic pattern.

DEVELOPMENTAL VOCATIONAL EDUCATION PROGRAM

LOCOMOTIVE ENGINEER -- works the throttles, air brakes, other controls, and checks the condition of the locomotive. He must observe track signals and comply with speed restrictions at all hours and in all conditions. He must be alert constantly, especially for obstructions on the track or other emergencies.

FIREMEN -- works with locomotive engineer. Checks to see if the locomotive is supplied with the fuel, sand and water needed for the run, that the engine is in proper working order. He checks the flagging equipment. He acts as lookout for obstructions on tracks and road crossings, inspects the train on curves for sparks, smoke or fire and any other defects.

CONDUCTORS -- safety of the passengers and cargos. Supervise work of the train and engine crews, takes care of any emergency that may occur on the run.

BRAKEMEN -- work with conductor, tools and equipment are in their proper place, at stops -- they make walking inspections of the cars in the train, regulate heat, light and air-conditioning on a train.

STATION AGENT -- calculate freight and express packages, deliver train order.

CLERKS -- paper work; collect bills, investigate complaints, adjust claims, tracing shipments, selling tickets and bookkeeping.

TRACKMEN -- look for cracked rails, weak ties, other track and road defects. Heavy maintenance work.

BRIDGE WORKERS -- skilled craftsmen, carpenters, bricklayers, plasterers, ironworkers.

CARMEN -- car inspectors that check cars that might lead to accidents and/or delay.

DEVELOPMENTAL VOCATIONAL EDUCATION

Brief History of the Railroad

Benefits of the R.R.
- --settled west
- --growth of cities near R.R.
- --brought farm machinery west
- --brought raw materials
- --R.R. usually build near shores
- --helped with the exchange of products (How would we get wheat from the West)
- --tied countries together making them a united nation
- --provided fast dependable, low cost, high volume transportation
- --delivered troops
- --expanded our nation
- --R.R. employed in every state except Hawaii

First R.R. in 1830 -- opened "railroad era"
- --13 million people lived east of Mississippi
- --new towns
- --increase in productivity
- --opened regions of farming, mining, lumber, and manufacturing
- --Congress aided construction of R.R. 1850 -- 1st land grant
- --Page 11-12; "Railroads in America" -- pictures showing the expansion of R.R.
- --type of power changed over the years from steam to diesel

Quote -- Late President J.F.K.

--"As our frontier moved westward, it was the railroads that bore the great tide of Americans to areas of new opportunities and new hope. It was the railroads that linked together the diverse segments of this vast land so that together they might create the greatest economy the world has known."

First locomotive to run on a standard railroad in the U.S. was the British built - Stourbridge Lion. On August 8, 1829, the Lion, operated by Horatio Allen, was tried out on a short wooden railroad in Pennsylvania. September, 1829, the Tom Thumb, an experimental locomotive built by Peter Cooper of N.Y. - was American built and run!
First steam passenger railroad run in Charleston, S.C. in December, 1830.

Network of more than 20,000 miles of rail line reaches into all parts of the country. Nations largest employer. Worker starts at the bottom and works his way up.

NAME _____

ACROSS

1. Responsible for running locomotive safely and efficiently
2. Handles paper work and accounts for each piece of merchandise
3. Builds and repairs railroad freight and passenger cars
4. Construct, maintain, and repair tracks

DOWN

5. Responsible for seeing that railroad trains are moved according to train orders
6. Official representative in dealing with public at railroad stations Sells tickets, checks baggage, and loads and unloads freight
7. Checks fuel, electrical equipment and tools before each run in order to insure safety
8. Construct and repair tunnels, bridges, railroad stations owned by the railroad
9. Sees that proper flags, warning lights, and other signals are displayed while train is in motion or stopped. Checks air brakes.

DEVELOPMENTAL VOCATIONAL EDUCATION

Due to the fact that the week is shortened because of the Thanksgiving Holidays, we have planned this lesson as a review -- a fun review. We have not written up specific objectives but have listed the activities. One of the activities might be an introduction to the following lesson on trucks.

Activities	Purpose
1. Riddle Bulletin Board	1. To review shipping and train occupations.
2. Place cards on the backs of the students (volunteers) which would have the name of an occupation. Then have the other members of the class give hints to this student who would then have to guess what job they represented.	2. A review in the area of the train.
3. Pass train booklets out. Let students page through these booklets.	3. A review and an enforcement of the train lesson.
4. Pass out pamphlets on the trucks which were received from White Motors. Allow the children to page these thoroughly giving them an idea and motivation to learn more about trucks.	4. Introduction to truck lesson.
5. Devote extra time to the development of the transportation table presentation. State different names that may be familiar to the children. (Names which correlate to the area/cluster of transportation) -- Cleveland Port, Burke Airport, Hopkins Airport, B & O Railroad, Penn Central, Pacific Central, White Motors, Leese-Neville	5. Learn more about city.

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Trucking

Goal: Student should develop an interest in trucking occupations.

Objectives: Student should identify and describe a greater number of occupations in trucking system.

(a) student should identify with areas trucking companies, White Motors
(b) student should describe the following jobs: over the road truck driver, local truck driver, and routeman, bus driver
(c) student should relate to school work and its importance in the working world.

Obj.	Learning Experience	Materials	Evaluation
b	1. Introduction - game Student describe and expresses what the truck is used for.	Paper bag with 4 trucks representing the different jobs.	
a,b,c	2. Film - further explanation of jobs.	"Lifeline on Wheels" White Motors Corp. 431-2000 East 79 St. Mr. G. Garret	
b,c	3. Discuss film - try to relate jobs to truck (toys) -over the road truckdriver -local truckdriver -routeman -bus driver -straight truck - local truckdriver -piggy back truck on trains -weight station - so much weight on an axle aloud to prevent wear on roads -drivers taught safety	Toy trucks Job flash cards	Was student able to relate to film?

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Trucking

Goal: Same as lesson #6

Objectives: Same as lesson #6 .

Obj.	Learning Experience	Materials	Evaluation
b,c	1. Define jobs - students draw trucks and name and define jobs.	Mimeographed sheets	Can students jobs by relat to film and d cussion from lesson #6?
c	2. Freight form - students will fill it out along with the teacher.	Mimeographed sheets	Is it importa to go to scho

B & O RAILROAD
Shipping Division

DRIVING OCCUPATIONS

Over the Road Truckdriver -- across the nation
large semi

Local Truckdriver -- state and vicinity

Routemen -- milkman, specific route

Bus driver -- associated with bus lines

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Airplanes

Goal: Student should develop an interest in airplane occupations.

Objectives: Student should identify and describe a greater number of occupations in airplanes system.

(a) student should identify with Cleveland Hopkins and Burke Lakefront Airports.
(b) student should describe the following jobs: aircraft mechanic, airplane dispatcher, air traffic controller, teletypist, pilot, copilot, flight engineer, and stewardess
(c) students should recognize the importance of education in obtaining a job.

Obj.	Learning Experience	Materials	Evaluation
a	1. Introduce Cleve. Hopkins Airport (largest in Cleve.). Can you name another airport in Cleve.? Burke Lakefront.	Picture of Cleve. Hopkins	
b,c	2. Airplane skit which was given out at previous lesson so student would have time to practice it.	Slides on airport shown - correlated with skit	Were students able to carry out task?
b,c	3. Discussion - ask actors to tell about their job	Flash cards	Were students able to defin jobs?
b	4. Culminating activity - game matching	Mimeographed sheets	Did students match jobs correctly?

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Airplanes

Goal: Student should develop an interest in airplane occupations

Objectives: Student should identify and describe a greater number of occupations in airplanes system.

(a) student should identify with Cleveland Hopkins and Burke Lakefront Airports
(b) student should describe the following jobs: aircraft mechanic, airline dispatcher, air traffic controller, teletypist, pilot, copilot, flight engineer, and stewardess
(c) students should recognize the importance of education in obtaining a job.

Obj.	Learning Experience	Materials	Evaluation
	1. Before class students in skits prepare and put on articles which represent their jobs 2. All students grouped together on floor as an audience. -Has anyone been to a play? -Did you play a part at the play even though you were not in the play? *Audience -Is an audience important? -What must they do? 3. Introduction to skit-set the scenes (1) classroom (2) airplane - United Airlines -Has anyone flown on a plane? -What airport did you fly from? *Cleveland Hopkins -Is it the biggest in Cleveland? -Does anyone know a smaller airport that is real close to us? *Burke Lakefront	Badge Stripes	
	4. Skit - Students did not have much time to practice so they will work on expression instead of body movement. Job titles on chalk tray. Students name jobs on chalk tray.	Airplane slides shown correlated to skit. Flash cards	Were students able to carry out task? Could students do the work sheet?
	5. Each student receives a skit in order to recall jobs for matching game. (skimming techniques used)	Mimeographed sheets	

Obj.	Learning Experience	Materials	Evaluation
	6. Students correct sheet with teacher in an overhead presentation. 7. Discuss what materials are available for them to look at 8. Next week we shall have a test so be sure to study.	Transparency "Wonderful World of Cleveland"	How well did students do?

PLAY The Pilot and His Plane

AUTHOR Jeanann Dzurilla

CHARACTERS Captain, Co-Pilot, Friend from F.A.A., Flight Engineer, Stewardess, Passengers (two), Little Old Lady and Her Friend, Teletypist, Clerk, Air Traffic Controller, Aircraft Mechanic, Airline Dispatcher, Teacher, Narrator.

PROPS Modify to own liking

NARRATOR: Here is Captain _____. He is the pilot of a big plane. He is brave. He is careful. Captain _____ wears a blue suit. He has gold stripes on his sleeves. There are wings on his coat. He wears a cap with a badge on it. It took a long time for _____ to become the captain of a big plane. First he had to go to a flying school.

AT SCHOOL
TEACHER: We have learned the importance of the radio and how to use it properly when in flight. (Radio Signal) Yesterday, we talked about weather and the need for the daily forecast. _____, can you recall any of the traffic rules of the sky?

CAPTAIN: Yes, teacher, we must fly at a certain altitude and a certain speed. Keep on course at all times to avoid collision with another plane.

TEACHER: Very good, _____. We will take our first lesson in the air today. Now we turn the wheel right and the plane goes to the right and then turn the wheel left and the plane goes to the left. Pull the wheel towards you and the nose of the plane goes up, push the wheel away from you and the nose goes down.

CAPTAIN: How about when you want to turn around and what's this pedal for?

TEACHER: To turn the plane around, move the wheel to the left and step on the left pedal or move the wheel right and step on the right pedal. Now one wing tilts up and the other wing tilts down. The plane will turn around.

CAPTAIN: I love to fly the plane. I will learn to control the plane properly and efficiently because I want to be an airplane pilot.

NARRATOR: Then _____ went to see a friend. He was a member of the F.A.A. _____ explained to his friend what he wanted to be.

CAPTAIN: _____, I am interested in becoming an airplane pilot for a national airline. What needs to be done and what should my qualifications be.

FRIEND: Well, old buddy. The F.A.A. which stands for Federal Aviation Administration has some very strict rules. We develop the safety regulations, inspect and test aircraft facilities, provide ground electronics guidance and we give the test for licensing pilots. But since your my buddy, I'll give you some inside info.
You seem to fit the qualifications. You must be 20-35 yrs. of age. 5 ft. 6 inches to 6 ft. 4 inches, and weigh between 140-210 pounds. You have graduated from high school and you need two years of college. If you have bad vision, you need

1st LITTLE OLD LADY: Hey, sonny, we need two tickets to Miami, Florida. This cold weather in Cleveland is doing nothing for my back aches.

2nd LITTLE OLD LADY: We want to fly the friendly skies. Gertrude, I can hardly wait to relax on the sunny warm beach in Miami. Get a move on there, young man.

CLERK: Reservations, ladies. Fare to Miami - $136.00 plus tax $6.30 which comes to $142.30. Thank you ladies, right down the ramp to Flight 216 for Miami, Florida. We'll take care of your baggage after we weigh it. Here are your tickets, and baggage tags. We are called the traffic agent or clerk. We sell tickets, make reservations, schedules, fare information, check and weigh baggage. We also keep record of passengers and cargo. Flight 216 leaving for Miami, Florida at Gate 23, in 15 minutes. Start boarding the plane.

LITTLE OLD LADIES: He was such a nice man. He was cute, too. Now, Gertrude, stick to your own age. Well, we're on our way.

STEWARDESS: I am a flight attendant and I am aboard almost all passenger planes operated by the commercial airlines. We greet the passengers as they board the plane and check their tickets, assist them to their seats, hang their coats, and generally make them comfortable. Since we come in contact with the public, we must be poised, tactful and resourceful in case of emergencies. There are age limits. We must be 19-27 years old. Our height must be at least 5 ft. 2 inches and at the most 5 ft. 9 inches. We must be in excellent health. We can serve meals and give safety instructions. We are responsible to the captain. Good afternoon, ladies. May I see your tickets? Seats 16 and 17. Right this way, please. May I have your coats? Would you like a pillow?

LITTLE OLD LADY: Where do I sit? How are the weather conditions down in Florida?

STEWARDESS: I will get that information for you immediately. Captain, how is the weather in Miami?

NARRATOR: For this information, the Captain contacts the Radio Room.

CAPTAIN: Radio Room, come in, Radio Room. Flight 216 needs weather report.

TELETYPIST: Flight 216 for Florida. Weather conditions are fair. Thunderstorm in the southern part of Ohio and northern part of Tennessee. Land in Atlanta, Georgia at 1100 to pick up shipment and continue on to Florida. Weather is good in Florida. Sunny skies at 84 degrees.

CAPTAIN: Get me the Control Tower.

TELETYPIST: Right away, Captain. The Control Tower is directly above us. I am called a teletypist and I work in the Radio Room. I report the weather conditions and other flight information between ground personnel and flight personnel. I use a radio-telephone. I also operate a teletype machine which has a keyboard similar to that of a typewriter.

it to be corrected to 20/20 vision. You cannot have any outstanding physical handicaps and we will give you a test to see if you have quick reflexes. You also need much experience in the air. I recommend you get a job at a small airport and work your way up.

CAPTAIN: Thanks, alot. I'll take your advice.

NARRATOR: _____ studied and practiced every day until he was ready to get a job as a pilot. There are many kinds of pilots. First _____ got a job as a flying forest ranger. If he saw smoke he called the ranger station on his radio. Next he flew a freight plane. He flew a giraffe from New York to a zoo in Cleveland. He flew fresh fish from Maine to Cleveland.

CAPTAIN: I want to fly a plane with people on it. I will get a job flying a small passenger plane.

NARRATOR: _____ flew a small plane for a long time. He studied more and more and again he had to pass tests to reach his goal of becoming a pilot for a airline.

CAPTAIN: I have studied hard and long and have become a co-pilot at the United Airlines. I sit next to the captain or pilot of the plane. I watch to see how the plane is flying. I am second in command. I assist the pilot in air-to-ground communications, monitoring flight and engine instruments and in operating the controls of the plane. Together, the pilot and I, the co-pilot, plot the course to be flown and compute the flying time between various points. We must also contact the airline dispatcher to check with his figures.

NARRATOR: Then one day _____ got good news.

CAPTAIN: I have finally made pilot. I am now a Captain and am in complete charge of the plane. I now have a co-pilot to help me.

CO-PILOT: I have taken over the duties that _____ once had. We sit in the cockpit. There is also another person up front with us. He is a man directly under me who does some very important jobs. He is called the flight engineer. Please, report the condition of the plane.

FLIGHT ENGINEER: I check the fuel tanks, and inspected the tires. Everything seems to be A-OK. Once the airplane is airborne or in flight, I watch and operate many instruments and devices to check the performance of the engines. I had much schooling also. 3 long years of work experience in the maintenance, repair and over haul of aircraft and engines including a minimum of 6 months training or a year of experience on 4-engine pistons and jet planes. But it all paid off because I love what I am doing. I also check the air-conditioning, pressure and electrical systems.
Condition of plane is tip-top. Ready for take-off.

CAPTAIN: Stewardess, will you please welcome the passengers.

NARRATOR: Back at the airline terminal, the passengers are buying their tickets.

AIR TRAFFIC CONTROLLER: Control tower, come in, Flight 216. Take course as planned. You may have a slight delay when you hit the thunderstorm but it shouldn't give you too much trouble. Fly at an altitude of 3200 ft. This will carry you above major air currents that may give disturbance. Your speed should be the regulation air speed. Over and Out.
I am called the air traffic controller. I am the guardian of the airways and give instructions, advice, and information to pilots by radio and radar to avoid collisions and minimize delays as aircraft fly between airports. We must consider many factors, including weather, geography, amount of traffic, and size, speed and operating characteristics of aircraft. I am stationed in the airport control tower.

CO-PILOT: Co-pilot to airline mechanic. How are the mechanical operations.

AIRCRAFT MECHANIC: Co-pilot, I have checked the propeller conditions which are in fine shape. The damage that was done in the flight yesterday is fixed and in good conditions. I keep the airplanes operating safely and efficiently. I specialize in a specific part of the plane, that is the propellers. They called me here today because of the propeller trouble they had yesterday. Other Aircraft mechanics may specialize on the landing gear, hydraulic equipment, airborne electronic communications. These are then inspected by the F.A.A. men.
Everything is up to standards and take-off can be on time.

CO-PILOT: Captain, did you check with the dispatcher in the pre-flight planning. Is everything going to go as planned.

CAPTAIN: Yes, but I would like to speak with him once again before take-off. Please contact him for me.

CO-PILOT: Radio Room, Flight 216 to Radio Room.

TELETYPIST: Radio Room

CO-PILOT: Contact me with _____ the airline dispatcher for our flight.

TELETYPIST: Will do.

AIRLINE DISPATCHER: Airline dispatcher here reporting to Flight 216.

CO-PILOT: Contact has been made, Captain

CAPTAIN: Give report on our pre-flight plan once again.

AIRLINE DISPATCHER: You will fly on route 106AB at the altitude of 3200 ft. The total flying time should be 3 hrs. and 43 mins. Your arrival at Atlanta, Georgia, will be at 0245 hrs. You will need no refueling and departure from Atlanta at 0300 hrs. Landing at Atlanta on the Far Northwest Air strip. Landing at Miami, Florida at 0335 hrs. on Southern Runway.
I am called the airline dispatcher. I coordinate flight schedules and operations within an assigned area. All F.A.A. rules and regulations are observed. I assist the pilot in pre-flight planning about the quantity of fuel, the best route and altitude, the total flying time and alternate fields for landing if the one planned is hazardous.

STEWARDESS: Weather conditions at Miami, Florida are good, sunny, warm at 84 degrees. Please fasten seatbelts and no smoking till we have leveled off. Arrival in Miami at 3:35. We hope you enjoy your flight.

NARRATOR: They finally arrive in Florida.

TWO LITTLE OLD LADIES: Well, Gertrude, let's get a move on.

CAPTAIN: We hope you have had an enjoyable trip on our flight. Be careful as you leave. Be sure to fly United again --- the friendly skies airline.

DEVELOPMENTAL VOCATIONAL EDUCATION

NAME _____(Teacher's Copy)_____

AIRPLANE OCCUPATIONS

COPILOT

TELETYPISTS

AIRCRAFT MECHANIC

FLIGHT ENGINEERS

AIRLINE DISPATCHER

PILOT

AIR TRAFFIC CONTROLLERS

STEWARDESSES

1. keep airplanes operating safely and efficiently
2. plan the flight schedules and operations, quantity of fuel, the best route, the total flying time
3. are the guardians of the airways, giving instructions, advice to avoid collisions
4. are stationed in the radio room and report the weather conditions between the ground personnel and flight personnel
5. is called the captain
6. is second in command and assists the captain
7. check the fuel tanks, inspects the tires, checks performance of engines while in flight
8. is the flight attendant aboard most passenger planes and makes the passengers as comfortable as possible

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Review

Goal: Student should express interest in transportation occupations and enjoy field trip.

Objectives: Students should review transportation occupations by relating to objects viewed.

Obj.	Learning Experiences	Materials	Evaluation
	1. Introduction to field trip given in previous lesson. General information on how to act.		
	2. Field trip - Auto-Aviation Museum - Western Reserve Historical Society 10825 East Blvd. 721-5622	Bus approved Christmas songs to sing on bus	
	3. Preparation for panel discussion or Post Test.		Could students relate what they saw to their panel discussion?
	4. Discuss field trip during return trip on the bus.		

DEVELOPMENTAL VOCATIONAL EDUCATIONAL PROGRAM

Title: Panel discussion - Review: Correlation of Career education and social studies.

Goal: Student should develop an interest in the occupations of transportation

Objectives: Student should identify and describe a greater number of occupations in the cluster of transportation.

(a) student should identify the occupations in shipping, railroads, road travel, and air travel in early times.
(b) student should identify the occupations in the transportation cluster with modern times and compare to early times.
(c) student should identify types of cargo carried on different types of transportation, early and modern.

Obj.	Learning Experience	Materials	Evaluation
a,c a,c	1. Groups discuss travel made in early times and the type of transportation used. 2. Groups discuss jobs that were needed on these types of transportation.	Map Pictures Textbook	Were the students able to identify their study of occupations in the areas of transportation with early times?
b	1. Identify modern transportation 2. Compare times	Pictures from handouts in career ed. classes Magazine pictures	Were the students able to identify more jobs in modern times?
a.b,c	1. Children at desks write down important facts, in comparing early times to modern.	Mimeographed sheet (sample below)	Were the students able to compare the early times to modern?

Outline -- Early Times Versus Modern

Early Times	Modern
1. Types of transportation	Types of transportation
2 Occupations	Occupations
3. Types of cargo	Types of Cargo

Lesson #10
Grade 6

DEVELOPMENTAL VOCATIONAL EDUCATIONAL PROGRAM

Title: Panel discussion - Review: Correlation of career education and social studies.

Goal: Student should develop an interest in the occupations of transportation.

Objectives: Student should identify and describe a greater number of occupations in the cluster of transportation.

(a) student should identify the occupations in shipping, railroads, road, air travel in the countries they are studying.
(b) student should identify types of cargo transported in the different countries.

Obj.	Learning Experience	Materials	Evaluation
a a a b. a,b	1. Children form groups and choose the countries they are interested in. 2. Children discuss the types of transportation used in that country. 3. Children discuss the types of occupations in the country. 4. Children discuss types of cargo from the countries. 5. Children at desk, take notes on the discussion held by panel.	Maps Pictures Pictures from handouts given in career ed. class Textbook Mimeographed sheet (below)	1. Were the students able to identify their study of occupations with the occupations in transportation used by other countries? 2. Were the students able to identify the types of cargo needed from different countries.

OUTLINE -- Occupations in transportation used by other countries

Country	Types of Transportation	Occupations	Cargo

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Transportation -- Post-Test

Goal: Student should develop a greater interest in transportation occupations.

Objectives: Student should express the knowledge obtained from the previous lessons.

Obj.	Learning Experience	Materials	Evaluation
	1. Quick review	Riddle board	
	2. Post-Test	Mimeographed sheets	Has the student's knowledge increased in the area of transportation occupations?

DEVELOPMENTAL VOCATIONAL EDUCATION NAME _____

POST TEST ON TRANSPORTATION DATE _____

PART I - ESSAY

1. What is transportation? _____

_____

2. What are the four areas of transportation we discussed?

_____ _____ _____ _____

PART II - MATCHING

____Longshoreman

____Shipping Clerk

____Cleveland Port

____Engineer

____Pilot

A. keeps records of goods unloaded and loaded on the ships
B. responsible for operation and maintenance of the ship
C. loads and unloads cargo
D. Ships from all over the world dock at this port
E. navigates the ship

PART III - FILL-IN

(Brakeman, Conductor, Trackman, Station Agent)

1. The _____ makes sure the trains move on time.

2. Selling tickets and checking baggage is the job of the _____.

3. The _____ checks air brakes and gives signals.

4. Maintenance, repairs, and construction of tracks, ties, switches, and fences is the job of the _____.

PART IV - TRUE OR FALSE

1. _____ The local truck driver works from a warehouse and receives daily assignments.
2. _____ The over-the-road driver stops at his daily route in the same city.
3. _____ The local driver delivers people from place to place.

PART V - MATCHING

_____ Flight Engineer	A. plans flight schedules and operations, quantity of fuel, and best flying route.
_____ Air Traffic Controller	B. Makes passengers comfortable
_____ Airline Dispatcher	C. checks fuel tanks, inspects the tires, and checks performance of engines while in flight
_____ Stewardess	D. guardians of airways, gives advice to avoid collisions.

EXTRA***

The largest airport in Cleveland is the _____.

MERRY CHRISTMAS!!!!

DEVELOPMENTAL VOCATIONAL EDUCATION

Title: Public Services

Goal: Students should develop an interest in Public Service Occupations

Objectives: Students should identify and describe a greater number of Public Services.

(a) students should recognize the need and importance of public servants.
(b) student should exhibit present knowledge of occupations and safety procedures correlating to public service, police and fire.
(c) student should identify the following occupations in public services of police and fire: detective, car patrol, motorcyclist, communicator, dispatcher, first aid, firefighter.
(d) student should become acquainted with postal jobs in the cluster of public services.

Obj.	Learning Experience	Materials	Evaluation
b	1. Pre-test (Public Service & Health)	Mimeographed sheet	Were the students able to answer some of the questions?
a,b	2. Problem-Solving Situation given to students orally. Discuss safety procedures to take and who to contact. Students given cards at board to place in proper order.	(Attached sheet) Cards scrambled at board	Were the students able to exhibit knowledge of safety procedures and recognize need of public servant?
a,b,c	3. Show slides and discuss. Police: What other types of policemen are we familiar with? mounted police, dog wardens. Compare police dispatcher with airline dispatcher. Both coordinate schedules to be taken that day. Fire - stress importance of teamwork. Stress equipment used in slides. Have a student place the correct name of the occupation on board from scrambled cards.	Slides on Public Services and 3M machine	Were the students able to identify the occupations before hearing the sound recorded about the job?
a,b,c	4. Have students write their own experience involving either the police or fire. Ask them to use the proper name for the occupation, what equipment they may have seen them use, and what they saw happen.	Paper and pencil	Were the students able to identify the occupation correctly?

Obj.	Learning Experience	Materials	Evaluation
	5. Ask students how they would address a letter. Ask the importance of the zip code. Show the slides about postal jobs and discuss.		Through discussion were the students able to identify some postal jobs?

Library Book -- <u>What Policemen Do</u>

<u>PROBLEM:</u>

Johnny is (the same age as the class; ex. 12 yrs. old.) He is home from school for X-mas vacation. He has a baby sister about 2 yrs. old. Johnny's mother is baking X-mas cookies but she has to go to the grocery store to buy more ingredients to finish baking. She leaves Johnny alone to watch his baby sister since she would only be gone a short while. Johnny takes his little sister into the living room to watch television with him. Johnny's favorite program was on (here mention a favorite of the children). Johnny became so involved in the television program that he did not see his baby sister crawling away toward the kitchen where she smelled the cookies. She crawled over to the stove and started playing with the knobs. Somehow the high flames from the burners caught a dish towel which was lying on the stove. The fire grew and the cupboards started to burn. The baby became frightened and began to cry. Johnny came running into the kitchen and saw that the fire was too high for him to put it out himself. What should Johnny do?

Detective -- college 2 yrs. and 4 yrs. of law school training.

Guards -- high school graduates

Policemen -- personal characteristics; honest, good judgement, and sense of responsibility

Firefighters -- strength, medical examination

DEVELOPMENTAL VOCATIONAL EDUCATION

PRE-TEST: PUBLIC SERVICES AND HEALTH

NAME _____ DATE _____

A. Public Services - Fill-in

1. Name 3 different jobs in the Police Department plainclothesmen, patrolmen, motorcycle, dispatcher

2. Where is the main police station located? E. 21st and Paine Ave.

3. What telephone number would you call to contact the police? 621-1234

4. Why is it important to use the zip code number? faster and more efficient

B. Yes or No

1. Yes When a policeman is off duty, is he expected to exercise his authority?

2. Yes Firemen sometimes give first aid.

3. No The number to call in case of fire is 621-1266

4. Yes Firefighting requires teamwork.

C. Health - Fill-in

1. Name a hospital in Cleveland St. Vincent Charity; Mount Sinai

2. Is it important to get a yearly check-up? Yes, prevents illness

D. Choose one to fill in the bottom

X-Ray Technician Physical Therapist

Pharmacist Medical Secretary

Dietician

1. Dietician plans the diets and foods each person eats in the hospital.

2. Pharmacist works at a drug store and fills prescriptions.

3. Filing and keeping records in order is the job of the Medical Secretary.

4. X-Ray Technician takes pictures of the inside of the body

5. Physical Therapist helps people to move their muscles, bones and nerves properly again.

E. True and False

1. Electricity operates your telephone. True

2. The cable splicer completes the connection after the lineman places the cable on the poles. True

3. The telephone operator installs, tests, and maintains meters. False

Title: Public Services -- Telephone

Goal: Students should develop interest in telephone occupations

Objectives: Student should identify and describe a greater number of occupations in the telephone industry.

(a) students should recognize the need and importance of the telephone
(b) students should identify the types of communication used in the past.
(c) students should identify the following jobs in the telephone industry: telephone operator, linemen, cable splicer, installer and repairman.
(d) students should demonstrate proper use of telephone and telephone directory.

Obj.	Learning Experience	Materials	Evaluation
a,b	1. Students discuss types of communications used in the past. Indians - smoke Africans - drum Pilgrims - horse, walking, pigeons, mirrors What types do we have today? Telegraph, T.V., radio, Telephone		Were the students able to recall from their history study?
a	2. Who invented the telephone - Bell - 1875 Who uses the telephone? Everyone What are its uses? Business, Emergency How would it be if there were no telephones? Slower Communication, less jobs. How does the telephone work? Electricity Direct student attention to one of the charts	Display 3 charts	Were the students able to recognize need and importance of the telephone?
c	3. Have students discuss the building of the telephone company. What is needed? lines, linemen, connections, cable splicer, phones, installer, repairmen, operator, telephone operator Fact: More than 1/2 of telephone workers are women	Yellow cards on board	Were the students able to identify telephone jobs?

Obj.	Learning Experience	Materials	Evaluation
d	4. Have a student describe the telephone Letters and numbers a. where to find number - directory-alpha. order b. listen for dial tone c. how to dial-finger to the stop d. describe busy signal e. what to say in case of wrong number f. 10 rings for someone to answer g. how to hold receiver h. what to say in case of emergency	Teletrainer used 2 students demonstrate telephone directory	Were the students able to demonstrate proper use of telephones?
e	5. Homework sheets handed out. Decode sentences.	Chart 2 used Mimeographed sheets	

Lineman -- sets up cables on poles, places wires and cables leading from the central office to customer's house
-- high school grad.; knowledge of basic principles of electricity and electronics; good physical condition.

Cable splicer -- splices and maintains telephone wires and cables, completes the line connections.
-- high school grad.; basic principles of electricity.

Installer and Repairmen -- maintain telephones, places telephones in homes, and buildings, also repairs them.

Telephone Operator -- assists customers in specialized services such as long discance, emergencies, information.

Attention Detectives: Decode these secret messages. These sentences follow a certain code. Figure out the code and decode the sentences to find out about public service occupations.

1. 20-17-8-21-20-17-19-18-6-21-8-7 must have some knowledge of 20-17-8-21-7 and 20-17-8-7-6-25-17-22 (Firefighters -- fires -- first aid)

2. There are many types of policemen: 23-25-8/10-25-6-8-11-14, 13-11-5-12-6-21-22/10-11-14-11-23-21, 7-21-23-15-8-17-6-1/19-5-25-8-22-7, 23-11-25-7-6/19-5-25-8-22-7, 13-11-7-11-8-23-1-23-14-21, and 18-21-14-17-23-11-10-6-21-8/10-25-6-8-11-14-7. (Car patrol -- mounted police -- security guards -- coast guards -- motorcycle -- helicopter patrols.)

3. 22-21-6-21-23-16-17-4-21-7 are also called 10-14-25-17-12-23-14-11-6-18-21-7-13-21-12. (Detectives -- plainclothesmen)

4. 22-21-6-21-23-6-17-4-21-7/13-5-7-6/19-11/6-11/7-23-18-11-11-14/20-11-8/6-3-11/1-8-7/25-12-22/6-18-21-12/6-11/14-25-3/7-23-18-11-11-14/20-11-8/20-11-5-8/1-8-7/. (Detectives must go to school for two years and then to law school for four yrs.)

5. 20-17-8-21-20-17-19-18-6-21-8-7/8-21-9-5-17-8-21-7/6-21-25-13-3-11-8-15/ (Firefighters requires teamwork.)

TRY THESE:

1. 1a/3b-2b-12a-9a-3a-5a/2b-6a-6a-9a-3a-5a-5b/13a-8b-6b-7b/2a-5a/3a-2b-8b-5b-1a-7a-5a-2b-8b-6b/3b-1a-7b-9a-5a-1b-7b/1a-1b-4a/8a-2b-1b-5a-6b-7b. (A police officer must be courageous,patient, and honest.)

2. The 12a-9a-1b-5a-13a-5a-1b places the 10b-9a-5b-5a-6b and 3a-1a-2a-12a-5a-6b/12a-5a-1a-4a-9a-1b-7a/6a-5b-2b-13a/7b-8a-5a/3a-5a-1b-7b-5b-1a-12a/2b-6a-6a-9a-3a-5a/7b-2b/7b-8a-5a/3a-8b-6b-7b-2b-13a-5a-5b-6b/8a-2b-8b-6b-5a/. (Linemen -- wires -- cables leading from the central office to the customers house).

3. The 7b-5a-12a-5a-3b-8a-2b-1b-5a/2b-3b-5a-5b-1a-7b-2b-5b/1a-6b-6b-9a-6b-7b-6b/the 3a-8b-6b-7b-2b-13a-5a-5b-6b. (Telephone operator assists customers).

4. The 3a-1a-2a-12a-5a/6b-12a-9a-3a-5a-5b/ completes the 3a-2b-1b-1b-5a-3a-7b-9a-2b-1b of the 12a-9a-1b-5a. (Cable splicer -- connection -- line).

5. The 9a-1b-6b-7b-1a-12a-12a-5a-5b places the 7b-5a-12a-5a-3b-8a-2b-1b-5a/9a-1b/8a-2b-13a-5a-6b/1a-1b-4a/2a-8b-9a-12a-4a-9a-1b-7a-6b. (Installer -- telephone in homes and buildings).

HINTS: (1) There are 26 letters in the alphabet.

(2) The alphabet divides into two equally

Cleveland, Ohio
(621-1223)
Public Relations

Dear Lieutenant Morgan,

This is a letter confirming our agreement for you to speak at St. Francis School. The date scheduled is January 29 at 1:00 P.M.

The class of 5th and 6th graders will consist of 55 students. They are eagerly awaiting your visit.

The contact person is Jane Ozello. If there is any change in plans please contact her at 361-4858.

We will see you then.

Sincerely,

_____
Principal of St. Francis School

_____
Developmental Vocational Education Program

Speakers to come to St. Francis and Immaculate Conception

St. Francis: Lt. Morgan of the Fire Dept.
Explanation of his job and some of his equipment -- oxygen tanks

Immaculate Conception: Officer Kaitsburg of the Police Dept.
2 day seminar with grades 5 and 6 discussing several aspects of the police departments -- juvenile codes, police occupations, description of equipment, procedures and regulations to follow.

Title: Public Services -- Gas and Water

Goal: Student should develop interest in occupations of the gas and water companies.

Objectives: Student should identify and describe a greater number of occupations in the areas of gas and water.

(a) student should recognize the need and importance of the gas and water companies.
(b) student should identify the process of transporting water and gas from its natural place to our homes
(c) student should identify the following jobs: chemist, stationary engineer, meter reader, mining engineer, construction laborer, geologist.

Obj.	Learning Experience	Materials	Evaluation
a,b	1. Students describe water sources. Why is it important to have water - its uses? How do we get it to our homes?	Map of U.S.	Were the students able to recognize the need of water companies?
a,c	2. Demonstrate an experiment. Ex. Compare two glasses of water dirty and clean. Discuss with the students. Which would you rather drink? Who might purify it? Chemist.	2 glasses of water	
c	3. Students describe a picture of a water plant, equipment? Who operates the equipment? Stationary engineer. How does the water co. know how much water we use? meter reader	Picture Representation of a meter	Were the students able to describe transport of water and identify the jobs?
a,b,c	4. Water is a resource. What other natural resource do we need and use? How do we use it? How does it get to our houses? Have students look at map to see if they can find any gas centers as they did with the water. Describe jobs. Need for construction laborer, mining engineer, geologist. How do we know the amt. we use? meterman.	Map Representation of a gas meter	Were the students able to recognize need of gas company and identify gas jobs?
c	Students divided into two - review through a game of tic-tac-toe.		Were the students able to identify the occupations?

PUBLIC SERVICE -- GAS AND WATER

Chemist -- study composition and chemical properties of substances and processes of chemical change. Test, purifies, water. College; degree of BS or Ph.D.

Stationary Engineer -- operates, maintains, and repairs stationary engines, furnaces, generators, turbines and other equipment; regulates power and controls. Water given to homes.

Water man -- house to house meter reading

Geologist -- examines rocks, search for natural resources.

Mining engineer -- find and extract minerals from the earth. Design the layouts of mines, supervise the construction of mine shafts and tunnels in underground operations. Also makes sure of efficient operation of the tunnels - ventilation, water supply, power, communication.

Construction Laborer -- loading and unloading of construction materials at the worksite and the shoveling and grading of earth. Stack and carries equipment. Good physical condition.

Gas man -- house to house meter reading

Tic-Tac-Toe:

Direct questions to the students concerning gas and water companies and occupations. Have them spell the occupations. If correct answer and correct spelling, get to place X or O in proper place.

DEVELOPMENTAL VOCATIONAL EDUCATION

VOCABULARY

transportation

pilot or captain
deck hand
engineer
shipping clerk
mate
longshoreman
gailey
bulk cargo
tug boat
custom officer

trackmen
locomotive engineer
brakeman
conductor
station agent
carmen
fireman
bridge workers

Over-the-Road truckdriver
Local
Routeman
Bus Driver

aircraft mechanic
airline dispatcher
air traffic controller
teletypist
pilot
co-pilot
flight engineer
stewardess

detective
car patrol
motorcyclist
communicator
disptacher
first aid
firefighter
mounted police
Coast Guard
Helicopter Patrol

electricity

telephone operator
linemen
cable splicer
installer and repairman

doctor
nurse
X-ray technician
dietician
medical records secretary
medical librarian
physical therapist
pharmacist
dentist

Title: Health

Goal: Students should develop an interest in Health Occupations

Objectives: Students should identify and describe a greater number of Health occupations.

(a) student should exhibit present knowledge of health occupations
(b) student should recognize the importance of health careers.
(c) student should identify the following jobs: doctor, nurse, X-ray technician, dietician, medical records secretary, librarian, physical therapist, pharmacist, dentist.

Obj.	Learning Experience	Materials	Evaluation
a.b	1. Recall situation of Johnny and baby sister, Mary. What would student do in situation where Mary was burned? Discuss nearest hospital, and others in area. What kind of people might we see there?		Were the students able to identify some health occupations? Were the students able to recognize their need?
c	2. Film "Health Careers"	Film	
c	3. Discuss new occupations met in the film. Display objects and have students relate them to the occupations	X-ray, Medical book, stethoscope	Were the students able to relate objects or pictures to the occupation?
c	4. Word scramble on board. This could be incorporated with above #3.		

Health:

Different educational backgrounds
One depends upon the other
There is a need for more people in the health field
Dedication is needed
Health occupations require certain abilities in people.

ACROSS:

1. greets patients, makes appointments, types, and files reports.
2. takes pictures of the inside of the body.
3. has a license which allows him to fill prescriptions.
4. helps people to move their muscles and bones properly again.

DOWN:

1. plans and prepares the diets of each patient in the hospital.
2. examines patients when ill and performs operations.
3. provides patients with nursing care.
4. files patient records so the doctors can examine them.
5. checks our teeth and gums.

NAME _____

DEVELOPMENTAL VOCATIONAL EDUCATION

PRE-TEST
PUBLIC SERVICES AND HEALTH

NAME _____ DATE _____

A. Public Services - Fill-In

1. Name 3 different jobs in the Police Department? dispatcher, motorcyclist, security guard, car patrol, communicator

2. Where is the main police station located? E. 21st and Payne

3. What telephone number would you call to contact the police? 621-1234

4. Why is it important to use the zip code number? faster and more efficient

B. Yes or No

1. Yes When a policeman is off duty, is he expected to exercise his authority?

2. Yes Firemen sometimes give first aid.

3. No The number to call in case of fire is 621-1266.

4. Yes Firefighting requires teamwork.

C. Health - Fill-In

1. Name a hospital in Cleveland. St. Vincent Charity, Mount Sinai

2. Is it important to get a yearly check-up? yes

D. Choose one to fill in the bottom

X-Ray Technician Physical Therapist

Pharmacist Medical Secretary

Dietician

1. Dietician plans the diets and foods each person eats in the hospital.

2. Pharmacist works at a drug store and fills prescriptions.

3. Filing and keeping records in order is the job of the Medical Secretary

4. X-ray Technician takes pictures of the inside of the body.

5. Physical Therapist helps people to move their muscles, bones and nerves properly again.

E. True and False

1. Electricity operates your telephone. True

2. The cable splicer completes the connection after the lineman places the cable on the poles. True

3. The telephone operator installs, tests and maintains meters. False

Title: Construction

Goal: Students should develop an interest in construction occupations

Objectives: Students should identify and describe a greater number of construction occupations.

(a) student should exhibit present knowledge of construction occupations
(b) student should recognize importance of construction workers
(c) student should identify the following jobs and their equipment: bricklayer, carpenter, electrician, painter, plasterer, plumber, cement mason, foreman.

Obj.	Learning Experience	Materials	Evaluation
a	1. Students view pictures of construction workers and discuss the pictures. When a certain job is described, that card is placed on the board.	Pictures Cards	Were the student able to relate w picture and identif occupation?
b,c	2. View blue-print. Have students describe the blue-print. What does each page describe? Job of the foreman. 1st page - foundation - brick-layer 2nd page - walls - carpenter, plumber, electrician 3rd page - 2nd floor - plasterer, painter, cement mason	Blue-print	Were the student able to describe how to build a hous and what occupation would be needed?
b,c	3. View slides, discuss tools used by workers	Slides	Were the students able to identify the tools of eac worker?
b,c	4. Have students look at house made out of construction paper on the board. Have volunteer describe how it was made.	Construction paper house	Were the students able to identify the occupations?
c	5. Have 2 volunteers put the cards that were on the board in order Game, Foreman, Bricklayer, Carpenter, Electrician, Plumber, Plasterer, Painter, Cement Mason		

3 Types of Construction

(1) electrical and plumbing
(2) residential, commercial, and industrial
(3) dams, bridges, roads

Occupations:

Bricklayer -- constructs and repairs structures such as walls, fireplaces, and partitions using brick tiles or terra cotta (red-brown clay).
Tools -- trowel, brick hammer, and jointer.

Carpenter -- erects wooden framework, installs doors, floors, and wooden trim.
High school and 4 year apprenticeship.

Cement Mason -- concrete fixing, buildings, sidewalks.

Electrician -- installs wiring, fixtures, and electrical equipment.
Basic math, high school and 4 year apprenticeship.

Foreman -- directs other workers, looks at blueprints.

Painters -- use spray gun or brush to apply paint.
no schooling, good eyesight, must stand paint fumes.

Plumber and Pipefitter -- installs, alters and repairs pipe systems that carry water, gas, waste matter.
Tools -- wrenches, hand tools

Plasterer -- several coats of plaster to unfinished walls and ceilings with trowel.
High school and 4 years.

Title: Apparel Industry

Goal: Students should develop an interest in Apparel Occupations

Objectives: Students should identify and describe a greater number of Apparel Occupations

(a) students should exhibit present knowledge of Apparel Occupations
(b) student should recognize importance of Apparel Industry
(c) student should identify the following jobs: designers, pattern makers, markers, cutters, sewing machine operators, hand sewers, alteration, pressers, tailors, inspectors.
(d) student should identify some types of materials

Obj.	Learning Experience	Materials	Evaluation
a	1. Discuss with the students any type of sewing done in their own homes. Let them describe the way it was done, how, and what was needed. (knitting, crochet)	Bring in types of needles	Were the students able to identify any types of sewing?
d	2. Have volunteers feel and describe materials to class.	Bag full of different materials	Were the students able to describe, identify different types of materials?
c	3. Show pattern. Place pattern on board and have volunteer draw the piece. Do several pieces and show how they fit together. Discuss importance of industry. (faster, cheaper) Have students name industries in the area.	Pattern	Were the students able to recognize the need and importance of Apparel Industry?
c	4. Have students decide which was needed first - design, pattern, marker, cutter, sewing machine, hand sewer, alterations, presser, tailor, inspector. Pass out cards and have them place them in order on the board	Cards	Were the students able to identify the jobs?
b,c	5. Show slides and discuss what is being done in each.	Slides	Were the students able to identify occupations and importance of them in the industry?
c	6. Matching exercise.	Mimeographed sheets	Were the students able to identify jobs?

NAME Teacher's Copy

CONSTRUCTION AND APPAREL INDUSTRY — STUDY SHEET

1. Designers
2. Pattern Makers
3. Markers
4. Electrician
5. Plumber
6. Plasterer
7. Foreman
8. Cutters
9. Sewing Machine Operators
10. Hand Sewers
11. Cement Mason
12. Painter
13. Carpenter
14. Bricklayer
15. Alteration (Bushelman)
16. Pressers
17. Tailors
18. Inspectors

MATCH THE WORD WITH ITS DEFINITION

a. 1 creates original designs for new clothes.
b. 3 trace the pattern pieces on large sheets of paper.
c. 2 constructs a full-size master pattern.
d. 10 use needle and thread to do simple sewing or stitching.
e. 12 a man who paints your house.
f. 13 a person who makes things of wood.
g. 7 a person who directs all workers on the construction area.
h. 8 cuts out various garment pieces from layers of cloth.
i. 14 a person who lays bricks.
j. 5 a man who fixes sinks and faucets.
k. 4 a man who installs wires so we may have lights in our homes
l. 6 a man who fixes the holes in a wall or puts finishing touches on them
m. 18 examines garments for proper workmanship
n. 9 specialize in one area like sewing shoulder seams
o. 16 a person who presses garments.
p. 17 make personalized clothes and fit them perfectly to one individual.
q. 15 alter clothes to fit perfectly.
r. 11 may assist the bricklayer, uses the tool called a trowel.

PLACE THE WORD IN THE CORRECT SETTING

CLUSTER OF COMMUNICATION

camera man	prop man
printing pressman	photoengraver
control room	disc jockey
reporter	make-up editor
music director	broadcast technician

FILL - IN

1. A soundproof room from which the director manages the show.
   (control room)

2. To become a successful (disc jockey), one must have a pleasant and well-controlled voice, a good sense of timing and excellent pronunciation.

3. Sets up and maintains the electronic equipment used to record radio programs.
   (broadcast technician).

4. The (make-up editor) arranges things exactly as they will go on the pages of the paper.

5. The (reporter) is to gather information of current events and write stories on many subjects for publication in daily newspaper.

6. The (photoengraver) makes metal plates of illustrations and other copy work which cannot be set up in type.

7. (Music director) is responsible for music co-ordination for over-all policy in connection with record distributors and promotion.

8. (Prop man) takes care of all props, clothing, tools, for the actors and makes sure they are in the right place at the right time.

9. (Camera man) holds the cards that tell the actors what to do.

10. (Printing pressman) makes ready forms and press plates, set up, operates, clean and maintains presses, including feeding, loading and unloading of paper. Controls ink flow and matching colors.

Title: Newspaper

Goal: Students should develop an interest in newspaper occupations

Objectives: Students should identify and describe a greater number of newspaper occupations

(a) student should exhibit present knowledge of newspaper
(b) student should identify the following jobs: reporter, managing editor, cartoonist, artist, photoengraver, printing pressman, copy editor, make-up editor, salesman.
(c) student should identify types of communication

Obj.	Learning Experience	Materials	Evaluation
c	1. Place // // on board. Ask students what this means to them. (two elevens, two's, unfinished crosswords). Place a plus in between. Now what is the meaning? // plus // equals ////. Discuss what is communication. (Exchange of information). Discuss types of communication. Why is it important?	Chalk Board	Were the students able to identify types of comm. in past and present?
a	2. Discuss newspaper. What does it say? Types of articles.	Newspaper	Were the students able to exhibit their knowledge of the newspaper?
a,b	3. Discuss an article. Relate types of articles to jobs. Reporters, cartoonist, artist (stress types of schooling for each).	Cards	Were the students able to identify these jobs?
b,	4. Explain that these articles, comics, and illustrations have to be proofread by a copy editor and arranged by the make-up editor, sent to photoengraver and printing pressman, finally to salesman. Managing editor is in charge of the total paper. Students choose a main issue in school and write a report on it.		Were the students able to identify these occupations?

Title: T.V.

Goal: Students should develop an interest in T.V. Occupations

Objectives: Students should identify and describe a greater number of T.V. Occupations

(a) students should exhibit present knowledge about T.V.
(b) students should identify the following jobs: prop man, cameraman, carpenter, make-up artist, video technician, news writer, news director, producer, traffic manager, director, program director.

Obj.	Learning Experience	Materials	Evaluation
a	1. T.V. Guide - discuss what types of information is in guide. What types of T.V. programs? What types of people are programs geared for? Were any students on T.V.? At a T.V. Station?	T.V. Guide	Were the students able to relate to the T.V. guide and exhibit knowledge of T.V. Industry?
b	2. Identify a few jobs through discussion. Who puts the programs in order? Program director. Who takes care of all the advertising? Traffic manager	Cards on board	
b	3. Show slides - discuss if possible	Slides	
b	4. Game: Cards are placed on the board. Student must unscramble one of the cards and tell what it is. He must also give a short description of the job. Class divided into two. If students give right answer, his side gets the point.		Were the students able to identify the occupations?

Title: Getting A Job

Goal: Student should develop a concern for responsibility in applying for a job.

Objectives: Student should demonstrate his knowledge of the mechanics needed in applying for a job.

(a) student should exhibit present knowledge of the mechanics needed for applying for a job: social security, neatness in dress. filling out application.
(b) student should identify social security card and how it works.
(c) student should distinguish job opportunities that are available at the White Motor Corp. and decide field of interest according to abilities: truck driver, mechanic, engineer, machinist, secretary, stenographer, receptionist, office machine operator, shipping clerk.

Obj.	Learning Experience	Materials	Evaluation
a	1. Show students a picture of untidy boy. Describe the boy. Ask students what they feel he could improve on. Would this be an appropriate way to dress for work or when looking for work? What other actions should he keep in mind? Gum chewing, hands in pocket, stand straight, pen on hand.	Picture	Were the students able to exhibit knowledge about responsibility in taking care of yourself?
c	2. Pose problem to class. This boy needs a job badly. He goes to a nearby factory, White Motor Corp. to look for work because he has heard they are hiring. What types of jobs might he find there? (listed above). Other jobs may be mentioned. They should be described and cards placed on board.	Cards	Were the students able to distinguish jobs?
a,b	3. Continue story: John is walking in and is greeted by receptionist who hands him an application. Discuss with students (1) Social Security - describe use where to get it (S.S. Adm. Bldg. E. 9 & St. Clair) (2) Position desired. Salary. When can you report for work. Felony charge, health, employement before, education, family, oath, signature	White Motor Application	Were the students able to identify social security card? Were the students able to exhibit knowledge of mechanics.

Obj.	Learning Experience	Materials	Evaluation
a	4. Students should describe how it should be filled out: pen, print, neat, clear, cannot erase, correct spelling, correct information.	Written on board	Were the students able to exhibit knowledge of responsibility
a,b,c	5. Have students fill out application	Mimeographed sheets	Were the students able to exhibit knowledge of mechanics and decide field of interest according to ability.

The students may fill out hobbies at the bottom of application.

Title: Communication -- Radio

Goal: Students should develop an interest in radio jobs.

Objectives: Students should identify and describe a greater number of radio jobs.

(a) students should exhibit present knowledge about radio stations and jobs affiliated with radio.
(b) students should identify the following jobs: station manager, program manager, music director, disc jockey, public relations consultant, braodcast technician, chief engineer.

Obj.	Learning Experience	Materials	Evaluation
a	1. Call letters scrambled Placed on board XIYW = WIXY WCLK = CKLW KWH = WHK CWAR - WGAR Students unscramble at seat		Were students able to unscramble the call letters?
a	2. Discuss the purpose of the call letters. Reason: Name Individual wave lengths		Could students relate to the discussion?
b	3. Class discussion of jobs Job/Description/Skill	Paper, pencil Chalk and board	
a,b	4. Students volunteer to role play and be a "disc jockey". Tape and play back Give example and directions.	Tape recorder	
a,b	5. Culminating activity. Students choose card and define it.		Were students able to define jobs?

DEFINITIONS

Station Manager -- in charge of whole operation.

Program Manager -- in charge of individual program.

Music Director -- responsible for music coordination for over-all policy in connection with record distribution and promotion.

Disc Jockey -- to succeed as a disc jockey one must have a pleasant and well-controlled voice, a good sense of timing and excellent pronunciation. He is responsible to the program director, is responsible for presenting a good station image while on the air and excellent pronunciation. He must also be a convincing salesman when presenting commercials.

Public Relation Consultant -- his job is to initiate contests and eye catching gimmicks to attract people to his radio station.

Broadcast Technician -- he sets up and maintains the electronic equipment used to record the radio programs.

Chief Engineer -- in charge of all electronic equipment.

Title: Fine Arts and Humanities

Goal: Student should develop an interest in the fine arts occupations

Objectives: Student should identify and describe a greater number of fine arts jobs.

(a) student should exhibit an awareness of the arts.
(b) student should identify the following jobs: actor, actress, singer, singing teacher, interior designer, commercial artist, industrial artist, musician, dancer, director.
(c) student should relate knowledge to present experiences.

Obj.	Learning Experience	Materials	Evaluation
a,b	1. Pre-test -- oral	Sheet	
b	2. Role play -give example: act out playing the role of a waitress in a play. -class decides which role you were acting out by choosing from the list of cards on the board. -pass out role sheets -answer question students may have about theirs.	Role Sheets Cards	Were students able to role play the jobs effectively?
b	3. Discuss jobs presented and skills needed and tools used. -80% dancers are woman - dancing teachers -they begin at age 12 -commercial artist-advertisement -industrial artist-design product -interior decorator-woman -musicians bands, night clubs, orchestras, T.V., motion pictures		
b,c	4. Try to relate jobs to T.V. program -musician - Partridge Family -actress - That Girl -commercial artist - Bewitched		Could students relate jobs to T.V. programs?
a,b,c	5. Define the "arts" -creativeness 6. Ask students to bring in pictures		

PRE-TEST

FINE ARTS AND HUMANITIES

1. I'll make a character come to life for you on T.V. or in motion pictures.

2. I'll entertain you with my voice.

3. I'll teach you how to entertain with your voice.

4. I'll use my artistic talent to improve the appearance and functional design of machine-made products.

5. I create the artwork you see on billboard posters, commercials, and magazine advertisements.

6. I'll use my artistic talent to make your home more attractive.

7. I'll play my instruments and entertain you.

8. I'll entertain you in the ballet, musicals, and sometimes you use my talent.

9. I'll take charge of the set and tell the actor and actress what to do.

10. I'll make the role of a girl come to life for you on T.V. and motion pictures.

A. Interior Designer
B. Commercial Artist
C. Industrial Artist
D. Musician
E. Director
F. Dancer
G. Actor
H. Actress
I. Singer
J. Singing Teacher

Title: Review of Jobs

Objectives: Student should review jobs discussed in class.
Student should exhibit knowledge of jobs discussed thus far.

Obj.	Learning Experience	Materials	Evaluation
	1. Students choose comic book which they would like to read (reading for enjoyment).	Comic Books	
	2. Students create their own comic book series relating to any job discussed in class.	Job written on board	Were students able to carry out the assignment?

Title: Consumer Homemaker

Goal: Student should develop an awareness of the consumer homemaker jobs

Objectives: Students should identify and describe a greater number of occupations in consumer homemaker.

(a) student should demonstrate an appreciation for these jobs.
(b) student should define the following jobs: home economist, nursemaid, housekeeper, caretaker, chauffeur, and butler, consumer, homemaker.

Obj.	Learning Experience	Materials	Evaluation
b	1. Introduction - talk about work a mother does. Students define jobs at top of page.	Paper Jobs stated on the board Dictionaries	How well did students define jobs?
b	2. Students choose at least 4 jobs to illustrate. Should do as many as possible. (divide paper in four and label the job under it). Student may write a caption if he likes.		Were students able to illustrate the jobs?
a,b	3. Papers collected and jobs discussed.		

Title: Airplanes (Review and Manufacturing of Airplanes)

Objectives: Student should be able to describe jobs related to airplanes.

(a) student should demonstrate present knowledge concerning jobs related to airplanes.
(b) students should identify and describe the following jobs: machinist, welder, missle assembly mechanic, sheet metal worker, mathematician, engineer, draftsman, electrical engineer, astronaut.
(c) students should become acquainted with NASA

Obj.	Learning Experience	Materials	Evaluation
a	1. Discuss jobs related to airplanes and air Examples: Stewardess, Carries Mail, Business, Astronaut		Were students able to discuss previous learned jobs?
a	2. How does a plane work? Air pressure		
b	3. Manufacturing - big business People needed to work Engineer Mathematicians Machine operator Welders		
a,b	4. Let's view film and see if some of our answers were right.	Films - Cleve. Board of Ed. "Airplanes Work For Us" "Airplanes and How They Fly"	
a,b	5. Discuss points of interest on film which pertains to your class.		
c	6. Discuss NASA - National Aeronautics and Space Administration Cleveland & Florida - builds space vehicles NASA field trip - 8th graders		Could students rel NASA to space flights

Lesson #27

Gr. 4

Title: Banking

Goal: Student should develop an interest in the occupations of Banking

Objectives: Student should identify the occupations in Banking

(a) student should recognize the importance of school for banking occupations
(b) student should identify the types of money we use as exchange
(c) student should describe the way money travels and the importance of a Bank
(d) student should identify the specific jobs in banking

Obj.	Learning Experience	Materials	Evaluation
a,b	1. Put signs on board. $ -- ¢. What does it mean? What types of money do we use for exchange?		Were the students able to identify types of money exchange?
c	2. Discuss what they do with their money? Spend or save. Why place it in a bank?		Were the students able to recognize importance of a bank?
a,d	3. What jobs do you see being done in your bank? What are some of its procedures? Why is it important to know math and skills of language?		Were the students able to name some occupations in banking?
b,c,d	4. Film How to Use Your Bank. Discuss.	Film - Visual Aide Center	Were the students able to relate to film and identify more occupations in banking?
a,d	5. Show money bag, bookkeeper's book, deposit slips, etc. How do we use each?	From nearby bank	Were the students able to identify purpose of bank papers?
d	6. Game - card is held over pupil's head as other students give him hints and the pupils guess. Point is scored for team if correct answer is given.	Cards with occupations written	Were the students able to identify the occupations?

NAME _____ DATE _____

DEVELOPMENTAL VOCATIONAL EDUCATION -- TEST -- COMMUNICATION

PART I -- FILL-IN

Camera man	Reporter	Photoengraver	Broadcast Technician
Printing Pressmen	Music Director	Disc Jockey	
Control Room	Prop Man	Make-up Editor	

1. To become a successful disc jockey, one must have a pleasant and well-controlled voice, a good sense of timing and excellent pronunciation.

2. A soundproof room from which the director manages the show. Control Room

3. Sets up and maintains the electronic equipment used to record the radio program. Broadcast Technician

4. The Make-Up Editor arranges things exactly as they will go on the pages of the newspaper.

5. The Reporter is to gather information of current events and write stories on many subjects for publication in the daily paper.

6. The Photoengraver makes metal plates of illustrations and other copy work which cannot be set up in type.

7. Music Director is responsible for music co-ordination for all connection with the record distributors and promotions.

8. Prop Man takes care of all props, clothing, tools, and equipment for the actors and makes sure they are in the right place at the right time.

9. Camera Man holds the cards that tell the actor what to do.

10. Printing pressman makes ready forms and press plates, sets up, operates, cleans and maintains presses, including feeding, loading and unloading of paper. He controls the flow of ink and colors.

PART II -- TRUE OR FALSE

1. True In order to get a job you must have a Social Security Card.

2. False The chief engineer at a radio station is in charge of programs about ships.

3. True The person who works with tape recorders is the video technician.

4. True Organization of the paper, putting each article where it belongs is the job of the make-up editor.

5. True The public relations man for the radio station tries to get people to listen to his radio station by initiating contest.

SCHOOL _____ GRADE _____

FATHER'S OCCUPATION _____

1. WHAT ARE THE NAMES OF THE NEWSPAPERS IN CLEVELAND? _____

_____

2. NAME THE LARGEST AIRPORT IN CLEVELAND. _____

3. NAME THREE AIRLINES THAT FLY TO AND FROM CLEVELAND _____

_____

4. WHAT KIND OF CARD WOULD YOU NEED BEFORE YOU COULD GET A JOB? _____

_____

5. THESE ARE SOME JOBS IN THE APPAREL INDUSTRY. SHOW HOW A DRESS OR SUIT CAN BE MADE BY PUTTING THESE JOBS IN THE ORDER THEY WOULD BE NEEDED TO MAKE THE PIECE OF CLOTHING. PUT A 1 NEXT TO THE JOB WHICH MUST BE DONE FIRST, A 2 NEXT TO THE JOB WHICH SHOULD BE DONE SECOND, ETC.

_____ SEWING MACHINE OPERATOR

_____ DESIGNER

_____ CUTTER

_____ PATTERN MAKER

_____ PRESSER

6. CIRCLE TRUE FOR THE STATEMENTS WHICH ARE CORRECT AND CIRCLE FALSE FOR THE STATEMENTS WHICH ARE NOT CORRECT.

TRUE FALSE FIREMEN GIVE FIRST AID TO PEOPLE IN THEIR HOMES.
TRUE FALSE POLICEMEN DECIDE IF PEOPLE ARE GUILTY WHEN THEY ARREST THEM.
TRUE FALSE POLICEMEN HAVE TO GO TO LAW SCHOOL IN ORDER TO BE HIRED.
TRUE FALSE FIREMEN HAVE TO INSPECT BUILDINGS TO FIND OUT IF THEY ARE SAFE.
TRUE FALSE POLICEMEN HAVE TO PASS A PHYSICAL EXAMINATION WHEN THEY ARE HIRED.
TRUE FALSE FIREMEN GET THEIR BASIC TRAINING ON THE JOB.

7. MATCH EACH JOB WITH THE CORRECT DESCRIPTION OF ITS MAJOR DUTIES. WRITE THE LETTER NEXT TO THE JOB THE DUTIES DESCRIBED. THERE IS ONLY ONE DESCRIPTION THAT IS CORRECT FOR EACH JOB.

_____ PRACTICAL NURSE

_____ NURSING AIDE

_____ MEDICAL TECHNOLOGIST

_____ PHYSICAL THERAPIST

_____ NUTRITIONIST

A. CONCERNED WITH THE BEDSIDE CARE OF PATIENTS. FOR EXAMPLE, TAKES THEIR PULSE, TEMPERATURE, AND BLOOD PRESSURE.

B. PERFORMS LABORATORY TESTS AND PROCEDURES, FOR EXAMPLE, EXAMINES BLOOD SAMPLES.

C. GIVES MEDICINE TO PATIENTS. REPORTS AND RECORDS THE PATIENTS' DAILY CONDITION.

D. WORKS WITH PATIENTS WHO HAVE BONE OR MUSCLE INJURIES.

E. APPLIES KNOWLEDGE OF "GOOD" FOOD TO IMPROVE PATIENTS' HEALTH.

F. PERFORMS DAILY TASKS NEEDED TO MAKE PATIENTS COMFORTABLE. FOR EXAMPLE, MAKES BEDS AND KEEPS ROOM NEAT.

8. WHICH JOB DOES NOT BELONG WITH THE OTHERS?

_____A. FLIGHT ENGINEER
_____B. RAMP SERVICEMAN
_____C. CHIEF ENGINEER
_____D. PILOT

_____A. PRODUCER
_____B. EDITOR
_____C. REPORTER
_____D. PUBLISHER

_____A. TELEPHONE OPERATOR
_____B. PROGRAM DIRECTOR
_____C. SERVICE REPRESENTATIVE
_____D. INSTALLER

9. UNDERLINE THE PLACE WHERE EACH JOB WOULD MOST LIKELY BE FOUND.

EXAMPLE: POSTMAN

NEWSPAPER
POST OFFICE
T.V. STATION
TELEPHONE COMPANY

10. WHICH ONE OF THE FOLLOWING BANK SERVICES DOES THE TELLER HANDLE MOST?

_____ A. MORTGAGE LOANS

_____ B. CREDIT CARD ACCOUNTS

_____ C. SAVINGS AND CHECKING ACCOUNTS

_____ D. CHARGE ACCOUNTS

11. WHO GIVES INFORMATION TO PEOPLE WHO COME INTO OR CALL A BUSINESS OFFICE?

_____ A. STENOGRAPHER

_____ B. RECEPTIONIST

_____ C. EXECUTIVE SECRETARY

_____ D. PUBLIC RELATIONS WORKER

12. WHO KEEPS A COMPLETE AND UP-TO-DATE RECORD OF MONEY USED IN BUSINESS ACTIVITIES?

_____ A. BOOKKEEPER

_____ B. CASHIER

_____ C. COMPANY VICE-PRESIDENT

_____ D. LAWYER

13. WHO KEEPS TRACK OF MERCHANDISE TRANSFERRED FROM ONE PLACE TO ANOTHER BY BUSINESS FIRMS?

_____ A. DISTRIBUTION WORKER

_____ B. SHIPPING AND RECEIVING CLERK

_____ C. WHOLESALER

_____ D. MARKET RESEARCHER

14. WHO HAS THE MOST FREEDOM TO CHANGE THE ROUTE OF A TRIP?

_____ A. PILOT

_____ B. TRAIN ENGINEER

_____ C. TRUCK DRIVER

_____ D. BUS DRIVER

THIS IS A LIST OF EIGHTEEN JOBS. READ THROUGH THE LIST TO MAKE SURE YOU KNOW ALL THE JOBS. THINK ABOUT HOW MUCH YOU WOULD LIKE TO WORK ON EACH OF THESE JOBS. NOW, DECIDE ON THE ONE JOB THAT YOU WOULD REALLY LIKE TO HAVE MORE THAN ANY OTHER. WRITE THE NAME OF THAT JOB IN THE SPACE NEXT TO "1 - BEST JOB". NOW, DECIDE WHICH JOB YOU WOULD REALLY NOT LIKE TO HAVE. DO NOT WORRY ABOUT THE REASON YOU DON'T WANT THE JOB. WRITE THE NAME OF THIS JOB IN THE SPACE NEXT TO "1 - WORST JOB". AT THE BOTTOM OF THE PAGE. CONTINUE TO ALTERNATELY CHOOSE BETWEEN THE "NEXT BEST JOB" AND THE "NEXT WORST JOB" UNTIL YOU HAVE WRITTEN THE NAMES OF ALL THE JOBS IN THE SPACES. AS YOU SELECT EACH JOB, DRAW A LINE THROUGH IT SO YOU DON'T CHOOSE IT TWICE. REMEMBER ALL THESE JOBS ARE FOR BOTH MEN AND WOMEN.

DOCTOR

ACTRESS/ACTOR

Career Opportunities

ACCESSION NUMBER: VT102196

PUBLICATION DATE: 75

TITLE: WOMEN IN THE WORK FORCE. FOLLOW-UP STUDY OF CURRICULUM MATERIALS.

PERSONAL AUTHOR: VETTER, LOUISE, AND OTHERS

DESCRIPTOR: *FOLLOWUP STUDIES; *SUMMATIVE EVALUATION; WORK ATTITUDES; CAREER PLANNING; OCCUPATIONAL INFORMATION; SECONDARY SCHOOL STUDENTS; *FEMALES

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 63P.

ABSTRACT: CAREER PLANNING FOR YOUNG WOMEN HAS GAINED MORE IMPORTANCE BECAUSE OF THE INCREASING NUMBERS OF WOMEN ENTERING THE WORK FORCE. A FOLLOW-UP OF THE ORIGINAL RESULTS OF A CURRICULUM UNIT, "PLANNING AHEAD FOR THE WORLD OF WORK" FOR HIGH SCHOOL WOMEN WAS CONDUCTED ONE YEAR AFTER THE UNIT WAS TESTED. THE FOLLOW-UP INCLUDED 247 OF THE ORIGINAL 326 HOME ECONOMICS STUDENTS WHO PARTICIPATED IN THE STUDY. AT THE TIME OF RETEST, STUDENTS WERE IN THE EIGHTH, TENTH, AND TWELFTH GRADES. THE INSTRUMENT USED FOR FOLLOW-UP INCLUDED SECTIONS RELATING TO KNOWLEDGE OF WORK, ATTITUDES TOWARD WORK, AND CAREER PLANS. THE CONCLUSIONS CONCERNING THE RETAINED EFFECT OF THE UNIT WERE: (1) SOME OF THE GAIN IN THE EXPERIMENTAL GROUP STUDENTS' OBJECTIVE KNOWLEDGE OF THE WORLD OF WORK WAS RETAINED, BUT EXPERIMENTAL AND CONTROL GROUP RESPONSES WERE NOT SIGNIFICANTLY DIFFERENT. (2) STUDENTS IN THE EXPERIMENTAL GROUP STILL HAD HIGHER SCORES ON THE CHALLENGE ATTITUDE SCALE. (3) THE CONTROL GROUP GAINED A DESIRE FOR ECONOMIC MOBILITY AND EXTRINSIC REWARDS IN GRADE 12 EQUAL TO THAT HELD BY THE EXPERIMENTAL GROUP. (4) THE STATUS LEVEL OF STUDENTS' STATED FIRST OCCUPATIONAL CHOICES TENDED TO REMAIN THE SAME, WHILE MORE STUDENTS IN THE EXPERIMENTAL GROUP FELT THEY WOULD CONTINUE TO WORK AFTER THEIR CHILDREN WERE BORN AND ALSO AFTER THEIR CHILDREN WERE IN HIGH SCHOOL. (AUTHOR/VA)

THE CENTER MISSION STATEMENT

The Center for Vocational Education intends to increase the ability of diverse agencies, institutions, and organizations to solve educational problems relating to individual career planning and preparation. The Center fulfills its mission by:

- Generating knowledge through research
- Developing educational programs and products
- Evaluating individual program needs and outcomes
- Installing educational programs and products
- Operating information systems and services
- Conducting leadership development and training programs

Columbus, Ohio 43210

1975

The material in this publication was prepared pursuant to a contract with the National Institute of Education, U.S. Department of Health, Education and Welfare. Contractors undertaking such projects under government sponsorship are encouraged to express freely their judgment in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official National Institute of Education position or policy.

Foreword

Exploring career alternatives, making career choices, and developing essential competencies is a difficult, complex, lifelong process with which many people have only limited success. Yet, many people could avoid or reduce such difficulties by timely development of identifiable knowledge, skills, attitudes, and plans. The Center has undertaken, therefore, to develop methods, procedures, and tools for school personnel to use in developing programs to assist young people in effectively acquiring and applying the capabilities they need to evolve satisfying careers.

This report on one project in the larger effort describes the follow-up study of a curriculum unit, "Planning Ahead for the World of Work," designed to aid secondary school girls in making career plan consistent with their interests and capabilities and with the realities of the world of work. The findings of this follow-up study, the findings of the original development and testing of the unit, and the unit itself should be of interest to teachers and counselors of girls as well as to researchers and to educational planners developing curricula and guidance experiences for these students.

We should like to acknowledge the cooperation and assistance of the students, faculty, and staff from the five school systems that participated in the field testing and follow-up study of the unit and that of Dr. Mary B. Kievit, Rutgers University, and Dr. Mary Faith Tanney, University of Maryland, for their review of the manuscript. Special recognition is due Louise Vetter, Alice J. Brown, and Barbara J. Sethney who conducted the project and prepared the report.

3.	Summary of Significant Pretest, Post-test, and Retest Analysis of Variance Results	12

Summary

Increasing numbers of women are entering and reentering the work force. Their reasons for working and the extent of their preparation for it are under serious study. Few studies however, relate to identified student needs and understandings. Career planning for young women must now be stressed. Recent federal legislation intensifies the need for increased career planning for young women.

A follow-up of the original results of a curriculum unit, "Planning Ahead for the World of Work," for high school women was conducted one year after the unit was tested. The follow-up included 247 of the original 326 home economics students who participated in the study. At the time of the retest, students were in the eighth, tenth, and twelfth grades. The conclusions concerning the retained effect of the unit were:

1. Some of the gain in the experimental group students' objective knowledge of the world of work was retained, but experimental and control group responses were not significantly different.

2. a. Students in the experimental group still had significantly higher scores on the Challenge attitude scale than the students in the control group.
   b. Other student attitude response choices changed in that the control group gained a desire for economic mobility and extrinsic rewards in the twelfth grade equal to that held by the experimental group. Age and maturity may have been responsible for these changes.

3. The status level of students' stated first occupational choices tended to remain the same, while more students in the experimental group than in the control group felt they would continue to work after their children were born and also after their children were in high school.

Recommendations for use of the unit are:

1. Optimal use of the unit appears to be at the ninth grade level. If used at all three grade levels,

seventh graders would need supplementary occupational information, and eleventh graders would need more information on women's work roles.

2. Teachers and guidance personnel can help extend the impact of the unit by updating the materials when needed and by providing additional career exploration and development activities for the students.

3. School counselors may wish to use the unit in group guidance classes.

4. Revision of the unit would allow for inclusion of boys in the learning experience.

5. It would be well to include parents, showing respect for past, present, and future attitudes.

6. This unit could be assimilated into an ongoing career education program.

7. More counseling information for career orientation of girls is now available and should be utilized.

At the time of retest, 20 percent of the original group were not available for testing; therefore, as further loss would seriously endanger test validity, no additional follow-up is planned.

Introduction

The Problem

Both boys and girls can expect to be employed at some time during their lives. True. Both boys and girls are equally prepared for their future occupations. False. Perhaps in the near future, the latter statement will also be true. Presently, however, many changes need to be made to balance the scales.

Girls need encouragement and assistance to properly prepare for the myriad of jobs becoming available to them. The federal government is helping. Executive Order 11246, as amended, requires most federal contractors to have an affirmative action program to encourage the hiring and promotion of women in jobs where they are presently under-represented. Public law 92-318 will help girls and young women as they prepare for jobs. The law specifies:

> no persons shall on the basis of sex be excluded from participation in, denied benefits of, or be subjected to discrimination under any educational program or activity receiving Federal financial assistance...(U.S. Congress, 1972:138).

Publicity surrounding states' ratification of the proposed Twenty-seventh Amendment to the Constitution (the Equal Rights Amendment) is also bringing attention to the need for opening new employment opportunities to women.

Schools, particularly high schools, have the major responsibility for career guidance of girls. New materials for students must be made available to counselors and teachers. The curriculum unit, "Planning Ahead for the World of Work," and the related study and follow-up were designed to help meet the need for such materials.

Objectives of the Follow-up Study

The study of career development is a priority area of The Center for Vocational Education (CVE). In 1968, materials were prepared for a curriculum unit, "Planning Ahead for the World of Work," directed toward female secondary school students. The goal of the unit was to bring about changes

in secondary school girls' knowledge of, attitudes toward, and plans for, the world of work.

The objectives of the unit, stated in terms of changes sought in students' behavior, were as follows:

1. Students will have more knowledge about women in the work force as exhibited by more correct answers to objective information items on a posttest than on a pretest.

2. Students will show, by responses to attitude items, more acceptance of the working role in their lives.

3. Students will list different alternatives for choices of their occupations.

4. More students will indicate plans for the future which show work force participation at some time in their lives.

5. More students will indicate that they have considered work life expectancy projections for the total life span.

The unit was designed to provide factual resource material on occupational opportunities past, present, and future. Unit activities called for informational, attitudinal, and career planning responses.

A research study conducted in 1969 sought to determine whether the objectives of the curriculum unit had been met. The results of this study were published in Women in the Work Force: Development and Field Testing of Curriculum Materials (Vetter and Sethney, 1972).

A follow-up study one year later was deemed necessary in order to determine the retention level of content, attitude responses, and career plan responses covered in the original study.

The one-year follow-up was conducted during 1970 with the same girls then in grades eight, ten, and twelve to evaluate the longer-term effects of the curriculum unit and to determine the feasibility of studying the career development of this group of students over a period of years.

Specific objectives of the follow-up study were to:

1. Determine whether students' objective knowledge

of the world of work had been retained over a period of one year.

2. Determine whether students' attitude responses had remained constant over the period of a year (and, if changed, in which direction).

3. Determine whether students' stated future plans had remained constant over the period of a year (and, if changed, in what ways).

Methods and Procedures

This section includes a discussion of the evaluation instrument and a description of the original testing and the follow-up testing of the curriculum unit.

Evaluation Instrument

The instrument used for follow-up was identical to that used in the original study. It included sections relating to knowledge of work, attitudes toward work, and career plans. Refer to Appendix A for a copy of the instrument.

Knowledge of Work

The knowledge of work section included 40 multiple choice item (Appendix A, Part Two). Of the items, 25 offered four choices, 15 offered two. Only one response per item was considered to be the correct choice. Items were scored pass (1) or fail (0), allowing a possible score range from zero to 40.

Attitudes Toward Work

The 40 attitude items included the instrument (Appendix A, Part One) were developed in an earlier study (Vetter, 1969). For each of the 40 items, the respondent was to indicate the extent of her agreement on a Likert-type scale (strongly diagree, disagree, indifferent or don't know, agree, strongly agree). Within the 40 attitude items, there were five scales (Economic Mobility, Role Security, Intrinsic Reward, Challenge, Extrinsic Reward) of eight items each. Scores for each subject were summed over the appropriate eight items to obtain each scale score. Thus, a subject's score on any of the five scales could range from eight (strongly disagree with all items) to 40 (strongly agree with all items).

The Economic Mobility scale referred to those circumstances under which girls felt they would work after marriage. It included items relating to basic necessities (items 6, 11, 16, 26) and those relating to upward mobility (items 1, 21, 31, 36). High scores on this scale indicate a contemporary approach to employment with strong approval of work after marriage.

The Role Security scale included items relating to role identification (items 2, 7, 12, 37), relationship to family (item 32), men (items 22, 27), and work (item 17). Strong agreement, high scores, indicate the traditional position -- woman's place is in the home.

Items included on the Intrinsic Reward scale pertained to working with others (items 3, 23, 33), helping others (items 8, 13, 18), and being of use to society (items 28, 38). High scores on this scale indicate strong agreement with those statements related to helping people.

The Challenge scale contained items about opportunities (items 4, 9, 14, 39), running one's own life (item 34), and making one's decisions (items 19, 24, 29). Strong agreement with these items suggests a positive response to statements about independence and creativity.

The items on the Extrinsic Reward scale related to attitudes toward salary (items 30, 40), promotion (items 5, 15), and benefits (items 10, 20, 25, 35). High scores on this scale reflect positive responses toward salary, promotion, and benefits.

Future Plans

Items in this section (see Appendix A, Part Three) covered the areas of education, employment, and marriage and family plans. Fourteen of the items were in the yes-no response category. There were 15 additional pretest varied response items and nine additional post-test and retest items.

Field Tests - Original and Follow-up

Sample

The sample was selected from public secondary schools in Ohio and Tennessee. Students from both metropolitan and nonmetropolitan locations were included. Also, it was felt necessary that the total range of ability levels be inlcuded in the sample from each location. The original field test was planned within these limits and a number of other constraining factors (e.g., the willingness of school administrators to allow participation of their schools, the willingness of teachers to participate, and the kinds of student groups available).

Three school districts were selected to particpate in the field testing, one metropolitan and two nonmetropolitan. The metropolitan community had a population of 260,000. One of the nonmetropolitan communities had a population of 19,000, the other was a rural community.

In the metropolitan community, the city supervisor of home economics aided in the selection of four racially integrated urban schools (as opposed to inner-city or suburban) with the entire range of socioeconomic status represented. One of the nonmetropolitan communities was served by one racially integrated high school, with four feeder junior high schools. One of the junior high schools, which was integrated and represented the entire range of socioeconomic status, was selected. The other community has an all-Caucasian student population served by a rural, consolidated school. Thus, seven schools were represented in the field testing.

In each of the participating schools, administrative considerations necessitated the use of regularly consituted home economics classes, although it is felt that the unit is appropriate for all secondary girls. As the follow-up study was one year later, the original sample of seventh, ninth, and eleventh grade students were then in grades eight, ten, and twelve.

After testing the community-size variable for effects on pretest scores, it was concluded that no distinction in this area was necessary. The data from the original field test and the follow-up were, therefore, analyzed for the numbers of students shown in Table 1.

Table 1

Number of Students in Participating Classes

	Original Study		Follow-up	
Grade Level	Experimental	Control	Experimental	Control
Seventh	87	35	71	29
Ninth	93	60	72	49
Eleventh	31	20	19	7
Total	211	115	162	85

Procedures

Project staff collected data for the follow-up re-rest in March and April 1970, using a standard administration procedure. The retest occurred one year after administration of the pretest. For the experimental groups, the pretest had immediately preceded the curriculum unit with the post-test following completion approximately two weeks later. For control groups, the pre-and post-test administrations were at two-week intervals.

Analysis

Knowledge of Work Attitude, Scales, Planning Items. The effects of grade level and of experimental versus control group membership were analyzed for pretest, post-test and retest scores using a two-way analysis of variance which allows for unequal frequencies (Winer, 1971). An analysis of variance of the preptest scores of students participating in the pretest, post-test and retest revealed no significant difference.

Reliability Estimation. Two reliability estimates were obtained. Reliability was estimated for knowledge of work and for each attitude scale by the test-retest correlations of the control groups over an interval of two weeks. Internal consistency reliability estimates (Kuder-Richardson Formula 8) were made by reanalyzing the scales developed by Lee, Ray, Vetter, Murphy, and Sethney (1971), using the shortened forms developed for this study.

Reliability estimates for the knowledge of work test and the five attitude scales revealed a reliability range from .49 to .71. The internal consistency estimates for the attitude scales were higher than that of the knowledge of work test, most porbably because several dimensions were present in the latter test while each of the attitude scales were developed as a single factor. The pretest - post-test correlations, based on the responses of the control group, may have been lowered by effects of the pretest if it stimulated some girls to consider plans for adult life, even though these students' did not participate in the unit.

Results

Results of the follow-up study are presented in this section. Discussion will focus on follow-up results and how they relate to the original study.

The means and standard deviations for each of the scales are presented in Table 2. Table 3 presents a summary of pretest and post-test analysis of variance results for the original group of 326 students, and a summary of the retest group results for the remaining 241 students. The analyses of variance tables for the two groups are available in Appendix B. The results will be discussed with reference to the unit objectives in order to parallel the original report (Vetter & Sethney, 1972).

Objective 1. Determine whether students' objective knowledge of the world of work had been retained over a period of one year.

In the original study, substantial gains in knowledge of work post-test scores were noted in the experimental group for each grade level. The control group remained at its original level. The significant difference between scores gained in the post-test was lost in the retest; however, there was some difference and it is positive. This result was to be expected as learning curves tend to level out over time. Eighth graders in the experimental group retained a gain of three points from the pretest through retest; tenth graders, two points; and twelfth graders maintained a three-point gain.

The significant difference by grade level maintained through the pre- and post-test were also lost. During the year following the pretest, those originally in the seventh grade had gained enough information about the world of work to eliminate any significant difference between grade levels. It is possible that prior to the eighth grade, students are not ready to assimilate such information or that such information is not provided.

Objective 2. Determine whether students' attitude response choices had remained constant over the period of a year (or if changed, in what directions).

In the retest, only one of the five attitude scales revealed a significant difference between the experimental and control groups. This occurred in the Challenge scale where a significant difference had also appeared in the post-test with the original complete group of students. The experimental group was more open to job opportunities and challenges. This suggests that the potential was there, but before participation in the unit, these students never realized that they, as girls, could feel that way. In the course of their study, these students were exposed to possible careers they could follow, and those that women actually do follow. Learning this in school served to add a stamp of approval to such careers. This experience was not available to the control group.

By grade-level comparison concerning the challenges of work, the mean scores of twelfth graders in the experiment held up, whereas, those of the control group fell considerably.

Douvan and Kay (Cook & Stone, 1973, p.42) studied girls between the ages of 11 and 18. Their nationwide study was concerned, in part, with adolescents' values and aspirations. Results indicated that the younger girls were more concerned with personal achievement and self-development, whereas, the older girls increased their interest in marriage and motherhood.

In a study of 1,237 girls and young women, Matthews and Tiedeman (1964) also noted that attitudes concerning career and marriage affect a girl's life style in various ways at varying developmental stages. They found a

> ...drop in career commitment from junior to senior high school (from 13 to 3 per cent) ... the high school group differed from the junior high group specifically in a greater acceptance of marriage... (p.383)

The twelfth grade control group retest appears to support both these studies. By exposing the experimental group to actual job possibilities, the usual loss of interest during this period was avoided.

The significant difference between experimental and control groups realized in the post-test for Economic Mobility was lost in the retest. The experimental group maintained only a slightly higher interest in economic mobility. At the twelfth-grade level, the control group considerably increased their interest in work after mar-

riage while the experimental group maintained their same degree of interest. This increase off-set the overall difference between groups. As twelfth graders are approaching the average age to marry (20.2 years), it is possible that all students were developing a concern for conditions under which they would work if married.

Retest scores for the twelfth grade showed that students in the control group had considerably increased their interest in extrinsic rewards while the experimental student group remained at the same level. This may indicate that interest in money increases with age independent of classroom instruction.

The significant difference revealed on the pre- and post-test between grade levels concerning Role Security was lost in the retest. It appears that for this one category, the loss of subjects did affect the results. The variation in responses was greatest at the twelfth grade level where there was also the largest subject loss.

In all other aspects, these findings a year later tend to support those found in the original study: Students participating in the curriculum unit

> ...showed more acceptance of the working role where it related to circumstances under which the respondent would work after marriage, such as working after marriage to have money to buy a home, and where it relates to the challenge of the working role, especially in relation to independence and creativity. Students did not change significantly their responses to items about the traditional role of women, nor their responses to the intrinsic ...reward of working (Vetter & Sethney, 1972, p.19).

Objective 3. Determine whether students' stated future plans had remained constant over the period of a year (or if changed, in what ways).

Students' first occupational choices (item 99) were categorized into seven status levels (one for professional to seven for unskilled labor) (Warner, 1960). Throughout the testing, no significant difference between experimental and control groups was reached. For the post-test a .01 significance level was noted by grade level. At the time of retest the difference was still significant at the .05 level. The major choice change appeared at the twelfth-grade level. This suggests a decline in expectations as students approach the actual

work situation. It may well be reality-based in terms of clerical opportunities being more abundant than others.

The interaction between the experimental and control groups remained significant in the retest. It is possible that the experimental group continued to maintain higher expectations than the control group. The curriculum unit could have interfered with the decrease of career expectation for tenth and twelfth graders.

Both experimental and control groups continued to feel the same way about whether they would work at all, work after high school, and work after college or other education (items 83, 82, 86). There were significant changes in students' outlook between grade levels. Both groups had much higher expectations to work after high school, from 58 percent to 88 percent at the twelfth grade level. This increase was probably a result of twelfth-grade students from both groups deciding not to further their education, either by college or other post-high school studies (retest item 96). These students did reveal an inconsistency in their answers regarding further education, as 58 percent had indicated that they would work after completing further education (item 86). Thus, the twelfth graders were still ambivalent about plans for additional education, or they may have theorized "if I were to further my education, I probably would/would not work."

Grade level continued to reflect changes in attitude of students to work after marriage until arrival of their first child (item 88). In the eighth and tenth grades respectively, 72 percent and 68 percent of the students felt they would continue to work until then, whereas 93 percent of the twelfth graders felt this way. The older students seemed to assume that this would be a natural progression of events.

Interestingly enough, there were considerable changes in the attitudes of participating students in the timing of work after children arrived (items 89, 90, 91, 92). Posttest responses indicated that the experimental group had earlier favored work after children had begun school and after children were grown. These times continued to be favored in the retest. In addition, twelfth graders in the experimental group increased their willingness to work after their children were born (item 89) enough to create a significant difference between the experimental and control groups (see Table 2). A significant difference

was also noted in item 91, interest in work after children had reached high school. It appears that the intervention of the unit helped the experimental group to gain interest as would be expected by the results of the control sample. Three-fourths of the twelfth-grade experimental group thought they would work when their children were in high school, whereas only 14 percent in the control group thought they would do so.

The difference between groups are more visible concerning work after children than the overall idea of work itself. This may result from the fact that almost all students, control and experimental, planned to work at some time in their lives. And, after exposure to the unit, more students decided they would work during various stages of child rearing than did those without such exposure.

The number of changes on the part of the experimental group in the post-test and retest concerning work after children arrive strongly suggests that the unit presented the possibility of work under these conditions. In most instances, this interest was most evident at the twelfth-grade level. This further suggests that at the eleventh- and twelfth-grade levels, students having exposure to such information are more open to the idea of a career or at least long-term work.

In the post-test, experimental students were asked if they had changed their occupational plans since participating in the curriculum unit (item 102). In responding, 43 percent of the students in the seventh grade, 30 percent in the ninth, and 48 percent in the eleventh grade said "yes."

One year leater, both experimental and control groups were asked about those changes (item 110). Overall, approximately 50 percent of both groups said they had changed occupational plans (experimental: 58 percent, eighth grade; 44 percent, tenth grade; 54 percent twelfth grade; control: 43 percent eighth grade; 57 percent tenth grade; and 55 percent twelfth grade). Students in these age groups tend to vary their occupational plans. For this particular sample, the unit did make an appreciable difference.

As for who may have influenced any changes in occupational planning (item 111), most students -- experimental and control -- indicated that friends (experimental, 14 percent; control, 13 percent) and other (experimental, 20 percent; control, 32 percent), mostly boyfriends, were most influential. Perhaps it is worth noting that students identified "boyfriends" separately from "friends."

Conclusions and Recommendations

Conclusions reached after comparing retest data with pre- and post-test data are discussed in terms of the objectives of the follow-up study. Recommendations for continued use of the curriculum unit and continuing research are also discussed.

Conclusions

Concerning changes students have made since the post-test in terms of meeting follow-up objectives:

1. Some of the gain in the experimental group students' objective knowledge of the world of work was retained, but experimental and control group responses were not significantly different.

2. a. Students in the experimental group still had significantly higher scores on the Challenge attitude scale than the students in the control group.

   b. Other student attitude response choices changed in that the control group gained a desire for economic mobility and extrinsic rewards in the twelfth grade equal to that held by the experimental group. Age and maturity may have been responsible for these changes.

3. The status level of students' stated first occupational choices tended to remain the same, while more students in the experimental group than in the control group felt they would continue to work after their children were born and also after their children were in high school.

There appears to be little material comparable to the "Planning Ahead for the World of Work" unit available to students and teachers. Yet, a need and desire for such material does exist. More than 4,000 requests for copies of the curriculum unit were filled by CVE. Also, some state supervisors reprinted the unit and distributed it to schools throughout

their states. An updated version of the unit, containing more recent information about the world of work, is available through CVE on a cost-recovery basis.

Recommendations

For the most part, the following recommendations support those offered at the conclusion of the original presentation of the curriculum unit.

1. The ninth-grade level appears to be the best time to offer this unit. These students are in the process of making educational decisions that seriously affect career decisions. Information such as that offered in the curriculum unit can assist students in their planning. As seventh graders are not quite to that decision stage, guidance material for them should emphasize occupational information. Introduction of such a unit at the tenth and eleventh grades would need to expand its focus to include concerns about the variety of roles of adult women.

2. Teachers and guidance personnel are encouraged to strengthen the impact of this brief unit by disseminating career information by way of bulletin boards, newspaper clippings, and class discussions with outside resource persons.

3. School counselors could help provide learning materials, maintain current career literature files, and participate in teaching the unit where appropriate. Schools having group guidance classes could utilize this unit to their advantage.

4. As boys must understand their future working roles with women co-workers and family roles with working wives, they could benefit from participation in the unit with slight revisions.

5. Parental involvement could help both parents and students to respect each other's outlook while gaining an understanding of how things were and how they are changing.

6. In accord with the widespread concern with career education, this unit could prove to be a useful addition to an existing career program.

7. Counseling materials are now available to assist both counselors and teachers better understand career orientation for girls. Such publications include: *Counseling Women* (Cook & Stone, 1973), *Girls and Women over the Life Span* (Matthews, Feingold, Weary, Berry, & Tyler, 1972), "We are Furious (Female) but We Can Shape Our Own Development" (Hansen, 1972), "A Framework for Counseling Women" (Schlossberg, 1972), and *Expanding Opportunities for Girls: Their Special Counseling Needs* (US Department of Labor, 1970).

Appendix A

PLANNING AHEAD

FOR

THE WORLD OF WORK

How do you feel about work? What do you know about working? What are your plans for employment? We are asking you to answer a number of questions which will be helpful to you and to the people who help students make decisions about work.

The questionnaire is divided into three sections. You will be marking your answers on the separate answer sheet. Use the special pencils provided. Notice that the answer spaces are in groups of five. After answering the first five questions, go to the top of the second column to find the space to mark your answer to question six. Be sure you mark the answer for each question in the spaces provided for it.

PART ONE

DIRECTIONS:

For the following statements, decide on the degree to which you agree or disagree with each statement and then mark that answer on the separate answer sheet. This should be how you personally feel about the statement, not how you think other people feel.

Example:

Statement: Work is a lot of fun.

Possible answers:
A. Strongly disagree
B. Disagree
C. Indifferent or don't know
D. Agree
E. Strongly agree

Choose the answer that comes the closest to the way you feel about the statement and mark it on the separate answer sheet. If you "strongly disagree" that work is a lot of fun, you would mark A as the answer by filling in the space under A with the special pencil.

Example:

A	B	C	D	E
■	||	||	||	||

If you "agree" that work is a lot of fun, you would mark D as the answer by filling in the space under D with the special pencil.

Example:

A	B	C	D	E
||	||	||	■	||

Answer every statement. Work quickly. Do not worry or puzzle over individual items. It is your first impressions, the immediate "feelings" that we want. Read each statement carefully, then answer it quickly and go on to the next item immediately. If you have any questions, raise your hand.

DO NOT TURN THE PAGE UNTIL YOU ARE TOLD TO DO SO.

PART ONE

A. Strongly disagree
B. Disagree
C. Indifferent or don't know
D. Agree
E. Strongly agree

1. I would work after marriage to have the money to live in a better community.

2. Women who have jobs are not really happy.

3. Working with others would be an important part of a job for me.

4. A chance to work with ideas is the ideal kind of job.

5. A job should have good opportunities for promotion.

6. I would work after marriage to have money to buy basic things.

7. Woman's place is in the home.

8. Opportunities to be helpful to others in my work are important.

9. A job that gives you a chance to create something new is the best kind of job.

10. Good fringe benefits would be one thing to look for in a job.

11. I would work after marriage to have money to buy essentials.

12. Women are too independent today.

13. Being of help to people would interest me.

14. A chance to show inventiveness in meeting new problems is important.

15. A job should have opportunities for early promotion.

16. I would work after marriage to meet financial responsibilities.

17. Most women are not interested in chances to help others through a job.

18. Helping people who are less fortunate is important to me.

19. Women should make their own decisions.

20. Retirement benefits would have to be satisfactory in order for me to consider taking a job.

21. I would work after marriage to have money to buy a home.

22. Most men are not interested in chances to help women advance in a job.

23. Working closely with people would interest me.

24. The chance to supervise activities is an important part of a job.

25. Work seems important to the people who are doing it.

26. I would work after marriage to have money for daily expenses.

27. Women are trying to imitate men.

28. Opportunities to be useful to society through my work are important.

29. Having influence on groups is important to me.

30. Making money is the best thing about having a job.

31. Women may hold jobs after they are married to buy more things for home and family.

32. Parents should encourage the idea of marriage and home-making (rather than working) from childhood.

33. Working with people is preferable to working with things.

34. Married women should hold jobs so they can have a life of their own.

35. Status symbols (such as a personal office) make a job more attractive.

36. I would work in order to help put my children through college.

37. Most women dislike smart women.

38. A job gives you a good opportunity to meet people.

39. A chance for self-expression is a good reason for taking a job.

40. Opportunity for increasing salary is an important feature of a job.

PART TWO

DIRECTIONS:

There is one right answer for each question in Part Two. Choose one answer for each question and mark it on the answer sheet. Make sure that the number of the answer sheet is the same as the letter of the answer you choose. Answer every question.

Questions 41 to 65 have only four possible answers rather than the usual five. Use only the first four spaces on our answer sheet to answer these questions.

A B C D ~~E~~

41. When one is thinking about the occupation she might enter as an adult, if her interests, abilities, and preferences did not limit her, approximately how many different jobs could she choose among?

    A. 300
    B. 3,000
    C. 30,000
    D. 300,000

42. The median salary income (half earned more, half earned less) of full-time male workers was $6,195 in 1964. What would you expect was the median income for female workers in that same year?

    A. $3,859
    B. $4,285
    C. $6,497
    D. $7,138

43. Approximately what percentage of all women are employed full time in the United States?

    A. 20%
    B. 35%
    C. 50%
    D. 65%

44. About how many women would you estimate are in the labor force?

A. 260,000
B. 2,600,000
C. 26,000,000
D. 260,000,000

45. Of the four groups below, indicate which educational group has the largest percentage of the women in that group employed full time.

A. less than high school education
B. high school graduate
C. college graduate
D. education beyond college

46. Look at the four age groups below and indicate which group has the largest percentage of women employed full time (both now and in projections for the 1970's).

A. 25-34 years old
B. 35-44 years old
C. 45-54 years old
D. 55-64 years old

47. What percentage of girls in your age bracket will probably be married by the time they are 19 years old?

A. 25%
B. 45%
C. 65%
D. 85%

48. Of those girls in the 18-19 year age bracket who are married, what percentage would you expect are also working?

A. 18%
B. 28%
C. 38%
D. 48%

49. What is the average number of years that a woman can expect to spend in the labor market?

A. 4-6 years
B. 8-10 years
C. 14-17 years
D. 20-25 years

50. Considering all the women who are working which of the following categories of educational achievement would account for over 40 percent of the total?

A. 8 years of school completed
B. 9-11 years of school completed
C. 12 years of school completed
D. 16 years of school completed

51. Among married women in the labor force, the age group represented in greatest number is:

A. 18-19
B. 20-24
C. 45-54
D. 55-64

52. Over 65 percent of the women employed in clerical positions have completed how many years of school?

A. 9-11 years of school
B. 12 years of school
C. 13-15 years of school
D. 16 years of school

53. Which of the following occupational areas has the greatest employment growth projection for the 1970's?

A. farm workers
B. sales workers
C. non-farm laborers
D. clerical workers

54. How many girls of today will work for money at some time during their lives?

A. about 1 of 3
B. about half
C. about 3 of 4
D. about 9 of 10

55. In 1964, the median yearly income of girls who dropped out of high school was $1,650. What would you expect to be the median yearly income for high school graduates?

A. $2,060
B. $2,400
C. $3,050
D. $4,500

56. In 1964, the median yearly income of girls who graduated from high school was $2,400. What would you expect to be the median yearly income for college graduates?

A. $3,000
B. $3,900
C. $4,400
D. $5,500

57. The average woman worker today is

A. single and 28 years old
B. single and 41 years old
C. married and 28 years old
D. married and 41 years old

58. More women are working today than ever before. Which of the following is (are) the reason(s)?

A. less time is needed for housekeeping
B. higher family costs for education, health, etc.
C. women are seeking the right to choose what they will do
D. all of the above

59. When do women make occupational decisions?

A. only in high school or college
B. when they take a job
C. when they have children
D. all of the above

60. Projected employment growth is more than average for which occupational groups?

A. professional and technical workers, service workers, and clerical workers
B. professional and technical workers, managers, and operatives
C. service workers, sales workers, skilled workers
D. clerical workers, sales workers, farm workers

61. In which three occupational groups did women represent over 50 percent of total employment in 1965?

A. professional and technical, clerical, sales
B. clerical, private-household workers, service workers
C. managers, operatives, and service workers
D. sales, services, craftsmen

62. Looking ahead to 1975 indicate about what percentage of women between 35 and 65 will be working or looking for work.

A. about 25%
B. nearly 50%
C. about 75%
D. nearly 90%

63. How many different types of jobs are you likely to have during your years of employment?

A. only one
B. three or four
C. eight or ten
D. dozens

64. When will your occupational education be finished?

A. when you graduate from high school
B. when you finish a vocational program
C. once you begin your first full-time employment
D. continuing education will be required to meet the challenge of change in the world of work

65. Worthwhile sources of occupational information include

A. school counselor
B. school and public libraries
C. friends and relatives
D. all of the above

DIRECTIONS:

Questions 66-80 have only two possible answers. Use only the first two spaces on your answer sheet to answer these questions.

In the following pairs, which occupation has the largest total number of people employed?

66. A. telephone operator
    B. airline hostess

67. A. physical therapist
    B. nurse

68. A. saleswoman
    B. fashion coordinator

In the following pairs of occupations, which requires the most education:

69. A. librarian
    B. surgeon

70. A. airline hostess
    B. dietitian

71. A. typist
    B. registered nurse

72. A. sales clerk
    B. laboratory technician

73. A. beauty operator
    B. high school counselor

DIRECTIONS:

The following questions can be answered with yes or no. If you decide the answer is "yes," mark "A" beside the item number on the answer sheet. If you decide the answer is "no," mark "B" beside the item number on the answer sheet. Be sure that the letter you mark is the same as the answer you chose. Answer every question. Use only the first two answer spaces on your answer sheet to answer these questions.

Remember - A. yes
B. no

74. The majority of women employed as professional workers have completed less than 12 years of school.

75. The majority of women employed as medical and other health workers have completed at or above 12 years of school.

76. Summer or part-time job experience is helpful in finding work later.

77. An individual needs to make an alternative vocational plan.

78. It is possible for a woman to successfully combine roles of wife, mother, and worker.

79. There are employment opportunities for women in jobs that are often considered men's work.

80. A study of occupational employment projections is a good way to get some idea of which occupations will offer the best job opportunities in the 1970's.

PART THREE

DIRECTIONS:

For statements 81-94, mark A if the statement applies to you. If it does not apply to you or if you don't know or aren't sure, mark B.

A. Yes, this statement applies to me.
B. No, this statement does not apply to me
(or) I'm not sure
(or) I don't know

Statistics show that 90-95 percent of all American women marry and that about one-third of married women are working. Assuming that you will marry some time, which pattern(s) would you plan to follow in your life?

81. I plan to marry right after high school.

82. I plan to work a couple of years after high school.

83. I have no plans to ever be employed.

84. I plan to marry while I'm still in college or some kind of occupational education.

85. I plan to marry right after college or other education beyond high school.

86. I plan to work a couple of years after college or other education beyond high school.

87. I plan to quit work when I marry.

88. I plan to continue working after I marry until we have our first baby.

89. I plan to return to work as soon as possible after my children are born.

90. I plan to work after all my children begin school.

91. I plan to work after all my children are in high school.

92. I plan to work when my children are grown up and on their own.

93. I definitely do not plan to marry.

94. I plan to work continuously after completing my education.

Pretest Field Study

_____
Name

DIRECTIONS:

Check or write in the correct answer for you. Be sure to put your name on this page and the next page.

95. Do you have plans for education following high school?

_____Yes _____No

If your answer is yes, please check the choice you have made.

_____junior college
_____four year college or university
_____business or commercial school
_____cosmetology (beauty) school
_____nursing school (2 or 3 year registered nurse program)
_____other (please specify_____)

96. What are your plans for working after you graduate from high school?

_____begin working immediately
_____begin working after further education or training
_____do not plan to work
_____undecided

97. What are your plans for marriage?

_____following high school graduation
_____following further education or training
_____after working at least two years
_____no plans for marriage
_____undecided

98. What job would you like to have when you first start working? (examples of jobs include: secretary, waitress, nurse)

_____
Name

99. How much do you think you will be able to earn when you get the job you chose in question 98?

_____$2,000 per year
_____$3,500 per year
_____$5,000 per year
_____$10,000 per year

100. How much education and/or training will you need to get the job you chose in question 98?

_____less than high school graduation
_____high school graduation
_____high school graduation plus some further education
_____four years of college
_____on-the-job training

101. How many children would you like to have?

102. Has your mother worked outside the home?

103. Is she working now?

104. What does (did) she do?

105. What is your father's occupation?

106. How many years of school did your father complete? (High school graduation would be equal to 12 years, college graduate would be equal to 16 years.)

107. How many years of school did your mother complete? (High school graduation would be equal to 12 years, college graduate would be equal to 16 years.)

108. Have you had a job?

109. What did you do?

_____
Name

DIRECTIONS:

Check or write in the correct answer for you. Be sure to put your name on this page and the next page.

95. Do you have plans for education following high school?

_____Yes _____No

If your answer is yes, please check the choice you have made.

_____junior college
_____four year college or university
_____business or commercial school
_____cosmetology (beauty) school
_____nursing school (2 or 3 year registered nurse program)
_____other (please specify _____)

96. What are your plans for working after you graduate from high school?

_____begin working immediately
_____begin working after further education or training
_____do not plan to work
_____undecided

97. What are your plans for marriage?

_____following high school graduation
_____following further education or training
_____after working at least two years
_____no plans for marriage
_____undecided

98. What job would you like to have when you first start working? (examples of jobs include secretary, waitress, nurse)

_____
Name

99. How much do you think you will be able to earn when you get the job you chose in question 98?

_____$2,000 per year
_____$3,500 per year
_____$5,000 per year
_____$10,000 per year

100. How much education and/or training will you need to get the job you chose in question 98?

_____less than high school graduation
_____high school graduation
_____high school graduation plus some further education
_____four years of college
_____on-the-job training

101. How many children would you like to have?

102. Have you made any change in your plans since you started this unit of study?

103. Explain your answer to question 102 (If you have made changes in your plans, tell why. If you have not made changes in your plans, tell why not.)

Retest Field Study

_____
Name

DIRECTIONS:

Check or write in the correct answer for you. Be sure to put name on this page and the following pages.

95. Which of the following choices most closely describes your grades in all courses over the past two years?

_____mostly A's or equivalent
_____mostly A's and B's or equivalent
_____mostly B's and C's or equivalent
_____mostly C's and D's or equivalent
_____mostly D's and below or equivalent

96. Do you have plans for education following high school?

_____Yes _____No

If your answer is yes, please check the choice you have made.

_____junior college
_____four-year college or university
_____business or commercial school
_____cosmetology (beauty) school
_____nursing school (2 or 3 year registered nurse program)
_____other (Please specify_____)

97. What are your plans for working after you graduate from high school?

_____begin working immediately
_____begin working after further education or training
_____do not plan to work
_____undecided

98. What are your plans for marriage?

_____following high school graduation
_____following further education or training
_____after working at least two years
_____no plans for marriage
_____undecided

99. What job would you like to have when you first start working? (examples of jobs include: secretary, waitress, nurse)

_____
Name

100. How much do you think you will be able to earn when you get the job you chose in question 98?

_____$2,000 per year
_____$3,500 per year
_____$5,000 per year
_____$10,000 per year

101. How much education and/or training will you need to get the job you chose in question 98?

_____less than high school graduation
_____high school graduation
_____high school graduation plus some further education
_____four years of college
_____on-the-job training

102. How many children would you like to have?

103. Has your mother worked outside the home?

104. Is your mother working now?

105. What does (did) your mother do?

106. What is your father's occupation?

107. How many years of school did your father complete? (High school graduation would be equal to 12 years, college graduate would be equal to 16 years.)

108. How many years of school did your mother complete? (High school graduation would be equal to 12 years, college graduate would be equal to 16 years.)

109. If you have had a job for which you have been paid, what was it? (If you have never worked for pay, write "none.")

_____
Name

110. Have there been any changes in your plans for the future since this time last year?

_____Yes _____No

If you answered yes, please check one or more of the categories listed below to indicate the area(s) of change.

_____Change in educational plans
What was the change?

_____Change in occupational plans
What was the change?

_____Change in marriage and family plans
What was the change?

111. Who do you think influenced the changes in your plans?

_____there has been no change in my plans
_____teacher
_____counselor
_____parent or guardian
_____other relative
_____friend
_____other
(Please specify_____)

TITLE: HAWAII CAREER DEVELOPMENT CONTINUUM, K-14. FINAL REPORT.

PERSONAL AUTHOR: RYAN, T. ANTOINETTE

DESCRIPTOR: *VOCATIONAL DEVELOPMENT; *CAREER EDUCATION; ELEMENTARY GRADES; SECONDARY EDUCATION; *PROGRAM DESCRIPTIONS; INSERVICE TEACHER EDUCATION; MATERIAL DEVELOPMENT; *PROGRAM EVALUATION

IDENTIFIER: HAWAII

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 235P.; SEE RELATED DOCUMENTS VT 102 045, VT 102 046, VT 102 047 AND VT 102 048 IN THIS ISSUE.

ABSTRACT: THIS REPORT DESCRIBES THE THIRD PHASE OF A THREE-PHASE PROJECT DESIGNED TO PROVIDE CAREER DEVELOPMENT AT ALL LEVELS IN HAWAII SCHOOLS. THE PROJECT PROPOSED TO MEET THE NEED OF A SYSTEMATICALLY DEVELOPED PROGRAM THROUGH THE DEVELOPMENT OF A CONCEPTUAL FRAMEWORK AND CURRICULUM GUIDES, PROVISION OF INSERVICE TRAINING FOR SCHOOL PERSONNEL, AND DEVELOPMENT OF INSTRUMENTS FOR EVALUATING STUDENT GROWTH IN CAREER DEVELOPMENT. THE CONCEPTUAL FRAMEWORK AND CURRICULUM GUIDES WERE DEVELOPED IN THE FIRST TWO PHASES. THE TWO MAJOR GOALS OF PHASE III WERE INSERVICE TRAINING OF SCHOOL PERSONNEL IN GRADES K-12 IN HAWAII AND THE DEVELOPMENT OF INSTRUMENTS TO ASSESS STUDENT GROWTH. FROM FEBRUARY 1974 TO JUNE 1975, INSERVICE TRAINING WAS PROVIDED TO 286 PARTICIPANTS THROUGH SEVEN TWO-DAY WORKSHOPS. A BATTERY OF FOUR INSTRUMENTS WAS DEVELOPED. RESULTS FROM AN ANALYSIS OF PRETESTS AND POSTTESTS ADMINISTERED TO 852 STUDENTS IN GRADES 3, 6, 9 AND 12 INDICATE THE INSTRUMENTS ARE VALID AND RELIABLE FOR ASSESSING STUDENT GROWTH IN CAREER DEVELOPMENT. AN ADMINISTRATOR'S MANUAL OF INSTRUCTIONS WAS DEVELOPED FOR EACH INSTRUMENT. RESULTS OF AN OUTSIDE EVALUATION INDICATE THAT GENERALLY THE PROJECT ACHIEVED ITS OBJECTIVES RELATING TO INSERVICE TRAINING AND INSTRUMENT DEVELOPMENT. THE REPORT CONTAINS A DESCRIPTION OF THE PROJECT, ACTIVITIES, RESULTS AND ACCOMPLISHMENTS RELATED TO EACH OF THE OBJECTIVES. SAMPLE PROJECT-DEVELOPED EVALUATION INSTRUMENTS ARE APPENDED. (AUTHOR/NJ)

FINAL REPORT

Project No. V361021L
Grant No. OEG-0-73-2912

Hawaii Career Development Continuum, K-14

Conducted Under
Part C of Public Law 90-576

This project was funded by P. L. 90-576 funds awarded to the State Board of Vocational Education but sponsored by the Department of Education. The actual development was undertaken by the College of Education of the University of Hawaii under contract to the Department of Education.

The project reported herein was performed pursuant to a grant from the Bureau of Adult, Vocational, and Technical Education, Office of Education, U. S. Department of Health, Education, and Welfare. Grantees undertaking such projects under Government sponsorship are encouraged to express freely their professional judgment in the conduct of the project. Points of view or opinions stated do not, therefore, necessarily represent official Office of Education position or policy.

SUMMARY OF THE REPORT

Time Period Covered: February 1, 1974 - June 30, 1975.

Goals and Objectives: The two major goals of Phase III were: (a) in-service training of school personnel in grades K-12 in Hawaii, and (b) development of instruments to assess student growth in career development. Subgoals of the staff training goal were to develop participants' understanding of career development as well as its importance, and to increase staff capabilities for infusing career development learning experiences into the existing curriculum. Subgoals of the instrument development goal were to develop instruments to measure students' career development growth in grades 3, 6, 9, and 12.

Procedures: In-service training was carried out through a series of seven workshops held in the fall of 1974 on four islands. Three workshops were held on Oahu, two on Hawaii, and one each on Kauai and Maui. The workshops were activity-oriented and used a variety of teaching techniques along with a multi-media approach.

A battery of four instruments to assess student growth in career development and four accompanying Administrator's Manual of Instructions were developed in fall 1974. An initial pool of items was categorized according to the objectives and subgoals of the four major goals of career development. Item analyses were made and items were combined to form the four instruments. Exploratory testing was done in fall 1974 and minor revisions were made on each inventory. The instruments were then tested in spring 1975. A pretest was administered to control and experimental groups of 3rd, 6th, 9th, and 12th grade students in April 1975. A posttest was administered in May 1975. Results from testing, analysis of teacher evaluations, and item analyses provided the basis for refinement of the four instruments.

Results and Accomplishments: In-service training was provided to 286 participants, most of whom were teaching personnel, through seven two-day workshops. Fifty-four percent of the participants reached criterion level on the posttest for acquiring career development knowledge and skills.

A battery of four instruments, each consisting of four subtests, was developed. Results from an analysis of pretests and posttests administered to 852 students in grades 3, 6, 9, and 12 indicate the instruments are valid and reliable for assessing student growth in career development. An Administrator's Manual of Instructions was developed and refined for each instrument.

Evaluation: Formative and summative evaluations were made. Self-evaluations were made of the in-service training and the instrument development. An outside evaluation was made by an independent evaluator. The results of self-evaluation are generally consistent with those of the independent evaluation. The outside evaluation generally is that the project achieved its objectives relating to in-service training and instrument development. Inadequacies were noted, particularly in regard to participant selection, and follow-through activities of the training program.

Conclusions and Recommendations: The results of the in-service program suggest the workshop format to be a viable one and point up the importance of creating an appropriate environment for learning as well as providing a set of systematically designed and logically-related learning experiences if training objectives are to be achieved. It is recommended that continued in-service training be implemented to reach all personnel in Hawaii's schools. There is a critical need for training administrative and guidance personnel, teacher trainers, and counselor educators. It is recommended that selection procedures be implemented, and that in-depth training as well as orientation to career development be provided. All training activities should be carried out as part of a single coordinated plan.

Data resulting from administration of the four forms of the Student Growth Assessment of Career Development Inventory to sample populations of 3rd, 6th, 9th, and 12th grade students in Hawaii schools indicate the instruments are suitable for assessing student growth in career development. It is recommended they be used for instructional and guidance purposes as well as for assessment of student growth in career development.

BODY OF THE REPORT

This report describes the third phase of a three-phase project designed to provide career development to learners in Hawaii schools. The Career Development Continuum Project was implemented under provisions of Part C of P.L. 90-576 for the purpose of providing a comprehensive, logically developed, rational system of career education for learners in Hawaii schools. During Phases I and II (April 1972 to June 30, 1973) a conceptual model and implementing curriculum guides (K-3, 4-6, 7-9, 10-12) were developed. Phase III (February 1, 1974 to June 30, 1975) focused on (a) training of Hawaii school personnel to implement career development concepts and principles in the existing curriculum, and (b) development of instruments for assessing student growth in the area of career development.

Problem Area

Need

The overall mission of the project has been to increase the capacity of the educational system to provide career development to all learners in Hawaii's schools. The Hawaii Career Development Continuum Project is part of the nationwide concern for changing the educational system to make it more relevant to the needs of today's youth. This nationwide concern is reflected in Hawaii's continuing concern for providing the best education possible for Hawaii's youth.

The need for career education was brought to the attention of the American public in 1971 by Sidney P. Marland, Jr., then Commissioner of Education. Academic, vocational, and technical education were not new concepts, but bringing them together under the umbrella of career education was. Marland (1971a) suggested that public education was in need of widespread revision if it was to meet the needs of all youth. Statistics bear out Marland's contention that current public education practices were failing to equip youth for personally satisfying and worthwhile participation in society:

> In 1969, 40% of the American labor force had less than a high school education. (Dunn, 1974, p. 1)
>
> In 1973 there were 900,000 public school dropouts. (Dunn, 1974, p. 1)
>
> (In 1971), the high school general curriculum generated 750,000 students who (had) neither vocational training nor who planned to go to college. (Cunha, Laramore, Lowrey, Mitchell, Smith, & Woolley, 1972, p. 1)

In a speech at the annual meeting of the State Directors of Vocational Education in Washington, D. C., in May 1971, Commissioner Marland stated:

> We have in this country the highest youth unemployment rate in the world, and the relentless advance of technology is making

> the situation explosively worse. . . . By 1975 we expect the unskilled to account for less than five percent of the labor force or something in the neighborhood of 4.5 million jobs. Yet Bureau of Labor Statistics' projections indicate that we will still have more than 3.5 million young people with no salable skills trying to squeeze themselves into this sad five percent category. For them there will literally be no room at the bottom.
>
> This tragic situation clearly indicates that America's educational efforts are failing or at least that they are not attuned to the realities of our times. If we are to correct that failure and if education is to serve properly its national purpose, then we must bridge the gulf between man and his work. We in education must be actively concerned with the boys and girls in our charge, not just until they receive a diploma, but until they have made the transition from student to worker or are enrolled in post-secondary education. Our job is not done properly, in other words, until each and every one of those youngsters is capable of developing a clear sense of direction in life and is able to make a responsible career choice. (Marland, 1971a, pp. 4-5)

Preparation for employment is only part of what career education is all about; learning the life skills of satisfying social relationships, civic responsibility, and self-realization are just as important. As Marland pointed out at the 1971 Convention of the National Association of Secondary School Principals in Houston, Texas:

> It is terribly important to teach a youngster the skills he needs to live, whether we call them academic or vocational, whether he intends to make his living with a wrench, or a slide rule, or folio editions of Shakespeare. But it is critically important to equip that youngster to live his life as a fulfilled human being. . . . Life and how to live it is the primary vocation of all of us. And the ultimate test of our educational process, on any level, is how close it comes to preparing our people to be alive and active with their hearts, and their minds, and, for many, their hands as well. (Marland, 1971b, pp. 8-9)

The need for school personnel trained to deliver career education to learners is vitally important if the potential of career education is to be realized. In 1974, it was pointed out that, "the retraining of virtually every person in every educational institution in the nation" (Hoyt, Evans, Mackin, & Mangum, 1974, p. 171) is essential. Today's youth cannot successfully achieve worthwhile and meaningful career development unless teachers, administrators, and counselors are prepared to implement the basic concepts and principles of career education.

These national concerns related to career development were reflected in Hawaii's proposal in 1971 for the development of a career development continuum for grades K-14 for the state of Hawaii. The results of a 1971 needs assessment which found Hawaii's career development programs fragmented and offered in only a few schools established the need for a

systematically developed career development program for all learners. The assessment revealed: (a) a statewide conceptual framework for a comprehensive program of career education that integrated instruction, guidance, and administrative functions was lacking; (b) orientation activities to educational and occupational requirements and opportunities, which had been called for in the Hawaii Foundation Program, were offered in only a few schools; (c) counselor effectiveness was lessened by lack of a systematic information and career development instructional program; (d) counseling services relating to students' self-appraisal, self-understanding, and career development were inadequate; and (e) teachers, counselors, and administrators were not delivering career development to students as an organized and coordinated team effort.

The Hawaii Career Development Continuum Project was one of the state's efforts to meet these needs. The project proposed to help meet the needs through development of a conceptual framework of career development, development of implementing curriculum guides, provision of in-service training in career development for Hawaii school personnel, and development of instruments for evaluating student growth in the areas of career development. The conceptual framework and the curriculum guides were developed in Phases I and II. The first step, development of the conceptual framework, integrated four career development goals among the various grade levels. The curriculum guides, developed for grades K-3, 4-6, 7-9, and 10-12, presented activities for teachers and counselors to use or adapt in order to integrate career development learning experiences into their existing curriculum.

Once the conceptual framework and curriculum guides were completed, the need was to give Hawaii school personnel the opportunities to develop an understanding of career development for grades K-12. It was necessary to offer training opportunities for school personnel to better understand basic concepts and principles of career education and to develop the skills needed to integrate career development learning experiences into the existing curriculum. Objective 1 of Phase III, derived from this need, was to provide in-service training in career development concepts to selected school personnel of Hawaii.

It is not enough to hand teachers a curriculum guide; it is equally important to increase their understanding of the concepts and principles of career development and to help them develop the skills to utilize the guides and adapt the learning experiences into their own subject areas. The importance of and need for training has been emphasized by the National Advisory Panel of the American Institutes for Research:

> Teachers must receive in-service training in (career education), (they must) understand the importance of career education. . . . Since teachers often think of themselves as being trained in a subject matter, it is important to show them that the resources of that subject have bearing on career education. (American Institutes for Research, 1974, p. 8)

These in-service training needs were the primary focus of Phase III of the Hawaii Career Development Continuum Project. In-service training was one of the objectives of Phase III of the project.

The second objective focused on meeting another need, that of developing an instrument for assessing student growth in career development. It is not sufficient to merely develop a new curriculum; there must be some way to assess its effectiveness. Concomitant with the development of the career development curriculum, therefore, there is the need to determine the effectiveness of the curriculum in meeting career development needs of students. The need, therefore, was for an instrument to determine the extent to which the conceptual framework with the implementing curriculum guides was, in fact, viable. A survey of literature revealed that suitable instruments did not already exist. The need, then, was to develop instruments to assess student growth in areas of career development. Objective II of Phase III was the development of instruments to meet this need.

The Hawaii Career Development Continuum Project reflects and becomes part of the national thrust toward making education more responsive to the needs of today's youth. The project is one of Hawaii's efforts made in response to the U. S. Office of Education's call for "preparation of each and every pupil for meaningful work or meaningful higher education lending itself to ultimate career entry and personal fulfillment" (Marland, 1972, p. 35).

Related Literature

Career education literature becomes more abundant daily. Since 1971 when Marland introduced the term, innumerable private, public, and commercial organizations and agencies have made available literally thousands of career education books, reports, newsletters, films, filmstrips, study guides, and teacher aids. A continuing effort has been made throughout all phases of this project to review results from related projects in career education and career development. Reports emanating from projects throughout the nation have been regularly reviewed and results have been related to the Hawaii Career Development Continuum Project.

Research, development, and training efforts of the U. S. Office of Education, state department of education, laboratories, centers, and private agencies have contributed to the project. Reports have been analyzed on a continual basis from the Center for Vocational and Technical Education at Ohio State University, the ERIC Clearinghouse on Career Education at Northern Illinois University at De Kalb, the Far West Laboratory for Educational Research, the American Institutes for Research, the Educational Testing Service, the Career Development Guidance, Counseling and Placement Project at the University of Missouri, and the Northwest Regional Educational Laboratory. The reports from organizations, universities, and state agencies throughout the nation have been reviewed routinely. In conducting Phase III of the Hawaii Career Development Continuum Project, a concerted effort was made to review literature in two areas: staff development and instrument development.

Literature Related to Objective 1: In-Service Staff Training. Of all materials reviewed, the most significant in terms of having a bearing on the in-service staff training component of the Hawaii Career Development Continuum Project include reports by Norton (1972), Drier and Jacobsen (1973), Drier (1974b), Ryan (1973a, 1973b), Trenton State College (1972), and Nelson (1974).

Reports related to staff training from the Comprehensive Career Education Model (CCEM) Project conducted by the Center for Vocational and Technical Education at Ohio State University included those by Norton (1972), Drier and Jacobsen (1973), and Drier (1974b). Norton stressed the importance of adequately preparing the staff for the roles they will be required to play in a career education program. This includes orienting and training staff in the philosophy and basic concepts of career education. The CCEM recommends that two staff groups be established: a Staff Development Cadre, members of which would be responsible for designing and conducting additional in-service sessions on a wide-scale; and a Building Coordinator group, members of which would be responsible for in-service activities in their respective buildings. While the Hawaii Career Development Continuum Project did not follow the exact outline of the CCEM Project, it did incorporate many of the same underlying staff training principles.

Drier and Jacobsen (1973) conducted and reported on a major study for the Comprehensive Career Education Model Project at the Center for Vocational and Technical Education. The authors stress the need for in-service training and have as their major focus an inherent problem in the implementation of career education, that of how to effectively deal with teachers who resist change. The authors recommend assessing where teachers are on a continuum of acceptance - resistance to change, assigning them to like groups, and then tailoring in-service activities specifically to each group. The Hawaii Career Development Continuum agreed with the importance and need for staff in-service training stated by the authors. However, instead of providing a variety of training sessions with participant selection procedures, the Hawaii Project offered a series of orientation workshops open to all Hawaii public school personnel in grades K-12. The limit on funds to support the Hawaii Project precluded the possibility of the more comprehensive and controlled approach. The orientation workshops conducted as part of the Hawaii Project represented only one component in the total state plan for staff training.

Drier (1974b) reports on materials originating from the CCEM Project for conducting staff development in career education. The Hawaii Career Development Continuum followed the design of many of the training programs and products of the CCEM Project. Like the CCEM Staff Development Guidelines, the Hawaii Continuum used a staff development model. The CCEM Project places more emphasis on staff needs assessment and employs a different evaluation method. The Hawaii Project utilizes a staff development program much like that of the CCEM, in that both give sample lessons with performance objectives and goals, learning activities, lesson-related resources, and evaluation activities. Unlike the CCEM, the Hawaii Project did not utilize a community resource program, self-instructional materials, or an attitude change in-service program as components in the orientation workshops.

One of the major sources used by the Hawaii Career Development Continuum Project were the references related to the Adult Career Education in Corrections Program conducted by the University of Hawaii. Ryan (1973a, 1973b), director of the program, reports on methods, goals, and purposes of the program. One of the major differences between the two programs was in the method of staff training. Like the Comprehensive Career Education Model of the Center for Vocational and Technical Education, the Adult Career Education in Corrections Program utilized a two-level staff training model, whereas the training in the Hawaii Career Development Project was limited to orientation. However, the emphasis placed on participant involvement as an integral and crucial part of a successful career education program is inherent in both programs.

In 1972, Trenton State College published a guide to available career education in-service teacher training programs. A wide variety of training programs are described, and most employ methods and activities similar to those of the in-service staff training component of the Hawaii Career Development Continuum Project. Most programs have participants working in task groups, attending lectures, participating in discussions, viewing films, reviewing career development/education instructional materials, and reading assigned reference materials. Many of the programs listed in this publication also employ self-evaluation techniques similar to those used by the Hawaii Career Development Continuum.

In 1973, the University of Bridgeport in Connecticut (Nelson, 1974) initiated a project to develop and implement three interrelated career education models. The first model focused on promoting and strengthening relationships among the business, educational, and industrial sectors of a community. The second model focused on K-12 teachers, and the third focused on developing a career education resource center. The Hawaii Career Development Continuum Project did not include community personnel to the extent the first model of the Connecticut Project did. In the second model, an individual, in-classroom approach was used, whereas for the Hawaii Career Development Continuum Project it was felt a concentrated, two-day, group-centered training approach would be more effective. The development of a career education resource center for staff was not incorporated into the Hawaii Project since a Career Information Center has been established in Hawaii.

Literature Related to Objective 2: Development of Instruments for Student Growth Assessment. A comprehensive search of available career development instruments revealed a number of tests and inventories which were relevant; however, no single instrument or technique completely and adequately met the project needs. Thus, instruments had to be developed and techniques selected to meet specific project needs.

The Career Education Survey, developed by Behavioral Consultants (n.d.), is a screening instrument designed to provide general feedback regarding career education needs and programs. It provides a needs assessment, diagnostic data, and is prescriptive. The Hawaii Career Development Inventory, like the Career Education Survey is not an achievement test, but instead gathers information from students regarding attitudes, knowledge, and experience in the area of career development, and can be used to gather data from any size group of students.

The Hawaii Career Development Inventory is not prescriptive since other needs areas are presently emphasized by the project.

The Career Maturity Inventory (Crites, 1973) was one of the instruments found to be most applicable to project needs. Two sections of the Career Maturity Inventory were adapted for use in the Hawaii Career Development Inventory, those of self-appraisal and occupational information. However, other sections of the Career Maturity Inventory were not applicable to or did not meet project needs, thus the instrument as a whole could not be used.

Clapsaddle (1973) reports on a study utilizing the Career Maturity Inventory to determine the relationship of career education teacher in-service preparation to the vocational development of 6th grade children. The testing design used by Clapsaddle was also used by the Hawaii Career Development Continuum Project: the respective project instruments were administered to both control and experimental groups, the experimental groups were composed of students of teachers who had received in-service training, control groups were composed of students of teachers who had not received training, and pre- and posttests were administered.

The Assessment of Career Development available from Houghton-Mifflin is designed for use in grades 8-11, thus had limitations for use by the Hawaii Career Development Continuum Project as the latter was concerned with testing students in grades 3, 6, 9, and 12. However, the testing models used by both projects are similar in that both call for control and experimental groups to be pre- and posttested using the same instrument for both tests.

Also available from Houghton-Mifflin is the Career Planning Program for grades 8-11. This instrument is designed to assess student experiences, interests, and abilities, and help the student identify and explore career options. This instrument was not applicable to the Hawaii Career Development Continuum Project needs since the focus was on assessing student growth in career development and the effects on student growth of in-service training of school personnel and exposure to the experiences in the Hawaii Career Development Continuum Curriculum Guides. As student interests or self-estimates of ability were not the primary focus it was not possible to utilize the Career Planning Program instrument.

The Differential Aptitude Test developed by Bennett, Seashore and Wesman (1974) was not applicable to the Hawaii Career Development Continuum as the Hawaii Project is concerned with measuring total career development effects of the Continuum on the student, rather than being limited to student aptitudes.

Materials available from the Comprehensive Career Education Model Project at the Center for Vocational and Technical Education were not applicable. Drier (1974a) reports on assessing community resources and local needs, and the Hawaii Career Development Continuum was concerned with developing an instrument for use with students.

Many of the materials available from the Achievement Competence Training (ACT) Project (Brandes, 1974; Buckingham, Davis, Kekalos, 1974) were not applicable, although some of the methods used by ACT were. ACT field testing procedures were similar to those employed by the Hawaii

Career Development Continuum Project, although specific testing techniques differed. The ACT utilized interviews and anecdotal reports. Because of time and personnel required to utilize these methods with a significant number of students, the Hawaii Project elected not to use this approach.

The designs which were devised for in-service training and instrument development were built on findings from related works in these areas, and, at the same time, incorporated factors to meet the unique needs of Hawaii.

Goals and Objectives

Phase III of the Hawaii Career Development Continuum Project had three aims.

Aim 1: Training of personnel in use of systems approach to plan, implement, and evaluate delivery systems for career development for all learners, K-14, in Hawaii.

Goal 1: To develop workshop participants' understanding of career development and to increase their capabilities of infusing career development into the existing curriculum.

Subgoal 1: For workshop participants to understand the basic concepts and principles of career development.

Subgoal 2: For workshop participants to understand the importance of and be motivated to utilize career development learning experiences in the classroom.

Subgoal 3: For workshop participants to develop the skills necessary to identify career development learning experiences which can be used in existing curriculum.

Aim 2: Development and testing of career development instruments appropriate for the learners and compatible with the socio-economic cultural setting in Hawaii.

Goal 1: To develop an instrument to assess career development growth of students in grade 3.

Goal 2: To develop an instrument to assess career development growth of students in grade 6.

Goal 3: To develop an instrument to assess career development growth of students in grade 9.

Goal 4: To develop an instrument to assess career development growth of students in grade 12.

Aim 3: Revision of the conceptual model and implementing curriculum guides.

Project Design and Procedures

Activities Related to Objective 1: In-Service Staff Training

Training Design. Design of the in-service training package was based primarily on the training design of the six-year national program of Adult Career Education in Corrections (Ryan, 1973a), the California Development Model (Cunha, Laramore, Lowrey, Mitchell, Smith, & Woolley, 1972), and the model of the American Institutes for Research (Dunn, 1974).

The six-year Adult Career Education in Corrections (ACEC) Program trained personnel in 45 states, 4 territories, the District of Columbia, and Canada. Personnel training in the ACEC Program was offered through an articulated program of basic and advanced seminars to equip participants for subsequent leadership roles and training and technical assistance responsibilities at the local and regional level. The training program design produced a multiplier effect through the two-level training model which produced technical assistance teams. Those trained in the basic seminars were equipped with basic skills and knowledge needed to implement career education programs, and to function as members of teams which provided technical assistance or training in their local settings. Participants were chosen from the basic seminar trainees for advanced training. Those who completed the advanced training were equipped with competencies to assume responsibilities of team leaders and with knowledge and skills to provide technical assistance or training on a regional level. This two-level training design sets in motion a process which supplies trained personnel who train other personnel, who train still others, thus achieving the multiplier effect by having trainers in each institution, capable of carrying on in-service training at the local unit level.

The Hawaii Career Development Continuum training activities chosen were similar to those recommended by the American Institutes for Research (Dunn, 1974) in that the workshops were the same length, two days, and used similar formats. The AIR Workshops, "typically involved opening remarks by school district leaders, . . . extensive career education materials displays, and workshop-type activities" (Dunn, 1972, p. 31). Although the AIR Workshops contained cadre teacher involvement as activity leaders, the Hawaii Career Development Continuum did not have a cadre of previously trained teachers, but did utilize participants as chairpersons and recorders at each workshop.

The Hawaii Career Development Continuum training activities chosen were also similar to those utilized by the California model (Cunha, Laramore, Lowrey, Mitchell, Smith, & Woolley, 1972), in that there were no selection procedures, but rather, voluntary participation by school staff members. It was felt,

> that the most effective volunteers were school staff members who were willing to accept the risks of innovation and the extra work involved in relating classroom activities and group guidance activities to learning about occupations and varied life styles. (Cunha, Laramore, Lowrey, Mitchell, Smith & Woolley, 1972, p. 26)

In addition, the California model,

> included an opportunity for staff members to work as teams and to have an opportunity to "brainstorm" the kinds of experiences they might organize to enable students to discover and understand the basic career development concepts. (p. 26)

The training model utilized by the Hawaii Career Development Continuum also incorporated opportunities for participants to work together as members of teams and to brainstorm experiences that might be organized in their classrooms.

The Hawaii Career Development Continuum Project utilized only the basic training portion of the ACEC training design. The design for the Hawaii training was a two-day workshop which was based upon the basic training portion of the ACEC Program. There were seven steps in the model developed: (a) analysis of the real-life environment, (b) a statement of the ideal, (c) assessment of needs, (d) definition of goals, subgoals, and objectives, (e) formulation of a training plan, (f) program implementation, and (g) evaluation. Figure 1 illustrates the Hawaii Career Development Continuum's training model.

Analyze Real-Life Environment (1.0)
- Analyze Workshop Setting (1.1)
- Analyze Participant Population (1.2)
- Analyze Workshop Functions (1.3)

State the Ideal (2.0)
- State the Philosophy (2.1)
- Describe Ideal Workshop Setting (2.2)
- Describe Ideal Participant Population (2.3)
- Describe Ideal Workshop Functions (2.4)

Assess Needs (3.0)
- State Participant Needs (3.1)
- State Program Needs (3.2)
- Rank Order Needs (3.3)

Define System Goals/Subgoals/Objectives (4.0)
- Define Concepts (4.1)
- Define Management Goals/Subgoals/Objectives (4.2)

Formulate Plan (5.0)
- State Mission/Parameters (5.1)
- State Constraints/Resources (5.2)
- Synthesize Possible Solutions (5.3)

Develop/Implement Program (6.0)
- Provide Management Support (6.1)
- Develop Curriculum (6.2)
- Implement Program (6.3)

Evaluate System (7.0)

Figure 1. Outline of model developed for the Hawaii Career Development Continuum Project's in-service staff training.

In analyzing the real-life environment (1.0), information was gathered in three areas: (a) the workshop settings, (b) the participant population, and (c) the workshop functions. The workshop setting refers to: support services, including physical facilities, food, and clerical services; social factors affecting the interaction of the participants; and the community in which the workshop is held, including resources, accessibility, and costs. The participant population was analyzed according to their training and background. Workshop functions refer to activities needed to implement the workshop; and were either participant-related functions or management-related functions.

Step 2 involved stating the ideal (2.0), in terms of philosophy, settings, participants, and functions of the workshop. The philosophy statement which gave direction to the workshops was:

> We believe that all participants can develop and be committed to incorporating career development into the school curriculum and that staff has the responsibility to provide optimal resources to help participants to realize this potential.

The description of the ideal workshop setting helped to identify criteria against which to measure practical workshop settings. Describing the ideal participants helped to identify guidelines for the best participant balance.

Step 3 involved comparing the real-life situation against the ideal, thus revealing needs (3.0). Participant needs included learning needs, social needs, need for adequate support services, needs for an environment conducive to learning, and needs for learner-involvement activities. Program needs included participant selection, pre-workshop indoctrination, and post-workshop communication.

Once the needs were identified, the training mission was implemented in goals, subgoals and objectives for the workshop participants (4.0).

The next step was the formulation of the plan for the workshop. Parameters, constraints, and resources were considered and a plan was then chosen. The outline of the workshop agenda is attached as Appendix B.

Upon selection of the plan, the curriculum for the workshop was developed and arrangements made for the services required: materials and activities for the workshop were developed, workshop sites and facilities were selected, and resource persons to serve as panelists and speakers were selected.

The last step, evaluation (7.0) was the process of determining the efficiency and effectiveness of the total system design. Evaluation forms were developed for distribution to workshop participants for their evaluation of the workshop's effectiveness and value to each.

Training Procedures. The actual procedures used at the Hawaii Career Development Continuum Project Workshops were as follows:

Settings and Dates: In 1974, seven workshops were given, three on Oahu and four on outer islands. Dates and places of the workshops were:

October 18-19	for Windward District held at Ulu Mau Village
October 25-26	for Kauai District held at Kauai Beachboy Hotel
November 1-2	for Honolulu District held at Ala Moana Banquet Hall
November 8-9	for Hawaii District (Hilo) held at Hilo Lagoon Hotel
November 15-16	for Hawaii District (Kona) held at Kona Lagoon Hotel
November 22-23	for Leeward and Central Districts held at Leeward Community College
December 6-7	for Maui District held at Maui Community College

The workshops originally were scheduled for alternate weekends, but rescheduling due to printing delays caused the workshops to be held on six successive weekends with Thanksgiving intervening before the seventh workshop.

Participants: In September 1974, notices and enrollment forms for the workshops were sent to district coordinators appointed by the Department of Education. The district coordinators were responsible for distributing information to all school personnel in their districts. Enrollment forms were to be returned two weeks ahead of workshop dates so that materials and final arrangements could be made.

Program: The workshop activities were scheduled from 3:30 p.m. to 10:30 p.m. on Friday and from 8:00 a.m. to 4:30 p.m. on Saturday. The program included individual, small group, and large group activities. Audio visual materials were used in connection with a variety of teaching techniques, including lecture, discussion, role playing, and simulation. The workshop opened with a meeting of the large group followed by a task activity session in small groups, after which reports, discussion, and evaluations were held in the large group. Large group activities included a film, banquet, a keynote speech, an address on the conceptual model, a panel discussion, and task group reports. Small group activities included task assignments on communication, assumptions undergirding career development, cooperation, and infusing career education into lesson plans. Individual activities included readings on career development, an assignment on career development instructional guidance materials, and assigned program responsibilities.

Staff: The principal investigator and 2 assistants comprised the staff for seven workshops. A guest speaker attended each workshop. Two to four teachers, counselors, and/or administrators were chosen from each district as panelists at the workshops.

Activities Related to Objective 2: Development of Instruments for Student Growth Assessment.

The Hawaii Career Development Inventory was constructed by establishing an instrument construction design, developing items, testing, refining, and synthesizing an inventory.

Construction of Preliminary Instruments. Initial consideration was given to possible approaches to instrumentation: the multi-instrument vs. single instrument, objective vs. non-objective, pictorial vs. word, and multichotomous vs. dichotomous. The decision was made to use four forms of a single instrument with each form designed for a specified grade level. It was decided that the inventory would be an objective, paper-and-pencil instrument. The choice of this approach to instrumentation was based on the fact that a single instrument alleviates the problem of establishing theoretical and empirical linkages between instruments, and also avoids the problem of scoring when different dimensions are used for different instruments. The preference for an objective instrument, as opposed to a subjective measure, was based on the assumption that objective instruments can be administered more easily and scored more economically, with less chance for error than is the case with subjective tests. A word statement instrument, as compared to pictorial stimuli, has the advantage of minimizing the margin of errors, since there is less chance for ambiguity.

The development of items for the four forms of the career development inventory was accomplished by establishing and then drawing from an initial pool of career development statements and items obtained from three sources: (a) published tests and inventories, (b) books and articles, and (c) item writing. The first step in item construction was the screening of items on the basis of relevancy, uniqueness, and specificity. Items which failed to measure up to these criteria or which were duplicate items were eliminated, rewritten, revised, or refined. In item construction, an effort was made to obtain as pure a measure of the dimension or subgoal as possible. Items which were ambiguous or vague were revised. The inventory was designed to provide as nearly as possible an equal number of positive and negative items to counteract effects of acquiescent response set. After faulty items were eliminated, the remaining items were categorized by career development goal, subgoal, and objective.

The next step was writing additional items to provide an equivalent set of stimuli at each level for eliciting responses related to the twenty-four subgoals defined in the conceptual framework of career development for Hawaii's public schools. The preliminary version of the inventory by intent had more items than would be included in the final version, to allow for elimination of faulty items. In the preliminary version, each inventory had four subtests, one for each goal area, with a possible score of 110 points.

The inventory had four forms, one for each grade level. All forms were for group administration. Forms B, C, and D were designed so students could read the items and record their responses on the inventory booklets. Form A, for administration to 3rd graders, was designed for the items to be read orally by the teacher. Students responded by circling yes or no for each item on the answer sheet. The four forms of the Inventory, A, B, C, and D, therefore had four parts, 1, 2, 3, and 4. In each form Part 1 consisted of items to sample self-realization achievement, Part 2 sampled economic efficiency achievement, Part 3 sampled civic responsibility achievement, and the fourth part, was to sample students' social relationship skills.

Because of reading limitations of learners in Kindergarten to Grade 3, the oral administration technique was selected for this level. The instrument provided a report form on which the learners could record their responses with a minimum of trouble. For the other three levels, the instruments were designed for easy recording of responses directly on the test booklets. Both multiple choice and true/false items were included in the preliminary version.

In constructing the inventory, care was taken to produce an inventory which would satisfy the demands for ease of administration. The inventory was not a power test. It was felt that respondents should not be penalized because of having relatively slow reading rates. Provision was made for respondents to ask questions of the administrator in cases where there was a lack of understanding about the meaning of words in the items. It was found, that most students could complete the inventory in 45 minutes to one hour. Each form had a set of Directions for Administration and Scoring.

Exploratory Testing of Instrument. Upon completing the four primary versions of the inventories, exploratory testing was done on the items. Items were revised or deleted to implement the results of the exploratory testing and the recommendations and comments of professional staff and an outside consultant. The preliminary versions were then reviewed by two specialists in the State Department of Education and one outside evaluator. Additional revisions were made to implement recommendations made.

Pilot Testing of Instruments. Schools were identified for pilot testing the instruments at grades 3, 6, 9, and 12. The design was pre-post experimental control groups. Teachers were assigned to experimental and control groups. Two field supervisors were responsible for distribution and collection of data. The testing design called for one experimental and one control group in each of the following schools, and two in each of the schools marked with an asterisk:

Grade 3: Fern, Kuhio, Maile, Makaha, Holualoa, Kealakehe
Grade 6: Fern, Kuhio, Maile, Makaha, Kealakehe, Konawaena
Grade 9: Central, Jarrett, Kaimuki, Washington, Nanakuli, Waipahu, Konawaena*
Grade 12: Kaimuki*, Nanakuli, Waipahu, Konawaena*

However, due to malfunctions in printing and a concomitant delay in instrument distribution, it was necessary to revise the training design as follows:

Grade 3: Fern, Konawaena, Kuhio, Maile
Grade 6: Konawaena, Kuhio, Maile, Puuhale
Grade 9: Central, Jarrett, Konawaena, Nanakuli, Waipahu
Grade 12: Kaimuki*, Konawaena, Nanakuli, Waipahu

The instruments, directions for administration, and teacher evaluation forms were distributed to participating schools for the pretest which was administered in April to a sample population. In May, using the same procedures as for the pretests, posttests were administered to students in grades 3, 6, 9, and 12.

As part of the pilot testing of the instrument, teachers were required to evaluate the instrument and also to rate each item on the instrument. Results of pre- and posttests and teacher evaluations were treated statistically.

Refinement and Synthesis of Final Instrument. Based on results from the analysis of results from pre-posttests, experimental and control groups, and teacher ratings, the instrument was refined.

Results and Accomplishments

Results and Accomplishments Related to Objective 1: In-Service Staff Training.

Participants. Three hundred persons returned completed enrollment forms for the seven two-day workshops. Fourteen of the 300 applicants withdrew, leaving a total of 286 participants. In addition, four panelists participated during the morning session of each workshop. Table 1 shows a breakdown of the participants at each workshop by sex, age, and education.

Table 1

Participant Sex, Age, and Education by Workshop Location

Inspection of Table 1 shows that nearly twice as many women as men attended. Only at the Maui workshop did the men equal the women in numbers. In age, the Leeward workshop had the youngest group, and Windward and Honolulu the oldest groups. Nearly 30% of the participants held advanced degrees, with over half of this 30% represented by participants in the Windward and Honolulu workshops.

Table 2 presents the employment classifications of the workshop participants.

Table 2 shows that the majority of participants were teachers. Teachers were in heavy majority at Kauai and Kona. Leeward was the only workshop at which teachers were not in the majority. A comparison of Table 2 with Table 1 leads to the conjecture that the relatively young median age at Leeward was due to the fact that over a quarter of the Leeward participants (27%) were University of Hawaii students. Further investigation proved this untrue; the average age of the six students was exactly the same as the median age of the entire group. Kauai and Kona teachers were predominently elementary school teachers, while Leeward and Maui teachers were predominently high school teachers. A preponderance of elementary teachers was expected at Kona, since the workshop date fell on the homecoming weekend for the largest high school in the Kona area. Representation from intermediate schools was light for all the workshops except Honolulu. Counselors were mostly secondary counselors. District office representation was particularly strong in Kauai and Hilo. Department of Education representation occurred only at the Oahu workshops, with a majority of the Department of Education participants attending the Windward workshop. University of Hawaii was represented mainly at Honolulu and Leeward, with representation primarily by faculty at Honolulu and by students at Leeward.

Participant Self-Evaluation. Participants' self-evaluation was made to determine the extent to which participants felt they had achieved the program goals: understanding career development concepts and principles, and development of skills for infusing career development into the existing curriculum. Table 3 gives the results of the self-evaluation.

Inspection of Table 3 reveals that over 80% of the participants at Windward, Kauai, Hilo, Kona, Leeward, and Maui felt they had succeeded in acquiring understanding of career development concepts and principles through participation in the workshop. Over 80% of participants in Windward, Kauai, Hilo, Kona, and Maui felt they had acquired skills for implementing career development in the classroom. For all seven workshops, 89.25% of the 286 participants felt they had acquired the necessary knowledge, while 2.85% felt they had not. In the area of developing skills, 88.12% of all the participants felt they had succeeded in developing the necessary skills, while 3.11% felt they had not. There was little difference between participants' estimate of knowledge increase and skill development.

Participants self-evaluation also included ratings of the achievement of objectives which implemented the major goals. Ratings were given of the extent to which major concepts were acquired and primary skills developed, as well as an assessment of professional competencies developed. The results of the participant ratings on a scale of 1 to 4 of the achievement of these training objectives are given in Table 4.

M Ratings	3.22	3.42	3.34	3.62	3.33	3.49	3.45	3.40

* scale = 0.0 (slight) to 4.0 (very much)

Inspection of Table 4 reveals that overall, participants indicated they had significantly increased their understanding of career development concepts. In each workshop the self-evaluation showed greatest achievement in the understanding of career development. With the exception of Maui participants, the development of understanding of the Hawaii Career Development Continuum was in second place in the order of objectives accomplished to implement the goal of increasing understanding of basic career development concepts. All participants, except at Maui, rated their understanding of the Career Development Curriculum Guides at a lower level than understanding of basic concepts or understanding of the career development continuum.

A secondary objective for the workshop was to increase participants' professional role competencies. The self-rating by participants of accomplishment of this objective, as reported in Table 4, reveals a significant achievement in all workshops except Windward and Honolulu. In these two workshops, there was achievement of the professional growth objective, but the level of achievement was less than at the other workshops. Windward and Honolulu reported a mean rating of 3.28 and 3.20, respectively, compared to a mean of 3.63 for the other five workshops.

Objective Tests. The extent to which training objectives were achieved was also assessed by an objective test. The training mission was for participants to reach a 70% criterion level on tests of knowledge and skills. Table 5 shows the results of this objective evaluation of the participants' acquisition of knowledge about career development concepts and development of skills for infusing career development into the curriculum.

Table 5

Participant Scores* on Tests of Career Development Knowledge and Skills by Workshop

Test	Workshop Location							N
	Windward	Kauai	Honolulu	Hilo	Kona	Leeward	Maui	
Knowledge	4.96	8.22	8.22	7.36	6.62	6.00	7.40	6.[illegible]
Skill	6.42	7.21	6.61	7.56	6.52	5.56	6.44	6.61
Total	11.38	15.43	14.83	14.92	13.14	11.56	13.84	13.5[illegible]

* Possible Score = 10 points each test

Inspection of Table 5 shows the mean score for all seven workshops to be close to 70% for knowledge, 66% for skill, and almost 68% for knowledge and skills combined. This is slightly below criterion level of 70%. All except Windward, Kona, and Leeward reached criterion level on knowledge acquisition; only Kauai and Hilo met criterion level on skill development.

Table 6 shows the percentage of participants in each workshop reaching criterion level on the tests over acquisition of knowledge and development of skills.

Table 6

Percentages for 7 Workshops			
Did reach Criterion Level	50.96	57.39	54.18
Did not reach Criterion Level	35.15	37.41	36.28
No response	13.89	5.20	9.54

Inspection of Table 6 shows close to a normal distribution across workshops for results of both knowledge and skill tests. Of the participants at Kauai, 74% met criterion level in the knowledge test compared to only 23% at Windward. The percentage of participants meeting criterion level at the other workshops were 60%, 59%, 50%, 46%, and 44% at Kona, Hilo, Leeward, Maui, and Honolulu, respectively. On the skills test, 82% of participants met criterion level at Hilo and 71% at Kauai, compared to only 13% at Leeward. The percentage of participants meeting criterion level on the skills test in the other workshops were 65%, 59%, 57%, and 53% at Windward, Honolulu, Kona, and Maui, respectively. The percentages of participants reaching criterion level on overall achievement of training objectives, as measured by objective tests, for the seven workshops were 72%, 71%, 58%, 52%, 50%, 44%, and 32% for Kauai, Hilo, Kona, Honolulu, Maui, Windward, and Leeward, respectively.

The results of the objective tests generally confirm the results of self-evaluation, as far as Kauai and Hilo workshops being the most effective in achieving training objectives. There also is agreement that the Kona workshop was very effective, with the percentage of participants reaching criterion level roughly 10 percentage points below that for Hilo and Kauai. Discrepancies are found between self-evaluations and objective tests for the other workshops. This may be accounted for in part by the number of non-responses. The objective tests show Leeward, Windward, Maui, and Honolulu to have been relatively less effective than Kauai, Hilo, and Kona.

Training Evaluation. Evaluation was made of the training process by participant rating of the workshop activities, reading materials, staff and resource persons, facilities, and schedule. The program contained a variety of different kinds of tasks and techniques. Table 7 shows participant ratings of the various activities on a 4-point scale, from 1 to 4.

Inspection of Table 7 shows that all but three activities were rated as contributing significantly to achievement of the training objectives. The film, study of materials, and readings, with ratings of 3.10, 3.10, and 3.08, respectively, on a scale of 1 to 4, were considered worthwhile but were of relatively less value than the other activities which had ratings ranging from 3.20 to 3.70.

Overall, participation in task groups was considered to be the most important activity. The banquet session was generally considered the next most valuable activity. Five workshops rated task groups the highest and two workshops gave the highest rating to listening at the banquet session. Ratings for task group activity and banquet session were 3.70 and 3.56, respectively, on a scale of 1.0 to 4.0. In general the participants favored group activities over individual activities, as seen by the relatively lower ratings given to reading reference materials, reviewing instructional materials, and watching the career education film. Comments by participants also revealed more enjoyment derived from participation-type activities than from the passive activities. A Leeward participant declared, "I'm glad somebody realized sitting and listening are not nearly as important as involvement!" The fact that listening at the banquet session, a passive activity, was highly rated is a tribute to the banquet speakers.

Table 7

Participant Rating* of Workshop Activities

Workshop Activities	Workshop Location							M Rating

* Scale = 1.0 (not worthwhile) to 4.0 (extremely worthwhile)

The reading materials, which were included for reference in conducting task group activities at the workshop and for subsequent use in the participants' school roles, might have been more effective had the workshop been longer, and allowed more time for participants to do in-depth reading. It was suggested that the reading materials be sent to participants in advance. A Kona participant wrote, "A bibliography of suggested readings would have been excellent preparation for this intensive 15-hour workshop." However, lack of sufficient funds to defray mailing costs, together with the lack of time, made this impossible. To have sent the reference materials to participants in advance, it would have been necessary to have enrollments for a workshop completely processed two weeks before the starting date. There was no workshop where this situation occurred.

Workshop personnel constituted an important factor in the training process. The extent to which instructional personnel contributed to the program objectives was determined. The instructional staff, consisting of the program director, and resource persons, consisting of the guest speaker and local panelists, were rated by participants on mastery of content and on communication skills. Results of this rating are shown on Table 8.

Inspection of Table 8 reveals significantly high rating for the program director and the guest speaker, with overall ratings of 3.76 and 3.73, respectively, on a scale of 1.0 to 4.0. There was little variation across seminars in ratings of these instructional personnel on their contribution to the program goals, with the exception of Windward and Honolulu where ratings on content and communication were 3.32 and 3.62, and 3.67 and 3.59 for program director and guest speaker, respectively. At all workshops the program director and guest speaker contributed significantly to program goals. Local panelists, rated separately from the outside resource person, were seen as an important part of the program at all workshops. The highest ratings were for the panelists at the Leeward and Maui workshops, with ratings of 3.57 and 3.49, respectively. In general, communication skills were rated slightly higher than content mastery, the single exception being the rating for program director, where content mastery was higher than communication, with ratings of 3.80 and 3.72, respectively. This difference is accounted for by the discrepant ratings given to mastery of content and communication at the Windward workshop, where the difference was .38, a significant difference. The differences at the other six workshops ranged from zero at Kauai and Leeward to .12 at Honolulu, with an average discrepancy of .04.

*Scale = 1.0 (poor) to 4.0 (outstanding)

Three other program factors which were considered important variables in the training process were rated: program information, workshop facilities and services, and time allocation. Results of the ratings of these factors are found in Table 9.

Inspection of Table 9 reveals considerable variation among the workshops on the different items. Program information was rated relatively lower than either facilities and services or time allocation. The rating of 2.93, on a scale of 1.0 to 4.0, for adequacy of program information was above the chance mean of 2.50, but significantly less than the rating for workshop facilities (3.46) or time allocation (3.12). Inspection of the ratings for program information by workshop suggests that the overall rating of less than 3.0, on a scale of 1.0 to 4.0, was accounted for by the ratings of 2.82 and 2.62 for Windward and Honolulu respectively. A comparison of the adequacy of information across workshops shows Kauai and Kona to have the highest ratings, with 3.05 and 3.08, respectively. The relatively high ratings at Kauai and Kona might be explained by the fact that these two workshop locations were the only ones for which letters from the Career Development Continuum Project Coordinator were mailed to school personnel in the area. It is possible that the rating on the program information factor might have been higher had it been possible to have provided a more comprehensive and systematic program of information dissemination. Lack of funds to defray communication costs, and the concomitant lack of an overall plan for a single, unified operation, precluded implementation of an optimally functioning information system. Information bulletins and enrollment forms were mailed to the district offices in September. However, in many reported instances, the information failed to reach school personnel in time to enroll in the workshops. Personnel from several schools in Honolulu, Central, and Leeward districts reported, after the fact, that they had not received notification of the workshops.

Workshop facilities and services are considered important factors for delivery of in-service training. Facilities and services combine to be the single most important factor in establishing the extent to which the environment is conducive to learning. Facilities and services include items such as type and arrangement of furniture, ventilation, lighting, sound, space, food service, and audio visual equipment.

An ideal location was judged to be one where (a) food and coffee were nourishing, appetizing, plentiful, and prepared and served by professional food service staff; (b) furniture was set up in advance of the opening of the workshop according to a scientifically designed and tested plan; (c) lighting was adequate for reading and writing, with a dimming adjustment for use with audio visual aids; (d) heating and cooling could be regulated and held constant; (e) the space was neither so small as to be crowded nor so large as to dwarf the group; and (f) there was minimal distraction to interfere with the purpose and content of the workshop.

Table 9

Participant Rating* of Program Factors

Factors	Workshop Location							Factor
	Windward n=45	Kauai n=43	Honolulu n=43	Hilo n=34	Kona n=57	Leeward n=15	Maui n=27	M
Program Information								
Pre-workshop information was adequate	2.90	3.00	2.59	3.03	3.10	2.92	3.00	
Pre-workshop information accurately described program	2.73	3.09	2.65	2.94	3.05	2.92	3.00	2.93
M	2.82	3.05	2.62	2.99	3.08	2.92	3.00	
Workshop Facilities and Services								
Location (city) for workshop was satisfactory	3.24	3.48	3.46	3.52	3.50	3.66	3.50	
Coffee service was satisfactory	3.52	3.47	3.26	3.48	3.40	3.73	3.55	
Meal service was satisfactory	3.60	3.74	2.95	3.61	3.31	3.86	3.92	
Menu was satisfactory	3.72	3.71	2.96	3.55	3.22	3.66	3.95	
Meeting space allocation was satisfactory	3.30	3.72	3.20	3.64	3.52	3.80	3.77	
Tables and chairs were satisfactory	3.26	3.69	3.13	3.61	3.76	3.40	3.62	3.46
Lighting was satisfactory	2.22	3.67	3.11	3.58	3.00	3.73	3.66	
Sound system was satisfactory	3.02	3.72	3.30	3.67	3.52	3.73	3.74	
Audio visual equipment was satisfactory	3.15	3.53	3.23	3.57	3.43	3.46	3.59	
Ventilation was satisfactory	3.24	3.53	2.69	3.36	2.57	3.73	3.62	
Working space was satisfactory	3.20	3.69	3.00	3.47	3.33	3.80	3.70	
M	3.22	3.63	3.12	3.55	3.32	3.69	3.69	
Time Allocation								
Length of workshop (15 hours) was satisfactory	3.02	3.33	3.05	3.14	3.10	3.26	3.22	
Daily schedule (3:30-10:30 Friday 8:00-4:30 Saturday) was satisfactory	2.86	3.23	2.92	3.20	3.03	3.13	3.18	3.12
M	2.94	3.28	2.99	3.17	3.07	3.20	3.20	
Combined M	3.13	3.51	3.03	3.42	3.26	3.52	3.53	

* Scale = 1.0 (low) to 4.0 (high)

The facilities varied greatly among the various workshops. Overall, the mean rating of 3.46 for facilities and services indicates the physical environments which were created at the seven workshops were conducive to learning. An inspection of the ratings on facilities and services for the respective workshops, and study of ratings of the individual items within each workshop, reveals the workshop environments to fall in two groups. Three workshops were relatively lower than the other four. Rating for the facilities and services at Honolulu, Windward, and Kona were 3.12, 3.22, and 3.32, respectively, with a mean of 3.22, compared to ratings of 3.55, 3.63, 3.69, and 3.69 for Hilo, Kauai, Leeward, and Maui, respectively, with a mean of 3.64.

An analysis of the facilities and services at the individual workshops reveals that the rating of the Honolulu facilities and services, 3.12, would have been even lower had it not been for the favorable reaction to the city location, 3.46. At Windward, the 3.22 rating would have been considerably lower, except for the favorable reaction to coffee service, meal service, and menu, where ratings of 3.52, 3.60, and 3.72, respectively, served to inflate the otherwise depressed mean.

The overall high rating of 3.69 for Leeward and Maui is accounted for in both instances by the favorable reaction to food service. Individual ratings show the lighting at Windward was poor, with a rating of 2.22, and ventilation at Honolulu and Kona was unsatisfactory, with ratings of 2.69 and 2.57, respectively. Although overall ratings for the seven workshop facilities suggest the environments were adequate, the deficiencies in environmental factors, such as lighting and ventilation, might have worked against attainment of program goals. The rating of 3.63 for the Kauai facilities is reinforced by the participant comment, "Excellent physical setup for meeting." It should be noted that the rating for Leeward facilities was the result of ratings by only 15 participants, since seven enrollees did not attend the full program.

Scheduling is an important factor in delivery of in-service training. The evaluation of this factor was accomplished by participant rating of time allocation. The overall rating of 3.12 on a scale of 1.0 to 4.0 suggests the scheduling of time was satisfactory. The length of the workshop, 15 hours, generally was considered all right. Windward and Honolulu participants were relatively less satisfied, as evidenced by ratings of 3.02 and 3.05, respectively, compared to 3.10, 3.14, 3.22, 3.26, and 3.33 for Kona, Hilo, Maui, Leeward, and Kauai, respectively. The daily scheduling of time was considered satisfactory for accomplishing the workshop goals. However, scheduling at Windward, Honolulu, and Kona, with ratings 2.86, 2.92, and 3.03, respectively, was relatively less satisfactory than the scheduling at Leeward, Maui, Hilo, and Kauai, where ratings were 3.13, 3.18, 3.20, and 3.23, respectively.

Since the same time schedule was used at all workshops, this discrepancy must be explained in terms of other interacting or contributing variables. It should be noted that the program at Windward for Day 1 was not followed according to schedule. A task activity scheduled for the first session was not carried out. Comments from participants at

Honolulu and Kona suggest the rating on scheduling at these workshops may have been a reflection of the desire for more time. A Honolulu participant commented, "I enjoyed participating in this workshop, but felt we needed more time. . . ." A Kona participant observed that, "The time flew by very quickly," and another said, "We need more time." The relatively higher rating on the scheduling factor by Maui participants is reflected in the comment, "I got more than my money's worth in profitable time spent - even though it meant giving up my precious Saturday!"

The combined ratings on program information, facilities and services, and time allocation reveal the workshops to be in two groups. Windward, Honolulu, and Kona had mean ratings on these three program factors of 2.94, 2.99, and 3.07, respectively, with a mean of 3.00. This compares to mean ratings of 3.17, 3.20, 3.20, and 3.28 for Hilo, Leeward, Maui, and Kauai with a mean of 3.21, a difference of .21 between the groups. When the ratings on these three factors are combined with ratings on instructional personnel, activities, and materials, the results, as shown in Table 10, is an overall rating of the training process which indicates all workshops were above average. The process implemented at Windward and Honolulu were relatively less effective than at the other five workshops.

Table 10

Mean Rating of Training Process Factors

Training Factors	Workshop						
	Windward	Kauai	Honolulu	Hilo	Kona	Leeward	Maui
Personnel	3.26	3.54	3.41	3.53	3.48	3.79	3.62
Information	2.82	3.05	2.62	2.99	3.08	2.92	3.00
Facilities	3.22	3.63	3.12	3.55	3.32	3.69	3.69
Schedule	2.94	3.28	2.99	3.17	3.07	3.20	3.20
Materials and Activities	3.05	3.43	3.21	3.48	3.44	3.56	3.40

Scale = 1.0 (low) to 4.0 (high)

The overall ratings of the training process is supported by participants' comments which reveal considerable satisfaction with the organization and administration of the workshops. A sampling of the comments are:

"The organization was superb." (Kauai)

"Most organized workshop I've ever attended." (Kona)

"I was really impressed with the organization and efficiency exhibited by the workshop staff and the punctuality and effectiveness of the sessions. Obviously, much thought and experience went into the smooth-running, worthwhile, and rewarding sessions." (Maui)

"A well planned and thought out workshop. I would be very much interested in attending another, with or without credit!" (Hilo)

"Extremely well-organized and productive. One of the best workshops I have attended in respect to content, delivery system, and personnel participation. Professional! Those who didn't sign up really missed a good program!" (Leeward)

"This was truly one of the most outstanding workshops I have attended." (Hilo)

"I would like to see something similar presented to each faculty upon implementing the career development continuum throughout the schools." (Windward)

"Please bring back more workshops of this nature." (Kona)

"You planned and conducted a superb activity-oriented workshop! Thank you!" (Honolulu)

Perhaps most significant was the enthusiasm expressed by participants at the conclusion of the workshops--enthusiasm which is likely to enrich the Hawaii school system. One Hilo participant summed it up: "Highly stimulating. Can't wait to incorporate experiences in this class to (my) own classroom."

Results and Accomplishments Related to Objective 2: Development of Instruments for Student Growth Assessment.

A Student Growth Assessment of Career Development Inventory battery consisting of four tests, for grades 3, 6, 9, and 12, was developed. The Inventory was designed to assess student growth in career development by providing a measure of the extent to which the four goals of the Career Development Continuum, as implemented in the Career Development Continuum Curriculum Guides, are achieved. The battery does not attempt to measure attitudes toward work or vocational preferences.

After exploratory testing, preliminary versions of each of the four subtests were pilot tested with inventories administered to experimental and control groups of students in April 1975 and again in May 1975. The development of each of the inventories comprising the Student Growth Assessment Inventory is discussed for the following: Inventory Form A, Inventory Form B, Inventory Form C, and Inventory Form D.

Inventory Form A

Results of Pilot Testing

Inventory Form A was administered to 212 third grade students assigned to experimental and control groups in three schools on the island of Oahu and one school on the island of Hawaii. The tests were administered by regular classroom teachers who had received prior training. Tables 11 and 12 show the numbers of students in the pretest and posttest groups by school.

Table 11

Third Grade Students Pretested by School

School	Experimental Group	Control Group	Total
Fern	24	20	44
Konawaena	31	33	64
Kuhio	26	24	50
Maile	31	33	64
Total	102	110	212

Table 12

Third Grade Students Posttested by School

School	Experimental Group	Control Group	Total
Fern	24	16	40
Kuhio	25	22	47
Total	49	38	87

Posttests from Maile and Konawaena schools were not returned to the project office. Field supervisors reported these tests were lost in the mail.

The preliminary version of Inventory Form consisted of 120 questions divided among the four career development goal areas, with a total possible score of 110. Total possible scores for each of the subtests are as follows: Self-Realization, 25; Economic Efficiency, 25; Social Relationship, 25; Civic Responsibility, 35. Table 13 presents the pretest results, by school and by experimental and control groups of third grade students for the four subtests representing the four goal areas of career development.

All Schools	68.64	70.52	14.19	12.30	1.39	1.26	-0.35	-1.17	-1.06	-1.48

Note. [a]Exp. = Experimental Group
[b]Con. = Control Group

Examination of Table 13 reveals that, overall, the control groups scored slightly higher than the experimental groups. This is accounted for by the higher mean scores of control subjects in Fern and Kuhio schools. The differences between experimental and control groups however were not significant. This was expected as the testing design called for both groups to be at equivalent career development levels prior to treatment.

Posttest results of experimental and control groups of students at Fern and Kuhio schools are presented in Table 14.

Note. [a]Exp. = Experimental Group
[b]Con. = Control Group

Inspection of Table 14 reveals that control groups scored slightly higher than experimental groups on the posttest. This was also true on the pretest. On the posttest, both experimental and control groups at Fern scored slightly higher than the groups at Kuhio, and again, this was also true of pretest results.

Table 15 presents means, standard deviations, and *t* tests by school for third grade groups for comparisons between pre- and posttest results.

Table 15

Means, Standard Deviations, and *t* Tests
for Third Grade Experimental and Control Groups by School

School/Group	M		S.D.		*t*
	Pretest	Posttest	Pretest	Posttest	
Fern					
Experimental	69.9	72.3	12.98	14.19	.903
Control	72.1	73.1	12.04	12.30	.512
Kuhio					
Experimental	56.9	57.4	11.46	10.70	.289
Control	64.9	64.3	12.55	16.01	-.217

Inspection of Table 15 reveals there were no significant differences between pre- and posttest means. None of the *t* values was significant at .10, .05, or .01 level. The finding of non-significant results, no doubt, is a function of insufficient treatment time. The time interval between pre- and posttests was only one month.

Standardization

Raw scores of third grade students were converted to standardized scores and precentile rankings. For comparison purposes, both pretest and posttest scores were converted. Table 16 presents the pretest raw scores, standardized scores, and percentile rankings by subtest; Table 17 presents the same breakdowns for posttest scores.

	94	68	98
	96	69	99
	98	71	99

Examining Table 16 reveals that a combined subtests raw score of 58 falls into the 25th percentile, a raw score of 68 falls into the 50th percentile, and a raw score of 79 falls into the 74th percentile. It was necessary to score at least 96 points to fall into the 99th percentile. These were compared with posttest scores and percentile rankings which are presented in Table 17.

	94	70	97
	97	72	99

Examination of Table 17 reveals that a combined subtests raw score of 54 fell into the 26th percentile as compared to a pretest raw score of 53 falling into the 25th percentile. It was necessary to score 68 on the pretest to be in the 50th percentile, and only 60 on the posttest. A pretest raw score of 79 and a posttest raw score of 75 fell into the 74th percentile. And, a pretest raw score of 96 and a posttest raw score of 97 fell into the 99th percentile. In comparing pre- and posttest data it should be noted that pretest data consisted of responses by students in four schools and posttest data consisted of data from only two schools.

Evaluation of Inventory Form A

Inventory Form A was evaluated by teachers who completed a questionnaire to elicit their ratings of the following: readability, length, reliability, scoring, clarity of expression, and freedom from bias. Table 18 shows the mean ratings, on a scale of 1.0 to 5.0, of the evaluative criteria by participating third grade teachers.

Table 18

Third Grade Teacher Mean Ratings of Evaluative Criteria for Inventory Form A

Evaluative Criteria	Mean Rating
Freedom from bias	3.50
Directions to students	3.33
Directions for administration	3.33
Coverage of key concepts/subgoals	3.17
Scoring	3.00
Relevance to career development objectives	2.83
Reliability	2.80
Length	2.67
Readability	2.60
Clarity of expression	2.17

Note. N = 6
Rating: 1.0 = low 5.0 = high

Inspection of Table 18 suggests teachers felt there were inadequacies in the areas of relevance to career development objectives, reliability, length, readability, and clarity of expression. Comments of the teachers suggested the inventory should be shortened and the reading level should be lowered. Readability and clarity are related and together could account for realiability deficiencies. These factors were taken into consideration in modifying the inventory.

Participating third grade teachers also evaluated each item on Inventory Form A. For each item, teachers recommended that the item be (a) eliminated, (b) modified, or (c) retained in the existing form. When elimination or modification were recommended, teachers provided substitute items. The teacher evaluations are presented in Table 19.

Note. N = 4

Inspection of Table 19 reveals that teachers recommended that no items be eliminated or modified. Results of item evaluations by participating teachers indicated that all of the items were satisfactory in their present form and should be retained.

In addition to teacher evaluations of items, an item analysis was performed using results from pilot testing with 3rd graders. The results of the item analysis on Inventory Form A presented in Table 20 show the percent of correct responses for each item by subtest.

Civic Responsibility (continued)	15	63
	16	63
	17	50
	18	70
	19	68
	20	73

Note. Criterion level is a 75% correct response rate.

Inspection of Table 20 reveals that roughly 65% of all inventory items failed to meet the criterion level of 75%. On the Self-Realization subtest 72% of the items needed modification, as compared to 68% on the Social Relationship subtest, 67% on the Civic Responsibility subtest, and 56% on the Economic Efficiency subtest.

Reliability

Estimates of test reliability are obtained to establish the precision of a test as a measuring instrument. The reliability of any instrument refers to the extent that an individual would remain at the same relative place in a group in repeated measurements of the group. Therefore, the more reliable a test, the more consistently would an individual make the same or nearly the same score on the test, assuming no change in ability. To determine the reliability of Inventory Form A, correlation coefficients for pre- and posttest results on each of the four subtests were determined for experimental and control groups of third grade students. These data are presented in Table 21.

Table 21

Means, Standard Deviations, and Correlation Coefficients from Inventory Form A by Subtest and by Group

Subtest/Group	Mean		Standard Deviation		Correlation Coefficient
	Pre.[a]	Post.[b]	Pre.[a]	Post.[b]	
Self-Realization					
Experimental	13.93	14.28	3.54	4.22	.70
Control	16.83	16.13	3.51	4.15	.61
Economic Efficiency					
Experimental	16.46	15.93	3.69	3.85	.61
Control	16.43	16.75	3.38	3.93	.62
Social Relationship					
Experimental	14.82	15.73	4.34	4.48	.73
Control	14.86	16.48	4.69	5.81	.71
Civic Responsibility					
Experimental	17.73	17.11	4.37	4.21	.59
Control	19.70	19.08	2.96	3.77	.57
Total Test					
Experimental	62.73	64.02	13.67	14.33	.75
Control	57.03	67.91	12.69	15.09	.72

Note. [a]Pre. = Pretest
[b]Post. = Posttest

Inspection of Table 21 reveals a relatively high degree of reliability for each of the subtests based on comparisons of pre- and post-test results. The Civic Responsibility subtest was the lowest of the four with a correlation coefficient of .58, compared to a correlation coefficient of .75 for the total test.

Validity

It was deemed important to determine whether the inventory was measuring growth in those career development areas for which it was designed. The process of establishing the validity of any test is an ongoing process that requires the continuous gathering and evaluating of various types of evidence indicative of the performance of the test. Users of Inventory Form A are urged to conduct additional validation studies.

Content Validity. The high content validity of Inventory Form A arises from the fact that the items for the preliminary and modified versions of the inventory were keyed to the goals, subgoals, and objectives of the Career Development Continuum. The relationship between career development goals, subgoals, and objectives, and the 100 items which constitute Inventory Form A, after modification, is shown in Table 22.

Table 22

Relationship of Inventory Form A Items(I) to Career Development Goals(G), Subgoals(SG), and Objectives(O)

Note. SR = Self-Realization; EE = Economic Efficiency; SR* = Social Relationships; CR = Civic Responsibility

Criterion-Related Validity. Criterion-related validity refers to establishing the relationship between scores obtained on a given test and those obtained on other specific external criterion measures generally associated with the attribute measured by the test. It was not possible to determine a criterion-related validity estimate as there were no external criteria available which could be used for comparison purposes with inventory scores.

Construct Validity. The construct validity of Inventory Form A was found by determining intercorrelations among the inventory subtests. The degree of intercorrelation between preliminary versions of the subtests was determined and is presented in Table 23.

Table 23

Intercorrelation Between Subtests of Inventory Form A

Subtest	Subtest				Total Test
	Self-Realization	Economic Efficiency	Civic Responsibility	Social Relationships	
Self-Realization	1.00				
Economic Efficiency	.75	1.00			
Civic Responsibility	.62	.65	1.00		
Social Relationships	.61	.67	.66	1.00	
Total Test	.85	.86	.80	.87	1.00

Inspection of Table 23 reveals that the intercorrelation between subtests of Inventory Form A was relatively high. This is not unexpected as the four goal areas of the Career Development Continuum are closely interrelated. Because of the overlapping among goals, it is unrealistic to expect to find pure and completely independent subtests.

Revision and Synthesis of the Final Form of Inventory Form A

Although the results from the teacher item evaluation suggested no need for modifying items on Inventory Form A, the results of the item analysis clearly indicated the need to modify or eliminate some of the items. Teacher comments indicated modifications were needed in relation to readability. The wording of items included in the modified version of the inventory was changed to clarify ambiguous items and to lower the reading level. Administration and scoring were simplified. Each item was given a one point value for a possible score of 25 on each subtest, with a total possible score of 100. Each item called for a true-false response.

The final form of Inventory Form A consists of 100 items, in four parts. Each part has 25 items, with four items for each of the six subgoals, and one item a repeated item to provide a check on reliability. The repeated items are as follows: Items 25 and 11, 50 and 36, 45 and 60, and 100 and 77.

The Administrator's Manual of Instructions - Form A was modified presenting standard procedures to follow in administering and scoring the inventory. Inventory Form A was then administered to a small group of third grade students to verify readability. Results indicated all items were appropriate for a third grade level reading ability.

A copy of the Administrator's Manual of Instructions - Form A, and a copy of Inventory Form A, with correct answers marked, appear as Appendices C and D of this report.

Inventory Form B

Results of Pilot Testing

Inventory Form B was administered to 185 sixth grade students assigned to experimental and control groups in three schools on the island of Oahu and one school on the island of Hawaii. The tests were administered by regular classroom teachers who had received prior training. Tables 24 and 25 show the numbers of students in the pretest and posttest groups by school.

Table 24

Sixth Grade Students Pretested by School

School	Experimental Group	Control Group	Total
Konawaena	25	26	51
Kuhio	24	26	50
Maile	23	19	42
Puuhale	23	19	42
Total	95	90	185

Table 25

Sixth Grade Students Posttested by School

School	Experimental Group	Control Group	Total
Kuhio	24	25	49
Puuhale	21	20	41
Total	45	45	90

Posttests from Konawaena and Maile schools were not returned to the project office. Field supervisors reported these tests were lost in the mail.

The preliminary version of Inventory Form B consisted of 174 questions divided among the four career development goal areas, with a total possible score of 110. Total possible scores for each of the subtests are as follows: Self-Realization, 24; Economic Efficiency, 40; Social Relationships, 20; and Civic Responsibility, 26. Table 26 presents the pretest results, by school and by experimental and control groups of sixth grade students for the four subtests representing the four goal areas of career development.

Combined Subtests										
Konawaena	76.52	84.69	10.90	9.73	2.18	1.90	-0.70	-0.16	-0.32	-1.27
Kuhio	77.16	76.73	11.55	10.12	2.35	1.98	-0.28	-0.18	-1.14	-0.85
Maile	79.60	79.15	8.89	9.46	1.85	2.17	-1.09	-0.88	0.31	-0.60
Puuhale	72.39	67.58	11.41	10.15	2.37	2.32	-1.04	0.73	-0.58	-0.53
All Schools	76.43	77.63	10.89	11.43	1.11	1.20	-1.74	-0.54	-0.56	-1.30

Note. [a]Exp. = Experimental Group
[b]Con. = Control Group

Inspection of Table 26 reveals that overall, control groups scored slightly although not significantly higher than experimental groups. This was not unexpected as the training design specified that the groups be at similar career development levels prior to treatment.

Posttest results of experimental and control groups from Kuhio and Puuhale schools are presented in Table 27.

Table 27

Both Schools	74.80	73.42	13.30	11.46	1.98	1.70	-2.20	-0.54	-0.14	-0.97

Note. [a]Exp. = Experimental Group
[b]Con. = Control Group

Inspection of Table 27 reveals minimal differences between experimental and control group posttest scores. Both experimental and control groups at Kuhio scored slightly higher than the groups at Puuhale on the posttest.

Table 28 presents means, standard deviations and t tests by school for sixth grade groups for comparisons between pre- and posttest results.

Table 28

Means, Standard Deviations, and t Tests
for Sixth Grade Experimental and Control Groups by School

School/Group	M		S.D.		t
	Pretest	Posttest	Pretest	Posttest	
Kuhio					
Experimental	77.6	77.9	11.51	13.10	.141
Control	76.2	75.0	10.06	11.62	.768
Puuhale					
Experimental	73.3	73.6	11.50	13.10	.207
Control	67.7	71.9	10.44	11.52	2.670*

* $< .05$

Examination of Table 28 reveals there were no significant differences between pre- and posttest means for Kuhio groups of students or for the experimental group at Puuhale. None of the t values for these groups was significant at .10, .05, or .01 levels; however the t values for the control group at Puuhale was significant at .10, .05, and .01 levels. The non-significant results at Kuhio and also for the experimental group at Puuhale probably were a function of insufficient treatment time as there was only a one-month interval between test administrations. The significant difference between pre- and posttest means of the control group at Puuhale is difficult to explain. It may be that students in these classes were experiencing career development activities through other means which were powerful enough to produce differences even in the short time span.

Standardization

Both pretest and posttest raw scores of sixth grade experimental and control groups were converted to standardized scores and percentile rankings. Table 29 shows pretest conversions and Table 30 presents posttest raw scores, standardized scores and percentiles by subtest.

Table 29

Sixth Grade Pretest Raw Scores Converted to Standardized Scores and Percentiles by Subtest

	92	64	93
	93	65	95
	94	66	97
	95	67	98
	97	69	99

Examining Table 29 reveals that a combined subtests raw score of 68 falls into the 25th percentile; a raw score of 78 falls into the 50th percentile; a raw score of 84 falls into the 76th percentile; and a raw score of 97 falls into the 99th percentile. These were compared with posttest scores and percentile rankings which are presented in Table 30.

	82	55	62
	83	56	68
	84	57	72
	85	58	74
	86	59	78
	87	59	82
	89	61	86
	90	62	90
	91	62	97

Inspection of Table 30 reveals that, for the combined subtests, a posttest raw score of 69 fell into the 26th percentile as compared to a pretest raw score 68 falling into the 25th percentile. A posttest raw score of 80 was in the 51st percentile, whereas a pretest raw score of 78 was in the 50th percentile. Scores of 85 and 86 on the pre- and posttests, respectively, fell into the 78th percentile. The greatest difference was at the higher raw score levels; whereas a pretest score of 91 fell into the 92nd percentile, the same posttest raw score was in the 97th percentile. In comparing pre- and posttest data it should be noted that pretest data consisted of responses by students in four schools and posttest data consisted of data from only two schools.

Evaluation of Inventory Form B

Inventory Form B was evaluated by teachers who completed a questionnaire to elicit their ratings of the following: length, scoring, clarity, reliability, and readability. Table 31 shows the mean ratings, on a scale of 1.0 to 5.0, of the evaluative criteria by participating sixth grade teachers.

Table 31

Sixth Grade Teacher Mean Ratings
of Evaluative Criteria for Inventory Form B

Evaluative Criteria	Mean Rating
Feedom from bias	3.20
Coverage of key concepts/subgoals	3.00
Relevance to career development objectives	2.75
Directions for administration	2.60
Directions to students	2.40
Clarity of expression	2.20
Scoring	2.20
Length	2.00
Readability	2.00
Reliability	1.25

Note. N = 5
Rating: 1.0 = low 5.0 = high

Inspection of Table 31 reveals that all evaluative criteria, with the exception of freedom from bias and coverage of key concepts/subgoals, were rated relatively low. Teacher comments indicated that of all areas, readability, length, and scoring most needed modifying. The low reliability rating may be accounted for by the low readability and clarity of expression ratings which are related. All of these ratings were noted by project staff for subsequent inventory modifications.

Participating sixth grade teachers were also asked to rate each inventory item as to whether it should be (a) eliminated, (b) modified, or (c) retained in the existing form. When recommending elimination or modification, teachers provided substitute items. The teacher item evaluations are presented in Table 32.

Note. N = 3

Examination of Table 32 reveals that teachers recommended that roughly 21% of the items needed modification. No items were recommended to be eliminated. As with the teacher survey results, these evaluations were noted for use by project staff in making inventory modifications.

In addition to teacher evaluations of items, an item analysis was performed using results from pilot testing. The results of the item analysis on Inventory Form B presented in Table 33 show the percent of correct responses for each item by subtest.

	20	33

Note. Criterion level is a 75% correct response rate.

Examination of Table 33 reveals that roughly 58% of all items on Inventory Form B failed to meet the criterion level of 75%. On the Civic Responsibility subtest 100% of the items needed modification, as compared to 78% on the Social Relationship subtest, 57% on the Economic Efficiency subtest, and 31% on the Self-Realization subtest.

Reliability

In order to establish the precision of a test as a measuring instrument, estimates of test reliability are obtained. The reliability of any instrument refers to the extent that an individual would remain at the same relative place in a group in repeated measurements of the group. The more reliable a test, the more consistently would an individual make the same or nearly the same score on the test, assuming no change in ability. To determine the reliability of Inventory Form B, correlation coefficients for pre- and posttest results on each of the four subtests were determined for experimental and control groups of sixth grade students. These data are presented in Table 34.

Table 34

Means, Standard Deviations, and Correlation Coefficients from Inventory Form B by Subtest and by Group

Subtest/Group	Mean		Standard Deviation		Correlation Coefficient
	Pre.[a]	Post.[b]	Pre.[a]	Post.[b]	
Self-Realization					
Experimental	19.41	19.58	3.38	3.20	.73
Control	19.18	19.88	4.16	2.88	.63
Economic Efficiency					
Experimental	27.14	27.48	4.50	5.35	.77
Control	26.02	25.09	4.16	4.99	.59
Civic Responsibility					
Experimental	15.78	16.53	3.75	4.52	.77
Control	15.39	16.30	3.36	4.00	.50
Social Relationships					
Experimental	13.37	13.12	2.40	2.64	.31
Control	12.16	12.37	2.72	2.46	.45
Total Test					
Experimental	75.80	76.04	11.56	13.11	.78
Control	72.69	73.74	10.96	11.54	.77

Note. [a]Pre. = Pretest
[b]Post. = Posttest

Examination of Table 34 reveals a relatively high degree of reliability for each of the subtests based on comparisons of pre- and posttest results. The Social Relationships subtest was the lowest of the four with correlation coefficients of .31 and .45 for experimental and control groups respectively.

Validity

It was deemed important to determine whether Inventory Form B was measuring growth in those career development areas for which it was designed. The process of establishing the validity of any test is an ongoing process that requires the continuous gathering and evaluating of various types of evidence indicative of the performance of the test. Users of Career Development Inventory Form B are urged to conduct additional validation studies.

Content Validity. The high content validity of Inventory Form B arises from the fact that the items for the preliminary and modified versions of the inventory were keyed to the goals, subgoals, and objectives of the Career Development Continuum. The relationship between career development goals, subgoals, and objectives, and the 100 items which constitute Inventory Form B, after modification, is shown in Table 35.

Table 35

Relationship of Inventory Form B Items(I) to Career Development Goals(G), Subgoals(SG), and Objectives(O)

24	1	6	-	49	2	6	2	74	3	6	-	99	4	6	-
25	1	1	2	50	2	1	2	75	3	1	1	100	4	1	-

Note. SR = Self-Realization SR* = Social Relationships
EE = Economic Efficiency CR = Civic Responsibility

Criterion-Related Validity. Criterion-related validity refers to establishing the relationship between scores obtained on a given test and those obtained on other specific external criterion measures generally associated with the attribute measured by the test. It was not possible to determine a criterion-related validity estimate as there were no external criteria available which could be used for comparison purposes with Inventory Form B scores.

Construct Validity. The construct validity of Inventory Form B was determined by obtaining intercorrelations among the inventory subtests. The degree of intercorrelation between preliminary versions of the subtests was determined and is presented in Table 36.

Table 36

Intercorrelation Between Subtests of Inventory Form B

Subtest	Subtest				Total Test
	Self-Realization	Economic Efficiency	Civic Responsibility	Social Relationships	
Self-Realization	1.00				
Economic Efficiency	.53	1.00			
Civic Responsibility	.70	.77	1.00		
Social Relationships	-.01	.13	.34	1.00	
Total Test	.74	.82	.95	.41	1.00

Inspection of Table 36 reveals that the intercorrelations between subtests of Inventory Form B are relatively high in most instances. This is not unexpected as the four goal areas of the Career Development Continuum are closely interrelated. Because of the overlapping among goals, it is unrealistic to expect to find pure and completely independent subtests.

Revision and Synthesis of Final Form of Inventory Form B

Modifications were made on Inventory Form B based on teacher evaluations and comments, and the item analysis. The wording of items was changed to clarify ambiguities and to lower the reading level. All items included were four-choice multiple choice items, each having only one correct response. The inventory was shortened to 100 items, 25 items for each of four subtests. There are four items for each of the six subgoals, and one item a repeated item to provide a check on reliability. The repeated items are as follows: Items 4 and 25, 29 and 50, 51 and 75, and 79 and 100. Scoring was also simplified as each item on the modified version is worth one point, making a total possible score of 100.

The Administrator's Manual of Instructions - Form B was also modified and presents standard procedures to follow in administering and scoring the inventory. Inventory Form B was then administered to a group of sixth grade students. Results indicated that the modifications made, particularly the lower reading level, were satisfactory.

A copy of the Administrator's Manual of Instructions - Form B and a copy of Inventory Form B, with correct answers marked, appear as Appendices E and F of this report.

Inventory Form C

Results of Pilot Testing

Inventory Form C was administered to 255 ninth grade students assigned to experimental and control groups in four schools on the island of Oahu and one school on the island of Hawaii. The tests were administered by regular classroom teachers who had received prior training. Tables 37 and 38 show the number of students in pretest and posttest groups by school.

Table 37

Ninth Grade Students Pretested by School

School	Experimental Group	Control Group	Total
Central	19	22	441
Jarrett	31	25	56
Konawaena	27	24	51
Nanakuli	30	25	55
Waipahu	24	28	52
Total	131	124	255

Table 38

Ninth Grade Students Posttested by School

School	Experimental Group	Control Group	Total
Central	14	20	34
Jarrett	30	24	54
Waipahu	23	27	50
Total	67	71	138

Posttests from Konawaena and Nanakuli were not returned to the project office. Field supervisors reported these tests were lost in the mail.

The preliminary version of Inventory Form C had a total possible score of 110 points. The Self-Realization subtest had 24 possible points, the Economic Efficiency subtest 40 possible points, the Civic Responsibility subtest 26 possible points, and the Social Relationships subtest 20 possible points. Table 39 presents the pretest results, by school and by experimental and control groups of ninth grade students for the four subtests representing the four goal areas of career development.

Note. [a]Exp. = Experimental Group
[b]Con. = Control Group

Inspection of Table 39 reveals that, overall, experimental groups scored slightly higher than control groups within the same school, as well as across schools. However, the difference was not significant. The testing design required that both groups be at equivalent career development levels at the time of the pretest. Posttest results are given in Table 40.

Note. [a]Exp. = Experimental Group
[b]Con. = Control Group

Examination of Table 40 reveals that experimental groups at each school scored somewhat higher than control groups on all parts of the posttest. Similarly, on total test mean scores, both experimental and control groups scored higher than on the pretest. A *t* test was conducted to determine if the mean differences between pre- and posttests were significant, the results of which are presented in Table 41.

Table 41

Means, Standard Deviations, and *t* Tests
for Ninth Grade Experimental and Control Groups by School

School/Group	M		S.D.		*t*
	Pretest	Posttest	Pretest	Posttest	
Central					
Experimental	74.4	79.2	6.56	10.62	1.983**
Control	67.3	72.6	8.47	10.30	3.722*
Jarrett					
Experimental	78.8	79.2	4.72	7.04	.283
Control	70.[illegible]	69.5	7.45	8.31	-.749
Waipahu					
Experimental	73.3	77.3	6.06	7.90	2.94 *
Control	69.1	67.8	11.10	10.75	-.858

* <.10 ** <.05

Examination of Table 41 reveals that there were no significant differences between pre- and posttest results of experimental and control groups at Jarrett or for the control group at Waipahu. None of the *t* values was significant at the .01, .05, or .10 levels. These non-significant differences probably are a function of insufficient treatment time which was only a one month period. The mean difference was significant for the control group at Central and the experimental group at Waipahu at all three levels. For the experimental group at Central, the mean difference was significant at the .05 level. These significant differences between pre- and posttest mean scores are possibly due to students experiencing career development experiences, other than those from the Career Development Curriculum Guides, which could be powerful enough to affect posttest results even in the short time span between tests.

Standardization

Raw scores of ninth grade students were converted to standardized scores and percentile rankings. For comparison purposes, both pretest and posttest scores were converted. Table 42 presents the pretest raw scores, standardized scores, and percentile rankings by subtest; Table 43 presents the same breakdowns for posttest scores.

Table 42

Ninth Grade Pretest Raw Scores Converted to Standardized Scores and Percentiles by Subtest

	81	60	85
	82	61	89
	83	62	90
	84	63	93
	86	66	95
	87	67	97
	88	68	98
	98	80	99

Inspection of Table 42 reveals that a combined subtests, or total test, raw score of 67 falls into the 24th percentile; a raw score of 75 falls into the 55th percentile; a raw score of 79 falls into the 76th percentile; and a raw score of 98 falls into the 99th percentile. These were compared with posttest scores and percentile rankings which are presented in Table 43.

Table 43

	87	61	87
	88	63	92
	89	64	95
	90	65	97
	91	66	99

Examination of Table 43 reveals that a combined subtests raw score of 72 fell into the 25th percentile as compared to a pretest combined subtests raw score of 67 falling into the 24th percentile. On the posttest it was necessary to score 79 to be in the 54th percentile, whereas a pretest score of 75 fell into the 55th percentile. A posttest raw score of 86 fell into the 82nd percentile and a pretest raw score of 80 fell into the 81st percentile. And, a posttest score of 91 fell into the 99th percentile as compared to a pretest score of 98 falling into

the 99th percentile. In comparing pre- and posttest data it should be noted that pretest data consisted of responses by students in five schools and posttest data consisted of data from students in three schools.

Evaluation of Inventory Form C

Inventory Form C was evaluated by participating ninth grade teachers in May 1975. Teachers were asked to complete a Survey Form which elicited their ratings of the following: directions for administration, readability, relevance, and reliability. The mean ratings, on a scale of 1.0 to 5.0, by teachers of the evaluative criteria are presented in Table 44.

Table 44

Ninth Grade Teacher Mean Ratings
of Evaluative Criteria for Inventory Form C

Evaluative Criteria	Mean Rating
Relevance to career development objectives	3.44
Coverage of key concepts/subgoals	3.44
Directions for administration	3.44
Directions to students	3.33
Freedom from bias	3.22
Readability	2.89
Reliability	2.78
Clarity of expression	2.78
Length	2.67
Scoring	2.56

Note. N = 8
Rating: 1.0 = low 5.0 = high

Inspection of Table 44 indicates the criteria which were rated low were readability, reliability, clarity of expression, length, and scoring. Ratings and comments of teachers indicated that directions for administration, directions to students, freedom from bias, relevance to career development objectives, and coverage of key concepts/subgoals were satisfactory. This evaluation was taken into consideration by project staff at the time modifications were made on Inventory Form C and the accompanying Administrator's Manual of Instructions - Form C.

Participating ninth grade teachers were also asked to rate each item as to whether it should be (a) eliminated, (b) modified, or (c) retained in the existing form. When recommending elimination or modification, teachers provided substitute items. The teacher evaluations of items are presented in Table 45.

Note. N = 6

Examination of Table 45 reveals that teachers recommended that roughly 5% of the items were in need of modification. They did not recommend that any items be eliminated. As with the survey results, these evaluations were noted for use in subsequent inventory modification.

In addition to teacher evaluations of items, an item analysis was performed using results from pilot testing with ninth graders. The results of the item analysis on Inventory Form C presented in Table 46 show the percent of correct responses for each item by subtest.

Note. Criterion level is a 75% correct response rate.

Examination of Table 46 reveals that roughly 79% of all items on Inventory Form C failed to meet the criterion level of 75%. On the Self-Realization subtest 85% of the items needed modification as compared to 80% of the items on the Civic Responsibility subtest, 78% of the Economic Efficiency items, and 73% of the Social Relationships items. This information was used in modifying the inventory.

Reliability

Estimates of test reliability are obtained to establish the precision of a test as a measuring instrument. The reliability of any instrument refers to the extent that an individual would remain at the same relative place in a group in repeated measurements of the group. Therefore, the more reliable a test, the more consistently would an individual make the same or nearly the same score on the test, assuming no change in ability. To determine the reliability of Inventory Form C, correlation coefficients for pre- and posttest results on each of the four subtests were determined for experimental and control groups of ninth grade students. These data are presented in Table 47.

Table 47

Means, Standard Deviations, and Correlation Coefficients from Inventory Form C by Subtest and by Group

Subtest/Group	Mean		Standard Deviation		Correlation Coefficient
	Pre.[a]	Post.[b]	Pre.[a]	Post.[b]	
Self-Realization					
Experimental	16.08	16.96	2.29	2.75	.27
Control	15.66	22.58	2.77	5.26	.35
Economic Efficiency					
Experimental	25.33	25.42	3.61	4.58	.61
Control	21.85	16.89	4.35	3.04	.58
Civic Responsibility					
Experimental	19.41	20.35	2.52	2.79	.58
Control	17.08	16.89	3.34	3.04	.46
Social Relationships					
Experimental	15.73	15.78	4.35	2.07	.41
Control	14.54	14.51	2.72	3.40	.29
Total Test					
Experimental	75.98	78.51	6.08	7.98	.56
Control	69.17	69.76	9.24	9.91	.69

Note. [a]Pre. = Pretest
[b]Post. = Posttest

Inspection of Table 47 reveals that the Self-Realization subtest had the lowest correlation coefficient, next was the Social Relationship subtest, followed by the Social Relationships and Civic Responsibility subtests. This information was utilized in modifying Inventory Form C.

Validity

It was deemed important to determine whether Inventory Form C was measuring growth in those career development areas for which it was designed. The process of establishing the validity of any test is an ongoing process that requires the continuous gathering and evaluating of various types of evidence indicative of the performance of the test. Users of Inventory Form C are urged to conduct additional validation studies.

Content Validity. The high content validity of Inventory Form C arises from the fact that the items for the preliminary and modified versions of the inventory were keyed to the goals, subgoals, and objectives of the Career Development Continuum. The relationship between career development goals, subgoals, and objectives, and the 100 items which constitute Inventory Form C, after modification, is shown in Table 48.

Table 48

Relationship of Inventory Form C Items(I) to
Career Development Goals(G), Subgoals(SG), and Objectives(O)

20	1	5	3	45	2	5	-	70	3	5	2	95	4	5	-
21	1	6	1	46	2	6	1	71	3	6	1	96	4	6	1
22	1	6	2	47	2	6	-	72	3	6	-	97	4	6	-
23	1	6	3	48	2	6	-	73	3	6	-	98	4	6	-
24	1	6	3	49	2	6	-	74	3	6	-	99	4	6	-
25	1	2	1	50	2	2	1	75	3	3	1	100	4	3	-

Note. SR = Self-Realization SR* = Social Relationships
EE = Economic Efficiency CR = Civic Responsibility

Criterion-Related Validity. Criterion-related validity refers to establishing the relationship between scores obtained on a given test and those obtained on other specific external criterion measures generally associated with the attribute measured by the test. It was not possible to determine a criterion-related validity estimate as there were no external criteria available which could be used for comparison purposes with inventory scores.

Construct Validity. The construct validity of Inventory Form C was found by determining intercorrelations among the inventory subtests. The degree of intercorrelation between preliminary versions of the subtests was determined and is presented in Table 49.

Table 49

Intercorrelation Between Subtests of Inventory Form C

Subtest	Subtest				Total Test
	Self-Realization	Economic Efficiency	Civic Responsibility	Social Relationships	
Self-Realization	1.00				
Economic Efficiency	.17	1.00			
Civic Responsibility	.21	.52	1.00		
Social Relationships	.31	.06	.28	1.00	
Total Test	.58	.75	.74	.55	1.00

Inspection of Table 49 reveals that the intercorrelations between subtests of Inventory Form C ranged from a high of .52 (Civic Responsibility--Economic Efficiency) to a low of .06 (Social Relationship--Economic Efficiency). Because of the overlapping among career development goals, it is unrealistic to expect to find pure and completely independent subtests.

Revision of Synthesis of the Final Form of Inventory Form C

Modifications made on Inventory Form C were based on teacher evaluations and comments, as well as the item analysis. In revising items or adding new ones, wording was modified for clearer expression and to obtain a lower reading level. To facilitate inventory administration and scoring: (a) items were modified so that all were four-choice multiple choice items, each having only one correct response, (b) the number of items were reduced from 166 to 100, 25 items for each of four subtests, and (c) each item was given a one point value, making a total possible score of 100. The final form of Inventory Form C consists of 100 items, divided into four parts. Each part has 25 items, with four items for each of the six subgoals, and one item a repeated item to provide a check on reliability. The repeated items are as follows: items 6 and 25, 30 and 50, 59 and 75, and 85 and 100.

Modifications were also made in the Administrator's Manual of Instructions - Form C to present standard procedures to follow in administering and scoring the inventory. Inventory Form C was then administered to a small group of ninth grade students to verify readability. Results indicated modifications implemented were satisfactory in meeting the needs pointed out by teacher evaluations and the item analysis.

A copy of the Administrator's Manual of Instructions - Form C and a copy of Inventory Form C, with correct answers marked, appear as Appendices G and H of this report.

Inventory Form D

Results of Pilot Testing

Inventory Form D was administered to 214 twelfth grade students assigned to experimental and control groups in three schools on the island of Oahu and one school on the island of Hawaii. The tests were administered by regular classroom teachers who had received prior training. Tables 50 and 51 show the numbers of students in the pretest and posttest groups by school.

Table 50

Twelfth Grade Students Pretested by School

School	Experimental Group	Control Group	Total
Kaimuki	43	56	99
Konawaena	22	13	35
Nanakuli	21	27	48
Waipahu	17	15	32
Total	103	111	214

Table 51

Twelfth Grade Students Posttested by School

School	Experimental Group	Control Group	Total
Kaimuki	30	19	49
Total	30	19	49

Posttests from Konawaena, Nanakuli, and Waipahu schools were not returned to the project office. Field supervisors reported these tests were lost in the mail.

A perfect score of 110 was possible on Inventory Form D. Total possible scores for each subtest were as follows: Self-Realization, 24; Economic Efficiency, 40; Civic Responsibility, 26; and Social Relationships, 20. Pretest results, by school and by experimental and control groups on twelfth grade students for the four subtests representing the four goal areas of career development are presented in Table 52.

Table 52

Combined Subtests										
Konawaena	85.81	78.84	5.47	6.49	1.16	1.80	-0.72	0.51	-0.10	-0.86
Kaimuki	83.86	81.28	6.33	8.22	.96	1.09	0.06	-0.11	-0.30	-0.39
Nanakuli	69.09	70.34	9.85	9.52	2.15	1.86	-0.83	-0.45	-0.84	-0.68
Waipahu	77.52	78.73	9.03	10.09	2.19	2.60	-0.90	-0.98	-0.12	0.81
All Schools	80.22	78.06	9.67	9.61	0.95	0.91	-3.58	-1.61	2.02	0.73

Note. [a]Exp. = Experimental Group
[b]Con. = Control Group

Examination of Table 52 reveals that, overall, there is very little difference between pretest results of experimental and control groups within a school. However, both experimental and control groups in Nanakuli scored slightly lower than other schools, and experimental and control groups in Kaimuki scored slightly higher than other schools. These differences were not significant. The non-significant differences were expected as the testing design called for both control and experimental groups to be at equivalent career development levels prios to treatment. Posttest results from experimental and control groups of students at Kaimuki are presented in Table 53.

Table 53

Grade 12 Posttest Results by Subtest and by School

Subtest/School	M		S.D.		S.D.(M)		Skewness		Kurtosis	
	Exp.[a]	Con.[b]	Exp.[a]	Con.[b]	Exp.[a]	Con.[b]	Exp.[a]	Con.[b]	Exp.[a]	Con.[b]
Self-Realization										
Kaimuki	19.06	18.26	2.34	2.40	.42	.55	0.61	-3.87	0.15	4.89
Economic Efficiency										
Kaimuki	30.30	28.52	4.14	5.14	.75	1.18	-0.19	-1.88	-0.02	0.32
Civic Responsibility										
Kaimuki	20.40	20.00	2.19	3.24	.40	0.74	-1.21	-1.01	-0.06	0.10
Social Relationships										
Kaimuki	16.16	15.68	2.65	2.26	.48	.51	-2.80	0.03	3.04	-1.50
Combined Subtests										
Kaimuki	86.13	82.84	8.09	8.73	1.47	2.00	-0.96	-2.04	0.63	1.23

Note. [a]Exp. = Experimental Group
[b]Con. = Control Group

Inspection of Table 53 reveals that, overall, the experimental group scored slightly higher than the control group at Kaimuki. This was also true of pretest results of the two groups. Table 54 presents means, standard deviations, and t tests for twelfth grade groups for comparisons between pre- and posttest results.

Table 54

Means, Standard Deviations, and t Tests
for Twelfth Grade Experimental and Control Groups by School

School/Group	M		S.D.		t
	Pretest	Posttest	Pretest	Posttest	
Kaimuki					
Experimental	84.1	87.6	6.95	6.87	2.763*
Control	83.3	84.5	7.84	6.58	0.995

Note. * $<$ .10

Inspection of Table 54 reveals there were no significant differences between pre- and posttest means of the control group, but the opposite was true of the experimental group. The non-significant results are probably a function of insufficient treatment time which was only a one month period. The significant difference between pre- and posttest means of the experimental group are probably not solely a function of treatment as the time span between tests was only one month, but the significant difference could be due to a combination of many career development experiences undergone by the experimental group, which included the Career Development Continuum Curriculum Guide experiences as well as others.

Standardization

Raw scores of twelfth grade students were converted to standardized scores and percentile rankings. For comparison purposes, both pretest and posttest scores were converted. Table 55 presents the pretest raw scores, standardized scores, and percentile rankings by subtest; Table 56 presents the same breakdowns for posttest scores.

Table 55

Social Relationships	13	38	13
	14	42	34
	15	47	47
	17	56	58
	18	61	79
	19	65	97
Combined Subtests	58	21	3
	72	37	8
	73	38	13
	78	44	18
	79	45	24
	80	47	29
	81	48	37
	83	50	47
	84	51	55
	86	54	61
	87	55	66
	90	58	74
	91	60	82
	92	61	89
	94	63	97

Inspection of Table 56 and a comparison of it with Table 55 reveals that a pretest combined subtests raw score of 76 fell into the 27th percentile as compared to a posttest raw score of 79 falling into the 24th percentile. A posttest raw score of 84 fell into the 55th percentile, whereas the same score on the pretest fell into the 59th percentile. It was necessary to score 90 to be in the 74th percentile in the posttest group, and it was necessary to score 87 to be in the 76th percentile in the pretest group. Finally, a pretest score of 94 fell into the 96th percentile as compared to the same posttest raw score falling into the 97th percentile. In comparing pre- and posttest data it should be noted that pretest data consisted of responses by students in four schools and posttest data consisted of data from only one school.

Evaluations of Inventory Form D

Participating twelfth grade teachers completed a questionnaire designed to elicit their evaluation of Inventory Form D. Teachers were asked to rate, on a scale of 1.0 to 5.0, such evaluative criteria as readability, length, scoring, and reliability. Table 57 presents the mean ratings on the evaluative criteria.

Table 57

Twelfth Grade Teacher Mean Ratings of Evaluative Criteria for Inventory Form D

Evaluative Criteria	Mean Rating
Freedom from bias	3.63
Length	3.63
Coverage of key concepts/subgoals	3.57
Directions for administration	3.38
Readability	3.38
Relevance to career development objectives	3.13
Clarity of expression	3.25
Directions to students	3.14
Scoring	2.71
Reliability	2.38

Note. N = 8
Rating: 1.0 = low 5.0 = high

Inspection of Table 57 reveals that scoring and reliability were the only criteria rated relatively low. In addition, teacher comments indicated that the scoring needed to be simplified, a lower reading level was needed, and there were some ambiguous items which needed clarification. The teacher comments and ratings were noted for subsequent inventory modifications.

Participating twelfth grade teachers were also asked to rate each inventory item as to whether it should be (a) eliminated, (b) modified, or (c) retained in the existing form. When recommending elimination or modification, teachers provided substitute items. The teacher evaluations are presented in Table 58.

Note. N = 3

Inspection of Table 58 reveals that teachers recommended that roughly 2% of the items needed modification. They did not recommend that any items be eliminated.

In addition to the teacher evaluations, an item analysis was performed using results from pilot testing with twelfth graders. Results of the item analysis on Inventory Form D presented in Table 59 show the percent of correct responses for each item by subtest.

	15	62
	16	63
	17	35
	18	75
	19	85
	20	62

Note. Criterion level is a 75% correct response rate.

Inspection of Table 59 reveals that roughly 57% of all Inventory Form D items did not meet criterion level of 75%. On the Social Relationships subtest, roughly 77% of the items needed modification, as compared to 75% of the Civic Responsibility items, 55% of the Economic Efficiency items, and 31% of the Self-Realization items.

Reliability

Estimates of test reliability are obtained to establish the precision of a test as a measuring instrument. The reliability of any instrument refers to the extent that an individual would remain at the same relative place in a group in repeated measurements of the group. Therefore, the more reliable a test, the more consistently would an individual make the same or nearly the same score on the test, assuming no change in ability. To determine the reliability of Inventory Form D, correlation coefficients for pre- and posttest results for each of the four subtests were determined for experimental and control groups of twelfth grade students. These data are presented in Table 60.

Table 60

Means, Standard Deviations, and Correlation Coefficients from Inventory Form D by Subtest and by Group

Subtest/Group	Mean		Standard Deviation		Correlation Coefficient
	Pre.[a]	Post.[b]	Pre.[a]	Post.[b]	
Self-Realization					
Experimental	18.07	19.34	2.26	2.26	.32
Control	18.05	18.23	1.78	2.48	.21
Economic Efficiency					
Experimental	29.19	30.96	5.02	3.61	.44
Control	29.35	29.64	3.93	3.99	.81
Civic Responsibility					
Experimental	20.11	20.69	2.16	1.97	.56
Control	20.05	20.47	2.60	2.76	.85
Social Relationships					
Experimental	16.50	16.46	1.47	1.98	.64
Control	15.88	15.76	2.17	2.27	.65
Total Test					
Experimental	84.15	87.65	6.95	6.87	.58
Control	83.35	84.52	7.84	6.58	.80

Note. [a]Pre. = Pretest
[b]Post. = Posttest

Examination of Table 60 reveals a relatively high degree of reliability for each of the subtests, with the exception of the Self-Realization subtest, based on comparisons of pre- and posttest results. The Self-Realization subtest was the lowest of the four with correlation coefficients for experimental and control groups of .32 and .21, respectively. This information was noted for use by staff when modifying the inventory.

Validity

It was deemed important to determine whether the inventory was measuring growth in those career development areas for which it was designed. The process of establishing the validity of any test is an ongoing process that requires the continuous gathering and evaluating of various types of evidence indicative of the performance of the test. Users of Inventory Form D are urged to conduct additional validation studies.

Content Validity. The high content validity of Inventory Form D arises from the fact that the items for the preliminary and modified versions of the inventory were keyed to the goals, subgoals, and objectives of the Career Development Continuum. The relationship between career development goals, subgoals, and objectives, and the 100 items which constitute Inventory Form D, after modification, is shown in Table 61.

Table 61

Relationship of Inventory Form D Items(I) to
Career Development Goals(G), Subgoals(SG), and Objectives(O)

10	1	3	1	35	2	3	1	60	3	3	-	85	4	3	-
11	1	3	2	36	2	3	2	61	3	3	-	86	4	3	-
12	1	3	2	37	2	3	2	62	3	3	-	87	4	3	-
13	1	4	1	38	2	4	1	63	3	4	1	88	4	4	1
14	1	4	1	39	2	4	-	64	3	4	-	89	4	4	-
15	1	4	2	40	2	4	-	65	3	4	-	90	4	4	-
16	1	4	2	41	2	4	-	66	3	4	-	91	4	4	-
17	1	5	1	42	2	5	1	67	3	5	1	92	4	5	1
18	1	5	1	43	2	5	1	68	3	5	1	93	4	5	-
19	1	5	2	44	2	5	2	69	3	5	2	94	4	5	-
20	1	5	3	45	2	5	2	70	3	5	2	95	4	5	-
21	1	6	1	46	2	6	1	71	3	6	1	96	4	6	1
22	1	6	1	47	2	6	-	72	3	6	1	97	4	6	-
23	1	6	2	48	2	6	-	73	3	6	-	98	4	6	-
24	1	6	2	49	2	6	-	74	3	6	-	99	4	6	-
25	1	2	1	50	2	1	-	75	3	3	1	100	4	2	-

Note. SR = Self-Realization
EE = Economic Efficiency
SR* = Social Relationships
CR = Civic Responsibility

Criterion-Related Validity. Criterion-related validity refers to establishing the relationship between scores obtained in a given test and those obtained on other specific external criterion measures generally associated with the attribute measured by the test. It was not possible to determine a criterion-related validity estimate as there were no external criteria available which could be used for comparison purposes with inventory scores.

Construct Validity. The construct validity of Inventory Form D was found by determining intercorrelations among the inventory subtests. The degree of intercorrelation between preliminary versions of the subtests was determined and is presented in Table 62.

Table 62

Intercorrelation Between Subtests of Inventory Form D

Subtest	Subtest				Total Test
	Self-Realization	Economic Efficiency	Civic Responsibility	Social Relationships	
Self-Realization	1.00				
Economic Efficiency	-.08	1.00			
Civic Responsibility	.57	-.14	1.00		
Social Relationships	.44	-.25	.74	1.00	
Total Test	.71	.41	.69	.58	1.00

Examination of Table 62 reveals that the intercorrelations between subtests of Inventory Form D are relatively low, with the exception of the intercorrelation between the Social Relationships and Civic Responsibility subtests. Thus, despite the overlapping of the four career development goal areas, this test had relatively pure measures in three areas. Since the four goal areas of the Career Development Continuum are closely interrelated, it is unrealistic to expect to find completely pure and independent subtests.

Revision and Synthesis of the Final Form of Inventory Form D

The item analysis and teacher evaluations and comments formed the basis for modifying Inventory Form D. In revising items or adding new items, wording was modified for clearer expression and to remove ambiguities, as well as to obtain a lower reading level. To facilitate inventory administration and scoring: (a) items were modified so that all were four-choice multiple choice items, each having only one correct response, (b) the number of items was reduced from 188 to 100 items, 25 items for each of the four subtests, and (c) each item was given a one point value, making a total possible score of 100. The final form of Inventory Form D consists of 100 items, in four parts. Each part has 25 items, with four items for each of the six subgoals, and one item a repeated item to provide a check on reliability. The repeated items are as follows: Items 6 and 25, 29 and 50, 59 and 75, and 81 and 100.

The Administrator's Manual of Instructions - Form D was modified presenting standard procedures to follow in administering and scoring the inventory. Inventory Form D was then administered to a small group of twelfth grade students. Results indicated all items were appropriate for a twelfth grade reading ability.

A copy of the Administrator's Manual of Instructions - Form D and a copy of Inventory Form D, with correct answers marked, appear as Appendices I and J of this report.

A PROJECT EVALUATION REPORT

Preparatory Activities for Implementing The Hawaii Career Development Continuum In Hawaii's Schools

Submitted to

PROJECT EVALUATION REPORT

Hawaii Career Development Continuum Project

Phase III

Introduction

The Hawaii State Department of Education has undertaken a systematic effort to integrate a comprehensive program of career education into the State of Hawaii's schools. This effort envisioned a sequential, step by step approach that would involve various phases over an extended period of time. This procedure is intended to insure an efficient and effective utilization of a comprehensive career development program.

The overall effort has come to be known as the Career Development Continuum Project (CDC). The project was implemented under provisions of P.L. 90-576, Part C, with funds awarded to the State Board of Vocational Education and sponsored by the State Department of Education. The project has been conducted by the Educational Research and Development Center and the Department of Educational Psychology of the College of Education, University of Hawaii, under contract to the State Department of Education. The University of Hawaii appointed Dr. T. Antoinette Ryan as project coordinator.

The initial phases produced 1) a career development model and conceptual framework, Kindergarten through grade 14, and 2) a set of related curriculum guides for school implementation, Kindergarten through grade 12. The project under consideration in this evaluation report is Phase III in the total systematic effort. The elements developed in previous phases were to be utilized in Phase III involving the following (Memorandum of Agreement, May, 1974):

1. inservice training of personnel
2. development of testing materials and instruments
3. evaluation and revision of the model and guides

Sources for the Evaluation Report

Information for this report was obtained from the following sources:

1. Review of CDC documents from previous phases:

   A Conceptual Framework for a Career Development Continuum K-14 for Hawaii's Schools

   Hawaii Career Development Continuum Curriculum Guide K-3

   Hawaii Career Development Continuum Curriculum Guide 4-6

   Hawaii Career Development Continuum Curriculum Guide 7-9

Hawaii Career Development Continuum Curriculum Guide 10-12

2. Career Development Continuum Project 1974 Workshop Syllabus

3. Materials and content used in 1974 Workshops, including handouts, references, agenda outlines, descriptions of procedures, methods and techniques.

4. Summary Report of Individual Workshop and Combined Workshops Data collected by the project coordinator.

5. Personal contact with the project coordinator and her staff.

6. Observations of the inservice program including discussion with program participants.

7. Preliminary copies of a Career Development Inventory battery.

8. Report of findings from pilot testing of the Career Development Inventory.

9. Revised Hawaii Career Development Continuum Curriculum Guides.

The Inservice Training Program

The Department of Education and the University of Hawaii collaborated on arrangements for the training program. The basic format for instruction and the target population for the program were agreed upon after reviewing resources available and imposed constraints. It was decided to offer a series of orientation workshops through the University of Hawaii, Manoa and Hilo, Division of Continuing Education and Community Services, and the Department of Educational Psychology. Dr. Ryan and her staff were responsible for defining the specific program objectives, developing the staff development procedures and materials, and implementing the program as planned.

The program series consisted of seven 2-day workshops which were designed to make some initial impact on a representative number of schools. Therefore, all seven major districts in the State of Hawaii were chosen for participation in the program. A two day workshop for one semester hour credit offered through the University of Hawaii's Center for Continuing Education was judged to be a feasible time commitment and reasonable incentive. Any school personnel in the designated areas, regardless of position assignment, could participate for credit or non-credit. The nature of the workshop did pose some restrictions on the number of participants.

The seven 15 hour workshops were held on Fridays and Saturdays, October through December 1974. The same basic instructional and staff development procedures were used in each workshop.

Factors Evaluated

This evaluation report will attend to the following factors and provide a summary of concluding remarks:

Staff Development Rationale

Selection of Participants

Organization of Workshops

Goals and Objectives of the Workshops

Process Evaluation

Outcome Evaluation

Staff Development Rationale

The career development workshops were described as one of a series of orientation experiences for school personnel. The specific intent seemed to be the implementation of the set of curriculum guides for elementary and secondary personnel. This mission is well documented in the workshop syllabus. The attention given to the concept of career development and systematic curriculum development scheme was well founded and developed. In this reviewer's opinion, they are high quality products.

However, preoccupation with the career development continuum framework may have caused a channeled view that has ignored some important development needs. There is no evidence of the typical staff development concerns such as the following:

1. Needs assessment of staff
2. Procedure for selection of participants
3. Differential needs of groups e.g. teachers, counselors, or administrators
4. Identification of competencies and attitudes required for goal achievement
5. Longitudinal and followup activities
6. Suggested school, group, and individualized programs
7. Integration of staff development within implementation plan
8. Provision of resources and a continuing education plan to support inservice activities

The most serious indictment may be the failure to provide an overall plan and/or rationale for staff development. Discussions with the

project coordinator suggested that some consideration had been given to a systematic staff development program by the University of Hawaii and DOE coordinators but documentation or other evidence of such a commitment were not available.

Selection of Participants

The career development workshops were organized around Hawaii's seven districts (regions). Specific school participation was not controlled. This plan did guarantee a spreadoff effect to the total state. All districts solicited participation of school personnel from elementary and secondary schools. Within the limitations of workshop size, this approach seemed reasonably effective.

Since the major concern of the project was the implementation of curriculum guides, a more selective process for workshop participation may have contributed more specific school building/unit implementation. Participation may have been organized around school units and representation of different school personnel. What are the critical school personnel needed to implement a program of career development in a particular school unit? From this point of departure each school unit could develop its own implementation plan, including their own individualized staff development program. This approach would have assured the important mixture of leadership, instruction, and guidance staff. Followup and continued progress activities could be better followed up on the basis of a building or unit approach. Workshop goals and instructional processes could have featured this point of departure. In light of the participation groups (See Summary Report), this would have been a viable and easily administered contingency.

Organization of Workshops

The Hawaii DOE and project coordinator should be credited with an outstanding job of workshop organization. This aspect is documented in the participants response in the Summary Report and feedback received by the evaluator from workshop participants. The length of the workshop was feasible (15 hours), Friday evening and all day Saturday. Most of the facilities and supportive arrangements were conducive to the type of instructional activities used. The various incentives employed including college credit and personal recognition were evidently effective. The motivational level seemed to be relatively high. This motivation may have varied somewhat according to area or group. The workshops seemed especially meaningful to classroom teachers and counselors and less appropriate for administrators and college trainers (teacher educators and counselor educators). Again, this may not be the organization of the workshops but rather consideration for rationale and selection.

Participant ratings of program factors (Table 9, Summary Report) support a positive attitude toward program organization. "Pre-workshop information" received the lowest rating. This is understandable considering the press of the workshop activities.

The DOE and district administrative support for the workshops was good. Their participation in various components of the program lend credence to the career development commitment. The utilization of administrative staff may have been further enhanced by a preliminary staff development program for administrative personnel.

Goals and Objectives of the Workshops

There is no question that goals and objectives were stated and systematically developed. The Syllabus for 1974 Workshops provides an excellent outline of the workshop objectives. The goal for the workshops was:

> To develop participants understanding of career development and to increase their capabilities of infusing career development into the existing curriculum.

The basic assumption that this is the only or most prominent goal could be challenged. Is this the only implementation goal for career development? Is this goal the result of a feasibility or priority study? The evaluator had no indication of any such study and suspects that none has been undertaken. Some critics would point up that infusion of career development into the existing curriculum is but one goal of career development.

Assuming the central focus of the goal statement leads to subgoals and performance objectives as stated in the syllabus, the following is an example of this procedure:

> Subgoal 2: For participants to understand the importance of and be motivated to utilize career development learning experiences in the classroom.
>
> Objective 2.3: Given a 40 minute task assignment on cooperation, participants will demonstrate their awareness of the need for cooperative efforts of teachers and/or administrators, counselors, instructors, and community persons in delivering learning experiences to learnee by correctly responding to questions 19-26, and 28 (Section 2) on the Inventory of Educational Improvement.

The sequence of instruction included excellent evaluation procedures for each objective. The Workshops were readily amenable to outcome evaluation.

Process Evaluation

There were a variety of techniques employed to achieve the workshops objectives. The match of the type of techniques with the objective seemed appropriate. On a 1.0 (not worthwhile) to 4.0 (extremely worthwhile) scale the participants rated the workshop activities 3.35 (Table 7, Summary Report). "Reading assigned reference materials" (3.08) and "viewing career education materials" (3.10) were rated lowest. "Participating in task groups" (3.70) was rated highest. The

high rating of the task group participation is representative of the basic thrust employed in the workshops. A great deal of effort was given to organizing workshop activities into task groups. This allowed the participants to achieve a sense of ownership and feel that they were capable of employing the career development continuum in their schools. This performance emphasis in the processes was in keeping with the objectives outlines in the syllabus.

Staff and resource personnel were rated on Content Mastery and Communication Skill scales (1.0 poor to 4.0 outstanding). The mean rating on Content Mastery was 3.49 and the mean rating for Communication Skill was 3.50 (Table 8, Summary Report). The participants' rating of staff and resource personnel indicated an exceptional positive reaction to those involved in the program activities. The ratings of Training Process Factors (Table 10, Summary Report) summarized various workshop elements. All were ranked above 3.00 on a 4.00 scale. The overall ratings of the training processes were very positive.

There were some variations of participants' responses by workshop setting. The make up of the participant roster may have demanded special consideration be given to certain characteristics of personnel in some of the districts (See Table 2, Summary Report). Again, this situation may have been best handled by a workshop participant selection procedure.

Outcome Evaluation

The training objectives of the workshops were stated in terms of performance behaviors. As indicated earlier, this approach lends itself to outcome evaluation. Outcome data were collected in two basic goal areas: Acquired Knowledge and Developed Skills. Two basic evaluation procedures were used: Perceived Self-Evaluation and Objective Test Responses.

Self-evaluation techniques indicated that the participants felt they had acquired the necessary knowledge and skills to implement the career development continuum. A combined 88.69 percent expressed this positive belief (Table 3, Summary Report). On a scale for the self-evaluation of achievement of training objectives, a 3.60 average was reported on a 4.00 scale (Table 4, Summary Report).

However, results from the objective test evaluation were not so conclusive. The mean score for all seven workshops was approximately 70 percent for Knowledge, 55 percent for Skill and almost 60 percent for Knowledge and Skill combined. This is slightly below the criterion level of 70 percent (Table 5, Summary Report). Considerable variation existed among workshop sites in their response to the objective tests. Likewise there was considerable variation in response to the two outcome areas: Acquisition of Knowledge and Development of Skills.

The contrasting results and variability on the objective tests casts some doubts about the test's validity. Observed performance by the project staff and the evaluator would tend to support the participants' self-evaluation.

Conclusions

Within the content of the workshop objectives the inservice program was successful. There is ample evidence that the DOE and the University of Hawaii have achieved some preliminary implementation goals.

To state that the Career Development Continuum Project has implemented career education into the State of Hawaii's Schools would be an over generalization. Considerable readiness has been established. However, a more systematic, unit by unit (school buildings) approach would be needed before any immediate or significant impact could be noticed. The success of this particular inservice program is promising.

A staff development needs assessment is still needed. This is especially true now that some staff members have received some training. The differences among staff members regarding competencies in career education has now increased. Further staff development activities are needed but this may now require differentiated approaches. School administrators must become involved or the leadership at the local level will suffer. Their participation in this evaluated workshop was certainly minimal.

A major strength of this workshop approach was the amount of guided participant involvement. This enabled the staff in training to relate to the CDC conceptual framework and the Guide Materials. As participants took responsibility for integrating activities, a sense of ownership and willingness to risk was noted. It was evident that a great majority of staff members felt comfortable with the career education approach. Many of these people could be used in further staff/inservice training activities. A follow up procedure would help clarify the possibilities in this area.

This series of workshops should be encouraged. Likewise the stimulation created in the local schools deserves systematic, in-depth commitment and support. Follow up and continued activities are definitely needed.

Development of Testing Materials and Instruments

An objective test battery was developed for grades 3, 6, 9, and 12. There is a 100 item form for each grade level. Four items represent each of six subgoals from the four career development goals of the Career Development Continuum Model. One item in each goal area is repeated for a reliability check.

The battery was developed by the following process:

1. Review of existing instruments and the development of prototype instruments.

2. Selection and construction of items for a preliminary version of a four subtest inventory.

3. Administration of a preliminary Career Development Inventory to experimental and control groups of students (April, 1975).

4. Administration of a Teacher Survey Form that gathered teachers' reactions to the Inventory and an evaluation of each item in each of the subtests.

5. Item analysis based upon student group responses.

6. Revision of items as indicated by student and teacher responses, also, keyed items to subgoals and modified directions for administration and scoring.

7. Administration of the Career Development Inventory battery to experimental and control groups of students (June, 1975).

8. Revision as test data indicated.

The result of this process was a Career Development Inventory battery that included Form A for grade 3, Form B for grade 6, Form C for grade 9, and Form D for grade 12. An Administrator's Manual of Instructions accompanies each form.

Developmental Concerns

A developer of a new sequential career development battery can expect to encounter some difficulties. First, similar career development batteries are not available for modeling or for cross validation. This area of test development is in its infancy. Research reports, consultation, and expert opinion in career development evaluation is lacking. It is understandable that an earlier national search inquiry by the inventory developer provided little assistance.

Secondly, the goal areas of the Career Development Continuum are relatively unique. The content validity of the battery was greatly enhanced by relating the items to the subgoals. The lack of knowledge about the flow of developmental elements as one proceeds from early childhood to adulthood makes item construction difficult. The same concerns were probably faced when the Career Development Continuum Curriculum Guides were developed. However, a testing battery will predetermine expectancies and influence the setting of developmental goals.

Lastly, new concepts and vocabulary will be included in such a battery. It may be difficult to determine if "readability" level is not just the function of lack of treatment (process of career development programs). There will be more of this readability concern in primary years where reading problems already exist. It is also possible that the Career Development Continuum goal areas represent more abstract concepts than usually found in other curriculum areas. In particular the goal areas of self-realization, social relationships and civic responsibility may contain many abstract concepts.

Utilization of Developmental Data

An experimental-control comparison is a rigorous test for this instrument development process. While this method may be desirable

for idealized test development and program evaluation, it does not seem to be an appropriate method for a situation where the adequacy of the treatment process can be questioned. However, it is doubtful that the comparison was the primary input for item revision. The teachers' reactions on the Teacher Survey Form and the item analysis data would seem to be more helpful at this stage of development. Student performance data from next year may allow another experimental-control design to be employed at that time.

The preliminary data (April, 1975) seemed to focus attention on readability, reliability, clarity, length, and scoring. This evaluator is concerned that the lack of experience with career development concepts, both students and teachers, may unduly suppress and constrict the scope of the instrument. Staff development programs and intensified career development programs may run pupils' scores to the ceiling of the battery.

Test Development and Program Evaluation

The development of a feasible testing battery for Career Development Continuum goal areas is an admirable research and development accomplishment. The fundamental instrument development process was sound, and considering the exploratory nature of the area, the results are extremely promising. A sequential testing of the Career Development Continuum subgoals will place school programs of career development in a comparable perspective with other curriculum objectives. The availability of evaluation procedures will give impetus to career development program implementation. Few evaluation instruments have been related to subgoals of instruction such as represented in the Career Development Inventory battery. This state of Hawaiian integration of rationale, model, curriculum guides, staff development, and evaluation is an outstanding program development capstone for the implementation of career development philosophy.

Other career development evaluation procedures will need to be employed. It is hoped that the impact of the Career Development Inventory will not be to over-simplify the career development program evaluation procedure. Some fundamental assumptions of the career development philosophy would suggest a number of evaluation procedures be used. The development of the Career Development Inventory battery should be a beginning not an end for program evaluation.

Evaluation and Revision of the Model and Guides

In accordance with Phase II evaluation input the Hawaiian Career Development Continuum Curriculum Guides were revised and printed. Preliminary evaluation data seems to substantiate the model on which the Guides are based.

This evaluator feels that the four Guides represent the most systematic, comprehensive approach to career development at this point in time. While the Guides have been made relevant to the state of Hawaii, they will provide assistance to other states and school districts interested in career development. The press for implementation will undoubtedly be one of Hawaii's top priorities.

Conclusions and Recommendations Related to Objective 1: In-Service Staff Training.

When the training results are interpreted in light of the process evaluation, it can be seen that the three workshops which were most effective in achieving training objectives, Kauai, Hilo, and Kona, were the three for which the process evaluation showed the highest ratings. Results show that the knowledge objective generally was achieved at a higher level than the skill objective. The process evaluation pointed up the time constraint. This factor may account, in part at least, for the lower level of achievement of the skill objective. Another process factor contributing to this was the fact that the supply of curriculum guides was not sufficient to permit each participant to have a set.

The relatively low rating for the Leeward workshop on the objective test, showing that only 32% of the participants met criterion level, is accounted for in part by the fact that 20% of the participants did not take the objective tests and a large number did not participate in the entire program. This points to a critical factor in any training program--selection of participants. In this in-service training program there were no criteria for selection of participants. In the Leeward workshop, one-third of the enrolled participants did not attend the total program. Windward, Honolulu, and Maui workshops also had participants who were not in attendance for the entire training program.

Another conclusion which can be drawn is that the learning environment is a critical factor in any training program. It can be noted that the three workshops which were most successful in achieving objectives, Kauai, Hilo, and Kona, were conducted in hotels where regular conference facilities and services were provided, according to requirements stipulated in the design for the delivery system.

The results of evaluating this training program suggest that with a systematic procedure for selecting participants, a training environment conducive to learning, and with participation in the total training program, the acquisition of basic knowledge about career development and development of preliminary skills for infusing career development into the curricula can be achieved with this training program.

The training package provided a model for an innovative, activity-oriented workshop. The success of this format was evident from the comments made by the participants. The format of "staying put and listening to lectures," as one participant stated, requires less in the way of planning and organization, but the learning is less than it would be when learning is activity-oriented.

It is important that the populations at the workshops be selected, and that administrators, counselors, and teachers receive in-service training. In order to have the greatest impact on the schools, it is necessary to select participants in the initial orientation and advanced training with great care. Effectiveness, enthusiasm, dedication, energy, and potential for leadership are important factors to consider when choosing participants. Training persons selected on the basis of these qualifications will make much more of an impact in the school system than training participants selected at random.

It is recommended that future training models incorporate a two-level training design and that participants for advanced training be chosen extremely carefully from among those who have completed the basic workshop and have shown leadership potential and mastery of career development concepts. Such two-level training will be more effective as well as more economical since the advanced participants should be fully capable, after training, to assume leadership positions in training others in their schools and districts. Involvement of more community representatives should also be considered. Training of administrators and counselors is essential.

Conclusions and Recommendations Related to Objective 2: Development of Instruments for Student Growth Assessment.

The four forms of the Student Growth Assessment of Career Development Inventory measured student growth in the career development areas of self-realization, economic efficiency, civic responsibility, and social relationships. Results from the pre- and posttests of control and experimental groups indicated there were no significant differences between experimental and control groups, nor were there significant differences between pre- and posttest responses. This, no doubt, is accounted for by the limited treatment time. These time constraints were due to the fact that all testing had to be completed by the end of the current fiscal year. Teachers had little time to incorporate career development learning experiences into their curriculum. However, trend data indicate that the instruments would measure differences between the two groups if the time interval was significantly longer.

It is recommended that data be gathered and analyzed routinely from the results of using the Student Growth Assessment of Career Development Inventory in subsequent years. Then data can form an important bank of information to help in interpreting results.

In classes with low reading ability, it is recommended that the inventory in the student growth assessment battery for the next lower level be used in testing career development outcomes. Since each guide has the same sequence of goals, subgoals, and objectives, the items in all four inventories are comparable in terms of testing achievement of objectives.

It is recommended that the inventories be used for instructional or guidance functions as well as for measurement instruments. Counselors can use the instruments for individual counseling purposes, and teachers can utilize them for stimulating discussions in the four career development goal areas.

APPENDIX C

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY

ADMINISTRATOR'S MANUAL OF INSTRUCTIONS - FORM A

* * * * * * * *

Student Growth Assessment of Career Development Inventory (SGACDI) battery is composed of items designed to measure the extent to which four major goals of career development are being achieved. The goals are: Self-Realization, Economic Efficiency, Social Relationships, and Civic Responsibility. The SGACDI battery consists of four forms. Form A is designed to measure achievement of third grade students. Form B is designed to measure achievement of sixth grade students. Form C is designed to measure achievement of ninth grade students. Form D is designed to measure achievement of twelfth grade students.

This manual describes administration procedures for the SGACDI Form A, designed for administration to third grade students. It is important that these procedures be thoroughly understood and followed by anyone who is involved in administering the inventory.

Inventory Form A consists of 100 items which are to be answered by responding true or false. The inventory should be administered to a group of third grade students. It will take about one hour to administer the inventory. To avoid student boredom and fatigue, the inventory can be administered in 1 day, 2 days, 3 days, or 4 days.

PART 1

A. General Duties of the SGACDI Administrator

1. Supervising the administration of the SGACDI.

2. Selecting and instructing SGACDI inventory proctors, if any.

3. Providing optimal conditions for inventory administration by preventing distractions and interruptions.

4. Becoming thoroughly familiar with this manual, <u>in particular</u>, Part 2.

5. Recommending to the students in advance that they have two or more sharpened soft lead (No. 2) pencils with erasers.

B. Materials Required

1. A copy of this manual should be on hand and a large enough supply of the SGACDI booklets to provide one copy to each student and one to the administrator.

2. A supply of sharpened No. 2 lead pencils with erasers should be on hand for students who forget to bring pencils or break theirs.

3. Tables and desks should be available for all students. If chairs with arms are used, adequate provision must be made for left-handed students.

PART 2

A. General Directions for the Administration of the Inventory

1. Instructions enclosed in boxes are to be read aloud by the administrator. In order to provide a standardized administering situation, these directions should not be changed.

2. During the inventory, the administrator should walk around the room checking to see that students are following the procedure properly. The students should have nothing on their desks except the inventory booklets and pencils.

3. Care should be taken to explain to students that they are not being graded, but they should do their best.

4. The administrator should answer any questions that the students may raise.

5. The administrator should follow the "Specific Directions" (Part 2-B) in each testing session, in order to orient the students to the procedure for marking their responses.

6. If the testing is done in two or more sessions, collect the inventory booklets systematically for each row or table. This will facilitate redistribution of the booklets in the next session, provided the students occupy the same seats.

7. If testing is done in two or more sessions, the students will use the same inventory booklets in each session. Therefore, the administrator should make sure each student receives his or her own booklet in each testing session. The administrator should ask the students to check their names on the booklets to see that they have their own booklets.

B. Specific Directions for the Administration of the SGACDI

1. When all students have been seated, say:

YOU ARE GOING TO RECEIVE A BOOKLET ON CAREER DEVELOPMENT. DO NOT OPEN THE BOOKLET UNTIL I TELL YOU TO DO SO.

2. Now distribute the booklets and say:

THE STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY IS EXACTLY WHAT THE TITLE SUGGESTS: AN INVENTORY OF YOUR GROWTH IN AREAS WHICH CONTRIBUTE TO CAREER DEVELOPMENT. THIS IS NOT A TEST. IT IS AN INVENTORY OF GROWTH IN FOUR AREAS WHICH RELATE TO CAREER DEVELOPMENT; SELF-REALIZATION, THAT IS, YOUR UNDERSTANDING OF YOURSELF; ECONOMIC EFFICIENCY, THAT IS, YOUR UNDERSTANDING OF WHAT IT TAKES TO BE AN EFFECTIVE PRODUCER OR CONSUMER OF GOODS AND SERVICES; SOCIAL RELATIONSHIP, THAT IS, YOUR ABILITY TO GET ALONG WITH OTHERS; AND CIVIC RESPONSIBILITY, THAT IS, YOUR UNDERSTANDING OF THE RIGHTS AND RESPONSIBILITIES OF YOURSELF AND OTHERS. THE RESULTS OF THIS INVENTORY CAN HELP YOU IN ASSESSING YOUR CAREER DEVELOPMENT. DO NOT TALK OVER THE QUESTIONS WITH ANYONE ELSE. UNLESS THE ANSWER IS WHAT YOU THINK, IT WILL NOT REALLY HELP TO GIVE A TRUE PICTURE OF YOUR CAREER DEVELOPMENT.

3. Write the date, teacher's name, and school on the board, and say:

WRITE YOUR FIRST AND LAST NAME ON THE TOP LINE. ON THE NEXT LINE GIVE YOUR GRADE, AGE, AND SEX. ON THE LINE BELOW THAT, WRITE YOUR TEACHER'S NAME. ON THE LOWEST LINE WRITE THE NAME OF OUR SCHOOL AND TODAY'S DATE. TODAY IS _____.

Provide assistance if necessary.

4. After completion of this, proceed by saying:

NOW LOOK AT THE SECTION WHERE IT SAYS "DIRECTIONS" AND LISTEN AS I READ THE DIRECTIONS TO YOU.

DIRECTIONS: LISTEN AS YOUR TEACHER READS EACH STATEMENT ALOUD. FOR EACH STATEMENT YOU SHOULD ANSWER EITHER TRUE OR FALSE. IF THE STATEMENT IF TRUE, CIRCLE THE WORD TRUE IN THE COLUMN TO THE RIGHT OF THE STATMENT. IF THE STATEMENT IS NOT TRUE, CIRCLE THE WORD FALSE. BE SURE TO LISTEN FOR THE STATEMENT NUMBER SO THAT YOU MARK THE CORRECT STATEMENT.

5. NOW LET US LOOK AT THE EXAMPLE ON THE BLACKBOARD.

Write on the board:

Today is Sunday.	True	False

IS TODAY SUNDAY? NO. TODAY IS NOT SUNDAY, SO WE SHOULD CIRCLE FALSE.

6. Explain that:

YOU SHOULD CIRCLE YOUR ANSWER IMMEDIATELY AFTER I READ EACH QUESTION TO YOU; IN THE SAME WAY WE DID THE EXAMPLE ON THE BOARD. O.K.?

7. Emphasize that:

NO QUESTION SHOULD BE LEFT UNANSWERED. FOR EACH QUESTION ONLY ONE CIRCLE MUST BE MADE. IF A MISTAKE IS MADE, IT MUST BE ERASED COMPLETELY. MAKE SURE YOUR MARK IS HEAVY AND DARK.

8. Make sure everyone understands the answering procedures properly and is ready before you begin reading the questions.

9. Read each question twice. Read the question number. Then read the question. Then say:

MARK YOUR ANSWER FOR QUESTION NUMBER _____.

10. Allow approximately 10 seconds for each question. Be sure the students answer all questions.

11. At the end of the session, after the last question is answered, say:

NOW CLOSE YOUR BOOKLETS AND LEAVE THEM ON YOUR DESKS.

12. If testing is done in two or more sessions, at the end of the session, conclude by saying:

THIS IS THE END OF THIS PART OF THE INVENTORY. WE WILL CONTINUE WITH THE NEXT PART IN THE NEXT SESSION. THE NEXT SESSION WILL BE _____.

Please provide the time of the next session.

C. Directions for Scoring

For scoring use the Scoring Key - Form A. The inventory is made up of 4 parts. Each part includes 25 items, and measures achievement of objectives implementing one of the four goals of career development. Part 1 includes items 1 to 25. Part 2 includes items 26 to 50. Part 3 includes items 51 to 75. Part 4 includes items 76 to 100. Give one point for each correct answer. Maximum possible score for each part will be 25 points, and for the whole inventory will be 100 points.

SCORING KEY

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY - FORM A

Item	Answer	Item	Answer	Item	Answer	Item	Answer
1	True	26	False	51	False	76	False
2	True	27	False	52	False	77	False
3	False	28	False	53	True	78	True
4	False	29	True	54	True	79	False
5	False	30	True	55	True	80	True
6	True	31	True	56	False	81	False
7	False	32	False	57	True	82	True
8	True	33	True	58	True	83	False
9	True	34	True	59	False	84	False
10	True	35	False	60	False	85	False
11	False	36	False	61	True	86	True
12	True	37	True	62	False	87	True
13	False	38	False	63	False	88	False
14	False	39	False	64	False	89	True
15	True	40	True	65	False	90	True
16	False	41	True	66	True	91	True
17	True	42	True	67	True	92	True
18	True	43	False	68	False	93	False
19	False	44	True	69	True	94	True
20	False	45	False	70	True	95	True
21	False	46	False	71	True	96	False
22	True	47	False	72	True	97	True
23	True	48	True	73	False	98	True
24	False	49	True	74	False	99	False
25	False	50	False	75	False	100	False

Part 3

INVENTORY INTERPRETATIONS

The SGACDI has been developed to assess student growth in four areas: self-realization, economic efficiency, social relationships, and civic responsibility. The inventory is designed to measure the extent to which the objectives of the Hawaii Career Development have been achieved; and to provide information and to assist counselors and teachers for designing new or improving existing programs to meet student needs. The inventory items have been constructed to measure achievement in relation to the 4 goals, 24 subgoals, and implementing learner objectives of the Hawaii Career Development Continuum. There are 6 subgoals to each goal as shown in Table 1.

TABLE 1

Major Goals and Subgoals

Goals	Subgoals
Self-Realization	1. Acquire skills of self-appraisal.
	2. Develop awareness and understanding of self.
	3. Develop understanding of decision-making process.
	4. Acquire skills of decision-making, risk taking, value clarification, and goal setting.
	5. Develop understanding of the relationship between work and life style.
	6. Develop appreciation for individual differences in interests, values, aptitude, skills, abilities, attitudes.
Economic Efficiency	1. Develop understanding of variety of occupations and knowledge of occupational classification and job descriptions.
	2. Develop understanding that occupations exist for a purpose and contribute to the dignity of the individual.
	3. Develop appreciation for the value of work, its contribution to society and the economy, and appreciate that work means different things to different people.
	4. Develop understanding that new occupations develop in response to needs of society.
	5. Develop employability skills.
	6. Develop understanding of the relationship between education and work.

Social Relationships	1. Develop interpersonal skills.
	2. Develop understanding of social roles.
	3. Develop understanding of cooperation.
	4. Develop understanding of community workers.
	5. Develop appreciation for flexibility and adaptability in social relationships.
	6. Develop understanding of interrelatedness of occupational roles.
Civic Responsibilities	1. Develop understanding of rights, privileges, and responsibilities on the job, in the home, in the community.
	2. Develop understanding of ways in which participation in civic groups contributes to individual and group goals.
	3. Develop understanding of importance of rules in society.
	4. Develop understanding of relationships between reponsibilities and rewards in work and leisure.
	5. Develop capabilities for making effective use of resources and understand relation of environment to work.
	6. Develop ability to participate in various kinds of civic groups.

These are four items for each subgoal. These items relate to the learner objectives for that subgoal, as shown in Table 2. Items 1 to 24 test the achievement of the Self-Realization Subgoals. Items 26 to 49 test the achievement of the Economic Efficiency Subgoals. Items 51 to 74 test the achievement of the Social Relationships Subgoals. Items 76 to 99 test the achievement of the Civic Responsibility Subgoals. Items 25, 50, 75, and 100 are repeated items for reliability. A reliability check can be made by comparing responses to the following items: Items 25 and 11, 50 and 36, 75 and 60, 100 and 77. In Table 2, the dash signs imply there were not any objectives available for the corresponding items, but that the items were constructed according to the subgoal or the one single objective if available for that subgoal.

Table 2

Student Growth Assessment of Career Development Inventory - Form A

Distribution of the Items(I) According to Goals(G), Subgoals (SG) and Objectives(O)

I.	G. (SR)	SG.	O.	I.	G. (EE)	SG.	O.	I.	G. (SR*)	SG.	O.	I.	G. (CR)	SG.	O.
1	1	1	1	26	2	1	1	51	3	1	1	76	4	1	1

25	1	3	-	50	2	3	3	75	3	3	-	100	4	1	-

Note. SR = Self-Realization SR* = Social Relationships
EE = Economic Efficiency CR = Civic Responsibility

APPENDIX D

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY - FORM A

Student's Name _____

Grade _____ Age _____ Sex: Male Female

Teacher's Name _____

School _____ Date _____

The Student Growth Assessment of Career Development Inventory is exactly what the title suggests: an inventory of your growth in areas which contribute to career development. This is not a test. It is an inventory of growth in four areas which relate to career development: Self-Realization, that is, your understanding of yourself; Economic Efficiency, that is, your understanding of what it takes to be an effective producer or consumer of goods and services; Social Relationships, that is, your ability to get along with others; and Civic Responsibility, that is, your understanding of the rights and responsibilities of yourself and others. The results of this inventory can help you in assessing your career development. Do not spend a great deal of time on any one item. Do not talk over the questions with anyone else. Unless the answer is what you think, it will not really help to give a true picture of your career development.

DIRECTIONS: Listen as your teacher reads each statement aloud. For each statement you should answer either True or False. If the statement is true, circle the word True in the column to the right of the statement. If the statement is not true, circle the word False. Be sure to listen for the statement number so that you mark the correct statement.

Example: 1. Today is Sunday True False

Today is not Sunday, so circle the word False.

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO.

Do Not Write Below This Line

PART	ITEMS	GOAL MEASURED	POSSIBLE SCORE	ACTUAL SCORE
1	1-25	Self-Realization	25	
2	26-50	Economic Efficiency	25	
3	51-75	Social Relationships	25	
4	76-100	Civic Responsibility	25	
		Total	100	

Inventory Form A

Part 1

1.	I can think of 3 different words to describe myself.	True	False
2.	I know which school subject I do best.	True	False
3.	All boys and girls are the same when they are 11 years old.	True	False
4.	All third-grade boys and girls weigh the same.	True	False
5.	Very loud noises are pleasant to everybody.	True	False
6.	A person who wants to be a teacher should like working with children.	True	False
7.	To be an artist a person should be a good speller.	True	False
8.	A person who is not good in mathematics could be a successful librarian.	True	False
9.	A person decides what to wear by thinking about where one is going and what one will be doing.	True	False
10.	If you are given $5 to spend, you will first have to decide what is most important to you.	True	False
11.	Knowing what will happen to you if you do something makes it harder to decide.	True	False
12.	In order to decide whether to do something or not, a person has to know what will happen if it is done or not done.	True	False
13.	Boys and girls are taking more of a chance if they play a game they know how to play well than if they play a game for the first time.	True	False
14.	The same things are important to boys and girls in the 3rd grade as to their parents and teachers.	True	False
15.	Knowing what you want is the most important part of deciding something.	True	False
16.	Planning ahead is of no value.	True	False
17.	A person who likes a lot of free time for surfing would probably not like to be a doctor.	True	False
18.	People who like their jobs are usually good at their jobs.	True	False

Inventory Form A (continued)

19.	Students usually make their best grades in subjects they do not like.	True	False
20.	Being lazy helps a person make good grades.	True	False
21.	All third graders like the same T.V. programs.	True	False
22.	Some children play baseball better than others.	True	False
23.	People from different countries sometimes have different manners.	True	False
24.	Everyone likes rice.	True	False
25.	Knowing what will happen to you if you do something makes it harder to decide.	True	False

Inventory Form A (continued)

Part 2

26.	A person who bakes bread is called a chef.	True	False
27.	A person who paints houses is called a plumber.	True	False
28.	A person who fixes cars is making a product.	True	False
29.	A person who paints pictures is producing something.	True	False
30.	Being able to do something well makes a person think better of himself or herself.	True	False
31.	Most people take pride in doing their job well.	True	False
32.	When you paint a picture and someone says they like it, you would probably feel disappointed.	True	False
33.	Most boys and girls feel proud when they know they have done something to help at home.	True	False
34.	Everyone in the school benefits from the school janitors doing their jobs well.	True	False
35.	If Hawaii had no hotels, tourists would come here anyway.	True	False
36.	A person who has lots of money never works.	True	False
37.	Many people enjoy working because their work helps others.	True	False
38.	A city without any police, firemen, and firewomen would be a safe place in which to live.	True	False
39.	A family can get along on its own without the help of the rest of the community.	True	False
40.	If there were no farmers, people in the city could not live.	True	False
41.	New jobs are made when people have new needs.	True	False
42.	A job is done better if it is done step by step in an organized way.	True	False
43.	It does not matter if a worker is on time for the job.	True	False
44.	In order to get a job, one should have the skills needed for that job.	True	False

Inventory Form A (continued)

45.	Having good manners is not important for most jobs.	True	False
46.	A person can become an English teacher as soon as he or she finishes high school.	True	False
47.	A person needs to go to school more years to become a bus driver than to become a doctor.	True	False
48.	A person who plans to become an airline steward or stewardess should study foreign languages.	True	False
49.	To become a doctor a person must study science.	True	False
50.	A person who has lots of money never works.	True	False

Inventory Form A (continued)

Part 3

51.	A person who smiles and says "hello" is being unfriendly.	True	False
52.	An unhappy person will have more friends than a happy person.	True	False
53.	Everyone needs to learn to communicate with others.	True	False
54.	Being helpful around home makes life easier for everyone in the family.	True	False
55.	People feel worthwhile and important when their jobs are of service to others.	True	False
*56.	Long distance telephone operators like their work because the phone calls are interesting to overhear.	True	False
57.	People feel worthwhile when they do their jobs well.	True	False
58.	Feeling proud of something you have done well is different from boasting.	True	False
59.	In doing a group activity, each person follows his or her own rules.	True	False
60.	Work done by a team is not as good as work done by one person.	True	False
61.	The waiter or waitress and the cook have to cooperate in order to serve people in a restaurant.	True	False
62.	People cooperate because they are too lazy to do things by themselves.	True	False
63.	The person who helps people find and check out books at the library is a bookkeeper.	True	False
64.	A mailman or woman is a person who gives people traffic tickets.	True	False
65.	A fireman or woman sells fire insurance.	True	False
66.	A bus driver helps people to get from one place to another.	True	False
67.	All jobs have some uninteresting parts to them.	True	False
68.	Boys and girls act the same on the playground as they do in the classroom.	True	False

69.	When the rules of a game are changed, players should play by the new rules.	True	False
70.	A third grader behaves differently from a ninth grader.	True	False
71.	In order to have grocers, we must have farm workers.	True	False
72.	It takes many different kinds of workers to put an astronaut on the moon.	True	False
73.	In order to build a house, one must hire a housekeeper.	True	False
74.	The job of a salesclerk is related to the job of a farmer.	True	False
75.	Work done by a team is not as good as work done by one person.	True	False

Part 4

76.	Being on time to meetings is not important.	True	False
77.	Teachers are responsible for seeing that students turn in their work on time.	True	False
78.	When United States citizens become 18 years old, they can vote to elect the President of the United States.	True	False
79.	Having jobs to do at home teaches children to be clean.	True	False
80.	When boys and girls join clubs like Cub Scouts and Brownies, they will probably make new friends.	True	False
81.	An organization that protects the welfare of workers is called a political party.	True	False
82.	When you take part in group games at school, you are contributing to group goals.	True	False
83.	When boys and girls collect money for UNICEF on Halloween, they are being greedy.	True	False
84.	A person can cross the street on a red light if no car is coming.	True	False
85.	The school has rules in order to teach students to obey.	True	False
86.	Waiting for your turn to speak makes it easier for a group to have a discussion.	True	False
87.	Laws are made to protect people.	True	False
88.	A person should be rewarded even if the person did the job badly.	True	False
89.	People feel proud of themselves when they do a job well.	True	False
90.	There are jobs from which people get great satisfaction even though the pay may be low.	True	False
91.	Doctors and nurses feel proud of their work because they are helping others.	True	False
92.	Everyone has a responsibility to keep from littering the school grounds.	True	False

93.	Keeping one's things neat makes it harder to find things.	True	False
94.	Most industries cause some pollution.	True	False
95.	Old newspapers and cans can be recycled.	True	False
96.	When you play a game, it is all right to take your turn before it is time to do so.	True	False
97.	Parents who take part in school activities benefit by learning more about their children.	True	False
98.	Adults who take part in neighborhood improvement groups increase their ability for getting along with others.	True	False
99.	Being a member of a group or on a committee makes a person feel more frightened and shy in front of a crowd.	True	False
100.	Teachers are responsible for seeing that students turn in their work on time.	True	False

APPENDIX E

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY

ADMINISTRATOR'S MANUAL OF INSTRUCTION - FORM B

* * * * * * * *

Student Growth Assessment of Career Development Inventory (SGACDI) battery is composed of items designed to measure the extent to which four major goals of career development are being achieved. The goals are: Self-Realization, Economic Efficiency, Social Relationships, and Civic Responsibility. The SGACDI battery consists of four forms. Form A is designed to measure achievement of third grade students. Form B is designed to measure achievement of sixth grade students. Form C is is designed to measure achievement of ninth grade students. Form D is designed to measure achievement of twelfth grade students.

This manual describes administration procedures for the SGACDI Form B, designed for administration to sixth grade students. It is important that these procedures be thoroughly understood and followed by anyone who is involved in administering the inventory.

Inventory Form B consists of 100 multiple choice items which will require about one hour to complete. To avoid student boredom and fatigue, the inventory may be administered in two or four sessions. Students can be asked to complete one or two parts for each session. Two possible schedules are as follow:

Schedule 1		Schedule 2	
Session 1	Part 1	Session 1	Parts 1 & 2
Session 2	Part 2	Session 2	Parts 3 & 4
Session 3	Part 3		
Session 4	Part 4		

Part 1

A. General Duties of the SGACDI Administrator

1. Supervising the administration of the SGACDI.

2. Selecting and instructing SGACDI proctors, if any.

3. Supplying inventory booklets, pencils, erasers, desks, chairs.

4. Preventing distractions and iterruptions, thus providing optimal conditions for the inventory administration.

5. Becoming thoroughly familiar with the SGACDI manual, <u>in particular</u>, Part 2-B.

B. Materials Required

1. A copy of this manual should be on hand, and a large enough supply of the inventory booklets to provide one copy for each student and one for the administrator.

2. An adequate supply of sharpened No. 2 lead pencils with erasers should be on hand for students who forget to bring pencils or in cases where their pencils break.

3. Tables and desks should be available for all students. If chairs with arms are used, adequate provision must be made for left-handed students.

Part 2

A. General Directions for the Administration of the Inventory

1. Instructions enclosed in boxes are to be read aloud by the administrator. In order to provide a standardized administering situation, these directions should not be changed.

2. Care should be taken to explain to students that they are <u>not</u> being graded, but they should do their best.

3. During the inventory completion, the administrator should walk around the room checking to see that the students are following the procedure correctly. The students should have nothing on their desks except the inventory booklets and pencils.

4. In response to questions about whether students should guess, say:

TRY TO ANSWER EVERY QUESTION. IF YOU ARE UNCERTAIN ABOUT AN ANSWER, SELECT THE ONE ALTERNATIVE YOU FEEL IS MOST NEARLY CORRECT.

5. Questions raised concerning the specific content of the item should not be answered by the administrator, except to clarify or define the meaning of words the students do not understand.

6. If testing is done in two or more sessions, the administrator should follow the "Specific Directions" (Part 2-B) in each testing session in order to reorient the students to the answering procedure.

7. If the inventory is being administered in two or more sessions, collect the inventory booklets systematically for each row or table, to facilitate redistribution in the next session, provided the students occupy the same seats.

8. If the inventory is being administered in two or more sessions, the administrator should make sure that each student receives his or her own inventory. The administrator should ask the students to check their names on the booklets to see that they have their own booklets.

B. Specific Directions for the Administration of the Inventory

1. When all the students have been seated, say:

> YOU ARE GOING TO RECEIVE A BOOKLET ON CAREER DEVELOPMENT. DO NOT OPEN THE BOOKLET UNTIL I TELL YOU TO DO SO.

2. Now distribute the booklets and say:

> THE STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY IS EXACTLY WHAT THE TITLE SUGGESTS: AN INVENTORY OF YOUR GROWTH IN AREAS WHICH CONTRIBUTE TO CAREER DEVELOPMENT. THIS IS NOT A TEST. IT IS AN INVENTORY OF GROWTH IN FOUR AREAS WHICH RELATE TO CAREER DEVELOPMENT: SELF-REALIZATION, THAT IS, YOUR UNDERSTANDING OF YOURSELF; ECONOMIC EFFICIENCY, THAT IS, YOUR UNDERSTANDING OF WHAT IT TAKES TO BE AN EFFECTIVE PRODUCER OR CONSUMER OF GOODS AND SERVICES; SOCIAL RELATIONSHIPS, THAT IS, YOUR ABILITY TO GET ALONG WITH OTHERS; AND CIVIC RESPONSIBILITY, THAT IS, YOUR UNDERSTANDING OF THE RIGHTS AND RESPONSIBILITIES OF YOURSELF AND OTHERS. THE RESULTS OF THIS INVENTORY CAN HELP YOU IN ASSESSING YOUR CAREER DEVELOPMENT. DO NOT SPEND A GREAT DEAL OF TIME ON ANY ONE ITEM. DO NOT TALK OVER THE QUESTIONS WITH ANYONE ELSE. UNLESS THE ANSWER IS WHAT YOU THINK, IT WILL NOT REALLY HELP TO GIVE A TRUE PICTURE OF YOUR CAREER DEVELOPMENT.

3. Write the date, teacher's name, and school on the board, and say:

> WRITE YOUR FIRST AND LAST NAME ON THE TOP LINE. ON THE NEXT LINE GIVE YOUR GRADE, AGE, AND SEX. THEN ON THE NEXT TWO LINES IN THE SPACES PROVIDED, WRITE YOUR TEACHER'S NAME, OUR SCHOOL, AND TODAY'S DATE. TODAY IS _____.

Provide assistance if necessary.

4. After each student has completed this part, proceed by saying:

> NOW LOOK AT THE SECTION WHERE IT SAYS "DIRECTIONS", AND READ IT SILENTLY AS I READ THE DIRECTIONS ALOUD. DIRECTIONS: FOR EACH ITEM IN THIS INVENTORY SELECT THE WORD OR PHRASE THAT BEST COMPLETES THE STATEMENT, AND WRITE THE LETTER OF YOUR CHOICE, (A), (B), (C), OR (D), ON THE LINE IN FRONT OF THE ITEM NUMBER.

NOW LOOK AT THE EXAMPLE GIVEN.

__C__ 1. THE NUMBER OF MONTHS IN ONE YEAR IS

(A) SEVEN
(B) TEN
(C) TWELVE
(D) TWENTY

THE BEST CHOICE IS TWELVE, SO THE LETTER C IS WRITTEN ON THE LINE IN FRONT OF THE STATEMENT.

ARE THERE ANY QUESTIONS? (PAUSE)

5. Emphasize that:

NO QUESTIONS SHOULD BE LEFT UNANSWERED. FOR EACH QUESTION ONLY ONE ANSWER MUST BE CHOSEN. IF A MISTAKE IS MADE, IT MUST BE ERASED COMPLETELY. WRITE YOUR ANSWER HEAVY AND CLEAR.

Make sure that everybody understands the answering procedure.

6. Then say:

TODAY YOU ARE GOING TO ANSWER ITEMS NUMBER ___ TO NUMBER ___. AFTER YOU HAVE FINISHED ANSWERING ALL THE QUESTIONS, CLOSE YOUR BOOKLETS AND LEAVE THEM ON YOUR DESKS.

The administrator should provide the numbers in the box above from the segment of the inventory which is going to be completed in that session.

7. Then say:

YOU MAY NOW BEGIN WORK ON THE INVENTORY STARTING WITH ITEM NUMBER ___.

Please provide the number.

8. If testing is done in two or more sessions, at the end of the session conclude by saying:

THIS IS THE END OF THIS PART OF THE INVENTORY. WE WILL CONTINUE WITH THE NEXT PART IN THE NEXT SESSION. THE TIME FOR THE NEXT SESSION IS _____.

Please provide the time of the next session.

C. Directions for Scoring

For scoring use the Scoring Key - Form B. The inventory is made up of 4 parts. Each part includes 25 items, and measures achievement of objectives implementing one of the four goals of career development. Part 1 includes items 1 to 25. Part 2 includes items 26 to 50. Part 3 includes items 51 to 75. Part 4 includes items 76 to 100. Give one point for each correct answer. Maximum possible score for each part will be 25, and for the whole inventory will be 100 points.

Part 3

Inventory Interpretations

The SGACDI has been developed to assess student growth in four areas: self-realization, economic efficiency, social relationships, and civic responsibility. The inventory is designed to measure the extent to which objectives of the Hawaii Career Development Continuum have been achieved; and to provide information and to assist counselors and teachers in designing new or improving existing programs to meet student needs. The inventory items have been constructed to measure achievement in relation to the 4 goals and 24 subgoals and implementing learner objectives of the Hawaii Career Development Continuum. There are 6 subgoals to each goal, as shown in Table 1.

Table 1

Major Goals and Subgoals

Goals	Subgoals
Self-Realization	1. Acquire skills of self-appraisal.
	2. Develop awareness and understanding of self.
	3. Develop understanding of decision-making process.
	4. Acquire skills of decision-making, risk taking, value clarification, and goal setting.
	5. Develop understanding of the relationship between work and life style.
	6. Develop appreciation for individual differences in interests, values, aptitude, skills, abilities, attitudes.
Economic Efficiency	1. Develop understanding of variety of occupations, interrelationship of occupations, and knowledge of occupational classifications and job descriptions.
	2. Develop understanding that occupations exist for a purpose and contribute to the dignity of the individual.
	3. Develop appreciation for the value of work, its contribution to society and the economy, and appreciate that work means different things to different people.
	4. Develop understanding that new occupations develop in response to needs of society.
	5. Develop employability skills.
	6. Develop understanding of the relationship between education and work.
Social Relationships	1. Develop interpersonal skills.
	2. Develop understanding of social roles.
	3. Develop understanding of cooperation.

	4. Develop understanding of community workers.
	5. Develop appreciation for flexibility and adaptability in social relationships.
	6. Develop understanding of interrelatedness of occupational roles.
Civic Responsibility	1. Develop understanding of rights, privileges, and responsibilities on the job, in the home, in the community.
	2. Develop understanding of ways in which participation in civic groups contributes to individual and group goals.
	3. Develop understanding of importance of rules in society.
	4. Develop understanding of relationships between responsibilities and rewards in work and leisure.
	5. Develop capabilities for making effective use of resources and understand relation of environment to work.
	6. Develop ability to participate in various kinds of civic groups.

There are four items for each subgoal. These items relate to the learner objectives for the subgoal, as shown in Table 2. Items 1 to 24 test the achievement of the Self-Realization Subgoals. Items 26 to 49 test the achievement of the Economic Efficiency Subgoals. Items 51 to 74 test the Social Relationships Subgoals. Items 76 to 99 test the achievement of Civic Responsibility Subgoals. Items 25, 50, 75, and 100 are repeated items for checking reliability. A reliability check can be made by comparing responses to the following items: Items 25 and 4, 50 and 39, 75 and 51, 100 and 79. The dash signs in Table 2 imply that there were no objectives for the corresponding items, but that the items were constructed according to the subgoal or the one single objective if available for that subgoal.

Table 2

Note. SR = Self-Realization SR* = Social Relationships
EE = Economic Efficiency CR = Civic Responsibility

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY - FORM B

Student's Name_____

Grade_____ Age_____ Sex: Male Female

Teacher's Name_____

School_____ Date_____

The Student Growth Assessment of Career Development Inventory is exactly what the title suggests: an inventory of your growth in areas which contribute to career development. This is not a test. It is an inventory of growth in four areas which relate to career development: Self-Realization, that is, your understanding of yourself; Economic Efficiency, that is, your understanding of what it takes to be an effective producer or consumer of goods and services; Social Relationships, that is, your ability to get along with others; and Civic Responsibility, that is, your understanding of the rights and responsibilities of yourself and others. The results of this inventory can help you in assessing your career development. Do not spend a great deal of time on any one item. Do not talk over the questions with anyone else. Unless the answer is what you think, it will not really help to give a true picture of your career development.

DIRECTIONS: For each item in this inventory select the word or phrase that best completes the statement, and write the letter of your choice--(a), (b), (c), or (d)--on the line in front of the item number.

Example: __c__ 1. The number of months in one year is
(a) seven
(b) ten
(c) twelve
(d) twenty

The best choice is twelve, so the letter c is written on the line in front of the statement.

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO

Do Not Write Below This Line

PART	ITEMS	GOAL MEASURED	POSSIBLE SCORE	ACTUAL SCORE
1	1-25	Self-Realization	25	
2	26-50	Economic Efficiency	25	
3	51-75	Social Relationships	25	
4	76-100	Civic Responsibility	25	
		Total	100	

INVENTORY FORM 3

Part 1

__b__ 1. You can best tell if you are doing well in a subject by
(a) checking the time the subject is given
(b) looking at your report card
(c) asking your next door neighbor
(d) asking a friend

__c__ 2. One of the physical characteristics that a person might have is
(a) laziness
(b) coolness
(c) handsomeness
(d) cheerfulness

__d__ 3. A <u>social</u> characteristic of a person is being
(a) pretty
(b) short
(c) strong
(d) friendly

__a__ 4. An aptitude that a person might have is
(a) mechanical
(b) fat
(c) charming
(d) selfish

__c__ 5. The <u>best</u> way to find out if one is good at an activity is by
(a) thinking about it
(b) reading about it
(c) trying it
(d) asking a friend

__b__ 6. A person can become better at an activity by
(a) talking about it
(b) practicing it
(c) reading about it
(d) worrying about it

__a__ 7. Knowing that you do something well is important because it helps you to
(a) make use of it
(b) boast about it to others
(c) hide it from others
(d) forget about it altogether

__d__ 8. One good reason for knowing that a student is weak in a certain subject is that it gives the person a chance
(a) to forget about that subject
(b) to get someone else to do the assignments
(c) to avoid that teacher in the future
(d) to try and overcome the weakness if it is possible

__d__ 9. When deciding to do something, a person should think about
(a) why and how to do it but not when
(b) how and when to do it but not why
(c) why and when to do it but not how
(d) why, how, and when to do it

__a__ 10. When deciding to do something, it is important to know
(a) both the advantages and disadvantages of doing it
(b) the advantages of doing it
(c) the disadvantages of doing it
(d) neither the advantages nor disadvantages of doing it

__b__ 11. The first thing a person should do in making a career decision is
(a) ask teachers and parents what to do
(b) set life career goals
(c) check working conditions
(d) find out how long the work week is

__b__ 12. In order to do almost any job well, one will need to
(a) know lots of people
(b) be able to make decisions
(c) be good in sports
(d) know one's own interests

__c__ 13. Once a person decides to do something, the next step to take would be to
(a) give it more thought
(b) wait for a while until things get cleared up
(c) go ahead and do it
(d) forget about it

__a__ 14. In choosing an occupation, it is important to know about
(a) the jobs which you like and dislike
(b) only the jobs you dislike
(c) only the jobs you like
(d) any jobs, regardless of your likes or dislikes

__c__ 15. You can <u>best</u> tell how interested you are in a job by
(a) asking a person you work with
(b) asking a close friend
(c) knowing how much you enjoy it
(d) checking the time you spend working

__d__ 16. In deciding whether or not a particular job is of interest to you, it is most important to consider
(a) your aptitudes and values
(b) your abilities and skills
(c) your skills and values
(d) your likes and dislikes

__b__ 17. A worker who is likely to have a great deal of leisure time is a
(a) doctor
(b) sanitation worker
(c) governor
(d) hotel manager

__d__ 18. A person who would probably do a great deal of traveling to many parts of the country or the world would be
(a) a forklift operator
(b) a T.V. repairman
(c) a chemist
(d) an airline pilot

__a__ 19. You will usually do better in a subject at school if you are
(a) ambitious and dependable
(b) cheerful and dependable
(c) honest and friendly
(d) friendly and cheerful

__c__ 20. One is most likely to do well in a subject if one
(a) goes to school on time
(b) does the assignment only when one feels like it
(c) studies regularly
(d) keeps one's books neat and clean

__c__ 21. In a group of sixth grade boys, the main difference among them would be in their
(a) ages
(b) sex
(c) interests
(d) hair style

__b__ 22. The pupils and teachers of sixth grade classes in Hawaii will most likely
(a) have the same values and attitudes
(b) have different values and attitudes
(c) have different attitudes but the same values
(d) have the same attitudes but different values

__d__ 23. In any sixth grade class it is most likely that
(a) all the students will excel in the same activity
(b) some of the students will excel in all activities
(c) none of the students will excel in any activity
(d) the students will excel in different activities

__a__ 24. The best way to tell how two persons are different from each other is to observe the way they
(a) feel, behave, and look
(b) behave and look
(c) feel and look
(d) feel and behave

__d__ 25. A word which describes a person's <u>aptitude</u> is
(a) fat
(b) charming
(c) selfish
(d) mechanical

Part 2

__c__ 26. A person who puts gas in a car and checks the tires, battery, water, and oil is
(a) an automobile mechanic
(b) an autobody repairman
(c) a service station attendant
(d) a safety inspector

__b__ 27. A person who prepares food, wears an apron and a tall white hat, and plans the meal is called
(a) a waiter
(b) a chef
(c) a dietician
(d) a pantry worker

__a__ 28. A worker who cooperates with other workers to produce or make something is called
(a) a production worker
(b) a labor leader
(c) a coordinator
(d) a service worker

__a__ 29. A salesperson works mainly with
(a) people
(b) things
(c) ideas
(d) data

__b__ 30. People have respect for policemen and policewomen because
(a) people are afraid of them
(b) they enforce the law
(c) they can give traffic tickets
(d) they can arrest people

__d__ 31. An important official who works for the city government is
(a) the governor
(b) the United States' president
(c) a congressman
(d) the mayor

__c__ 32. A person who works to give service to others will most likely feel
(a) useless
(b) indifferent
(c) worthwhile
(d) respectful

__b__ 33. A farmer's job is of most help to
(a) a banker
(b) a baker
(c) a barber
(d) a bartender

__c__ 34. A teacher contributes to society by
(a) making a living
(b) using resources
(c) helping others
(d) creating new jobs

__d__ 35. If we had no medical doctors and hospitals in Hawaii,
(a) tourists would increase but economic goods would decrease
(b) economic goods would increase, but tourists would decrease
(c) economic goods and tourists would not change
(d) economic goods and tourists would both decrease

__a__ 36. When you participate in a group task at school, you will be able to contribute to the group goal by
(a) sharing part of the work with others
(b) sitting around and watching how others work
(c) being independent and doing things your own way
(d) refusing to help others unless they are friends

__c__ 37. You can <u>best</u> contribute to group goals when in a group activity by
(a) setting up your own rules
(b) being cooperative only when and if you desire
(c) following the rules set by the group
(d) asking others to follow your way

__a__ 38. You can find out which occupations have been developed within your lifetime by writing to
(a) the Department of Labor and the Chamber of Commerce
(b) the Department of Labor and the Honolulu Police Department
(c) the Department of Labor and the Visitors Bureau
(d) the Chamber of Commerce and the Honolulu Police Department

__d__ 39. The best way to find out what occupations have been developed during your lifetime is to
(a) read children's books
(b) ask a close friend
(c) view comic strips
(d) refer to an occupational handbook

__b__ 40. The best way to find out <u>why</u> a new occupation was created is by
(a) knowing how many people work in that occupation
(b) knowing what the occupation provides for people
(c) knowing who works in that occupation
(d) knowing whether the occupation is a daytime or nighttime job

__d__ 41. A policeman's job was created because society needs
(a) to take away people's property by force
(b) to take rich people's property and give it to poor people
(c) to give people traffic tickets and create money for the police department
(d) to protect people and their property

__b__ 42. To be successful in most jobs a worker should
(a) have a union card
(b) be skillful
(c) be friendly
(d) go to bed early

__c__ 43. To be successful in most jobs a worker should be
(a) friendly
(b) deliberate
(c) organized
(d) humorous

__a__ 44. To be successful in most jobs a worker should be
(a) responsible
(b) kind
(c) musical
(d) handsome

__a__ 45. To be successful in most jobs a worker should be
(a) cooperative
(b) considerate
(c) robust
(d) artistic

__c__ 46. A person must go to college to be
(a) an airline pilot
(b) a sanitation worker
(c) a professor
(d) a chef

__d__ 47. A nurse must take courses in
(a) mathematics
(b) English
(c) bookkeeping
(d) science

__b__ 48. An engineer must study
(a) biology and chemistry
(b) physics and mathematics
(c) history and geography
(d) economics and banking

__b__ 49. In order to become a doctor one must complete
(a) college, vocational school, and an apprenticeship
(b) college, medical school, and an internship
(c) vocational school, medical school, and an internship
(d) community college and medical school

__c__ 50. The best way to find out what occupations have been developed during your lifetime is by
(a) viewing comic strips
(b) reading children's books
(c) referring to an occupational handbook
(d) asking a close friend

Inventory Form B (continued)

Part 3

a 51. When you play a group game you know you can play well, you will likely feel very
(a) confident
(b) fearful
(c) tense
(d) weak

d 52. If you play in a group game and you win, you will probably feel
(a) selfish
(b) indifferent
(c) aggressive
(d) proud

c 53. Doing your share of work well in a group activity will make the group
(a) respect you less
(b) load you with extra work
(c) respect you more
(d) neglect you more

a 54. When several people participate in a group activity
(a) all of the participants should enjoy it
(b) only some of the participants need enjoy it
(c) only the leader should enjoy it
(d) none of the participants should enjoy it

b 55. I work in a courthouse. When people have arguments they cannot settle, they hire lawyers and present their arguments in front of me in court. I wear a robe and use a gavel. It is usually my job to decide which side is right. Who am I?
(a) mayor
(b) judge
(c) recorder
(d) senator

d 56. My job is important to everyone. I collect the garbage that people discard and put into cans and bags. If I did not do my job the garbage would collect on the streets and this would not be healthy. Who am I?
(a) fireman or firewoman
(b) policeman or policewoman
(c) meter reader
(d) sanitation worker

d 57. I work for the city. I am elected to be in charge of the city government. When things need to get done people call my office or attend our city council meetings. Who am I?
(a) governor
(b) police chief
(c) inspector
(d) mayor

c 58. One of my parents is a Republican and the other is a Democrat. They belong to what?
(a) service club
(b) trade unions
(c) political parties
(d) parent-teacher associations

a 59. Preventive medicine is best provided when
(a) doctors and nurses work together
(b) doctors and dentists work together
(c) doctors work alone
(d) dentists and nurses work together

a 60. The customers in an eating place are given the best service when
(a) counter workers and the fry cook work together
(b) fry cooks work alone
(c) counter workers work alone
(d) counter workers and customers work together

b 61. In order to manufacture an automobile it is important to have cooperation between
(a) customers and salespersons
(b) supervisors and assembly workers
(c) salespersons and assembly workers
(d) supervisors and customers

d 62. To provide a good education for Hawaii students it is especially important that
(a) the school clerk and bookkeeper work together
(b) the cafeteria workers and parents work together
(c) the maintenance workers and cafeteria workers work together
(d) the principals, teachers and parents work together

c 63. A baker's job depends on
(a) a broker's job
(b) a butcher's job
(c) a farmer's job
(d) a banker's job

a 64. The plastic industry is dependent upon the
(a) petroleum industry
(b) steel industry
(c) car industry
(d) cotton industry

a 65. A clothing salesperson's job depends upon the
(a) textile industry
(b) automobile industry
(c) food industry
(d) sugar industry

_b_ 66. The druggist's work depends on the work done by
(a) a teacher
(b) a doctor
(c) a storeclerk
(d) a policeman or policewoman

_c_ 67. Some people work because they want to
(a) kill time
(b) get tired
(c) make money
(d) relax

_b_ 68. Most people work because they want to
(a) get old faster
(b) feel useful
(c) waste their time
(d) sleep well at night

_a_ 69. Many people work because they want to
(a) make a living for themselves and their dependents
(b) take advantage of others
(c) use natural resources wisely
(d) punish themselves

_d_ 70. When parents are helping out at school by making things for school parties, they are
(a) relaxing
(b) teaching
(c) studying
(d) working

_b_ 71. A doctor's job is related to
(a) an engineer's job
(b) a druggist's job
(c) a banker's job
(d) a professor's job

_d_ 72. An engineer's job is related to
(a) a carpenter's job
(b) a chemist's job
(c) a teacher's job
(d) an architect's job

_b_ 73. A grocer's job is related to
(a) a baker's job
(b) a farmer's job
(c) a butcher's job
(d) a barber's job

_d_ 74. An actor's job is related to
(a) a realtor's job
(b) an architect's job
(c) a sculptor's job
(d) an actress's job

Inventory From B (continued)

__a__ 75. When you play a group game you know you can play well, you will likely feel very

(a) confident
(b) tense
(c) fearful
(d) weak

Inventory Form B (continued)

Part 4

__a__ 76. When you agree to do a share of work in a group activity, you have accepted
(a) a responsibility
(b) a privilege
(c) a right
(d) a hardship

__b__ 77. If you fail to do your share of work, your friends will probably think of you as being
(a) careless
(b) undependable
(c) forgetful
(d) carefree

__d__ 78. When you take a job, you are expected to
(a) do it whenever you are in the right mood
(b) ask somebody else to do it for you
(c) be carefree about doing it
(d) do it as best you can

__c__ 79. Workers will most likely be successful in their jobs if they are
(a) punctual, dependable, and artistic
(b) dependable, organized, and indulgent
(c) punctual, dependable, and organized
(d) punctual, organized, and evasive

__b__ 80. Taking part in an organized group activity most likely means
(a) learning new things and making money
(b) learning new things and making new friends
(c) making new friends and more money
(d) sharing things and giving up working

__c__ 81. Taking part in an organized group probably means
(a) giving up group goals
(b) sacrificing group goals for personal goals
(c) achieving personal goals by contributing to group goals
(d) giving up personal goals

__d__ 82. Taking part in an organized group probably means working
(a) independently
(b) competitively
(c) incompetently
(d) interdependently

__c__ 83. To take part in an organized group, one needs to be
(a) aggressive and agreeable
(b) aggressive and dependable
(c) agreeable and dependable
(d) agreeable and impersonal

d 84. In an election people do their voting at the
(a) senate chambers
(b) tax office
(c) T.V. station
(d) polls

c 85. We need to have laws in order to
(a) make jobs
(b) enforce rules
(c) protect society
(d) help lawmakers

a 86. In Hawaii state taxes are used to pay for
(a) schools
(b) industries
(c) newspapers
(d) hotels

c 87. When voting for a President, you would be least concerned about the person's
(a) leadership quality
(b) understanding of people's needs
(c) friendliness
(d) ability to solve problems

a 88. Some students help with chores at home without getting paid because they like to
(a) be praised
(b) get money
(c) spend time
(d) follow orders

d 89. Schools sometimes give prizes to students who
(a) do chores at home
(b) sit quietly in the classroom
(c) are very playful and friendly
(d) are excellent in their studies

a 90. An employer might reward a worker for doing a job well by giving the worker
(a) a promotion
(b) a club membership card
(c) a demotion
(d) a discharge note

b 91. A professor of chemistry might be rewarded by being
(a) awarded a badge for literary achievement
(b) awarded a medal for scientific distinction
(c) asked to retire early
(d) asked to write an autobiography

d 92. Pineapple workers live and work in
(a) warm, dry climates
(b) cold, wet climates
(c) cold, dry climates
(d) warm, wet climates

c 93. To have good crops it is most important for farmers to have water and
(a) barren soil
(b) good workers
(c) rich soil
(d) heavy trucks

a 94. Hawaii is a popular place for tourists because
(a) Hawaii has a beautiful climate
(b) Hawaii is the fiftieth state
(c) people in Hawaii are dependent on tourists
(d) Hawaii has so many different people

b 95. In order to keep tourists coming to Hawaii, we must keep Hawaii's beaches
(a) open only to tourists
(b) beautiful and clean
(c) under the control of hotels
(d) closed to surfers

c 96. When people join civic groups they will
(a) avoid working altogether
(b) avoid being interdependent
(c) become aware of their rights as citizens
(d) forget about their problems

b 97. By joining a civic group you can most likely learn how to be
(a) playful
(b) useful
(c) restless
(d) restful

d 98. When you join a civic group you will
(a) cooperate, compete and coordinate with others
(b) cooperate, compete, and organize with others
(c) coordinate, compete, and organize with others
(d) coordinate, cooperate, and organize with others

a 99. An organization that protects the welfare of the workers is called
(a) a labor union
(b) a political party
(c) a service club
(d) a professional society

__b__ 100. One may increase one's success in a job by being
(a) dependable, organized, and indulgent
(b) punctual, dependable, and organized
(c) organized, evasive, and punctual
(d) punctual, dependable, and artistic

APPENDIX G

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY

ADMINISTRATOR'S MANUAL OF INSTRUCTIONS - FORM C

* * * * * * * *

Student Growth Assessment of Career Development Inventory (SGACDI) battery is composed of items designed to measure the extent to which four major goals of career development are being achieved. The goals are: Self-Realization, Economic Efficiency, Social Relationships, and Civic Responsibility. The SGACDI battery consists of four forms. Form A is designed to measure achievement of third grade students. Form B is designed to measure achievement of sixth grade students. Form C is designed to measure achievement of ninth grade students. Form D is designed to measure achievement of twelfth grade students.

This manual describes administration procedures for the SGACDI Form C designed for administration to ninth grade students. It is important that these procedures be thoroughly understood and followed by anyone who is involved in administering the inventory.

Inventory Form C consists of 100 multiple choice items which will require about one hour to complete. To avoid student boredom and fatigue, the inventory may be administered in two or four sessions. Students can be asked to complete one or two parts for each session. Two possible schedules are as follow:

Schedule 1		Schedule 2	
Session 1	Part 1	Session 1	Parts 1 & 2
Session 2	Part 2	Session 2	Parts 3 & 4
Session 3	Part 3		
Session 4	Part 4		

PART 1

A. General Duties of the SGACDI Administrator

1. Supervising the administration of the SGACDI.

2. Selecting and instructing SGACDI proctors, if any.

3. Providing necessary materials such as pencils, erasers, inventory booklets.

4. Preventing distractions and interruptions, thus providing optimal conditions for the inventory administration.

5. Becoming thoroughly familiar with this manual, <u>in particular</u>, Part 2-B.

B. Materials Required

1. A copy of this manual should be on hand, and a large enough supply of the SGACDI booklets to provide one to each student and one to the administrator.

2. An adequate supply of sharpened No. 2 lead pencils with erasers should be on hand for students who forgot to bring pencils or in cases when their pencils break.

3. Tables and desks should be available for all students. If chairs with arms are used, adequate provision must be made for left-handed students.

PART 2

A. General Directions for the Administration of the Inventory

1. Instructions enclosed in boxes are to be read aloud by the administrator. In order to provide a standardized administering situation, these directions should not be changed.

2. Care should be taken to explain to students that they are <u>not</u> being graded, but they should do their best.

3. During the inventory completion, the administrator should walk around the room checking to see that students are following the procedures properly. The students should have nothing on their desks except the inventory booklets and pencils.

4. In response to questions about whether students should guess, say:

TRY TO ANSWER EVERY QUESTION. IF YOU ARE UNCERTAIN ABOUT AN ANSWER, SELECT THE ONE ALTERNATIVE YOU FEEL IS MOST NEARLY CORRECT.

5. Questions raised concerning the specific content of the item should not be answered by the administrator, except to clarify or define the meaning of words the students do not understand.

6. If testing is done in two or more sessions, the administrator should follow the "Specific Directions" (Part 2-B) in each testing session in order to reorient the students to the answering procedure.

7. If the testing is done in two or more sessions, the administrator should collect the inventory booklets systematically for each row or table, to facilitate redistribution in the next session, provided the students occupy the same seats.

8. If testing is done in two or more sessions, the students will use the same inventory booklets in each session. Therefore, the administrator should make sure each student receives his or her own booklet in each testing session. The administrator should ask the students to check their names on the booklets to see that they have their own booklets.

B. Specific Directions for the Administration of the Inventory

1. When all students have seated, say:

> YOU ARE GOING TO RECEIVE A BOOKLET ON CAREER DEVELOPMENT. DO NOT OPEN THE BOOKLET UNTIL I TELL YOU TO DO SO.

2. Now distribute the booklets and say:

> THE STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY IS EXACTLY WHAT THE TITLE SUGGESTS: AN INVENTORY OF YOUR GROWTH IN AREAS WHICH CONTRIBUTE TO CAREER DEVELOPMENT. THIS IS NOT A TEST. IT IS AN INVENTORY OF GROWTH IN FOUR AREAS WHICH RELATE TO CAREER DEVELOPMENT: SELF-REALIZATION, THAT IS, YOUR UNDERSTANDING OF YOURSELF; ECONOMIC EFFICIENCY, THAT IS, YOUR UNDERSTANDING OF WHAT IT TAKES TO BE AN EFFECTIVE PRODUCER OR CONSUMER OF GOODS AND SERVICES; SOCIAL RELATIONSHIPS, THAT IS, YOUR ABILITY TO GET ALONG WITH OTHERS; AND CIVIC RESPONSIBILITY, THAT IS, YOUR UNDERSTANDING OF THE RIGHTS AND RESPONSIBILITIES OF YOURSELF AND OTHERS. THE RESULTS OF THIS INVENTORY CAN HELP YOU IN ASSESSING YOUR CAREER DEVELOPMENT. DO NOT SPEND A GREAT DEAL OF TIME ON ANY ONE ITEM. DO NOT TALK OVER THE QUESTIONS WITH ANYONE ELSE. UNLESS THE ANSWER IS WHAT YOU THINK, IT WILL NOT REALLY HELP TO GIVE A TRUE PICTURE OF YOUR CAREER DEVELOPMENT.

3. Write the date, teacher's name, and school on the board, and say:

> WRITE YOUR FIRST AND LAST NAME ON THE TOP LINE. ON THE NEXT LINE GIVE YOUR GRADE, AGE, AND SEX. THEN ON THE NEXT TWO LINES IN THE SPACES PROVIDED WRITE YOUR TEACHER'S NAME, OUR SCHOOL, AND TODAY'S DATE. TODAY IS _____.

Provide assistance if necessary.

4. After each student has completed this part, proceed by saying:

> NOW LOOK AT THE SECTION WHERE IT SAYS "DIRECTIONS" AND READ IT SILENTLY AS I READ THE DIRECTIONS ALOUD.
> DIRECTIONS: FOR EACH ITEM IN THIS INVENTORY SELECT THE WORD OR PHRASE THAT BEST COMPLETES THE STATEMENT, AND WRITE THE LETTER OF YOUR CHOICE, (A), (B), (C), OR (D), ON THE LINE IN FRONT OF THE ITEM NUMBER.

NOW LOOK AT THE EXAMPLE GIVEN.

__C__ 1. THE NUMBER OF MONTHS IN ONE YEAR IS

(A) SEVEN
(B) TEN
(C) TWELVE
(D) TWENTY

THE BEST CHOICE IS TWELVE, SO THE LETTER C IS WRITTEN ON THE LINE IN FRONT OF THE STATEMENT. ARE THERE ANY QUESTIONS? (PAUSE)

5. Emphasize that:

NO QUESTIONS SHOULD BE LEFT UNANSWERED. FOR EACH QUESTION, ONLY ONE ANSWER MUST BE CHOSEN. IF A MISTAKE IS MADE, IT MUST BE ERASED COMPLETELY. WRITE YOUR ANSWER HEAVY AND CLEAR.

Make sure that everybody has understood the answering procedure.

6. Then say:

TODAY YOU ARE GOING TO ANSWER ITEMS NUMBER ___ TO NUMBER ___. AFTER YOU HAVE ANSWERED ALL THE QUESTIONS CLOSE YOUR BOOKLETS AND LEAVE THEM ON YOUR DESKS.

The administrator should provide the numbers in the box above from the segment of the inventory which is going to be completed in that session.

7. Then say:

YOU MAY NOW BEGIN WORK ON THE INVENTORY STARTING WITH ITEM NUMBER _____.

Please provide the item number.

8. If the testing is done in two or more sessions, at the end of a session conclude by saying:

THIS IS THE END OF THIS PART OF THE INVENTORY. WE WILL CONTINUE WITH THE NEXT PART IN THE NEXT SESSION. THE TIME FOR THE NEXT SESSION IS _____.

Please provide the time of next session.

C. Directions for Scoring

For scoring use Scoring Key - Form C. The inventory is made up of 4 parts. Each part includes 25 items, and measures achievement of objectives implementing one of the four goals of career development. Part 1 includes items 1 to 25. Part 2 includes items 26 to 50. Part 3 includes items 56 to 75. Part 4 includes items 76 to 100. Give one point for each correct

answer. Maximum possible score for each part will be 25 points, and for the whole inventory it will be 100 points.

SCORING KEY

CAREER DEVELOPMENT CONTINUUM INVENTORY - FORM C

Item	Answer	Item	Answer	Item	Answer	Item	Answer
1	b	26	c	51	a	76	d

25	c	50	b	75	d	100	d

PART 3

INVENTORY INTERPRETATIONS

The SGACDI has been develped to assess student growth in four areas: self-realization, economic efficiency, social relationships, and civic responsibility. The inventory is designed to measure the extent to which objectives of the Hawaii Career Development Continuum have been achieved; and to provide information to assist counselors and teachers in designing new or improving existing programs to meet student needs. The inventory items have been constructed to measure achievement in relation to the 4 goals, 24 subgoals and implementing learner objectives of the Hawaii Career Development Continuum. There are six subgoals to each goal, as shown in Table 1.

Table 1

Major Goals and Subgoals

Goals	Subgoals
Self-Realization	1. Acquire skills of self-appraisal.
	2. Develop awareness and understanding of self.
	3. Develop understanding of decision-making process.
	4. Acquire skills of decision-making, risk taking, value clarification, and goal setting.
	5. Develop understanding of the relationship between work and life style.
	6. Develop appreciation for individual differences in interests, values, aptitude, skills, abilities, attitudes.
Economic Efficiency	1. Develop understanding of variety of occupations, and knowledge of occupational classifications and job descriptions.
	2. Develop understanding that occupations exist for a purpose and contribute to the dignity of the individual.
	3. Develop appreciation for the value of work, its contribution to society and the economy, and appreciate that work means different things to different people.
	4. Develop understanding that new occupations develop in response to needs of society.
	5. Develop employability skills.
	6. Develop understanding of the relationship between education and work.
Social Relationships	1. Develop interpersonal skills.
	2. Develop understanding of social roles.
	3. Develop understanding of cooperation.
	4. Develop understanding of community workers.

	5. Develop appreciation for flexibility and adaptability in social relationships.
	6. Develop understanding of interrelatedness of occupational roles.
Civic Responsibility	1. Develop understanding of rights, privileges, and responsibilities on the job, in the home, in the community.
	2. Develop understanding of ways in which participation in civic groups contributes to individual and group goals.
	3. Develop understanding of importance of rules in society.
	4. Develop understanding of relationships between responsibilities and rewards in work and leisure.
	5. Develop capabilities for making effective use of resources and understand relation of environment to work.
	6. Develop ability to participate in various kinds of civic groups.

There are four items for each subgoal. These items relate to the learner objectives for the subgoal, as shown in Table 2. Items 1 to 24 test the achievement of the Self-Realization Subgoals. Items 26 to 49 test the achievement of the Economic Efficiency Subgoals. Items 51 to 74 test the achievement of the Social Relationships Subgoals. Items 76 to 99 test the achievement of the Civic Responsibility Subgoals. Items 25, 50, 75, and 100 are repeated items for checking reliability. A reliability check can be made by comparing responses to the following items: Items 25 and 6, 50 and 30, 75 and 59, 100 and 85. In Table 2 note that the dash signs imply that there were not any objectives for the corresponding items, but that the items were constructed according to the subgoal or the one single objective if available for that subgoal.

Note. SR = Self-Realization SR* = Social Relationships
EE = Economic Efficiency CR = Civic Responsibility

APPENDIX H

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY - FORM C

Student's Name_____

Grade_____ Age_____ Sex: Male Female

Teacher's Name_____

School_____ Date_____

The Student Growth Assessment of Career Development Inventory is exactly what the title suggests: an inventory of your growth in areas which contribute to career development. This is not a test. It is an inventory of growth in four areas which relate to career development: Self-Realization, that is, your understanding of yourself; Economic Efficiency, that is, your understanding of what it takes to be an effective producer or consumer of goods and services; Social Relationships, that is, your ability to get along with others; and Civic Responsibility, that is, your understanding of the rights and responsibilities of yourself and others. The results of this inventory can help you in assessing your career development. Do not spend a great deal of time on any one item. Do not talk over the questions with anyone else. Unless the answer is what you think, it will not really help to give a true picture of your career development.

DIRECTIONS: For each item in this inventory select the word or phrase that best completes the statement, and write the letter of your choice--(a), (b), (c), or (d)--on the line in front of the item number.

Example: __c__ 1. The number of months in one year is
(a) seven
(b) ten
(c) twelve
(d) twenty

The best choice is twelve, so the letter c is written on the line in front of the statement.

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO

Do Not Write Below This Line

PART	ITEMS	GOAL MEASURED	POSSIBLE SCORE	ACTUAL SCORE
1	1-25	Self-Realization	25	
2	26-50	Economic Efficiency	25	
3	51-75	Social Relationships	25	
4	76-100	Civic Responsibility	25	
		Total	100	

INVENTORY FORM C

Part 1

b 1. A worker who needs to be especially fast and physically fit is
(a) a carpenter
(b) a policeman/woman
(c) a bus driver
(d) a house cleaner

b 2. A worker who does an extraordinary amount of physical work is
(a) a salesperson
(b) a sanitation worker
(c) a bus driver
(d) a tour director

d 3. A worker whose job demands a very great amount of accuracy is
(a) an economic analyst
(b) an account clerk
(c) a technical writer
(d) a medical surgeon

a 4. In choosing an occupation, people should be aware of their own
(a) abilities, interests, and attitudes
(b) abilities, interests, and place of birth
(c) attitudes, interests, and cultural background
(d) attitudes, interests, and racial background

b 5. If you engage in an occupation that you dislike, you will more likely be
(a) successful if you read fast
(b) successful if you grow to like the work
(c) unsuccessful no matter what
(d) successful if you make friends easily

d 6. Your disinterest in a job may be changed to interest after you
(a) tell your feelings to a friend
(b) leave it aside for a while
(c) take a vacation abroad
(d) learn more about it

b 7. The best reason for being aware of your own strengths is so that you can
(a) hide them from others
(b) use them to choose the right occupation
(c) use them to take advantage of others
(d) forget about your weaknesses

c 8. It is important for you to be aware of your own weaknesses because you can then
(a) make sure nobody finds out about them
(b) forget about the weaknesses completely
(c) try to find out how to overcome the weaknesses
(d) try to find other people with the same weaknesses

Inventory Form C (continued)

d 9. The more you know about a situation
(a) the more confusing the situation becomes
(b) the more critical the time element becomes
(c) the better off your opponents will be
(d) the better prepared you will be to make decisions

c 10. People who are able to make good decisions tend to be more
(a) impulsive
(b) impatient
(c) successful
(d) educated

d 11. In making career decisions a person must think first of all in terms of
(a) parents' interests
(b) friends' interests
(c) public interests
(d) personal interests

a 12. When a person decides on a career, the most important factor would probably be
(a) personal satisfaction
(b) social status
(c) family tradition
(d) making money

c 13. If you plan to be a teacher, your high school course of study will most likely be
(a) general education
(b) vocational training
(c) college preparatory
(d) technical training

a 14. An undesirable occupation for a shy person would be
(a) insurance salesperson
(b) brickmason
(c) carpenter
(d) farmer

b 15. A person who places high value on achievement and recognition from others would be most likely to choose a career as
(a) a gardener
(b) a musician
(c) a taxi driver
(d) a sanitation worker

b 16. If several career opportunities are open to a person, one would have to consider
(a) job location, income, and one's own friends
(b) income, job location, and one's own values
(c) transportation, hours, and one's own friends
(d) transportation, food preference, and one's own values

__c__ 17. One's occupation will likely determine one's
(a) age and income
(b) religion and race
(c) income and friends
(d) race and friends

__d__ 18. The people in a particular occupational group most likely will have the same
(a) age
(b) sex
(c) friends
(d) living style

__b__ 19. One who has a liking for figures and calculation would do well as
(a) a typist
(b) a bookkeeper
(c) a machinist
(d) a librarian

__c__ 20. People who were workers in the Peace Corps probably found that their way of life
(a) did not change
(b) was changed educationally
(c) was changed economically and socially
(d) was changed politically

__c__ 21. When people of different ethnic backgrounds work and live together they tend
(a) to develop different interests
(b) to dislike each other more
(c) to develop similar values
(d) to be suspicious of each other

__b__ 22. When you work or live with people from different cultural or racial backgrounds, you should
(a) try to change your ways to their ways
(b) understand and respect their ways
(c) avoid associating with such people
(d) try to change their ways to your ways

__b__ 23. The factor which is <u>least</u> helpful to describe how two groups of people are different is
(a) religion
(b) total population
(c) race
(d) customs

__a__ 24. We can <u>best</u> describe how two groups of people differ in their way of life by observing their
(a) behaviors
(b) heights
(c) weights
(d) sizes

Inventory Form C (continued)

__c__ 25. Your disinterest in an occupation may be changed to interest after you

(a) leave it aside for a while
(b) take a vacation abroad
(c) learn more about it
(d) tell your feelings to a friend

Inventory Form C (continued)

Part 2

__c__ 26. A salesperson is one who works with
(a) things
(b) data
(c) people
(d) ideas

__b__ 27. A statistician is a person who works with
(a) things
(b) data
(c) people
(d) ideas

__a__ 28. A mechanic works with
(a) things
(b) data
(c) people
(d) ideas

__c__ 29. A community worker whose job is concerned mainly with people is a
(a) meter reader
(b) sanitation worker
(c) policeman/woman
(d) telephone repairperson

__d__ 30. The worker whose job is most directly important to the welfare of people is the
(a) salesperson
(b) florist
(c) ditch digger
(d) social worker

__c__ 31. Ambulance drivers probably increase their feelings of personal dignity because
(a) the hours of work are flexible
(b) the rate of pay is very high
(c) their work involves great responsibility
(d) their work involves some travel

__c__ 32. Nurses probably develop feelings of worth because
(a) their hours change from time to time
(b) the fringe benefits are extraordinary
(c) they are helping other people
(d) they meet important people

__b__ 33. People have respect for policemen and policewomen because
(a) people are afraid of them
(b) they enforce the law
(c) they can give traffic tickets
(d) they can arrest people

Inventory Form C (continued)

a 34. A service worker whose work is often done in resort hotels is a
(a) cook
(b) fireman/woman
(c) policeman/woman
(d) pharmacist

a 35. A worker who contributes to our environment by keeping it healthy and clean is
(a) a sanitation worker
(b) a medical doctor
(c) a social worker
(d) a licensed nurse

d 36. A person to whom money means a great deal might decide to be a
(a) travel agent
(b) teacher
(c) farmer
(d) lawyer

c 37. If no one in Honolulu had jobs,
(a) everybody would be free and happy
(b) there would be no conflicts or crimes
(c) there would be many people who were frustrated
(d) there would be no worry about the future

a 38. There are many different jobs in the society because
(a) there exist so many different needs
(b) people like to try different jobs
(c) the population is so large in this country
(d) there are so many different people in this country

d 39. New occupations are created in the society because
(a) young people do not like to do old jobs
(b) some people always like to try new jobs
(c) people get tired of doing old jobs over and over again
(d) new needs arise in the society

b 40. Our community would become totally unsafe without the services of our
(a) mailman/woman
(b) policeman/woman
(c) zookeepers
(d) social workers

d 41. Our Hawaiian communities would be hardest hit economically if we did not have the contribution of
(a) doctors and nurses
(b) architects and engineers
(c) policemen/women and firemen/women
(d) hotel and restaurant workers

Inventory Form C (continued)

_b_ 42. When an employer has many applications for a particular job, the applicant who is picked most likely will be the one having
(a) the most references
(b) the best job qualifications
(c) the greatest economic need
(d) the greatest mental ability

_a_ 43. Those workers who are usually hardest hit by unemployment are
(a) the unskilled workers
(b) the semi-skilled workers
(c) the craftsmen
(d) the professional workers

_d_ 44. Your chances of being hired for a job will increase if you have
(a) motor skills and manners
(b) good manners and attitudes
(c) good manners and skills
(d) good attitudes and skills

_d_ 45. Once you are hired for a job your chances of keeping the job will increase if you are
(a) neat, punctual, forgetful
(b) organized, dependent, carefree
(c) organized, carefree, impersonal
(d) efficient, organized, neat

_b_ 46. To be able to work as an electrician a person should have
(a) a high school diploma with courses in mechanical drawing
(b) one or two years of post-secondary vocational technical education
(c) four or five years of college education
(d) an engineering degree

_b_ 47. To be able to work as an engineer one should have
(a) a high school diploma with courses in industrial arts
(b) four or five years of college with courses in mathematics and physics
(c) one or two years of community college or vocational-technical school
(d) a high school diploma with courses in mechanical drawing

_c_ 48. A person who studies uses and compositions of medicines is called
(a) a chemist
(b) a biochemist
(c) a pharmacist
(d) a nutritionist

__a__ 49. To become a newspaper reporter, one should study
(a) journalism
(b) physics
(c) English
(d) chemistry

__b__ 50. The worker whose job is most directly important to the welfare of the people is the
(a) ditch digger
(b) social worker
(c) florist
(d) salesperson

Inventory Form C (continued)

Part 3

a 51. One who makes friends quickly and easily is most likely to be
(a) compatible
(b) aggressive
(c) impulsive
(d) seclusive

d 52. The best thing to do if you cannot get what you want from other people is to
(a) take it from them by force
(b) steal it if you can
(c) beg for it or cry
(d) remain calm and patient

c 53. A very effective way to gain an understanding of oneself is through
(a) plenty of exercise each morning
(b) a well balanced diet
(c) interacting with various people
(d) keeping to oneself and avoiding people

b 54. If a person criticizes you or your work, you should
(a) demand an immediate apology
(b) see how to best benefit from the criticism
(c) respond with counter criticism
(d) stop interacting with that person

d 55. The way a person behaves depends largely on
(a) the time of year
(b) the place you are in
(c) the interests you have
(d) the groups you are in

c 56. A person has an expected way to behave if the person
(a) goes surfing alone
(b) does homework
(c) joins the basketball team
(d) watches TV

a 57. You can best influence a group by
(a) participating in its activities
(b) reading about the group
(c) thinking a great deal about it
(d) hearing what others say about it

a 58. Being a member of a group, like Boy Scouts or Girl Scouts, helps a person to
(a) appreciate different ethnic groups
(b) develop independence in thinking
(c) develop skills in athletics
(d) acquire skills in self-understanding

b 59. In a group activity participants should work
(a) independently
(b) cooperatively
(c) competitively
(d) impersonally

c 60. When participating in a group activity, the members should
(a) follow their own rules
(b) help others if they feel like it
(c) cooperate with others to do the task
(d) avoid being dependent on others

a 61. The effect of teamwork is that work is done more
(a) effectively
(b) inefficiently
(c) slowly
(d) competitively

a 62. People often cooperate to do things because
(a) they find it essential to their survival
(b) they are afraid of competing with each other
(c) they are too lazy to do things alone
(d) they like to check and control each other

d 63. To make the pineapple industry profitable, it is necessary for the jobs of cannery workers and pineapple pickers to be
(a) independent
(b) controlled
(c) competitive
(d) interrelated

a 64. A doctor's occupation is most closely related to that of
(a) a nurse
(b) a chemist
(c) a biochemist
(d) a physicist

c 65. A civil engineer's job is most closely related to
(a) a carpenter's job
(b) a sanitation engineer's job
(c) an architect's job
(d) a pilot's job

b 66. A newspaper editor's job is most closely related to
(a) a sociologist's job
(b) a journalist's job
(c) a realtor's job
(d) a biologist's job

d 67. People who can change their behavior from one situation to another are
(a) inconsistent
(b) maladjusted
(c) irresponsive
(d) flexible

b 68. A person who is able to play different roles when on a group project would most likely
(a) constantly interfere in everybody's work
(b) facilitate the completion of the project
(c) delay the completion of the project
(d) push everybody else aside and do the project alone

d 69. The best reason for changing from one occupation to a new or a different occupation is that a person
(a) is mentally unstable
(b) is not able to stick to a single job for long
(c) does not know what he or she really wants
(d) sees the change as essential to survival and success

a 70. Over a long period of time the relationship between any two people will most likely
(a) change somewhat
(b) remain the same
(c) become stronger
(d) become weaker

a 71. A baker's job would not continue to exist if there were no
(a) farmers
(b) teachers
(c) coal miners
(d) doctors

d 72. Your daily life at school is probably influenced most by
(a) teachers and custodians
(b) teachers and principal
(c) friends and principal
(d) teachers and friends

c 73. In order to build a house, one will likely need the services of
(a) a machinist, an electrician, and a carpenter
(b) an assembler, an architect, and an electrician
(c) a carpenter, a painter, and a plumber
(d) a plumber, a glazier, and an assembler

b 74. To meet the basic needs of the tourist industry, Hawaii needs
(a) hotel managers, tour directors, and movie projectionists
(b) food service workers, hotel workers, and bus drivers
(c) stenographers, typists, and immigration officials
(d) barbers, beauticians, and salesclerks

d 75. When people participate in a group task they tend to work
(a) impersonally
(b) competitively
(c) independently
(d) interdependently

Inventory Form C (continued)

Part 4

__d__ 76. Sharing part of the work in a group project means you should
(a) be unconcerned if the task is completed
(b) be unconcerned if the rest complete their parts of the task
(c) strictly stick to your own rules and standards
(d) be concerned with the efficiency of task completion

__c__ 77. If you accept a share of work in a group task but fail to do it as you promisted to, the other members would think of you as being
(a) careless
(b) forgetful
(c) irresponsible
(d) carefree

__a__ 78. An employee working for a company should follow the company rules
(a) even if they may seem unfair
(b) only as long as they are fair
(c) only if the worker is paid enough
(d) only if they are approved

__c__ 79. The safety rules in a construction company are for
(a) keeping the tools and machines undamaged
(b) operating the company efficiently
(c) the safety of the workers themselves
(d) the safety of the building itself

__a__ 80. Participating as a volunteer in a civic group would mean
(a) contributing to a cause
(b) avoiding working
(c) killing extra time
(d) earning extra money

__b__ 81. Participating in a civic group like the League of Women Voters will increase a person's chances for
(a) discussing personal problems and family matters
(b) becoming more aware of one's rights as a citizen
(c) creating an independent group in the community
(d) contributing to the blood bank in the community

__b__ 82. A person who joins a civic organization should be able
(a) to compete with others in the group
(b) to take initiative when necessary
(c) to be domineering and agressive
(d) to be submissive and non-challenging

c 83. People usually join civic organizations to
(a) gain self-understanding
(b) participate in social activities
(c) fight against social injustice
(d) make new friends

d 84. Labor unions were established in order
(a) to create new leadership roles among workers
(b) to have control over workers and check if they work properly
(c) to have workers get together sometimes to exchange their working knowledge
(d) to protect the rights and privileges of the workers

c 85. The reason for establishing laws in the society is
(a) to provide jobs for the lawyers
(b) to provide jobs for the police
(c) to provide protection of society
(d) to make money for the city

a 86. Rules and regulations which restrict areas where hiking is permitted
(a) should be obeyed under all circumstances
(b) should be obeyed only if rangers are around
(c) should not be obeyed if no fines are imposed
(d) should be obeyed under special circumstances

d 87. Laws and rules that are established in a society
(a) should never be changed
(b) should be changed if lawyers say so
(c) should be changed once in a while so that politicians can keep their jobs
(d) should be changed if most of the people say so

a 88. Working should give a person a feeling of being
(a) useful
(b) playful
(c) wasteful
(d) useless

d 89. Working should give a person a sense of
(a) belonging, incompetence, and achievement
(b) belonging, dependency, and unimportance
(c) achievement, impersonality, and importance
(d) belonging, achievement, and worth

b 90. Working should provide an opportunity for a person to satisfy his or her need for
(a) status, approval, and impersonality
(b) status, approval, and giving service
(c) approval, giving service, and aggression
(d) aggression, approval, and dependency

__c__ 91. A person who works will likely develop a strong appreciation for
(a) wastefulness
(b) dependency
(c) leisure time
(d) snobbishness

__c__ 92. The purpose of recycling cans and newspapers is
(a) to create new jobs for the unemployed
(b) to increase companies' profits
(c) to conserve resources
(d) to overcome temporary shortages of such products

__d__ 93. A social worker's job deals with conservation of
(a) natural resources
(b) energy
(c) endangered species
(d) human resources

__a__ 94. Keeping the environment clean is the responsibility of
(a) every person in the country
(b) sanitation workers
(c) all those who use motor vehicles
(d) all residents who live in cities

__b__ 95. Keeping the environment clean most likely will result in
(a) decreased use of resources
(b) less disease and death
(c) greater social costs
(d) greater personal loss

__a__ 96. Workers should be punctual for their work
(a) if they want to increase their chances for advancement
(b) only if they find the job is interesting
(c) if they will be fined for being late
(d) if they notice other workers are punctual

__d__ 97. Dependability in a job means that
(a) certain workers can be depended upon to complete everyone else's work
(b) one can depend on others to complete one's assigned work
(c) the worker is a helpless and dependent person
(d) the worker will complete the assigned work on time

__c__ 98. An employer of airplane mechanics usually wants to have employees who have
(a) intelligence, mental ability, good work habits
(b) psychomotor skills, manipulative skills
(c) good work habits, mental and motor skills
(d) mental abilities, motor skills, intelligence

__a__ 99. Personal traits that are important factors in working in groups are
(a) punctuality and dependability
(b) strength and aggressiveness
(c) sensitivity and stubbornness
(d) verbal skills and energy

__d__ 100. Laws are established in the society in order
(a) to make money for the city
(b) to create jobs for the lawyers
(c) to create jobs for the police
(d) to provide protection of society

APPENDIX I

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY

ADMINISTRATOR'S MANUAL OF INSTRUCTION - FORM D

* * * * * * * *

Student Growth Assessment of Career Development Inventory (SGACDI) battery is composed of items designed to measure the extent to which four major goals of career development are being achieved. The goals are: Self-Realization, Economic Efficiency, Social Relationships, and Civic Responsibility. The SGACDI battery consists of four forms. Form A is designed to measure achievement of third grade students. Form B is designed to measure achievement of sixth grade students. Form C is designed to measure achievement of ninth grade students. Form D is designed to measure achievement of twelfth grade students.

This manual describes administration procedures for the SGACDI Form D. It is important that these procedures be understood and followed by anyone who is involved in administering the inventory.

Inventory Form D consists of 100 multiple choice items which will require about one hour to complete. There are four parts, each part consisting of 25 items related to the four goals of career development. To avoid student boredom and fatigue, the inventory may be administered in two or four sessions. Students can be asked to complete one or two parts for each session. Two possible schedules are:

Schedule 1		Schedule 2	
Session 1	Part 1	Session 1	Parts 1 & 2
Session 2	Part 2	Session 2	Parts 3 & 4
Session 3	Part 3		
Session 4	Part 4		

Part 1

A. General Duties of the SGACDI Administrator

1. Supervising the administration of the SGACDI.

2. Selecting and instructing SGACDI proctors if any.

3. Providing necessary materials such as pencils, erasers, inventory bookelets.

4. Preventing distractions and interruptions, thus providing optimal conditions for the inventory adminitration.

5. Becoming thoroughly familiar with this manual, <u>in particular</u> Part 2-B.

B. Materials Required

1. A copy of the manual should be on hand as well as a large enough supply of the SGACDI booklets to provide one for each student and one to the administrator.

2. An adequate supply of sharpened No. 2 lead pencils with erasers should be on hand for students who forget to bring pencils or in cases when their pencils break.

3. Tables and desks should be available for all students. If chairs with arms are used, adequate provision must be made for left-handed students.

Part 2

A. General Directions for the Administration of the Inventory

1. Instructions enclosed in boxes are to be read aloud by the administrator. In order to provide a standardized administering situation, these directions should not be changed.

2. Care should be taken to explain to students that they are <u>not</u> being graded, but they should do their best.

3. During the inventory completion, the administrator should walk around the room checking to see that the students are following the procedures correctly. The students should have nothing on their desks except the inventory booklets and pencils.

4. In response to questions about whether students should guess, say:

TRY TO ANSWER EVERY QUESTION. IF YOU ARE UNCERTAIN ABOUT AN ANSWER, SELECT THE ONE ALTERNATIVE YOU FEEL IS MOST NEARLY CORRECT.

5. Questions raised concering the specific content of the item should not be answered by the administrator, except to clarify or define the meaning of words the students do not understand.

6. If testing is done in two or more sessions, the administrator should follow the "Specific Directions" (Part 2-B) in each testing session in order to reorient the students to the answering procedure.

7. If testing is done in two or more sessions, the administrator should collect the inventory booklets systematically for each row or table, to facilitate redistribution in the next session, provided the students occupy the same seats.

8. If testing is done in two or more sessions, the students will use the same booklets in each session. Therefore, the administrator should make sure each student receives his or her own booklet in each session. The administrator should ask the students to check their names on the booklets to see that they have their own booklets.

B. Specific Directions for the Administration of the Inventory

1. When all students have been seated, say:

> YOU ARE GOING TO RECEIVE A BOOKLET ON CAREER DEVELOPMENT. DO NOT OPEN THE BOOKLET UNTIL I TELL YOU TO DO SO.

2. Now distribute the booklets and say:

> THE STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY IS EXACTLY WHAT THE TITLE SUGGESTS: AN INVENTORY OF YOUR GROWTH IN AREAS WHICH CONTRIBUTE TO CAREER DEVELOPMENT. THIS IS NOT A TEST. IT IS AN INVENTORY OF GROWTH IN FOUR AREAS WHICH RELATE TO CAREER DEVELOPMENT: SELF-REALIZATION, THAT IS, YOUR UNDERSTANDING OF YOURSELF; ECONOMIC EFFICIENCY, THAT IS YOUR UNDERSTANDING OF WHAT IT TAKES TO BE AN EFFECITVE PRODUCER OR CONSUMER OF GOODS AND SERVICES; SOCIAL RELATIONSHIPS, THAT IS, YOUR ABILITY TO GET ALONG WITH OTHERS; AND CIVIC RESPONSIBILITY, THAT IS, YOUR UNDERSTANDING OF THE RIGHTS AND RESPONSIBILITIES OF YOURSELF AND OTHERS. THE RESULTS OF THIS INVENTORY CAN HELP YOU IN ASSESSING YOUR CAREER DEVELOPMENT. DO NOT SPEND A GREAT DEAL OF TIME ON ANY ONE ITEM. DO NOT TALK OVER THE QUESTIONS WITH ANYONE ELSE. UNLESS THE ANSWER IS WHAT YOU THINK, IT WILL NOT REALLY HELP TO GIVE A TRUE PICTURE OF YOUR CAREER DEVELOPMENT.

3. Write the date, teacher's name, and school on the board and say:

> WRITE YOUR FIRST AND LAST NAME ON THE TOP LINE. ON THE NEXT LINE, GIVE YOUR GRADE, AGE AND SEX. THEN ON THE NEXT TWO LINES IN THE SPACES PROVIDED WRITE YOUR TEACHER'S NAME, OUR SCHOOL, AND TODAY'S DATE. TODAY IS _____.

Provide assistance if necessary.

4. After each student has completed this part, proceed by saying:

> NOW LOOK AT THE SECTION WHERE IT SAYS "DIRECTIONS," AND READ IT SILENTLY AS I READ THE DIRECTIONS ALOUD.
>
> DIRECTIONS: FOR EACH ITEM IN THIS INVENTORY SELECT THE WORD OR PHRASE THAT BEST COMPLETES THE STATEMENT, AND WRITE THE LETTER OF YOUR CHOICE, (a), (b), (c), or (d), ON THE LINE IN FRONT OF THE ITEM NUMBER.
>
> NOW LOOK AT THE EXAMPLE GIVEN.
>
> __c__ THE NUMBER OF MONTHS IN ONE YEAR IS
>
> (a) SEVEN
> (b) TEN
> (c) TWELVE
> (d) TWENTY
>
> THE BEST CHOICE IS TWELVE, SO THE LETTER __c__ IS WRITTEN ON THE LINE IN FRONT OF THE STATEMENT.
>
> ARE THERE ANY QUESTIONS? (PAUSE)

5. Emphasize that:

NO QUESTION SHOULD BE LEFT UNANSWERED. FOR EACH QUESTION ONLY ONE ANSWER MUST BE CHOSEN. IF A MISTAKE IS MADE IT MUST BE ERASED COMPLETELY. WRITE YOUR ANSWER HEAVY AND CLEAR.

Make sure that everybody understands the answering procedures.

6. Then say:

TODAY YOU ARE GOING TO ANSWER ITEMS NUMBER ____ TO NUMBER ____. AFTER YOU HAVE ANSWERED ALL THE QUESTIONS, CLOSE YOUR BOOKLETS AND LEAVE THEM ON YOUR DESKS.

The administrator should provide the numbers in the box above from the segment of the inventory which is going to be completed in that session.

7. Then say:

YOU MAY NOW BEGIN WORK ON THE INVENTORY STARTING WITH ITEM NUMBER _____.

Please provide the number.

8. If testing is done in two or more sessions, at the end of the session conclude by saying:

THIS IS THE END OF THIS PART OF THE INVENTORY. WE WILL CONTINUE WITH THE NEXT PART IN THE NEXT SESSION. THE TIME FOR THE NEXT SESSION IS _____.

Please provide the time of the next session.

C. Directions for Scoring

For scoring uses the Scoring Key Form D. The inventory is made up of 4 parts. Each part includes 25 items, and measures achievement of objectives implementing one of the four goals of career development. Part 1 includes items 1 to 25. Part 2 includes items 26 to 50. Part 3 includes items 51 to 75. Part 4 includes items 76 to 100. Give one point for each correct answer. Maximum score for each part will be 25 points, and for the whole inventory it will be 100 points.

SCORING KEY

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY - FORM D

Item	Answer	Item	Answer	Item	Answer	Item	Answer
1	d	26	b	51	d	76	c
2	b	27	d	52	b	77	c
3	c	28	d	53	d	78	a
4	a	29	a	54	a	79	d
5	c	30	a	55	a	80	c

24	c	49	b	74	a	99	a
25	b	50	a	75	c	100	d

Part 3

Inventory Interpretations

The SGACDI has been developed to assess student growth in four areas: self-realization, economic efficiency, social relationships, and civic responsibility. The inventory is designed to measure the extent to which objectives of the Hawaii Career Development Continuum have been achieved; and to provide information to assist counselors and teachers in designing new or improving existing programs to meet student needs. The inventory items have been constructed to measure achievement in relation to the 4 goals, 24 subgoals and implementing learner objectives of the Hawaii Career Development Continuum. There are 6 subgoals to each goal as shown in Table 1.

Table 1

Major Goals and Subgoals

Goals	Subgoals
Self-Realization	1. Acquire skills of self-appraisal.
	2. Develop awareness and understanding of self.
	3. Develop understanding of decision-making process.
	4. Acquire skills of decision-making, risk taking, value clarification, and goal getting.
	5. Develop understanding of the relationship between work and life style.
	6. Develop appreciation for individual differences in interests, values, aptitude, skills, abilities, attitudes.
Economic Efficiency	1. Develop understanding of variety of occupations, interrelationship of occupations, and knowledge of occupational classifications and job descriptions.
	2. Develop understanding that occupations exist for a purpose and contribute to the dignity of the individual.
	3. Develop appreciation for the value of work, its contribution to society and the economy, and appreciate that work means different things to different people.
	4. Develop understanding that new occupations develop in response to needs of society.
	5. Develop employability skills.
	6. Develop understanding of the relationship between education and work.
Social Relationships	1. Develop interpersonal skills.
	2. Develop understanding of social roles.
	3. Develop understanding of cooperation.

	4. Develop understanding of community workers.
	5. Develop appreciation for flexibility and adaptability in social relationships.
	6. Develop understanding of interrelatedness of occupational roles.
Civic Responsibility	1. Develop understanding of rights, privileges, and responsibilities on the job, in the home, in the community.
	2. Develop understanding of ways in which participation in civic groups contributes to individual and group goals.
	3. Develop understanding of importance of rules in society.
	4. Develop understanding of relationships between responsibilities and rewards in work and leisure.
	5. Develop capabilities for making effective use of resources and understand relation of environment to work.
	6. Develop ability to participate in various kinds of civic groups.

There are four items for each subgoal. These items relate to the learner objectives for the subgoal, as shown in Table 2. Items 1 to 24 test the achievement of the Self-Realization Subgoals. Items 26 to 49 test the achievement of the Economic Efficiency Subgoals. Items 51 to 74 test the Social Relationships Subgoals. Items 76 to 99 test the achievement of Civic Responsibility Subgoals. Items 25, 50, 75, and 100 are repeated items for checking reliability. A reliability check can be made by comparing responses to the following items: Items 25 and 6, 50 and 29, 75 and 59, 100 and 81. The dash marks in Table 2 imply that there were no objectives for the corresponding items, but that the items were constructed according to the subgoal or the one single objective if available for that subgoal.

Table 2

Note. SR = Self-Realization
EE = Economic Efficiency
SR* = Social Relationships
CR = Civic Responsibility

APPENDIX J

STUDENT GROWTH ASSESSMENT OF CAREER DEVELOPMENT INVENTORY - FORM D

Student's Name_____

Grade_____ Age_____ Sex: Male Female

Teacher's Name_____

School_____ Date_____

The Student Growth Assessment of Career Development Inventory is exactly what the title suggests: an inventory of your growth in areas which contribute to career development. This is not a test. It is an inventory of growth in four areas which relate to career development: Self-Realization, that is, you understanding of yourself; Economic Efficiency, that is, your understanding of what it takes to be an effective producer or consumer of goods and services; Social Relationships, that is, your ability to get along with others; and Civic Responsibility, that is, your understanding of the rights and responsibilities of yourself and others. The results of this inventory can help you in assessing your career development. Do not spend a great deal of time on any one item. Do not talk over the questions with anyone else. Unless the answer is what you think, it will not really help to give a true picture of your career development.

DIRECTIONS: For each item in this inventory select the word or phrase that best completes the statement, and write the letter of your choice--(a), (b), (c), or (d)--on the line in front of the item number.

Example: __c__ 1. The number of months in one year is
(a) seven
(b) ten
(c) twelve
(d) twenty

The best choice is twelve, so the letter c is written on the line in front of the statement.

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO

Do Not Write Below This Line

PART	ITEMS	GOAL MEASURED	POSSIBLE SCORE	ACTUAL SCORE
1	1-25	Self-Realization	25	
2	26-50	Economic Efficiency	25	
3	51-75	Social Relationships	25	
4	76-100	Civic Responsibility	25	
		Total	100	

INVENTORY FORM D

Part 1

__d__ 1. To communicate effectively with different people in various situations and various positions it is necessary for a person
(a) to have a loud voice
(b) to have access to a microphone
(c) to be acquainted with them
(d) to have the necessary vocabulary

__b__ 2. Among the following pairs of persons, the pair who probably can communicate best with each other is
(a) electrical engineer and geologist
(b) psychologist and social worker
(c) psychiatrist and archeologist
(d) botanist and neurologist

__c__ 3. Among the following pairs of workers, the pair who probably can communicate most easily with each other in their work is
(a) surgeon and architect
(b) crane operator and radio operator
(c) zoologist and neurologist
(d) bookkeeper and bookseller

__a__ 4. One would choose a future occupation according to existing opportunities and one's own
(a) values, interests, and desired lifestyle
(b) values, interests, and religious affiliation
(c) attitude, ability, and ethnic background
(d) racial, cultural, and religious background

__c__ 5. A person who has a liking for figures and calculation would do well as
(a) a machinist
(b) a typist
(c) a bookkeeper
(d) a pharmacist

__b__ 6. A person who is interested in creative work would likely do well as
(a) a plumber
(b) an architect
(c) a doctor
(d) an engineer

__a__ 7. A person who likes to help people with their emotional and personal problems would likely do well as
(a) a social worker
(b) a medical doctor
(c) a librarian
(d) a policeman/woman

Inventory Form D (continued)

__c__ 8. Maximizing one's potential in daily life means
(a) devoting yourself to many necessary and unnecessary things
(b) doing many things that you both desire and do not desire
(c) planning to make best use of one's talents
(d) going through an intense program of physical fitness

__a__ 9. Once one makes a decision one should
(a) accept the consequences even if they don't live up to expectations
(b) accept the consequences only if they are desirable
(c) place blame for the consequences on others
(d) deny making the decision if it turns out badly

__b__ 10. A person who is responsible
(a) welcomes taking risks
(b) accepts the outcome of his or her action
(b) saves face by denying failure
(d) accepts only the good parts of his or her action

__b__ 11. In any life career decision the element of chance is involved
(a) never
(b) always
(c) seldom
(d) randomly

__d__ 12. One of the best reasons for choosing a career is
(a) to be well liked
(b) to buy a car
(c) to get away from home
(d) to be useful

__d__ 13. In making a career decision one of the first things to do is
(a) check working conditions
(b) compare opportunities
(c) consider benefits
(d) set goals

__c__ 14. A personal factor which might influence the choice of a career yet be beyond a person's control would be
(a) educational preparation
(b) skill acquisition
(c) physical limitations
(d) employment opportunity

__c__ 15. A person who has completed high school would be able to work as
(a) an electronic technician
(b) a computer programmer
(c) a bus driver
(d) a nurse

__d__ 16. A person who wants to become an engineer must have
(a) a high school diploma with courses in mechanical drawing
(b) one or two years of community college or vocational training
(c) a high school diploma with courses in industrial arts
(d) four or five years of college with courses in math and physics

__c__ 17. One who values power and wants to have influence over others would likely choose to be
(a) a professor
(b) a pilot
(c) a politician
(d) a painter

__b__ 18. A person who likes to travel and change work location might choose to be
(a) a dentist
(b) an archeologist
(c) a veterinarian
(d) a barber

__b__ 19. One who enjoys working <u>outdoors</u> might choose to be
(a) a plumber
(b) a mail carrier
(c) a janitor
(d) a carpenter

__a__ 20. The one who is most likely to change lifestyles when given a promotion is
(a) a diplomat
(b) a geologist
(c) a bus driver
(d) a pilot

__d__ 21. A person with a negative self-image would most likely
(a) be highly active in many social organizations
(b) be highly ambitious and assertive
(c) show more respect for self than for others
(d) tend to blame self rather than others for mistakes

__b__ 22. People have feelings of dignity and worth
(a) for the same reasons
(b) for different reasons
(c) for no reason
(d) for selected reasons

Inventory Form D (continued)

__d__ 23. One way to differentiate between yourself and another person is to see
(a) what things both of you can do
(b) what things both of you cannot do
(c) what things both of you can and cannot do
(d) what things one of you can do but the other one cannot do

__c__ 24. One can compare personalities of two persons best by comparing their
(a) age, race, and religion
(b) height, weight, and size
(c) values, abilities, and attitudes
(d) date of birth, place of birth, and income

__b__ 25. One who is interested in creative work would likely do well as
(a) a plumber
(b) an architect
(c) a doctor
(d) an engineer

Inventory Form D (continued)

Part 2

_b_ 26. Office occupations include
(a) waiter, waitress, cook, cashier
(b) bookkeeper, secretary, bill collector, clerk
(c) dancer, actor, singer, comedian
(d) personal manager, economist, engineer, statistician

_d_ 27. Fine arts and humanities occupations include
(a) nurse, doctor, lawyer, pharmacist
(b) mailman/woman, fireman/woman, bus driver, policeman/woman
(c) machinist, carpenter, plumber, electrician
(d) artist, poet, sculptor, musician

_d_ 28. The jobs <u>least</u> related to each other are
(a) dancer, actor, singer, musician
(b) banker, insurance adjuster, teller, broker
(c) house builder, road worker, heavy equipment operator, electrician
(d) architect, artist, archeologist, astronomer

_a_ 29. A construction worker's job is most closely related to that of
(a) an architect
(b) a banker
(c) a machinist
(d) an auto mechanic

_a_ 30. Sanitation workers probably increase their feelings of personal dignity because
(a) their work is essential
(b) the hours or work are flexible
(c) the rate of pay is very high
(d) their work develops physical fitness

_d_ 31. Most governors' secretaries feel pride in their work because
(a) they work in plush surroundings
(b) they meet important people
(c) the hours are flexible
(d) the governor's position is important to the state

_b_ 32. The meter reader develops a feeling of worth because
(a) the work is largely outdoors
(b) the city's income depends partly upon the work
(c) the hours are very flexible
(d) the work involves some travel

_b_ 33. The long distance telephone operator develops feelings of self-satisfaction because
(a) the hours change from time to time
(b) the work provides service to others
(c) the fringe benefits are extraordinary
(d) the conversations are interesting to overhear

Inventory From D (continued)

a 34. The worker whose service all of us receive almost every day is
(a) mailman/woman
(b) doctor
(c) pharmacist
(d) bus driver

c 35. The worker whose service is likely to be least urgently needed by the community is the
(a) bus driver
(b) policeman/woman
(c) social worker
(d) sanitation worker

d 36. An occupation from which a person might make either a lot of money or very little money is
(a) a librarian
(b) a secretary
(c) a professor
(d) a singer

a 37. If a person chooses to work for the Salvation Army or the Goodwill Industries, one can probably assume that money
(a) means very little to him or her
(b) means a great deal to him or her
(c) is the root of all evil
(d) has always been a problem

d 38. New occupations emerge because
(a) young people do not like to do old jobs
(b) some people are always interested in new jobs
(c) people get tired of doing old jobs over and over
(d) new needs develop in the society

c 39. The employment outlook of an occupation refers to
(a) where workers are located
(b) where workers are watched from outside
(c) future employment opportunities
(d) whether workers can look at outside activities

c 40. An expansion in the oil industry very likely would increase demand most for
(a) industrial engineers
(b) aeronautical engineers
(c) petrochemical engineers
(d) electrical engineers

b 41. An expansion in the space industry very likely would increase the need most for
(a) chemists
(b) physicists
(c) biochemists
(d) architects

_b_ 42. When many people apply for a particular job, the employer will likely pick the one having
(a) the most education
(b) the best job qualifications
(c) the greatest economic need
(d) the greatest mental ability

_d_ 43. The worker hardest hit by unemployment is likely to be the
(a) semi-skilled worker
(b) craftsman
(c) professional person
(d) unskilled worker

_b_ 44. A person getting an entry-level job would need to be able to demonstrate
(a) interpersonal skills
(b) employability skills
(c) communication skills
(d) mathematical skills

_a_ 45. A worker <u>most</u> capable of entering a job requiring work with data would be
(a) a statistician
(b) an electrician
(c) a radio operator
(d) a computer operator

_c_ 46. To be able to work as a newspaper reporter one has to study
(a) English
(b) philosophy
(c) journalism
(d) sociology

_b_ 47. A hotel manager would be wise to study
(a) civil service
(b) business administration
(c) home economics
(d) bookkeeping

_c_ 48. One who has studied the uses and compositions of medicines is called
(a) a chemist
(b) a dietician
(c) a pharmacist
(d) a nutritionist

_b_ 49. The person most likely to need a college degree would be
(a) a folk singer
(b) music professor
(c) piano teacher
(d) a rock musician

__a__ 50. A construction worker's job is most closely related to that of
(a) an architect
(b) a banker
(c) a machinist
(d) an auto mechanic

Inventory Form D (continued)

Part 3

__d__ 51. A good employer-employee relationship would be one based on
(a) impersonal interaction
(b) mutual non-interaction
(c) completely formal interaction
(d) personal interaction

__b__ 52. In order to keep a friend, it is important to be
(a) impulsive
(b) understanding
(c) dominant
(d) secretive

__d__ 53. If one cannot get from others what one needs, the best thing to do is
(a) to demand it from people
(b) to take it from people by force
(c) to steal it from people if necessary
(d) to remain patient and calm

__a__ 54. In all job interviews it is important to have good
(a) social skills
(b) computation skills
(c) mechanical skills
(d) psychomotor skills

__a__ 55. A <u>social role</u> which is important to most high school seniors is that of
(a) student
(b) child
(c) employee
(d) athlete

__b__ 56. The way a person behaves at any particular time depends largely on
(a) the time of year
(b) the group you are in
(c) the talents you have
(d) the place you are born

__c__ 57. A person's behavior is determined largely by others when the person
(a) rides a bicycle
(b) becomes a pilot
(c) joins a club
(d) watches T.V.

__a__ 58. A person has an expected way to behave if the person
(a) joins the basketball team
(b) goes swimming alone
(c) watches T.V.
(d) does homework

_c_ 59. Participating in a group activity means working
(a) independently
(b) competitively
(c) cooperatively
(d) impersonally

_d_ 60. Participating in a group activity requires
(a) following your own rules
(b) helping others if one feels like it
(c) avoiding being dependent on others
(d) following the rules of the group

_d_ 61. In any group situation it is important for the members to
(a) try to get recognition
(b) do the tasks alone
(c) ignore the rules
(d) be willing to give and take

_a_ 62. When a team cooperates on a project, the result is most likely to be
(a) creative and innovative
(b) conventional and correct
(c) limited and conforming
(d) traditional and sterile

_b_ 63. A policeman needs to be above average in
(a) verbal aptitude
(b) interpersonal skills
(c) computation skills
(d) spatial aptitude

_a_ 64. Public service occupations include
(a) fireman/woman, policeman/woman, bus driver, mailman/woman
(b) banker, broker, barber, baker
(c) nurse, doctor, lawyer, engineer
(d) stenographer, stockbroker, file clerk, typist

_c_ 65. The fireman/woman needs to be above average in
(a) verbal aptitude
(b) spatial ability
(c) physical agility
(d) interpersonal skills

_c_ 66. The sanitation worker needs to be above average in
(a) finger dexterity
(b) verbal aptitude
(c) physical strength
(d) quantitative aptitude

_a_ 67. Where the rules of a game are changed, it is most important for the players to
(a) play by the new rules
(b) memorize the new rules
(c) forget the old rules
(d) try to regain the old rules

_b_ 68. The expected behavior of a person would change most from
(a) one high school to another high school
(b) kindergarten to junior high school
(c) one job to another related job
(d) one city to another city

_d_ 69. A person who has many roles is likely to become more
(a) rigid
(b) disoriented
(c) unstable
(d) flexible

_c_ 70. A person who belongs to many social groups is likely to become more
(a) intelligent
(b) stable
(c) adaptable
(d) efficient

_d_ 71. One value from being in a group is that members
(a) have interpersonal competition
(b) do things alone
(c) have control over each other
(d) appreciate contributions of others

_b_ 72. Being a member of a group makes one have a feeling of
(a) disorientation
(b) belonging
(c) frustration
(d) enthusiasm

_a_ 73. Being a member of a group will likely give you
(a) an insight into your abilities
(b) a relief from working
(c) a false sense of security
(d) a feeling of dependency

_a_ 74. One of the benefits of belonging to a school club is that it
(a) contributes to social skills
(b) helps meet financial needs
(c) develops physical skills
(d) develops independence

_c_ 75. To participate effectively in a group activity, one must work

(a) independently
(b) competitively
(c) cooperatively
(d) impersonally

Inventory Form D (continued)

Part 4

c 76. Of the following, the one which is not a civic group is
(a) Lion's Club
(b) Life of the Land
(c) Board of Regents
(d) League of the Women Voters

c 77. When you accept a job, you commit yourself to certain
(a) rights
(b) privileges
(c) responsibilities
(d) rewards

a 78. One who often fails to fulfill his or her job responsibilities will likely be regarded by others as
(a) unreliable
(b) careless
(c) forgetful
(d) lax

d 79. One should complete one's job assignment
(a) only if the pay is good
(b) only if the work load is not heavy
(c) only if one enjoys it
(d) even if the working conditions are poor

c 80. The purpose of having a labor union is
(a) to keep laborers under surveillance
(b) to increase companies' profits
(c) to protect the rights of the workers
(d) to fight organized crime

a 81. A civic action group is often for the purpose of
(a) promoting the legal interests of certain groups
(b) organizing individuals against society
(c) disrupting the normal process of social activities
(d) aiding the exploitation of one group by another

d 82. A civic organization gives one an opportunity to
(a) lose one's civil liberties
(b) disrupt the process of social movements
(c) become disassociated from the community
(d) contribute to community improvement

b 83. The members participating in a civic group most likely will
(a) work for individual goals
(b) share common goals
(c) have different goals
(d) not be concerned about goals

d 84. When parliamentary procedures are followed to conduct a union meeting, a motion should be voted on
(a) only if it has been tabled
(b) without being seconded
(c) only if it has a third
(d) only if it has been seconded

d 85. A civic group works best when it is based on a system of
(a) communication, coordination, intercompetition
(b) concealment, coordination, mutual opposition
(c) coordination, concealment, cooperation
(d) communication, coordination, cooperation

b 86. A civic group is least likely to provide
(a) a system of hierarchy
(b) a system of competition
(c) a mutual decision-making process
(d) a system of communication

a 87. Disputes between labor and management over wages are best settled by
(a) negotiations between both groups
(b) negotiations by management
(c) declaration by the workers
(d) work slowdown by labor

c 88. Social security contributions are withheld from wages to
(a) support the government
(b) contribute to the community
(c) help support retired people
(d) help support employment agencies

b 89. To support oneself and one's family, one needs to be skilled in
(a) communicating with others
(b) managing money
(c) applying for credit
(d) buying antiques and artwork

a 90. One advantage of being self employed is that a person most likely will have
(a) more freedom
(b) more security
(c) more stability
(d) more traveling

c 91. The best way to keep a balanced budget is to
(a) make more money
(b) declare bankruptcy
(c) plan expenditures in advance
(d) buy only on installment

a 92. Conservation of resources refers to
(a) controlled use of resources
(b) concentrating resources in heavy industries
(c) producing the most goods
(d) using resources to meet human needs

b 93. The worker who will be least affected by an energy crisis is
(a) an air pilot
(b) an architect
(c) a truck driver
(d) an electrician

d 94. A worker whose occupation will likely be most affected by an energy crisis is
(a) an astronomer
(b) a surveyor
(c) a tool designer
(d) a bus driver

a 95. The study of the relationships between living organisms and their environment is called
(a) ecology
(b) zoology
(c) sociology
(d) geology

c 96. Team efforts often
(a) hinder task completion
(b) create conflicts among team members
(c) facilitate task completion
(d) result in wasteful use of resources

d 97. Keeping the environment clean can be achieved best through the efforts of
(a) sanitation workers only
(b) all people with motor vehicles
(c) sanitation workers and people with vehicles
(d) every person in the country

c 98. Preventive medicine requires the team efforts of
(a) doctor, zoologist, and medical secretary
(b) doctor, nurse, and receptionist
(c) doctor, biochemist, and x-ray technician
(d) pharmacist, psychologist, and patient

a 99. In order to achieve goals for the common good, it is important for people to
(a) work together cooperatively
(b) work on tasks competitively
(c) work on tasks independently
(d) work together conservatively

d 100. A civic organization is usually for the purpose of
(a) exploitation of one group by another group
(b) disrupting the normal process of social activities
(c) organizing individuals against society
(d) promoting the legal rights of certain groups

TITLE: FEDERAL POLICY ISSUES AND DATA NEEDS IN POSTSECONDARY EDUCATION. FINAL REPORT TO THE NATIONAL CENTER FOR EDUCATION STATISTICS.

PERSONAL AUTHOR: CHRISTOFFEL, PAMELA; RICE, LOIS

DESCRIPTOR: *EDUCATIONAL POLICY; *POST SECONDARY EDUCATION; *DATA BASES; *FEDERAL AID; *EDUCATIONAL PROGRAMS; STATE FEDERAL SUPPORT; STATISTICAL DATA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 2.

DESCRIPTIVE NOTE: 119P.

ABSTRACT: THIS REPORT DELINEATES THE MAJOR POLICY ISSUES IN FEDERALLY SUPPORTED POST SECONDARY EDUCATION PROGRAMS AND IDENTIFIES SPECIFIC CATEGORIES OF POSTSECONDARY EDUCATION DATA NEEDED AT THE FEDERAL LEVEL TO ADDRESS THESE ISSUES. TO ACCOMPLISH THESE TASKS: (1) MAJOR LITERATURE SOURCES PERTINENT TO FEDERAL POLICY ISSUES AND DATA NEEDS WERE REVIEWED; (2) FEDERAL OFFICIALS AND EXPERTS IN THE FIELD WERE INTERVIEWED; (3) A CONFERENCE OF POSTSECONDARY EDUCATION EXPERTS AND INTERESTED FEDERAL OFFICIALS WAS CONVENED IN AN ATTEMPT TO DEFINE POLICY ISSUES AND DATA NEEDS: (4) THE COMPILATION OF FEDERAL POSTSECONDARY EDUCATION PROGRAMS WAS REVIEWED FOR INHERENT POLICY ISSUES AND DATA NEEDS. THE FEDERAL POSTSECONDARY POLICY ISSUES IDENTIFIED WERE: (1) PROVIDING EQUAL EDUCATIONAL OPPORTUNITY; (2) MEETING MANPOWER NEEDS; (3) PROMOTING RECURRENT EDUCATION; (4) STIMULATING EDUCATIONAL DIVERSITY; AND (5) ENCOURAGING RESEARCH IN THE NATIONAL INTEREST. FEDERAL POLICY ISSUES AND DATA NEEDS IN POSTSECONDARY EDUCATION

Final Report
to the
National Center for Education Statistics

by
Pamela Christoffel
and
Lois Rice

This report was prepared by the Washington Office of the College Entrance Examination Board under contract No. OEC-0-74-2126 with the Office of Education, U.S. Department of Health, Education, and Welfare. Contractors undertaking such projects for the Government are encouraged to express freely their professional judgment. This report, therefore, does not necessarily represent positions or policies of the Office of the Assistant Secretary for Education, and no official endorsement should be inferred.

NATIONAL CENTER FOR EDUCATION STATISTICS

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."--Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

FOREWORD

This report delineates the major policy issues in federally supported postsecondary education programs and identifies specific categories of postsecondary education data needed at the Federal level to address these issues. The report constitutes an important phase in the Common Core of Data (CCD) program which is a major new concept of the National Center for Education Statistics. CCD provides an integrated and interlocking system of educational statistics to meet Federal, State, local, and institutional needs for planning and management.

Guidance in the preparation of this report was provided by Ron Pedone and Andrew Pepin of the National Center for Education Statistics.

I. INTRODUCTION

A. Background

The Education Amendments of 1974 transferred the National Center for Education Statistics (NCES) from the Office of Education (OE) into the Office of the Assistant Secretary for Education and stated that NCES shall "collect, collate and, from time to time, report full and complete statistics on the conditions of education in the United States." The legislation requires that NCES submit to the Congress an annual statistical report for the two preceding and three succeeding fiscal years. NCES shall participate with other Federal agencies in forming an education data "consortium" and shall provide all interested parties, including public and private agencies and individuals, "direct access" to data collected.

The tasks are not simple or easy. However, NCES has now received a congressional mandate to move beyond the collection of basic education data into a broader realm of examining the conditions of education.

Even before the Education Amendments of 1974, NCES had begun to move beyond simple data gathering. Its Common Core of Data (CCD) Program sought to respond to many of the broad education data needs of the Congress, the Federal Government, and the education community. As noted in the Office of Education's Request for Proposal which initiated this study, the CCD Program "is a major new concept of the U.S. Office of Education intended to replace the current uneven and largely inadequate provision for education statistics in the 50 States, six outlying areas, and the District of Columbia, with an integrated and interlocking system of education statistics to meet Federal, State, local, and institutional needs for planning and management."

B. The Tasks of This Study

The Washington Office of the College Entrance Examination Board received a request from NCES to assist it in this overall CCD effort in the area of postsecondary education.1/ This College Board study for NCES examines Federal post-

---

1/ For the purposes of this study, NCES provided a definition of a postsecondary education institution as follows: "A postsecondary education institution is defined as an academic, vocational, technical, home study, business, professional, or other school, college or university, or other organization or person offering educational credentials or offering instruction or educational services (primarily to persons who have completed or terminated their secondary education or who are beyond the age of compulsory school attendance), for attainment of educational, professional, or vocational objectives."

secondary education programs in all relevant agencies, Federal policy issues, and Federal data needs. The task included a survey of over 400 Federal postsecondary programs in 25 separate Federal departments and agencies. From this survey, a 1,200-page report titled A Compilation of Federal Programs Financing Postsecondary Education, An Update, Fall 1974, has been delivered to NCES separately from this study report.

Using the array of Federal programs supporting postsecondary education as a base, the College Board next was requested to identify the major postsecondary issues facing Federal policymakers and administrators and to specify the categories of postsecondary education data needed to enable them to address these issues. To accomplish these tasks, the Washington Office of the College Board:

1. reviewed the major literature sources pertinent to Federal policy issues and data needs;

2. interviewed Federal officials and experts in this field;

3. convened a conference of postsecondary education experts to meet with interested Federal officials and attempt definitions of Federal issues and data needs; and

4. reviewed the Compilation of Federal Postsecondary Education Programs for inherent policy issues and data needs.

This report distills information and recommendations received from these sources. Section II surveys briefly the Federal role in postsecondary education; section III defines and documents the Federal policy issues underlying current and future Federal efforts in this area; section IV describes categories of data Federal officials need to respond to questions raised by these policy issues. A brief comparison of NCES' current postsecondary data collection efforts with identified Federal data needs follows in section V. The final section addresses challenges and opportunities of the Education Amendments of 1974 and presents a possible role for NCES in postsecondary data collection and coordination. Appendixes A and B outline the Federal programs, policy issues, and data needs for postsecondary education; appendix C lists the NCES reports and instruments used in preparation of section V of this report; appendix D describes efforts to compile a list of nonoperative postsecondary programs.

Those who have previously pointed out needed data at the Federal level are cited in this report. What is significant in this document is that postsecondary education data needs have been derived in a unique way. Matrixes including current Federal programs and Federal policy issues have been used to identify needed postsecondary data, thus providing NCES with a rational framework for data-collection efforts. NCES will thus have the opportunity to review all its data-collection activities in postsecondary education, helping it meet the challenges of the Education Amendments of 1974.

II. POSTSECONDARY EDUCATION PROGRAMS AT THE FEDERAL LEVEL

A. The Development of a Federal Role in Postsecondary Education

Historical trends, political pressures, and the accretion of largely unrelated national policy decisions have combined to shape the role of the Federal Government in postsecondary education, traditionally a State responsibility.

Federal support for colleges and universities began with the establishment of West Point, the first Federal college. The first legislative authorization for postsecondary education was the Morrill Act of 1862, which provided endowment and other funds for the Nation's land-grant colleges. For the next 80 years, until World War II, the Federal role in postsecondary education involved a relatively modest investment of funds and slight Federal influence.1/

Following World War II, Federal support increased substantially. Funds made available through the G.I. Bill for veterans' education increased postwar enrollments at most colleges and universities. Increased Federal funds began to flow to postsecondary institutions, initially in support of research directed toward solving problems of national defense, but later toward an array of studies, including research into peacetime uses of atomic energy and other areas of basic and applied science.

Growing Federal interest in research for the needed quantity and quality of scientific manpower was also manifested. The Federal Government expected colleges and universities to produce more and more highly trained individuals. National concerns, intensified during the sputnik era, prompted the passage of the National Defense Education Act. Postsecondary education was now encouraged to train more college faculty, and the first low-interest Federal loans were made available to college students.

The 1960's saw a rapid expansion of Federal programs benefiting postsecondary education. Institutions received construction assistance. The disadvantaged received Federal scholarships and work-study assistance. Federal funds for research reached their highest level. By 1970, postsecondary education had become closely entwined with such national commitments as development of new knowledge through

1/ The Second Newman Report notes that by 1940 "total Federal funding was less than $50 million per year." The Second Newman Report: National Policy and Higher Education, (Cambridge, Mass : The MIT Press, 1973), p. 65.

research, the training of manpower for the economy, and expansion of equal opportunity. The Federal role had become substantial.

B. Current Federal Postsecondary Programs

The Compilation of Federal Programs Financing Postsecondary Education, An Update, Fall 1974, described on page 2, lists over 400 programs. Approximately 25 separate Cabinet-level departments and agencies, from the Department of Agriculture to the Veterans' Administration, administer them. Interestingly, the Department of Health, Education, and Welfare provides less than half and the Office of Education less than a quarter of the total Federal dollars received by postsecondary institutions and students. The following table, compiled for the National Commission on the Financing of Postsecondary Education, illustrates sources, amounts, and percents of Federal postsecondary support.

Selected Postsecondary Education Outlays by Major Participating Agencies:
Fiscal year 1972

Agency	Amount (in millions)	Percent of total
Department of Health, Education, and Welfare	$4,090.4	44.3
Veterans' Administration	2,006.5	21.7
Department of Defense	1,082.6	11.7
Department of Labor	898.2	9.7
National Science Foundation	390.2	4.2
All other agencies	769.0	8.3
TOTAL	$9,236.9	100.0

NOTES: Data supplied by the individual agencies.
Percents do not add to 100.0 because of rounding.

Source: National Commission on the Financing of Postsecondary Education, Financing Postsecondary Education in the United States. (Washington, D.C.: Government Printing Office, December 1973), p. 107.

Federal program purposes and financing mechanisms vary widely. (Appendix A lists programs; appendix B (part I) outlines programs by Federal goal and method of financing.) Many programs provide categorical aid to postsecondary education institutions. Purposes vary widely and include, for example, agricultural research, innovative approaches to the education of the handicapped, and training professionals in the study and control of water pollution. Students can receive financial assistance for various reasons; e.g., if they are veterans or willing to study in a field of special interest to the Federal Government, such as mental health, law enforcement, or urban mass transportation.2/ Indians, Social Security beneficiaries, or persons related to miners with black-lung disease are eli-

2/ Over 160 of the programs provide funds for teacher training of various kinds.

gible as students for special Federal support. The Federal Government runs a number of postsecondary institutions itself, including the military service academies, the merchant marine academy, a staff college for civil defense personnel, and a junior college in Panama. Federal funds also support Haskell Junior College (for Indians), Howard University, Gallaudet College for the deaf, maritime schools in six States, and Federal City College (through the District of Columbia budget). The Federal Government even provides assistance "in kind" to postsecondary institutions, ranging from loans of machine tools and dispersal of surplus Government property to provision of films for educational purposes. In addition, many other diverse Federal programs support postsecondary education.

C. The Future of Federal Support

The vast range of Federal postsecondary programs has been called a shopping list in search of a rationale. No coherent Federal postsecondary education policy exists, just as no single Federal agency administers a majority of the programs. Surveying the array of the programs, the Newman Task Force pointed out that "a sense of legitimacy for an issue of educational policy is often created by the existence of a Federal program."3/

However, the programs themselves imply broad principles of Federal support for activities in the national interest--including equality of opportunity, economic growth, upgrading of manpower, and research of national importance.

Still, in the last few years, groups and individuals have called for a better definition of the Federal role in postsecondary education. Some argue that the array of Federal programs hides a disarray of Federal policies. The Second Newman Report states:

> ...not since sputnik has the American public engaged in a thoughtful, extensive discussion of the national interest in postsecondary education. Student unrest became an important 'political' issue in the late 1960's, as did the question of access for minority students. In the early 1970's the institutions of higher education themselves raised the issue of their state of 'financial' distress. Yet none of these issues provoked a thoughtful debate about national "educational policy. 4/

Heated debate over the merits of Federal support to postsecondary institutions versus assistance to students preceded the passage of the Educational Amendments of 1972. The Congress reached a compromise agreement which accepted that student assistance would be a major Federal mechanism for support of postsecondary education. However, during the extensive review of postsecondary education in the Congress' work on the Education Amendments of 1972, discussion

---

3/ Ibid., p. 66.
4/ Ibid., pp. xx-xxi.

centered on postsecondary programs administered by the Office of Education. The broader Federal role--including other HEW programs, and National Science Foundation, Veterans' Administration, Department of Labor, and other programs--was not debated at that time, nor has it been since.

Postsecondary education today needs a definition of Federal policy. The growth in enrollments is slowing. In some areas Federal funding for colleges and universities is declining. New types of students are demanding that "educationally relevant" postsecondary education should be available to them. Oversupplies of teachers and college faculty have forced a reassessment of postsecondary education's role as a trainer of skilled manpower. Financial distress has become a familiar complaint of postsecondary institutions.

Predictable trends include an increase in recurrent postsecondary education at all age levels and experimentation with new curriculums, new teachers, and new types of schools. Efforts must be made to promote equality of opportunity at all levels of the educational system. Debates about the age of majority indicate that student assistance programs may have to be substantially revised. Career education will be emphasized at the postsecondary level.

Future directions for the Federal role in postsecondary education are certain to be a major congressional concern during 1975-76, when much of the higher education legislation administered by the Office of Education expires. The role of the Federal Government will be examined; program impact and effectiveness will be assessed. Postsecondary education must face the realities of increasing costs, new students seeking new types of education, and answer basic questions about the validity of college degrees in the economic marketplace.

The following chapter examines five broad areas which encompass the major policy issues confronting the Federal Government now and will in the near future.

III. FEDERAL POLICY ISSUES

A. Identification of Postsecondary Policy Issues

The identification of major Federal policy issues included three major steps:

(1) identification and examination of operating Federal programs supporting postsecondary education;

(2) review of recent major policy reports, including Carnegie Commission, Newman Task Force, Committee on Economic Development, and National Commission on the Financing of Postsecondary Education reports, and other relevant publications.

(3) discussions about the identification of policy issues with knowledgeable Federal officials, congressional staff, and others.

On June 25, 1974, the College Board convened a meeting of postsecondary education experts to discuss issue identification (and related data needs) with representatives from HEW and the Congress. This meeting clarified some important issues and helped project staff identify policy issues and data needs. Conference findings were selectively combined in the compilation of a comprehensive description of the major issues facing Federal policymakers. These issues have been grouped into five broad categories pertinent to operating programs and reflecting recent reports on postsecondary education. They include:

(1) providing equal educational opportunity;

(2) meeting manpower needs;

(3) promoting recurrent education;

(4) stimulating educational diversity; and

(5) encouraging research in the national interest.

The identification of these policy categories is not new. Chancellor Ernest L. Boyer, State University of New York, recently identified three national policy concerns: (1) promotion of equality of access, (2) support of key professional

needs, and (3) stimulation of research in high priority areas.1/ The National Commission on the Financing of Postsecondary Education described eight objectives for postsecondary education, all encompassing policy issues relevant to the Federal Government: (1) student access, (2) student choice, (3) student opportunity, (4) educational diversity and flexibility, (5) institutional excellence, (6) institutional accountability, and (8) adequate financial support.2/ The Second Newman Report and the report of the Committee for Economic Development stressed similar concerns.

The following section examines each policy category individually, defining the category and its inherent issues. These categories are not mutually exclusive; policy issues overlap among several of them.

B. Description of Individual Policy Categories

1. Equal Educational Opportunity

In the 1960's equal educational opportunity became a primary goal of Federal policy. It has been defined as the right of all individuals, regardless of race, age, income, or other characteristics, to have access to the postsecondary education best suited to their own purposes, needs, abilities, and aspirations. Dr. Patricia Cross was especially perceptive. She argued that equal educational opportunity did not mean simply sending everybody off to college in the same old fashion, and stated that "Equal opportunity does not mean that all students are exposed to a standard body of information, but that each individual is helped to develop the capabilities to solve the problems that are of importance to him or her."3/

The Federal policy goal most often cited by the literature, postsecondary education experts, and Federal officials themselves is probably equal opportunity. The Committee on Student Economics asserted that its basic assumption and overriding recommendation was "that the Nation will and should accelerate its effort to expand the opportunities for postsecondary education."4/ The Carnegie Commission has made similar statements.

Equal opportunity is, of course, still an unrealized goal. As one report put it, "the poor, even those of highest ability, do not enter higher education at the same rate as the rich. Minority students continue to have far less chance of entering and remaining in college than majority students. Equal opportunity

4/ Report of the Committee on Student Economics. (New York: College Entrance Examination Board, 1972), p. 3.

still remains the great unfinished business of the seventies."5/

Equal opportunity policies encompass three areas: access (initial entry into the postsecondary system); choice (both institutional and curricular); and opportunity for individuals to continue in education until they achieve their objectives.6/

a. Equal access

Equal access means equalization of enrollment rates by race, sex, and income, and also equalization in the timing of enrollments (the problem of delayed entrance) and in enrollment status (part-time versus full-time).

The Federal Government uses student assistance programs as the principal vehicle to improve access to postsecondary education. The National Commission on the Financing of Postsecondary Education estimated that in 1972 nearly 30 percent of the total local, State, and Federal funds supporting postsecondary education were directed, mainly through student aid programs, toward the improvement of access.7/ Talent Search, Upward Bound, Basic Educational Opportunity Grants, and National Direct Student Loans are among OE programs designed to provide equality of access to postsecondary education. In addition, funds for Social Security beneficiaries and G.I. Bill veterans have the same focus. Other Federal programs are also directed toward this goal. But Census statistics show that equal access has not yet been achieved, despite these large expenditures of government funds. The table below illustrates the continuing problem of participation rates of low-income students in postsecondary education.

Primary Families With Dependent Members 18 to 24 With Incomes Under $3,000
(Constant 1972 dollars)

Year	Number of families with enrolled dependents (thousands)	Percent of families with enrolled dependents
1967	87	13.1
1968	103	15.9
1969	99	16.5
1970	91	13.9
1971	99	14.0
1972	116	14.8

6/ National Commission on the Financing of Postsecondary Education's Report (op. cit.): pages 55-56 discuss these areas.

7/ Ibid., p. 134.

Federal officials face a clear policy issue--how can the Federal Government provide support to postsecondary education, to students and/or institutions, to ensure that equality of access is achieved? In particular, what kinds of programs can be developed or expanded at the Federal level to accomplish this objective? What incentives must the Federal Government provide to the States to bring about equal access?

The Carnegie Commission points out that those now unable to secure postsecondary education because of work schedules, geographic location or family responsibilities also need increased access.8/ The Federal Government must provide improved access for a broader population; more adult women, senior citizens, and others will seek postsecondary education.

b. Equal Choice

The National Commission on the Financing of Postsecondary Education (NCFPE) defined this goal as follows: "Each individual should have a reasonable choice among those institutions of postsecondary education that have accepted him or her for admission."9/ Others argue strongly for a broader definition. The Panel on Financing Low-Income and Minority Students in Higher Education calls for "equity in the distribution of minority and poverty students, among differing types of higher education institutions, providing them collegiate options that meet their individual interests, needs, and abilities."10/ One NCFPE commissioner, Tim Engen, argues that "a choice of program offerings that is responsive to student needs, desires, and capabilities supercedes the importance of institutional choice."11/

Percent Distribution of Full-Time Freshmen Among Types of Institutions, Fall 1973

	2-year colleges		4-year colleges		Universities	
	Public	Private	Public	Private	Public	Private
All incomes	38	3	20	16	18	5
Less than $3,000	54	4	17	15	7	2
$3,000 to $5,999	52	3	19	15	9	2
$6,000 to $9,999	47	3	19	15	13	3
$10,000 to $14,999	42	2	20	14	17	3
$15,000 to $19,999	35	3	22	15	21	5
$20,000 to $24,999	29	2	22	16	24	6
More than $25,000	21	3	17	23	25	11

9/ In Financing Postsecondary Education..., op. cit., p. 55.

10/ In Toward Equal Opportunity, op. cit., p. 8.

11/ In Financing Postsecondary Education..., op. cit., p. 378.

As the table on the preceding page indicates, institutional price is a major barrier to equal choice of institutions. Students from low- and moderate-income families tend to enroll in low-cost 2-year institutions.

The Federal Government must make complex policy decisions if it is to achieve student choice of institution. Some insist that equal opportunity cannot be achieved unless student choice is addressed at the same time as student access. Equal educational opportunity, they maintain, means more than simply assuring entrance to some postsecondary institution. Too often, disadvantaged students have to choose public 2-year institutions because of their lower costs, when their educational needs and abilities would be better served by some other type of post-secondary institution. The first issue, then, concerns what the Federal role should be.

Second, the alternative mechanisms for promoting student choice present important policy issues for the Federal Government. The operations of the Supplementary Education Opportunity Grant program support the goal of student choice to some extent. Should student aid programs be expanded to enable disadvantaged students to attend higher-priced institutions? Should institutional support programs that encourage high-priced institutions to lower their charges to certain students be developed? Should incentives be provided to States to promote the equal opportunity goal of student choice? These are among the issues facing Federal policymakers at this time.

c. Opportunity

The NCFPE has defined opportunity as making available "academic assistance and counseling that will enable each individual, according to his or her needs, capability, and motivation to achieve his or her educational objectives," noting "it is only when opportunity for achievement is assured that the objectives of access and choice have real meaning."12/

Opportunity has been more broadly defined as the right to continue through the educational levels as long as one's abilities permit. This includes retention and transfer to upper division programs and entrance into graduate and professional institutions. Behind the statistics showing increased enrollment, the Newman Task Force found a "major phenomenon, the surprisingly large and growing number of students who voluntarily drop out of college."13/ Several factors, including lack of financial assistance and dissatisfaction with courses and teachers, appear to contribute to attrition. The key factor is that many dropouts are in the groups that Federal equal opportunity programs encouraged to enter postsecondary education. Dropouts are too often--but certainly not always--disadvantaged and poor.

12/ Ibid., p. 56 and p. 154.

13/ The Second Newman Report, op. cit., p. xi.

The Panel on Financing Low-Income and Minority Students called for equalization in postsecondary student retention rates.14/ The Newman Task Force recommended the development of new educational options to motivate students to complete their education; others called for special efforts to provide continuing financial assistance to students beyond the initial year.15/ The Carnegie Commission reminded the Federal Government and the postsecondary education community that the degree to which their recommendations on equal opportunity would be successful depended, in part, "on the availability of minority teachers at all levels."16/

Numerous current Federal programs have as their goal equal opportunity to continue in postsecondary education. Office of Education student financial aid programs provide funds to students beyond the freshman year; Special Services for Disadvantaged Students program funds seek to improve supportive student services in postsecondary institutions. At the graduate and professional levels, Federal programs in various agencies provide grants to graduate students in specific fields--some are directed toward disadvantaged and minority students; others promote equal opportunity in specific fields such as health, urban studies and science.

Federal policy issues include major questions: (1) To what extent have barriers to the opportunity to continue in postsecondary education hampered Federal efforts to ensure equal educational opportunity? (2) How can the Federal Government ensure that disadvantaged students will not be forced to drop out because of lack of adequate financing? (3) What can be done about underrepresentation of minorities in professional and graduate schools? (4) What programs should be operated which assist students, through the provision of counselors, tutors, etc., to continue their postsecondary education? (5) How can institutions be encouraged to develop programs and services which will promote educational opportunity for low-income students to continue and complete their education? (6) What should the State role be in this area and what should be the relationship of the Federal Government to the States?

2. Manpower Needs

The policy category of manpower needs subdivides into two basic areas: (1) the overall supply and demand for college-trained manpower, and (2) specific manpower needs.

a. Supply and Demand

In 1970 the Bureau of Labor Statistics estimated that a high school education would be sufficient for 8 out of 10 jobs during the 1970's. Current news reports have stated that many recent college graduates have blue-collar,

16/ In A Chance to Learn, op. cit., p. 18.

sales and clerical jobs in which they do not utilize their postsecondary education. As the Newman Task Force put it:

> In the aggregate, technology creates more jobs than it destroys, but the jobs created do not always require more skill than those replaced. For the last few years, this problem has been compounded by an economic recession and a slowdown in the flow of research and development funds... which have combined to lessen the demand for college-trained employees just as the supply was reaching new peaks.17/

For years the demand for college graduates has exceeded the supply; however, the new phenomenon of graduates unable to find jobs appears likely to continue for some time. It is especially ironic, the Newman Task Force noted, that the demand for college-educated manpower is declining exactly when equal opportunity initiatives have encouraged so many new students to enter postsecondary education.

The Task Force observed that "whereas the ability of college degrees to ensure entrance to the middle class is eroding as degrees proliferate, they still have a more powerful ability to certify middle-class membership for minorities than for whites."18/

The Carnegie Commission has highlighted another supply and demand policy problem for educated manpower. Their report, College Graduates and Jobs, states that Federal research programs heavily and sometimes undesirably affect the supply of college graduates. The instability of support has been the problem. As Federal R&D expenditures fluctuated (as in the space industry) so did the demand for college-trained manpower. The Carnegie Commission noted the effect of Federal R&D expenditures on the market for Ph.D.'s as well (up in the early 1960's, down in the late 1960's, and up slightly in the early 1970's). The Commission also pointed out the probable future effects on the demand for college graduates as a result of such Federal programs as the National Direct Student Loan program and others which encourage individuals to enter certain fields.19/ The fact is that often one part of the Federal Government encourages what another part would discourage. Federal programs train more individuals, Federal planners worry about oversupply. As there is no overall postsecondary education policy, these problems will continue.

The Federal Government has, however, tried to help in the manpower and supply area through the use of economic forecasting techniques. Results suggest that the economy's requirements for college-educated manpower are extremely difficult to measure, especially by individual fields of study and/or employment. The Carnegie Commission describes the problem:

17/ The Second Newman Report, op. cit., p. 21.

18/ Ibid., p. 28.

19/ See the Carnegie Commission's College Graduates and Jobs: A Report and Recommendations. (New York: McGraw-Hill, 1973), pp. 142-144, 179.

> In varying degrees, the methods used in many of the projections that have been developed by Federal Government agencies in recent years have been deficient. They have relied too heavily on past trends and have failed to take into account probable adjustments on both the demand and the supply sides of the job market. And yet, it is not at all clear that enough is known about these adjustments to permit the development of adequately sophisticated models for long-range projections.20/

Though others have criticized various aspects of Federal Government manpower forecasting efforts, attempts must be made to predict the demand for college-educated manpower.21/ Until techniques improve, Federal policymakers cannot accurately assess the probable impact of alternative manpower strategies.

b. Specific Manpower Needs

Most Federal program support in manpower development has evolved in three distinct areas.

The first involves general skill training and is principally supported by the Department of Labor under the Job Corps, the Manpower Development and Training Act programs (now part of the Comprehensive Employment and Training Act) and similar programs. The Social and Rehabilitation Service (HEW) and the Appalachian Regional Commission provide additional support of similar kinds. These Federal programs have emphasized postsecondary training as a means of enabling individuals to find permanent and productive employment.

The numerous programs for postsecondary institutions and students in teacher training constitute a second area of Federal program support. Aid is available for teachers of elementary, secondary, and postsecondary education, as well as for college and university teacher training programs.

The third area of Federal involvement includes specific categories where the Government has decided that shortages of skilled manpower exist. These shortages are widely varied, and numerous Federal agencies operate programs to offset them. For example, HEW funds training programs in many areas such as health manpower; other agencies administer training programs in air and water pollution control, occupational safety, civil defense techniques, etc. Programs support institutions in these training efforts by assisting them to build facilities or by funding instructional costs (in some programs), or by providing equipment.

Federal policy issue questions in these manpower areas include: (1) Are Federal manpower skill training programs effective in providing postsecondary training to their participants? (2) Are participants finding productive long-term employment? (3) Since many Department of Labor training programs have been

---

20/ Ibid., p. 186.

21/ See, for example, Charles V. Kidd's comments in D. W. Vermilye, ed., The Future in the Making, op. cit., pp. 43-48.

consolidated into the Comprehensive Training and Employment Act and now will be administered by State and local governments, what should be the future Federal role in manpower training?

Postsecondary institutions are offering more and more skill training and occupational education. In The Open-Door Colleges, the Carnegie Commission recommends "coordinated efforts at the Federal, State, and local levels to stimulate the expansion of occupational education in community colleges and make it responsive to changing manpower requirements."22/

The Federal Government is facing the policy issue of postsecondary career education at this time. Clear definition of what career education means at the college and university level is necessary. Four-year institutions are beginning to develop occupational education programs for their students.23/ What should the Federal role be in the development of such programs?

Many sources, including the Carnegie Commission, are predicting continuing dim employment prospects for college faculty members as well as primary and secondary school teachers. With over 160 teacher training programs in operation in fiscal year 1974, the Federal Government is playing a major role in this manpower area. Though demographic factors are the chief cause of the surplus, the Federal Government must ensure its efforts do not increase the problem of oversupply. This is especially acute for women since, according to the Carnegie Commission "about one-half of all employed female college graduates have been engaged in teaching."24/

The Carnegie Commission, however, quotes the Bureau of Labor Statistics as noting:

> Teaching opportunities for both men and women will be very favorable in urban ghettos, rural districts, and other areas offering unfavorable working and living conditions. There will also be increased demands for teachers of mentally retarded or physically handicapped children, for teachers in vocational and technical schools, and teachers in two-year colleges.25/

The Commission suggests that the issue facing the Federal Government and others is that of adapting teacher training to changing needs for education manpower.

Federal manpower programs to reduce shortages of trained personnel in particular fields are based on the premise that shortages exist and their elimination is in the national interest. Though definitions of shortage areas and of

25/ Ibid.

the best means of alleviating them have been the source of constant Federal policy debate, most agree that the next few years will bring a manpower shortage in the health field, especially if national health legislation becomes a reality. But training programs in this, and in other less obvious shortage areas, require constant scrutiny by Federal program administrators as well as policy de lopers. Federal agencies must examine their support for specific graduate training programs. As the Newman Task Force pointed out, "The issue in graduate education today is not growth, but reform; not the shortage of needed manpower, but the need for improved training in certain fields."26/

3. Recurrent Education

In Purposes and the Performance of Higher Education in the United States, the Carnegie Commission stated, "We believe, first, that concern should be spread from the college-attending group to the total postsecondary age group."27/ They also recommend that "opportunities be created for persons to reenter higher education throughout their active careers in regular daytime classes, nighttime classes, summer courses and special short-term programs, with degrees and certificates available as appropriate."28/ Various experts called for more opportunities to be developed by the Federal Government for adults to take classes and to obtain any needed financial support. As the Newman Task Force put it, "Under any foreseeable conditions, there will be substantial underemployment of college graduates in relation to the traditional view of 'college-type' jobs. A more rational relationship between education and careers can come about if realistic opportunities exist for students to return to formal education on a recurrent basis throughout life..."29/ In discussing the scope of recurrent education, a Kellogg Foundation study found that "terms like 'continuing education' or 'adult education' are too conventional and administrative in meaning to encompass the comprehensive responses called for in attitudes and national policy."30/ This study and others called for broad opportunities for what they termed the "learning society."

Whatever it is titled, recurrent education has tremendous implications for the process of education and for national education policy. The New York Times Guide to Continuing Education in America, compiled by the College Entrance Examination Board, contains over 700 pages of continuing education opportunities (as of 1970) offered by accredited institutions. Many more such courses--accredited or nonaccredited--are available today. An OECD Conference on Recurrent Education (held at Georgetown University in 1973) discussed possibilities for financing such broad learning opportunities, and noted that "if recurrent education is to be taken seriously as a citizenship right, like social security or pensions, then

26/ The Second Newman Report..., op. cit., p. 100.

the transformation of the established system is at issue..." The report considered other innovative options including flexibility in the traditional work-education relationship, and admitted the need for increased education budgets.31/ The Kellogg Foundation study stressed the need for efforts to develop and improve recurrent education for professionals, as well as the need for retraining programs in areas of surplus manpower.32/

The National Advisory Council on Extension and Continuing Education identified (in 1972) over 140 Federal postsecondary education programs as supporting continuing education and recurrent education.33/ The Cooperative Extension Service programs (administered by the Department of Agriculture) and the less extensive Community Service and Continuing Education program (Office of Education) can be considered major programs. Other Federal programs encourage retraining of professionals in various fields; some provide fellowships and other benefits to established college faculty.

The issue facing the Federal Government concerning recurrent education is major. If support of recurrent education for adults is adopted as a national goal, as some groups recommend, the budget implications would be substantial. Some have argued that the Federal Government should provide an "educational bank account" for individuals, to be drawn against as they pursue postsecondary education throughout their lifetime. Many have suggested that the Federal Government will have to reassess the policy under which financial aid is provided largely to students between 18 and 22 years old. As technological change calls for more retraining of individuals during their working lives, Federal policymakers must decide upon the Federal role in sponsoring such retraining activities. The problem is broad and the policy issues are complex. Lifetime education is a new challenge to Federal planners concerned with education, the economy, and the general welfare.

4. Educational Diversity

The policy issues in the area of educational diversity can be divided into two areas: (1) issues dealing with new students and new types of education at the postsecondary level; and (2) problems of stimulating institutional diversity. Both are discussed in this section.

a. New Students and New Education

As postsecondary education enrollments have expanded over the last few years, a new population has been entering, larger and much more diverse than before. These new students are more varied in age, race, and social background, in acad-

33/ In A Question of Stewardship, A Study of the Federal Role in Higher Continuing Education. (Washington, D.C.: 1972)

emic experience and in ability. As Dr. Patricia Cross points out, so many students from the academic upper half of their high schools now go on to some form of postsecondary education that there are not many "academically well-prepared" students left to recruit, regardless of their social background. As she puts it, "a group of young people whom we used to dismiss as 'not college material' are now walking through the open doors of colleges, and they constitute a growing proportion of the college population."34/

The Newman Task Force highlighted another group of what might be called "new" students. "While hundreds of thousands of students leave college because they find it disappointing, hundreds of thousands more enter and stay in when they might better serve their interests and aspirations elsewhere. Strong pressures in our society, some old, others recent, keep students in the academic lockstep."35/

A new, diverse clientele for postsecondary education results today when we add to these two groups those aware of the recently declining demand for college-educated manpower. Many in this third group are, therefore, seeking postsecondary career education which will lead to productive jobs.

As entering students become more diverse, many study groups and others are accusing postsecondary education institutions of a discouraging similarity. The Newman Task Force noted:

> American higher education is renowned for its diversity. Yet in fact our colleges and universities have become extraordinarily similar. Nearly all 2,500 institutions have adopted the same mode of teaching and learning. Nearly all strive to perform the same generalized educational mission. The traditional sources of differentiation between public and private, large and small, secular and sectarian, male and female, are disappearing.36/

In reflecting on the original Rivlin Report (published in 1969), Alice Rivlin said later, "We spoke of preserving diversity as though we thought we had it. But if one thinks seriously about American higher education, it seems to me, its most singular characteristic is not its diversity but its uniformity."37/ Colleges and universities assume that the traditional academic method is the only method of teaching.

Yet new postsecondary students are seeking new types of learning, much of which is not in the traditional academic model. Dr. Cross suggests that even

34/ In D. W. Vermilye, ed., The Future in the Making, op. cit., p. 89.

35/ As quoted in The Second Newman Report, op. cit., p. xi, but originally included in the Task Force's first report.

36/ Ibid., pp. xi-xii.

37/ In Financing Equal Opportunity in Higher Education. (New York: College Entrance Examination Board, 1970), p. 6.

community colleges might not be "different enough" from the more traditional higher education institutions to serve these students. She calls for the design of new and different educational experiences for different kinds of students. "I believe we should strive for maximizing our chances of educating our diverse new clientele. Postsecondary education is too big and too influential for us all to do the same thing at the same time."38/

Several groups have pointed out the many close ties between the need to improve educational diversity for new students and the goals of assuring equal access and equal educational opportunity. The Newman Task Force emphasized that "if we are serious about equal opportunity, access alone is not enough. The national concern must move beyond a focus on access to a concern with the 'effectiveness' of the education process in relation to the individual."39/ The Task Force argued that an appropriate goal of public policy "is the provision of an opportunity for more meaningful choices among many forms of postsecondary education."40/

The Committee for Economic Development brought out another argument for the support of educational diversity. "...diversity in the type and character of colleges and universities--in such matters as education purposes and goals, instruction programs, types of facilities and students, institution size and location, and types of organization and control--serves the Nation's varied manpower requirement."41/

The rapidly increasing number of proprietary schools in postsecondary education has sought to bring innovative kinds of education within reach of students. New kinds of colleges, geared toward new students, have been opened.42/ Open universities, single-purpose institutions, experimental colleges within a larger university, urban learning centers, cooperative and consortia arrangements--all seek to bring new and more relevant education to the new students.

The Carnegie Commission and the Rivlin Report call for encouragement of educational diversity as a major Federal goal for postsecondary education, as does the National Commission on the Financing of Postsecondary Education.

Federal programs seeking to provide such encouragement include demonstration programs and funds for innovative teaching developments--as sponsored by the National Science Foundation and the Fund for the Improvement of Postsecondary Education. The real policy issue facing the Federal Government, as noted in the Second Newman Report, is whether the nature and extent of diversity matches the range of student needs. They question the spectrum of available educational

choices for those who "want to develop differing skills, who want to capitalize on differing abilities, or who learn in different ways."43/

b. Stimulating Institutional Diversity

The problems the Federal Government faces in this area of educational diversity focus on higher education institutions, particularly traditional ones. In the 1960's a Federal rationale for support of colleges and universities developed. As the Newman Task Force explains it, "If it was important to conduct research or to educate, then it was important that the institution be properly equipped to do the job."44/ In keeping with this rationale, such Federal programs as construction aid, support for college libraries, funds for developing institutions and for support of particular academic departments within an institution came about. Each program was intended to provide assistance to institutions which were meeting particular Federal needs.

By the late 1960's and early 1970's, a number of factors (including rising enrollment levels of incoming students needing new institutional counseling and remedial services) created new pressures on college and university budgets. Declining enrollments in some schools and increased operational costs were among other factors. Apprehension grew over the perceived problems of college financing.45/ Predictions of severe financial distress for institutions prompted the passage, in the Education Amendments of 1972, of programs to provide Federal monies to colleges and universities. To date, the Office of Education has not funded these programs. Whether or not to operate them, or to develop others with similar purposes, is an important Federal policy issue.

Just how severe the "financial distress" faced by institutions is constitutes a problem. Another is whether or not the Federal goal of stimulating educational diversity is strong enough to require a substantial Federal role in institutional financing. A third problem, discussed by the National Commission on the Financing of Postsecondary Education, the Newman Task Force and the Committee for Economic Development, is the measurement of costs at postsecondary institutions. Accurate measurement of "financial distress" should be made before the Government takes any action on this particular issue. But the development of costing methods is not easy. Chapter 8 of the National Commission's report carries a full discussion of the possibilities and problems Federal policymakers face in seeking the development of uniform procedures for reporting annual per-student costs.

The policy issues in educational diversity are, it can be seen, numerous and Federal policymakers face significant questions.

43/ Op. cit., p. 40.

44/ Ibid., p. 67.

45/ See appendix C of the final report of the National Commission on the Financing of Postsecondary Education for a summary of the numerous studies which have discussed the problems of institutional financing.

5. Research

Federal planners have not considered the category of research a major area of policy issues to the extent they have the categories of equal opportunity or educational manpower and diversity. Research should be considered a major area, for at least two reasons: first, the Federal Government, through many of its separate agencies, supports a large number of categorical research programs in a wide range of fields. (See appendix B, part I.) Substantial amounts of Federal money go to postsecondary institutions to support these research efforts. Federal policymakers should question, therefore, the use and effectiveness of these funds. Consequently, it must be asked: What is the role of postsecondary education in the Nation's research effort? What should it be in the future?

Student unrest over the college and university military research efforts has brought into question the role of postsecondary education as a major contractor for Federal research programs.

A second reason the research category contains policy issues of interest to Federal education policymakers has been stated as follows:

> A century ago, scientists were attempting to transform the old college into a true university, an institution in which faculty and students...could search for new truths instead of dwelling on what was already known. Ironically, now that the university has become such a successful research institution, faculty members are criticized for devoting too much time to research and not enough to telling undergraduates what is already known. Many students would like to turn the university back into a school.46/

The Federal policy and practice of conducting much of its research through colleges and universities began after World War II with the establishment of the National Science Foundation. Establishment of the Atomic Energy Commission and the National Aeronautics and Space Administration strengthened the policy. Though these two agencies have recently cut back their support of research, the National Science Foundation and now HEW have begun to provide steadily larger proportions of the research funds going to colleges and universities. As Wolfle points out, "It was HEW and not DOD that was in the strongest position to influence academic research in 1971."47/

At first, much of the research sponsored at postsecondary institutions was in scientific fields. But recently, with the establishment of the Environmental Protection Agency, the National Foundation for the Arts and Humanities, and the National Institutue for Education, research areas have been expanded into the humanities and the arts.

46/ Dael L. Wolfle, The Home of Science: The Role of the University. (New York: McGraw-Hill, 1972), pp. 128-129.

47/ Ibid., p. 116.

Wolfle states the current problem:

> Government agencies were expected to use universities and other nongovernmental institutions to accomplish their research objectives, and while there has been some coordination among the agencies, they have not been required to integrate their plans or to pay much attention to the permanent welfare of the universities as whole institutions.48/

Postsecondary education must now develop a better rationale for its role in the conduct of the Nation's research. Traditionally many have argued that Federal research support to colleges and universities helps to educate students, to promote and maintain faculty competence, and to preserve the role of postsecondary institutions as critics in our society. Yet, recently, some of the largest universities have been described as quasi-governmental agencies, and there have been increased demands for better institutional, fiscal, and program accountability.

Nevertheless, Federal R&D funds going to colleges and universities continue to rise. For the period 1971-1973, Federal R&D obligations to postsecondary institutions rose from $1.6 billion to $2.1 billion. The National Science Foundation noted that "HEW support of the university and college sector in 1973 is expected to cross the $1 billion line, the first time any one agency will make such a large commitment of funds to this sector."49/

The issues in this area of research support are important. What has been the impact on colleges and universities of these Federal research funds? What will be the capabilities of these institutions to carry out these needed research efforts in the future? Harold Orlans argued that student rebellions on campuses in recent years were due in part, at least, to the demands of federally-sponsored research, which, in his view, caused "the neglect by faculty of their colleagues and their institutions."50/ This problem is tied to the questions raised under the category of educational diversity about the need for more effective education for students. Because Federal research support strongly affects postsecondary education, Federal policymakers must develop a better understanding of those effects and their consequences for the future.

This chapter has identified postsecondary policy issues in the areas of equal opportunity, manpower needs, recurrent education, educational diversity, and research. It is not reasonable to assume that Federal policymakers will be able to focus on all these issues equally. Priorities must be set for future government action. However, this is a difficult task at best. Various methods

48/ Ibid., p. 128.

49/ National Science Foundation, Federal Funds for Research, Development, and Other Scientific Activities. Fiscal Years 1971, 1972 and 1973. (Washington, D.C.: Government Printing Office, 1972), p. 9.

50/ Harold Orlans, The Nonprofit Research Institute. (New York: McGraw-Hill, 1972), p. 141.

can be developed, among them indentifying relative amounts of Federal money involved in programs included under each issue area, or defining issues of more interest to one Federal agency seeking to set priorities than another.

If the level of Federal program funding is used as a criterion for setting priorities among policy issues, then it should be noted that slightly over half of all Federal funds supporting postsecondary education are directed toward equal opportunity and manpower goals. About 100 Federal programs in all the Federal agencies involved were classified in fiscal year 1972 as supporting these two goals. The bulk of the remaining programs (nearly 400 in fiscal year 1972) were directed toward the goals of educational diversity and research. Few Federal programs supported recurrent education. These groupings might be interpreted as directing Federal policymakers to concentrate on equal opportunity and manpower as first priorities, diversity and research issues next, and finally recurrent education. However, it can be argued that there are other ways of assessing priorities.

The Office of Education might survey the postsecondary education programs it administers itself and develop priorities concentrating more heavily on students and equal opportunity issues.

Federal policymakers could also look more to the future, putting aside consideration of current operations, and make the prediction that recurrent education will be a major focus of Federal postsecondary education activity in the next decade.

Whatever priorities are set by the Federal Government, coordination must exist between those responsible for data collection and those responsible for policy identification, in order that future Federal data-collection activities reflect these identified priorities.

IV. FEDERAL DATA NEEDS

This chapter describes the categories of data needed by Federal policymakers to better devise postsecondary programs and strategies for the 1970's and beyond. The data categories are not exhaustive, but they do seek to be comprehensive in responding to the questions raised by the issues in each of the five policy areas described in chapter III. It is not the purpose of this chapter to suggest new postsecondary education programs or alternative strategies for addressing the various policy issues raised in chapter III.

This study, it should be noted, involves a broad view of postsecondary institutions and students. The study surveyed Federal programs sponsored by 25 different agencies, far beyond the range of normal Office of Education operations. The Newman Task Force stressed the need for data-collection activities across this broad spectrum. Federal statistics, they argued, must include a broad range of institutions. Postsecondary education data needed today are of greater complexity than those collected in earlier years. The Federal Government should not "emphasize those things which can be counted most easily."1/ As the National Commission on the Financing of Postsecondary Education put it:

> Information bearing upon the full spectrum of postsecondary education--not just the narrow spectrum now deemed useful for program management in the Office of Education--must be collected. Data on the noncollegiate as well as the collegiate sector should be included and they should reflect the full scope of public sector involvement...the Commission recommends that comparable financial information for the entire postsecondary education enterprise be collected and reported in a timely and systematic fashion.2/

This chapter suggests data categories without regard to methods of collection; in many cases the National Center for Education Statistics would not be the collector. Indeed, some information can be better collected by the Bureau of Labor Statistics, the National Science Foundation, the Census Bureau and other agencies. (This is discussed in chapter VI). For the purposes of this chapter, needed data are noted without regard to collection methodology or responsibilities.

1/ The Second Newman Report, op. cit., p. 100.

2/ In Financing Postsecondary Education in the United States, op. cit., pp. 130, 338.

The pages that follow describe the necessary data categories under each of the five policy issue areas. Data required to respond to one set of issues may well be necessary for another category of problems, and some data overlap will occur among policy categories.

Appendix B, part II, of this report, presents the data needs outlined in this chapter. Each Federal policy issue is broken down into issue dimensions and needed-data categories in this appendix.

A. Equal Educational Opportunity

The Carnegie Commission has recommended that the Commissioner of Education designate a unit within the Office of Education "to develop standard definitions and methods of reporting to ensure the coordination, evaluation, and dissemination of available data" on equal opportunity, as "national policy for equal opportunity must be based on the most recent and significant data."3/

1. Equal Access

To determine the effect of current policies and programs on access, the Federal Government needs better information. More data are needed on the characteristics of postsecondary entering students, including such minimum variables as age, race or ethnic group, sex, some measures of personal or family income, other socioeconomic (SES) background data, and some acceptable measure of ability. These data need to be collected regularly; if not annually, then biennially.

Statistics on entering students must be collected across the broad range of postsecondary education options, including proprietary schools, public trade and technical schools, and other education options as well as from the more traditional higher education institutions.

Similar data on those who do not enter postsecondary education after high school or at any other time are needed if the problems of access are to be understood. Analysis of detailed statistics for students entering postsecondary education with identical data for nonentrants will shed much useful light on the access question.

In addition, information from students, their families and postsecondary institutions is necessary on the perceived and actual barriers to attendance for these nonentrants. These barriers include lack of finances, of motivation, and of nearby postsecondary institutions. Questions as to ability must also be considered and needed data assembled.

Data are required on the motivation and perceptions of potential students toward postsecondary education. What are their alternatives? What are the nonentrant high school leavers doing?

3/ In A Chance to Learn, op. cit., pp. 25-26.

The influence of primary and secondary schools on the propensity of students to enroll in postsecondary education has been noted. More data are needed, including institutional attitudes (as well as personal characteristics) of high school dropouts, choices of high school, influences of parents and peers, curriculum as a factor in postsecondary education attendance, and numbers and characteristics of students completing high school equivalency exams.

National data about how entering students pay for their education need to be collected regularly. Sources of support, including parents, the student himself, spouses and other outside funding sources--Federal, State, local, and private--must be collected.

Once students have entered postsecondary education, they have not necessarily achieved equal access. More data are needed (by the same personal characteristic variables) about part-time as well as full-time enrollees which describe the factors (finances, job or home requirements, and other constraints) behind their enrollment in a less than full-time schedule.

The age of entrants is an important factor in the question of access. More data are needed about the characteristics of late entrance because of lack of finances, job or home requirements, or geographical location of an available postsecondary institution.

Data are needed on the impact of Federal student financial aid funds, since the Government has such a large investment in this area. Such data could be used to assess the impact of student financial aid monies from all agencies providing such funds, not just the Office of Education, but also Veterans' Administration and Social Security benefits, Indian grants, and other sources. Does the provision of student aid break the access barrier for disadvantaged students? How does aid affect the behaviors of students, institutions, and States? What are the varying impacts of these funds by type of aid (grants, loans, and work arrangements)? What is the marginal impact of additional student aid funds in eliminating the access barrier? If Federal policymakers are to evaluate current student financial aid programs in access problems, these data are needed.

The postsecondary education community and education planners in the Department of Defense and other Federal agencies also need up-to-date data on who learns what and how while in the military service. Many servicemen take courses at civilian institutions: more data are needed about these students and their activities.

Data on student financial aid programs should be coordinated at the national level. Data on out-of-State migration of students are needed on a regular basis, perhaps every two years, so that Federal and State incentive programs and additional mechanisms can be devised to promote equal access. These are among the questions for which data are needed on postsecondary education entrants and nonentrants on a State-by-State basis. Once these are answered, potential State barriers to equal access can be identified.

Finally, what attack on barriers to equal access are institutions making? What impact have community colleges made on equality of access? Have their availability, costs, curriculums, teachers, etc. encouraged students to enter postsecondary education? What are postsecondary institutions doing about remedial education? Have counseling and tutoring facilities been established? Federal review of equal access policy issues requires data on these institutional efforts.

2. Equal Choice

Measures of equal student choice within the broad equal educational opportunity question are more complex. Federal officials need data to decide the Federal role. Information about student enrollments (including personal characteristics) at all types of postsecondary institutions must be collected. Institutional charges must be matched to the statistics describing the characteristics of student enrollees. Data concerning the distribution of low-income students at these various types of institutions must be collected. In addition, student charges for out-of-State students must be assembled, so their impact on equal opportunity can be examined.

Students participating in Federal financial aid programs need to be surveyed so the impact of financial assistance on choice of institution can be analyzed. Student financial aid packages must be examined since many low-income students receive funds from more than one Federal or State program source or from self-help. These data will assist policy analysts to measure the sources and extent of the problems of unequal student choice.

3. Opportunity

Dropout and retention rates and reasons are important data needs in the issue of equal opportunity to continue in postsecondary education. The Federal Government needs these data to estimate the success of its equal opportunity programs. Needed data include personal characteristics of dropouts, by type of institution, and level of study completed.

Data on the retention of students in postsecondary education are also necessary. The Federal Government should know who continues through so that the factors which encouraged continuation can be replicated elsewhere. Data on dropouts and on continuing students must include the part-time as well as the full-time. Data are needed on the educational, financial and motivational factors causing students to drop out if equal opportunity is to be achieved.

Data are needed about transfer students. Data on graduates of 2-year institutions and on entrance rates into upper division colleges must be collected by personal characteristics, by field of study, and by institution. Such transfer data should be collected regularly. Potential barriers to transfer must be examined, including availability of student financial aid, transfer admission requirements, and availability of transfer institutions.

In addition, data, including personal characteristics, type of studies, and type and control of institution, must be collected on graduates and others in proprietary institutions and other postsecondary education centers providing

skill training and career education. Many students in proprietary and other similar schools drop out before completing their studies because they have learned sufficient skills to find employment. Data on these dropouts must be gathered, since retention and graduation statistics from these kinds of postsecondary education institutions can be misleading.

A third major area of data needs concerns college graduates and entrants into graduate and professional schools. Graduation information about students, including age, race or ethnic group, sex, field of undergraduate study, type and control of institution from which graduated, and some measure of college achievement (such as grades, Graduate Record Exam scores, or similar information) must be gathered. Similar data must be collected about entrants into graduate and professional schools, including their eventual retention rates, dropout statistics, or final graduation by type of institution, fields of study, and degrees awarded. Minority and disadvantaged students are especially underrepresented in graduate and professional schools. If the Federal Government is to improve equal opportunity throughout postsecondary education, more detailed statistics about these students' progress at advanced educational levels are needed.

B. Manpower Needs

Data needs under this heading relate, as did the issues in chapter III, to two areas: (1) supply and demand, and (2) specific manpower needs.

1. Supply and Demand

The Carnegie Commission has recommended that "the Federal Government should give high priority to the development of more adequate, sophisticated, and coordinated programs of data gathering and analysis relating to highly educated manpower."4/

The Newman Task Force also emphasized the need for Federal efforts in this area. "The Federal Government can help by developing and disseminating more reliable data on the supply and demand for highly educated manpower."5/ As others have put it, "unless we have a system for monitoring the development of educational and career plans, we will be in a poor position to advise students or to plan the needed changes in recruitment policies or educational program development."6/

In considering the future supply of college graduates, Federal policymakers need to know more about shifts in undergraduate enrollment patterns--and their causes, including the increasingly high cost of attending college, the job market for college graduates, and the increasing tendency for students to "stop out" of

---

4/ In College Graduates and Jobs, op. cit., p. 138.

5/ In The Second Newman Report, op. cit., p. 34.

6/ John K. Folger, Helen S. Astin, and Alan E. Bayer, Human Resources and Higher Education. (New York, Russell Sage Foundation, 1970), p. 362.

college and return later.

Student perceptions of viable career options must be analyzed, students' knowledge of the realities of the world of work and necessary skills for jobs must be assessed. More data are required about career education programs now offered by postsecondary institutions. What institutions are training students for what types of skills? Data addressing these questions must be assembled so that better estimates can be made of the supply of trained manpower.

Additional data are needed on the efforts of postsecondary institutions to provide career counseling and job placement services to their students. In proprietary institutions placement services are especially important to students, so data by type of institution and by type of services offered are important here. (Students at proprietary institutions can receive Federal student aid funds; thus the Federal Government needs improved information about the annual operations of these schools.)

Data on enrollments and graduates, at undergraduate, graduate, and professional levels should be collected by age and race or ethnic group, as well as by sex and field of study, as is done now. Such information would help define the future labor force being trained by postsecondary education institutions.

Proper assessment of the overall need for manpower training at the Federal level requires that more data be collected in the following experimental areas: open-entry training systems with no prerequisites; the use and effectiveness of training modules and individualized instruction; ladder approaches and open-exit programs; and cluster training for broad occupational groupings. Data which could demonstrate the effectiveness of stipends to make full-time training possible for adults are also needed.

The Education Amendments of 1974 state that NCES shall collect data on education activities in foreign countries. The migration of American students abroad and foreign students into the United States is one aspect of this activity and represents an important manpower problem. Regular data collection on both these student populations is needed, including statistics on personal characteristics, field of study, location and type of institution, and factors contributing to migration, including lack of equivalent education facilities or courses in the home country. As American medical students denied admission to U.S. medical schools are going abroad, and as many foreign nationals come to the United States to complete their medical training, these data are important to health manpower planners.

Most of the data categories detailed above seek to describe the supply of postsecondary education manpower. Data are also necessary about the demand for educated manpower, so that students can better plan their careers and institutions can develop more relevant educational programs.

More data, including such variables as curriculum studied, ability and personal characteristics, are necessary about the employment patterns of persons from various postsecondary education levels. The Carnegie Commission recommended spe-

cifically that "Federal Government agencies should develop more adequate data on occupational and industrial employment patterns of graduates of 2-year colleges and of dropouts from institutions of higher education."7/

One factor influencing the demand for college-educated personnel is credentials. Data should be collected on the educational requirements and degrees actually necessary for employment in various jobs, ascertaining if specific degrees are really necessary for employment in certain fields. The scope of the survey should include what job skills are needed which can be taught at postsecondary institutions. These data would help planners to examine degrees and educational requirements at colleges and universities and to assess their impact on the flow of college-educated manpower.

The Carnegie Commission also recommended that Federal agencies "should undertake studies of the implications of the changing job market for holders of master's degrees and for enrollment in master's programs."8/ Such a study would require collection of data about the competition college graduates face for jobs from others in the work force, including married women entering or reentering the job market, foreign nationals in the United States, and senior citizens seeking part-time or volunteer employment.

Though manpower forecasting is a difficult process, the Federal Government needs to more accurately predict the future effects of current labor market situations on college graduates. Predictions by individual occupations over a relatively long-term period are necessary so students can acquire appropriate skills and education. Federal planners and the postsecondary education community will require timely release of such data.

2. Specific Manpower Needs

Although much of the Federal effort in manpower skill training is being transferred to State and local governments, Federal data needs remain in this area as some Federal manpower skill training programs are continuing to operate. Needed data include the effectiveness of various kinds of skill training, using such variables as length of training and its results in terms of students' experience of long-term productive employment.

The Federal Government must examine exemplary training programs and gather statistics which describe them in detail sufficient to enable similar results to be replicated elsewhere.

Much manpower training data currently collected deals with basic characteristics of student participants. More data are needed, some suggest, describing how students learn about work attitudes, human relations skills, orientation to the working world, alternative career choices and the acquisition of specific

---

7/ In College Graduates and Jobs, op. cit., p. 47.

8/ Ibid., p. 161.

job skills.9/ Such data collection should enable the Federal Government to improve its own skill training programs as well as to provide assistance to States and local governments in the operations of theirs.

The Carnegie Commission noted that "...present procedures for reporting statistics of students enrolled in occupational programs are highly unsatisfactory. Non-degree credit enrollment is not always equivalent to enrollment in an occupational program, and the regularly published statistics of the U.S. Office of Education shed no light on numbers enrolled in occupational programs in specific fields."10/ The Commission recommended that OE develop a better definition of such enrollments and expand its statistics in this area.

Additional data are needed which project the needs for the many kinds of special teachers now receiving training support from the Federal Government. The Carnegie Commission made the following recommendation:

> The U.S. Bureau of Labor Statistics and the U.S. Office of Education should develop revised estimates of the future demand for teachers that take into account, as exisiting projections do not, the growing demand for teachers in pre-elementary education and in other such settings as adult education programs. There is also a need for revised estimates of supply that take account of the declining enrollment in undergraduate education programs and of a possible future decline in enrollment in master's degree programs.11/

Statistics which demonstrate whether or not manpower shortages exist and whether teacher training programs are alleviating them should be assembled for other areas of manpower training. Substantial amounts of data exist in the health area, but not in other areas of Federal training activities.

C. Recurrent Education

As noted by the National Commission on the Financing of Postsecondary Education, the Federal Government needs statistics which will enable policymakers to estimate the demand from adults for recurrent education.12/

Data must be collected regularly concerning the participants in these courses, including their age, sex, race or ethnic group, and also such data as occupation

---

9/ See for example, Larry McClure and Carolyn Buan, eds., Essays on Career Education. (Portland, Oregon: Northwest Regional Educational Laboratory, 1973), p. 130.

10/ In The Open Door Colleges, op. cit., p. 44.

11/ In College Graduates and Jobs, op. cit., p. 80.

12/ In Financing Postsecondary Education in the United States, op. cit., p. 37.

and special status (veteran, handicapped, etc.). Data must also be assembled to identify those not participating, but who wish to participate, in some form of recurrent education. Barriers to student participation in recurrent education, such as costs, availability, and location of courses, times of course offerings, etc., must be analyzed.

The Federal Government must learn more about how adults of all ages learn. Data to be collected in this broad area include information on learning structures--whether adults learn well in unstructured environments; where recurrent education takes place across the country--at home, in classrooms, through the media, or elsewhere; when recurrent education is being provided to students--at night, part time, on weekends, through monthly seminars, or through correspondence. Data are also needed about what is being studied by adults, for what purposes (self-improvement, new learning, or upgrading of skills), as well as what methods are being used to teach recurrent education and who is teaching these courses. Regular data collection in all these areas should provide the Federal Government with better information with which to assess policy issues.

Data on charges to students for recurrent education and how students pay must be collected regularly. Statistics which describe what portion of these charges are paid by the students themselves, by employers, or by other persons or organizations are necessary for Federal planners reviewing student financial assistance programs, as well as for their consideration of alternatives.

More data are needed on the institutional support of recurrent education; for example, the efforts of community colleges to provide recurrent education. In particular, their role in providing recurrent education to students of all ages; the types of students attending recurrent education courses at community colleges (by personal characteristics, courses taken); teachers of these courses; the possibilities for expansion of recurrent education activities; and techniques these schools use to inform the public about the availability of such courses all need analysis. Data to respond to these questions should be collected. In addition, similar information about recurrent education activities at other types of postsecondary institutions should be gathered, including how courses are being structured--whether through separate colleges within universities, through separate divisions within colleges, in off-campus centers, or in some other administrative arrangement.

Data should be collected on postsecondary retraining programs for adults, ascertaining what kinds of jobs are likely to require the retraining of persons over time; what demand individuals are making for further education so that they may upgrade their skills; and when the need for such retraining is likely to occur during a person's career. Data in all these areas would provide relevant information to those planning the future Federal role in recurrent education.

Finally, the Federal Government should assemble data which describe imaginative and innovative approaches to recurrent education. Data which enumerate these approaches should be accompanied by statistics describing how they work, what their impact is on learning, motivation, and absorption of education by students. Some of these approaches are used more widely than others, such as advanced

placement, independent study and work-study programs. Other newer approaches include external degrees, credit-for-service arrangements, credit for experiential learning or for occupational experiences and on-the-job training run by postsecondary institutions. Data about these so-called "people-centered" educational offerings will provide information valuable in the analysis of the future of recurrent education.

D. Educational Diversity

The data categories of value to Federal planners in the area of educational diversity are divided into two categories, similar to those found in chapter III: (1) data needs relating to new students and new types of postsecondary education, and (2) information concerning the stimulation of institutional diversity.

1. New Students and New Education

Data needed to identify the new students in postsecondary education are similar to those suggested under the category of equal educational opportunity. Characteristics of students (including variables as noted earlier) are relevant data needs if policymakers are to define accurately the new clientele entering postsecondary education. Special areas of statistical interest in this area include ability measures of students and data which examine the motivations of students to commence and continue through postsecondary education. Additional data are needed about student expectations for careers and the impact of these expectations on their choice of field of study. Broad data should be collected about how students learn, what they learn, and where.

Further data are necessary on the student demand for innovative and nontraditional forms of education, including the characteristics of students who prefer to study in these new and innovative educational options and the fields of study and the courses they are selecting.

Information is also required from institutions about new kinds of postsecondary education now offered. As one source put it, "In spite of the great difficulties presented by this data, its paucity and questionability, the double counting (of students), and lack of comparability..., the data lead us to the conclusion that there exists a great deal of educational activity which has been excluded from the 'educational system' regularly reported by the Office of Education."13/

Data are needed about the extent and use of the new degrees (e.g., the doctor of arts) in postsecondary education, including what schools award them and who receives them. Information is needed about experiments involving shorter times for degrees (e.g., bachelor of arts degrees completed in 3 years) and other similar arrangements.

Statistics should be gathered on the numbers of postsecondary institutions by the following variables: varieties of curriculum offerings available to students,

13/ Stanley Moses, The Learning Force: A More Comprehensive Framework for Educational Policy, (Syracuse, New York: Syracuse Univeristy Occasional Papers, No. 25., 1971), p. 24.

varieties of institutional size and administration, and varieties of teaching methods--all measures of institutional diversity as noted by the National Commission on the Financing of Postsecondary Education.14/

Data are specially needed about innovative institutional methods of presenting postsecondary education to students and the application of these methods to other centers of learning. Included here is information about nontraditional ways to earn traditional degrees--Saturday classes, educational television, and courses by newspaper. Data about nontraditional learning methods used to obtain traditional degrees should be assembled, including such options as the University Without Walls, and Britain's Open University. Further information should be collected about the use of examinations, such as CLEP (College Level Examination Program) for credit or degrees, including who takes such exams and which schools accept them. Data about the use of computers, television and other advanced technologies to improve learning should be included here.

Institutional consortia arrangements have spread across the country in recent years. Federal planners examining new education administration arrangements need data about their numbers and their characteristics, including methods of operation, extent of shared facilities, faculties, students, and computers. A number of Federal programs encourage such institutional arrangements, including Developing Institutions, Ethnic Heritage Studies, and the Fund for Improvement in Postsecondary Education programs. More data about the operations of such cooperative arrangements are needed at the Federal level.

Information is needed about the success and failure rates of innovative educational institutions and programs--schools closed, innovative programs discontinued, and similar situations.

Continued and ongoing data collection is especially important in the noncollegiate sector of postsecondary education (as noted by the National Commission on the Financing of Postsecondary Education). Distributions of students, by the characteristics noted in this chapter, and changes in enrollment levels are important data needs.

A survey needs to be undertaken of the estimated 3,500 postsecondary education institutions not yet eligible for participation in Federal programs.15/ Many of these schools are licensed in the States in which they are located. While data about such schools need not be collected annually, Federal planners concerned with problems of supporting educational diversity and improving equal opportunity must know their number, their locations, the courses offered, and the numbers and basic characteristics of the students attending them.

14/ In Financing Postsecondary Education..., op. cit., p. 61.

15/ As estimated by the National Commission on the Financing of Postsecondary Education in Financing Postsecondary Education..., op. cit., p. 17.

2. Stimulating Institutional Diversity

The debate over the merits of Federal support for postsecondary institutions, particularly in the traditional higher education sphere, highlights the need for improved knowledge about institutional financing. The following paragraphs note some of these data areas.

If some institutions are experiencing "financial distress" and if Federal policymakers want to define the Federal role, then better measures of "financial distress" need to be developed and data gathered nationally. The National Commission on the Financing of Postsecondary Education suggested that data be collected on the numbers of institutional closings and mergers, by type and control of institution, and on changes in enrollment patterns.16/ Key institutional income and expenditure components which reflect change should be identified, and data about the so-called "tuition gap" (tuition revenues minus instruction costs) should be gathered. Postsecondary institutions should provide statistics which identify the frequency and size of reported operating deficits and reflect substantial changes in plant assets and institutional indebtedness in order to document "financial distress."

The National Commission on the Financing of Postsecondary Education also noted the following data need in this general area:

> Information about the nature and size of enrollment changes among different types of institutions is central to assessing their financial stability. Unfortunately, opening fall enrollments, which provide only a crude indication of what is taking place, are the only enrollment data collected by NCES that can be related to HEGIS financial data and other relevant institutional information. In order to estimate the full financial impact of enrollment changes, it is necessary to have an enrollment count that is directly related to tuition and fee income and that shows net gains or losses over the academic year.17/

The Carnegie Commission recommended "...all appropriate agencies--the U.S. Office of Education, the Southern Regional Education Board, the Western Interstate Commission for Higher Education and similar bodies--give high priority to the development of more adequate data on the behavior of costs, income, and output in higher education."18/

The Newman Task Force and others have pointed out the importance of collecting data on cost effectiveness from institutions. They define cost effectiveness as " the effects of alternative structures and environments on student learning,...

16/ In Financing Postsecondary Education..., op. cit., pp. 193-194.

17/ Ibid., p. 197.

18/ In The More Effective Use of Resources: An Imperative for Higher Education. (New York: McGraw-Hill, 1972), p. 47.

in terms of the resources utilized."19/ The National Commission on the Financing of Postsecondary Education and others have noted the need for data which could help measure the productivity of educational institutions and the quality of their outputs. Quality is admittedly difficult to measure; data on institutional salaries, institutional costs per student, and student scores on tests such as the Graduate Record Exam, etc.,provide guidance.

Finally, as noted in chapter III, the National Commission on the Financing of Postsecondary Education gave careful consideration to the need for disclosing uniform procedures for reporting per-student costs (chapter 8 of their report). Data needs in this area have been noted in the paragraphs above.

E. Research

Federal planners need data to assist them in examining the impact of Federal research funds on colleges and universities. Their findings will help define the future Federal role in this area.

Data are needed which describe how institutions conduct this research, including costs (both Federal and institutional funds), personal characteristics of those working on the research, characteristics of research facilities and their location, and the administrative structure of these research activities within colleges and universities.

The impact of Federal research funds on faculty, including the percent of faculty time spent on research versus teaching, fields of expertise, relationships of the research to subjects taught, and data on amounts of salaries paid by research funds, should be researched.

Data on the impact of Federal research funds on students describe imagiportant, and should include the numbers and personal characteristics of students participating in research projects at colleges and universities. The number of students receiving financial support from research monies should be ascertained together with the personal characteristics and fields and levels of study of these recipients. How students learn through their participation in such projects and what they learn require analysis. Data collection designs should reflect that student support is really manpower development and equal opportunity assistance.

Various research support mechanisms utilized by the Federal Government must be examined in order to define their different impacts on colleges and universities. Such mechanisms include: (1) grants to individuals or small groups for specific research projects; (2) grants to institutions for the benefit of the school; and (3) university development grants involving substantial funding over several years. More information is needed on the costs of Federal research to postsecondary institutions, such as contributed equipment, faculty time, etc., as well as the income received by institutions, such as fees, overhead, etc.

19/ In The Second Newman Report, op. cit., p. 107.

The flow of Federal research funds has shifted by field of inquiry and has fallen and risen over time. Data are needed at the Federal level about the impact of such funding fluctuations on institutions, by type, control, and field of study. For example, have faculty been hired, students enrolled in graduate work, space rented, only to find that the research support continues for merely a short period and the institution must bear the cost if it wishes to continue the activity? One data recommendation in this area has been that the Federal Government "publish annually a five-year projection of scientific and technological trends, probable national needs for scientific resources, and expected levels of Federal support in various areas..."20/

Finally, the Federal Government needs data which describe how colleges and universities are responding to multidisciplinary research needs, in particular on the kinds of innovative organizational and functional arrangements being tried to meet the new demands of federally-sponsored multidisciplinary research.

Data to respond to all these questions about the nature and impact of Federal research on colleges and universities will assist Federal policymakers to analyze the future capabilities of these institutions to meet the needs described above.

The next chapter briefly compares these broad categories of data needs with current NCES data-collection activities.

20/ Wolfle, The Home of Science, op. cit., p. 159.

V. A BRIEF COMPARISON OF NCES CURRENT POSTSECONDARY DATA COLLECTION WITH DATA NEEDS

A brief review of NCES current data-collection efforts has been made and these activities compared with the broad data-collection needs described in chapter IV.

The outline that follows arranges currently available NCES data-collection instruments and reports by the policy and data need categories identified in chapters III and IV. Each data-collection instrument or report is organized under the categories for which it provides relevant information. Some instruments--forms or reports--provide data useful to the study of more than one category; such reports are repeated wherever necessary in the outline.

The authors were unable to obtain copies of collection instruments for several NCES studies underway but at present not completed. Appendix C of this report includes a complete list of the NCES documents and reports reviewed for this study, and notes at least two which could not be obtained from NCES for use in this review.

I. EQUAL OPPORTUNITY

A. Access

7. Salaries and Tenure of Full-Time Instructional Faculty, 1974-75
8. Employees in Institutions of Higher Education, 1972-73

V. RESEARCH

A. Support for Research in the National Interest

1. Higher Education: Number and Characteristics of Employees in Institutions of Higher Education, Fall 1967
2. Higher Education: Teaching and Research Staff by Academic Field in Institutions of Higher Education, Fall 1968
3. Financial Statistics of Institutions of Higher Education for Fiscal Year 1974
4. Higher Education: Inventory of Physical Facilities in Institutions of Higher Education, Fall 1967

The compilers of this report matched, on an item-by-item basis, the kinds of data collected currently by NCES with the data needs described in chapter IV and outlined in appendix B, part II.

At least three major areas of identified data needs were not part of current NCES data-collection activities. These were:

1. regular data collection about those who do not enter postsecondary education;

2. regular data collection about participants in postsecondary education which identifies their age, race or ethnic group, and other personal characteristics of these enrollees; and

3. regular data collection which includes the broad range of postsecondary institutions and also includes data about innovative or experimental efforts at colleges and universities.

The following paragraphs describe each of these three areas in more detail.

As was noted in chapter IV, data defining the characteristics and circumstances of those who do not enter postsecondary education are especially important to the Federal Government. The Federal goal of equal opportunity requires that statistics be available concerning those who face barriers in access to postsecondary education, in choice of institution, and in opportunity to continue through postsecondary education with any necessary assistance which might be required. Such data are not necessary each year, but should be collected regularly, thus permitting Federal planners to assess the progress of their efforts toward equal opportunity.

Regular data collection about postsecondary education participants must include more personal characteristic variables than simply sex. If the policy issues noted in the discussion of equal opportunity and recurrent education are to be resolved, then the Federal Government must have statistics about participants (and, as noted above, nonparticipants), which, at the same time, identify age, race or ethnic group, and financial data. Many Federal programs, for instance, seek especially to aid disadvantaged students; recurrent education is very important to adults. Therefore assessment of the progress of Federal efforts in these areas requires personal characteristic data about enrollees at all levels, in all fields, and in all types of postsecondary institutions.

Finally, both the range of postsecondary institutions and their diverse efforts to provide both traditional and new forms of education to their students must be surveyed regularly. Using the FICE definition of a postsecondary institution, NCES should make regular (if not annual) data-collection efforts in all types of institutions this definition encompasses, especially proprietary institutions and other schools in the noncollegiate area. Policy issues dealing with the diversity of postsecondary institutions, as well as with the equal opportunity of students attending them, cannot be resolved without regular statistical efforts in this area. Data on new approaches to postsecondary education (new types of institutions, new teaching and learning techniques) are also needed. The Federal Government needs relevant statistics in order to analyze the future of postsecondary education and the possibilities for replicating successful new approaches at other postsecondary institutions.

Other data needs are noted throughout chapter IV and therefore are not repeated here.

In reviewing NCES' current data-collection efforts, many items noted in the various categories of necessary data actually were found to have been collected by NCES at one time or another. For example, the National Longitudinal Study of

the High School Class of 1972 asked many questions relevant to the data needs identified in this study. Most of the needed data should, however, be collected regularly, annually or biennially, as well as through the useful methodology of a longitudinal study. Data about student migration, last collected by NCES in 1968, should be updated every 2 or 3 years at most. Surveys of non-collegiate institutions and their students should be regular, ongoing, and continuous projects.

In other words, the problem is one of timing and frequency of data-collection. Costs are understandably high, and in some cases NCES may well have to use samples rather than uinverse surveys.

It was not the task of this survey to analyze costs, benefits, or NCES manpower requirements of more frequent data collection; NCES will undoubtedly perform such analyses itself. But if NCES is to respond fully to the requirements and challenges posed by the Education Amendments of 1974, it must consider increasing the scope of its data-collection efforts.

In response to these challenges, chapter VI offers suggestions for a new NCES role in postsecondary data collection at the Federal level.

VI. A SUGGESTED ROLE FOR NCES IN POSTSECONDARY EDUCATION

The data needs noted in chapter IV are far-ranging. They reflect the broad dispersal of Federal programs supporting postsecondary education and the important policy issues underlying them. The identified data needs call for varied collection methodologies, including surveys, samples, and case studies.

It is evident that NCES' available funds and capabilties for postsecondary data collection will not suffice to meet the data needs identified here. NCES should not, however, ignore any of the identified needs or set priorities for data collection which might delay information needed to resolve major Federal policy issues. Rather, NCES could consider its role in a very different way. The Center does not have to be the major collector of all the necessary postsecondary education data; instead it might consider itself the chief coordinator of all such data. This role would confer substantial advantages on NCES.

For example, some of the data identified as needed in chapter IV can be collected more efficiently by agencies other than NCES. Manpower forecasting data could continue to be assembled by the Department of Labor and the Census Bureau; health manpower statistics relevant to postsecondary education could continue to be collected by the HEW Health Resources Administration; data on Federal research funds going to colleges and universities could continue to be collected by the National Science Foundation. NCES need not collect all necessary data itself; most sources mentioned have data tapes NCES could copy. Though data definitions might not be exactly alike in these various collection instruments, interested researchers can link many of these data sources. The Center should utilize other data sources wherever it can, coordinate statistics wherever possible, and collect data itself only when no other data sources exist and where NCES itself would be the most efficient data collector.

This concept of an NCES data coordination role is broad and argues that NCES should be a National Center. The Education Amendments of 1974 required NCES to expand its operations and its influence on postsecondary education data collection at the Federal level, in coordination with the States and with the postsecondary education community of associations, institutions, and individual researchers. This expanded role is explained in detail below. The chart at the end of the chapter presents the new role in relation to other agencies and organizations involved in postsecondary data collection.

Within the Office of Education and the National Institute for Education are numerous sources of important postsecondary education data which should be tapped by NCES. For example, NCES should annually collect copies of data tapes describing participants in Office of Education student financial aid programs. These

data are broken down by State, by institution and by congressional district. Similar copies should be made of fiscal year data tapes of other postsecondary education programs. NCES would hold such tape copies and make them available to other Federal policymakers and researchers. In addition, NCES should collect copies of data tapes from all relevant planning and evaluation studies conducted within the Office of Education and the National Institute of Education as data from these tapes would assist Federal postsecondary education planners. Finally, NCES should collect on tape the legislative authorization for every program, operating and nonoperating, within OE and NIE, holding it available to the Congress, which is especially interested in such information.

Thus NCES would receive data from all relevant OE and NIE operating programs, and also from all relevant OE and NIE evaluations and other statistical studies. Such data would be broken down (as far as possible) by region, State, institution and participant. Having received all of these data, NCES would be much better placed to provide data to those needing such information within OE, in other Federal agencies, in the Congress, and in the postsecondary education community. After reviewing all received data, NCES could incisively justify additional data collection needed to respond to important postsecondary education policy issues. Costs would be lowered through the elimination of any unnecessary data collection.

NCES should not only receive and provide OE-NIE postsecondary program data, but should require the equivalent from other HEW components and the 24 other Federal agencies supporting postsecondary education. No other government agency, it should be noted, has a National Center for Education Statistics. This does not suggest that NCES collect all data normally collected by these other agencies. Instead, it suggests a role for NCES similar to that it plays within OE and NIE. NCES would receive from the other agencies: (1) copies of data on postsecondary education activities and of studies assembled by these agencies (including the National Science Foundation, the Veterans' Administration, the National Institutes of Health, the Social Security Admininstration, and the Bureau of Health Resources Development); (2) copies of program participant data tapes from these agencies operating such programs; and (3) legislative references for these programs, operating and nonoperating. NCES would then add all these Federal postsecondary data to its data bank and make them available to interested Federal policymakers and other planners.

NCES would operate in a similar fashion vis-a-vis States and postsecondary education associations, researchers, and others. NCES would receive copies of data tapes about the postsecondary activities of these groups and add them to the NCES data bank. NCES would then be in a position to provide to States and others information about postsecondary activities at Federal, State, and local levels. NCES would also collect copies of data from study commissions and other researchers, as was done to create the data base of the National Commission on the Financing of Postsecondary Education.

Preservation of data confidentiality is assumed in all these NCES activities. NCES would provide the public access to its data bank (in keeping with the requirements of confidentiality) through computer terminals, additional copies of data tapes, and timely publications.

Through the coordination of all this information NCES would accumulate a broad data base on postsecondary education activities, making it truly a National Center and enabling it to assess the "conditions" of education, as required in the Education Amendments of 1974.

APPENDIX B

OUTLINES OF FEDERAL POSTSECONDARY PROGRAMS, POLICY ISSUES, AND DATA NEEDS

INTRODUCTION

Part I of this appendix lists, in outline form, over 400 Federal programs that supported postsecondary education in fiscal year 1974. Each program is classified under one or more of five Federal goals for support of postsecondary education: (1) equal opportunity at all educational levels; (2) development of manpower; (3) recurrent education; (4) encouragement of institutional and student diversity; and (5) support for research. Some programs meet more than one goal and are therefore listed more than once.

Within each Federal goal, the listing of Federal programs has been further subdivided by program funding mechanism and administering agency. Many programs have more than one funding mechanism and therefore appear under several such mechanisms. For example, a program which provides both financial aid to students and a cost of education allowance to institutions would appear under the heading of "institutional support" as well as "student assistance."

This listing makes no judgments about the achievement of the goals under which the programs are listed; it merely shows the intended or apparent purpose.

Numbers following program names refer to their classification in recent editions of the Office of Management and Budget's Catalog of Federal Domestic Assistance. Unnumbered programs, to the best of our knowledge, have not appeared in the Catalog.

Readers wishing to know more about these programs are referred to the Catalog and to Pamela Christoffel, A Compilation of Federal Programs Financing Postsecondary Education, Washington, D.C.: National Commission on the Financing of Postsecondary Education, 1974.

Part II of this appendix outlines postsecondary policy issues and needed data categories.

PART I

FEDERAL GOAL: EQUAL OPPORTUNITY

I. INSTITUTIONAL SUPPORT

A. General Institutional Support

Department of Defense

Service Academies (------)

Department of Health, Education, and Welfare

Health Professions Capitation Grants (13.339)
Special Schools (------)

Department of the Interior

Haskell Junior College (------)

District of Columbia Government

Federal Support for D.C. Postsecondary Education (------)

B. Categorical Aid

Department of Health, Education, and Welfare

Associated Health Professions--Special Improvement Grants (13.377)
Family Medicine--Training Grants (13.379)
Health Manpower Education Initiative Awards (13.380)
Nursing Capitation Grants (13.386)
Nursing Professions Talent Utilization (13.387)
Schools of Public Health Grants (13.370)
Allergy and Infectious Diseases (Traineeships) (13.855-13.858)
Arthritis, Metabolism and Digestive Diseases (Traineeships) (13.846-13.849)
Cancer Research Manpower (Traineeships) (13.398)
Child Health and Human Development (Traineeships) (13.864-13.866)
Dental Research (Traineeships) (13.840-13.845)
Environmental Health Sciences (Traineeships) (13.872-13.876)
Eye Research (Traineeships) (13.867-13.871)
General Medical Sciences (Traineeships) (13.858-13.863)
Heart and Lung Research (Traineeships) (13.837-13.839)
Medical Library Training Grants (13.353)
Neurological Diseases and Stroke (Traineeships) (13.851-13.854)
Animal Resources Training Grants (13.368)
Minority Schools Biomedical Support (13.375)

Alcohol Research Development Awards (13.271)
Drug Abuse Research Development Awards (13.277)
Mental Health Research Development Awards (13.281)
EPDA Educational Leadership (13.514)
Teacher Corps (13.489)
Teacher Training in Developing Institutions (13.507)
Vocational Personnel Awards (13.503)
College Teacher Fellowships (13.407)
Educational Opportunity Centers (13.543)
Cooperative Education (13.510)
Cost for Veterans Instruction (13.540)
NDSL Loans to Institutions (13.469)
Special Services for Disadvantaged Students (13.482)
Talent Search (13.488)
Upward Bound (13.492)
Library Training Grants (L3.468)
EPDA Career Opportunities (13.421)

ACTION

University Year for ACTION (72.204)

C. Construction Aid

Department of Health, Education, and Welfare

Health Professions Construction Grants (13.340)
Health Professions Loan Guarantees (13.378)
Nursing School Construction (13.369)
Academic Facilities Construction (13.458-13.459)
Academic Facilities Interest Subsidy (13.457)

II. STUDENT ASSISTANCE

A. Grants and Scholarships

1. Direct to Students

Department of Defense

Off-Duty Education (------)
Overseas Dependents Education (------)
Professional Education (------)
ROTC (------)
Service Academies (------)

Department of Health, Education, and Welfare

Special Fellowships in Nursing Research (13.360)
Basic Educational Opportunity Grants (13.539)
Social Security Disability Insurance (13.802)
Social Security Retirement Insurance (13.803)
Social Security Survivors Insurance (13.805)

Department of Housing and Urban Development

Urban Studies Fellowship (14.217)

Department of the Interior

Indian Higher Education Grants (15.114)

Department of Labor

Coal Mine Workers Compensation (17.307 & 13.806)

Department of State

Educational Exchange--Graduate Students (19.101)

Civil Service Commission

Civil Service Retirement Fund (------)

National Science Foundation

Graduate Fellowships (47.009)

Railroad Retirement Board

Social Insurance for Railroad Workers (57.001)

Smithsonian Institution

Academic Appointments (60.002)
Visiting Research Appointments (60.019)

Veterans' Administration

Pension and Compensation to Widows and Children (64.102 & 64.105)
Veterans Educational Assistance (64.111)
Dependents Educational Assistance (64.117)

2. Through Institutions

Department of Health, Education, and Welfare

Mental Health Fellowships (13.241)
Mental Health Research Development Awards (13.281)
Associated Health Professions--Grants for Advanced Training (13.303)
Family Medicine Training Grants (13.379)
Health Manpower Education Initiative Awards (13.380)
Health Professions Scholarships (13.341)
Health Professions Teacher Training (13.385)
Nurse Scientist Graduate Training Grants (13.362)
Nursing Scholarships (13.363)
Professional Public Health Personnel Traineeships (13.366)
Allergy and Infectious Diseases (Fellowships and Traineeships) (13.855-13.858)
Arthritis, Metabolism and Digestive Diseases (Fellowships and Traineeships) (13.846-13.849)
Cancer Research Manpower (Fellowships and Traineeships) (13.398)

Child Health and Human Development (Fellowships and Traineeships) (13.864-13.867)
Eye Research (Fellowships and Traineeships) (13.867-13.871)
General Medical Sciences (Fellowships and Traineeships) (13.858-13.863)
Heart and Lung Research (Fellowships and Traineeships) (13.837-13.839)
Neurological Diseases and Stroke (Fellowships and Traineeships) (13.851-13.854)
Animal Resources Fellowships (13.367)
Animal Resources Training Grants (13.368)
Alcohol Research Development Awards (13.271)
Drug Abuse Research Development Awards (13.277)
Drug Abuse Research Manpower Fellowships (13.278)
EPDA Educational Leadership (13.514)
Vocational Personnel Awards (13.503)
Ellender Fellowships (------)
CLEO Fellowships for the Disadvantaged (------)
College Teacher Fellowships (13.407)
Supplementary Educational Opportunity Grants (13.418)
EPDA Higher Education Fellowships (13.462)
Foreign Language and Area Studies Fellowships (13.434)
Fulbright-Hays Doctoral Research Abroad (13.441)
EPDA Career Opportunities (13.421)

Department of Justice

Law Enforcement R&D Fellowships (16.505)

Department of Labor

Manpower Research--Doctoral Research (17.218)

Atomic Energy Commission

Nuclear Science and Technology Graduate Training (24.020)

Environmental Protection Agency

Air Pollution Fellowships (66.002)

B. Loans

Department of Health, Education, and Welfare

Health Professions Student Loans (13.342)
Nursing Student Loans (13.364)
Cuban Student Loans (13.409)
Insured Loans (13.460)
NDSL Student Loans and Cancellations (13.470-13.471)

Department of the Interior

Indian Loans (15.124)

C. Work

Department of Health, Education, and Welfare

College Work-Study (13.463)

III. SUPPORT TO STATES, LOCAL GOVERNMENT AND OTHERS

Department of Health, Education, and Welfare

State Student Incentive Grants (------)
Vocational Education Basic Grants to States (13.493)
Vocational Education Consumer and Homemaking (13.494)
Vocational Education Special Needs (13.499)
Vocational Education Cooperative Education (13.495)
Vocational Education Work-Study (13.501)
Bilingual Education Training (------)

Department of Housing and Urban Development

Model Cities Grants (14.300)

Department of the Interior

Indian Employment Assistance (15.108)

Department of Labor

Concentrated Employment Program (17.204)
Job Corps (17.211)
Work Incentive Program (17.226)
MDTA Institutional Training (17.215)

FEDERAL GOAL: MANPOWER

I. INSTITUTIONAL SUPPORT

A. General Institutional Support

Department of Commerce

U.S. Merchant Marine Academy (11.507)
State Marine Schools (11.506)

Department of Defense

Civil Defense Staff College (------)
Service Academies (------)

Department of Health, Education, and Welfare

Health Professions Capitation Grants (13.339)
Nursing Capitation Grants (13.386)

APPENDIX B: PART II

Issues inherent in PSE goals	Issue dimensions	Needed data categories
I. EQUAL OPPORTUNITY		
A. Equal Access	Who currently enters postsecondary education?	Characteristics of student entrants into the broad range of postsecondary educational options (including proprietary schools, public trade and technical schools, and other options as well as traditional higher education institutions), by the following variables: age race or ethnic group sex some SES background some ability measure some measure of personal or family income
	Who does not enter postsecondary education following high school?	Characteristics of high school graduates not enrolled in postsecondary education following high school, by the variables noted above.
	What are these nonentrants doing instead?	Information about employment (or unemployment) and other possible occupations, such as housewife, etc.
	What were the perceived barriers to equal educational access for these nonentrants?	Personal description of such potential barriers as lack of finances, lack of ability, lack of motivation, lack of availability of a nearby postsecondary school.
	What are the influences of high school curriculum choice, high school dropout, parents and peers on access to postsecondary education?	Postsecondary entrants and nonentrants by high school curriculum studied. Data on characteristics of high school dropouts. Data on persons completing high school equivalency exams and their possible entrance into postsecondary education. Data on group influences on entrance into postsecondary education.
	How do students pay for their education?	Information on sources of support, including who pays for education, other than Federal, State, local, and private funding sources.
	Who enrolls part time?	Characteristics of part-time enrollees, including at least these variables: age, sex, race or ethnic group, other SES background, some measure of personal or family income, some ability measure, high school curriculum, influence of parents, peers, etc.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
A. Equal Access (continued)	What are the reasons the attendee is enrolled part time?	Factors restricting full-time attendance, such as: finances, job, home responsibilities, influences of parents, peers, etc.
	Who are delayed postsecondary education entrants?	Characteristics of delayed entrants, by variables noted above.
	What are the reasons for delayed enrollment?	Factors delaying enrollment, such as: finances, job, home responsibilities, influences of parents, peers, etc.
	What is the impact of financial aid on students directly, and through institutions they attend?	Assessment of the impact of financial aid monies from all agencies providing such funds, including information on funds by type of aid, information on student aid provided by all Federal agencies as a means of breaking the access barrier for disadvantaged students, and information on marginal impact of additional student aid funds in eliminating access barrier.
	Who participates in postsecondary education programs in the military?	Characteristics of servicemen enrolled in both civilian and military postsecondary education programs, by such variables as noted in characteristics of student entrants, including previous education and/or occupational experiences.
	What do these servicemen learn and where?	Types of programs offered and type of programs taken, by types of training categories, by military or civilian institutions, by geographical location or program alternatives, etc.
	What is the national impact of State-promoted equal access?	Data on State-student financial aid should be coordinated at national level.
	What is the impact of migration of students on promoting equal access?	Numbers and student characteristics of out-of-State migration necessary on regular basis, numbers and characteristics of students attending institutions in their own States.
	How can potential State barriers to equal access be identified?	Characteristics and numbers of postsecondary education entrants and nonentrants on a State-by-State basis.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
A. Equal Access (continued)	What has been the impact of equality of student access made by certain types of institutions, e.g., community colleges or open-admission institutions?	Information on geographical availability, costs, curriculum, teachers, etc. which might encourage students to enter postsecondary education at community colleges and other institutions.
	What types of efforts are institutions making to encourage equal access?	Descriptions of special programs, such as remedial education courses, counseling and tutoring facilities, etc., by type of institution offering these services.
Choice	Who is enrolled in postsecondary education at present?	Characteristics as noted in equal access entrants and nonentrants.
	What is the impact of institutional charges on equal choice?	Information on institutional charges to students matched to characteristic statistics on distribution of low-income students at various types of institution, etc.
	What is the impact of Federal financial assistance on choice of institution?	Information on financial aid packages by recipient, types and amounts of aid, etc., and by type of institution, classified by charges to students.
Opportunity	Who does not complete their postsecondary education?	Personal characteristics as noted in equal access entrants and nonentrants, by type of institution they attended, type of programs in which students were enrolled.
	Why don't students complete postsecondary education?	Factors restricting completion, such as: finances, job, home responsibilities, influence of parents, peers, etc.
	At what levels of postsecondary education do students drop out?	Numbers and characteristics of dropouts and those retained from level to level, including full-time and part-time status, sources of support for students in various levels.
	Which students transfer?	Personal characteristics of graduates of 2-year institutions, by field of study, and by institution; personal characteristics of transfers from 4-year institutions, by field of study, and by institution. Personal characteristics of other students who transfer.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
Opportunity (continued)	Why don't students complete post-secondary education?	Factors restricting completion, such as: finances, job, home responsibilities influence of parents, peers, etc.
	At what levels of postsecondary education do students drop out?	Numbers and characteristics of dropouts and those retained from level to level, including full-time and part-time status, sources of support for students in various levels.
	Which students transfer?	Personal characteristics of graduates of 2-year institutions, by field of study; by institution, personal characteristics of transfers from four-year institutions, by field of study, and by institution. Personal characteristics of other students who transfer.
	What are the entrance rates into upper division colleges?	Numbers and personal characteristics of transfer students, by institution, on annual or other regular basis.
	What are the potential barriers to transfer?	Factors restricting transferring, such as: availability of student financial aid, transfer admission requirements, and availability of transfer institutions.
	Who has graduated, as well as who attends, proprietary institutions and other postsecondary education centers providing skill training and career education?	Personal characteristics of attendees and graduates, including type of studies, and by type and control of institution.
	Who drops out of proprietary, skill training, and career education institutions?	Personal characteristics of dropouts, including type of studies, and by type and control of institution, as well as some measurement of skill sufficiency gained by level completed and following employment.
	Who graduates from college?	Personal characteristics as noted under student entrants, including age, race or ethnic group, field of undergraduate study, type and control of institution from which student graduated, and some measure of college achievement (grades, GRE scores, etc.).

Issues inherent in PSE goals	Issue dimensions	Needed data categories
Opportunity (continued)	Who enters graduate and professional schools?	Personal characteristics of entrants, as well as their eventual retention rates, dropout statistics, or final graduation by fields of study, degrees awarded, type of institution.
	Who are minority and disadvantaged graduate and professional entrants and which institutions do they attend?	Personal characteristics, as well as types of financial support, programs taken, some measurement of progress at advanced educational levels, dropout and retention rates.
II. MANPOWER NEEDS		
A. Supply and Demand	What is the impact of undergraduate enrollment pattern shifts on the future supply of college graduates?	Information on causes of enrollment shifts, such as increasingly high cost of attending college, the unfavorable job-market for college graduates, and the increasing tendency for students to defer college attendance for a specific period and return later.
	What do students know about the realities of the world of work?	Information on student perceptions of the labor market and the labor force, and their role in it.
	What types of career education programs are now being offered, and by which postsecondary institutions?	Types of career education programs offered and types of programs taken at postsecondary education institutions of all types, especially community colleges and 4-year institutions.
	What institutions are training students for what types of skills?	Types of training programs matched to types of job skills, by institution, by type and control of institution and by participants.
	What efforts are postsecondary institutions making to provide career counseling and job placement services ?	Information detailing career counseling and job placement services by type of institution.
	How do proprietary schools deal with placement services?	Detailed information on types of services offered by institutions, success rates in placing students, etc.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
Supply and Demand (continued)	What is the U.S. aggregate picture of the future labor force?	Enrollment and graduate data, at undergraduate, graduate, and professional level, by age, and race or ethnic group, as well as by sex and field of study.
	What is the impact of experimental programs on the overall need for manpower training?	More information on open-entry training systems with no prerequisites, on use and effectiveness of training modules and individualized instruction, on ladder approaches and open-exit programs, on cluster training for broad occupational groupings, and on the effectiveness of stipends to make full-time training possible for adults.
	What is the impact of migration of American students abroad and foreign students into the United States in terms of manpower needs?	Regular information on both American and foreign students on personal characteristics, field of study, location and type of institution, reasons behind student migration, and plans for future, in terms of job and geographic location.
	What is the relationship between patterns of employment and various postsecondary education levels?	More information on personal characteristics, curriculum studied, ability, type of institution attended, and level of institution completed; especially information on employment patterns of graduates of 2-year colleges and dropouts from institutions of higher education.
	Are certain degrees really necessary for employment in certain fields?	Information on educational requirements and degrees actually necessary for employment, more detailed information on the way postsecondary institutions orient their educational curriculums to match needed job skills.
	What are the implications of the changing job market for holders of master's degrees and for enrollment in master's programs?	Numbers and characteristics of master's degree holders and candidates by field of study, level of study completed, in relation to type of job desired, and actual job vacancies, and future outlook for job desired.
	What competition do graduates face for jobs from others in the job market, including married women entering or reentering the job-market, foreign nationals in the U.S., and senior citizens seeking part-time or volunteer work?	What jobs currently utilize what kind and what degree of training, and who fills the job; characteristics of the competing labor market, including married women entering or reentering the job market, foreign nationals in the U.S., and senior citizens seeking part-time or volunteer employment.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
Supply and Demand (continued)	What is the future of the current labor market situation of college graduates?	Predictions necessary by individual occupation over relatively long-term period; timely release of needs is important.
Specific Manpower Needs	What is the effectiveness of various types of skill training?	Information using variables such as length of training, location of training, and results in terms of productive long-term employment for the recipient.
	What are the results of exemplary training programs?	Statistics which describe the programs sufficiently so that similar programs can either be duplicated or eliminated according to the success or failure of the exemplary program.
	How can the Federal Government improve its own skill training programs, as well as provide assistance to States for improvement of their programs?	Information needed on student behavior characteristics which describes, among other variables: how students learn about work attitudes, how students learn about human relations skills, how students learn about orientation to the nature of the working world, alternative career choices, and students' actual acquisition of specific work skills.
	How can the Federal Government best count students enrolled in occupational programs?	Development of more accurate definition of enrollment in occupational programs, and expansion of statistics to include changes in enrollments by field of study.
	What are the projections of needs for the many kinds of special teachers now receiving training support from the Federal Government?	Revised estimates of future demands for teachers, that consider the growing demand for preschool teachers and for teachers in other settings, such as adult education programs.
	Do manpower shortages actually exist, and are training programs filling such shortages?	Statistical information which demonstrates whether or not manpower shortages exist, and whether training programs do fill such shortages.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
III. RECURRENT EDUCATION	What is the demand for recurrent education by adults?	Statistics which will enable policymakers to estimate demand, such as numbers of adults currently enrolled in recurrent education programs, types of training programs provided, types of needed skills.
	Who is not enrolled in recurrent education who wishes to be?	Personal characteristics of those persons wishing to be enrolled.
	What are the barriers to participation in recurrent education?	Factors restricting participation, such as: costs of courses, time of courses, geographical location of courses, availability.
	In what ways do adults of different age groups want to learn?	Information on learning environments, such as: do adults learn well in unstructured environments? where do recurrent education courses take place: home, classroom, other? times at which courses are provided: night, weekend, etc. method of instruction: correspondence, lecture, other.
	What is being studied by adults and for what purpose?	Types of courses offered to adults, and types of courses taken by adults; by reasons, such as upgrading skills, self-improvement, or new learning.
	How do adults pay for their courses?	Statistics which describe what portion of these charges are paid by student, by employers, or by others.
	What is the role of the community college in providing recurrent education?	Statistics on what efforts community colleges have made toward recurrent education; on what students, by personal characteristics, are attending recurrent education courses at community colleges; on what recurrent education courses are being offered at community colleges; on what techniques community colleges use to inform the public about recurrent education.
	What is the role of other types of postsecondary institutions?	Similar statistics as mentioned above for community colleges, as well as data on educational structures in the system through which courses are offered (separate colleges within universities, in off-campus centers, etc.).

Issues inherent in PSE goals	Issue dimensions	Needed data categories
Recurrent Education (continued)	What kinds of jobs are likely to require the retraining of persons over time?	Data on the kinds of jobs likely to require further upgrading of skills.
	When is the need for such retraining likely to occur during a person's career?	Information on the kinds of jobs needing further training, by levels of jobs, and by personal characteristics of persons employed.
	What are innovative approaches to recurrent education and what is their impact on learning?	Description of innovative approaches to recurrent education, including statistics describing how they work, what their impact is on learning, motivation, and absorption of education by students.
IV. EDUCATIONAL DIVERSITY		
A. New Students and New Education	Who are the "new" students in postsecondary education?	Personal characteristics of "new" students, similar in kind to those for entrants mentioned under Equal Opportunity, especially, ability measures and motivational data; also, information on career expectations, and their impact on choice of field of study.
	What is the new student demand for nontraditional and innovative forms of education?	Information on what fields of study and what courses new students are taking, on the characteristics of students who prefer to study in new and innovative educational programs.
	What kind of new education is being offered?	Information from the institutions on the extent of the use of new degrees in postsecondary education, including what schools are awarding these degrees, and who is receiving them; information on experiments with shorter times for degrees at all levels, etc.
	Which institutions are offering what types of new educational programs?	Numbers and names of postsecondary institutions by varieties of curriculum offerings, varieties of institutional size and administration, and varieties of teaching methods.
	What is the impact of using exams for credit or degrees?	Information on the use of exams (such as CLEP) for credit or degrees, by number and characteristics of people taking such exams, and by which schools accept them.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
New Students and New Education (continued)	What is the impact of institutional consortia arrangements?	Numbers and characteristics of consortia arrangements, including methods of operation, extent of shared facilities, faculties, students, computers, etc.; also information on Federal programs encouraging such arrangements, including the Developing Institutions and Ethnic Heritage Studies programs.
	What are the success and failure rates of innovative educational institutions?	Information on new school openings and closings, on innovative programs expanded and discontinued, etc.
	How is the noncollegiate sector of postsecondary education affected by innovative educational programs?	Data by personal characteristics of new students in the noncollegiate sector (as mentioned under Equal Educational Opportunity), distribution of students, and changes in enrollment levels.
	What is the extent of the postsecondary institutions not yet eligible for participation in Federal programs?	Information on where such schools are located, how many exist, what courses of study they offer, what their basic characteristics are, and numbers of students attending them.
B. Preserving Institutional Diversity	What is the impact of institutional "financial distress" on institutional diversity?	Improved data on institutional finances; better measures of "financial distress," including numbers of institutional closings and mergers, by type and control of institution, changes in enrollment patterns by type and control of institution, identification of key institutional income and expenditure components, "tuition gap" data, frequency and size of reported operating deficits, and substantial changes in plant assets and institutional indebtedness.
	What is the financial impact of enrollment changes in assessing financial stability?	Information on the nature and size of enrollment, including enrollment counts directly related to tuition and fee income which show net gains or losses over the academic year.
	What is the productivity of educational institutions, and what is the quality of their outputs?	Data including at least these three variables: institutional salaries, institutional costs per student, student scores on tests such as GRE.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
B. Preserving Institutional Diversity (continued)	How can institutions provide better data in the area of cost effectiveness?	Information on quality of educational output, need for uniform procedures for reporting per-student cost.
V. RESEARCH	What is the impact of Federal research funds on colleges and universities?	Data which describe how institutions conduct federally-funded research, including cost of research (both Federal and institutional funds), personal characteristics of those working on research, characteristics of research facilities and their location, and administrative structure of research activities within the institution.
	What is the impact of Federal research funds on faculty?	Information on relevant characteristics, including such variables as: percent of faculty time spent in research versus teaching, field of expertise, relationship of research to subject taught, and data on salaries paid from research funds.
	What is the impact of Federal research funds on students?	Information on numbers and personal characteristics of students participating in research projects at colleges and universities, including: numbers of students, by personal characteristics and field and level of study, receiving financial support from research monies, and data describing how and what students learn through participation in projects.
	What are the costs of Federal research to institutions?	Information including contributed equipment value, faculty time, income received by institutions, etc.
	What is the effect of Federal funding fluctuations on institutions?	Information on institutions, by type, control, and field of study; also identification of projected trends of scientific and technological fields that would include probable national needs for scientific resources, and expected levels of Federal support in the various areas.

Issues inherent in PSE goals	Issue dimensions	Needed data categories
Research (continued)	How are colleges and universities responding to multidisciplinary research needs?	Data needed on types of innovative organizational and functional arrangements currently in operation at various institutions.

APPENDIX C

NCES DATA-COLLECTION INSTRUMENTS AND REPORTS REVIEWED

NCES DATA-COLLECTION INSTRUMENTS AND REPORTS REVIEWED

1. Continuing Education: Noncredit Activities in Institutions of Higher Education, 1967-68, Professional and Technical Refresher Courses
2. Continuing Education: Noncredit Activities in Institutions of Higher Education, Registrations 1967-68
3. Degrees and Other Formal Awards Conferred Between July 1, 1971 and June 30, 1972
4. Degrees and Other Formal Awards Conferred Between July 1, 1972 and June 30, 1973
5. Employees in Institutions of Higher Education, 1972-73
6. Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1972
7. Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1974
8. Higher Education: A Taxonomy of Instructional Programs in Higher Education
9. Higher Education Basic Student Charges (1968-69)
10. Higher Education: Earned Degrees Conferred, 1969-70, Summary Data
11. Higher Education: Fall Enrollment in Higher Education, 1971
12. Higher Education: Financial Statistics of Institutions of Higher Education: Federal Funds 1965-66 and 1966-67
13. Higher Education: Institutions of Higher Education, Index by State and Congressional District, June 1973
14. Higher Education: Inventory of Physical Facilities in Institutions of Higher Education, Fall 1969
15. Higher Education: Number and Characteristics of Employees in Institutions of Higher Education, Fall 1967
16. Higher Education: Residence and Migration of College Students, Analytic Report
17. Higher Education: Teaching and Research Staff by Academic Field in Institutions of Higher Education, Fall 1968
18. Indicators of Educational Outcome, Fall 1972
19. Inventory of College and University Physical Facilities (as of September 30, 1974)

20. Junior-Year Science, Mathematics, and Foreign Language Students, First-Term 1962-63 (Higher Education)

21. National Assessment of Educational Progress, Age Class III

22. National Longitudinal Study of the High School Class of 1972:

    Student Questionnaire
    School Questionnaire
    Counselor Questionnaire
    Student's School Record Information
    First Followup Survey
    Capsule Description of High School Seniors Base-Year Survey
    First Followup Questionnaire, Form A (Fall 1973)
    Survey Instrument for the Second Followup (July 1974)

23. Opening Fall Enrollment in Higher Education, 1974

24. Opening Fall Enrollment in Higher Education: Part A--Summary Data

25. Postsecondary Career School Survey, 1973

26. Postsecondary School Enrollment Survey, 1974

27. Projections of Educational Statistics to 1981-82 (1972 edition)

28. 1973-74 Education Directory

29. Salaries and Tenure of Full-Time Instructional Faculty, 1974-75

30. Students Enrolled for Advanced Degrees, Fall 1972

31. Students Enrolled for Advanced Degrees, Fall 1974

32. Survey of High School Seniors and Recent Graduates, 1974

33. Survey of Programs and Enrollments, Postsecondary Schools

34. Vocational Education: Directory of Postsecondary Schools with Occupational Programs, 1971 (Public and Private)

35. Vocational Education: Inventory of Vocational Education Statistics Available in Federal Agencies

36. Characteristics of Students and Staff, 1972, Vocational Education

NCES did not provide the College Entrance Examination Board with copies of the following two documents:

(1) Resident and Extension Enrollment in Institutions of Higher Education, First Term, 1969.

(2) Characteristics of Vocational Education Teachers and Students.

APPENDIX D

OFFICE OF EDUCATION NONOPERATIVE PROGRAMS

APPENDIX D: NONOPERATIVE PROGRAMS

The College Entrance Examination Board, as part of the overall study conducted under OE-NCES Contract No. 74-2126, was asked to compile a list of nonoperative Federal programs in postsecondary education. To begin this task, the project staff met with the Office of Education Budget Office and listed nonoperative programs within the Office of Education. That list of programs is attached.

As the next step, the project staff sought to compile similar lists for other Federal agencies which administered postsecondary programs. It soon became apparent that this was going to be a difficult task. Postsecondary education programs operated by many Federal agencies, such as research grants and special training programs, are relatively incidental to the major purposes and functions of those agencies. As such the legislative authorization for these programs is often buried in broad legislation, such as the Foreign Assistance Act of 1966 (AID programs) and the Snyder Act of 1921 (Indian higher education grants).

While the various agencies could provide legislative references for their operating postsecondary education programs, they were not willing to search through vast amounts of potentially relevant legislation for authorizations of programs not in operation. They had neither the time nor the staff to complete the involved and complex legal research which would be necessary.

Faced with this dilemma, the project staff searched for other sources which might provide the needed information on nonoperative programs. One such possible source which was investigated thoroughly was an Air Force-sponsored computer system known as LITE (Legal Information Through Electronics). This computer system, administered in Denver, Colorado, contained the U.S. Code indexed by key words. Theoretically, one could query this system about existing legislation pertinent to postsecondary education. In fact, however, the LITE system was not current and did not include legislation passed after 1972. Air Force officials agreed that LITE would not be suitable for our purposes.

Conversations with the Harvard University Law Library staff led us to an additional source. A private company, Mead Data Central, also maintains a legal research system which operates similarly to the Air Force LITE system. Called LEXIS, the Mead Data Central system is designed to retrieve legal information by use of key word identifiers. It includes the entire U.S. Code (to mid-1973), indexed by these identifiers. The project staff met with Mead Data Central representatives to discuss possible use of this system. However, a demonstration of the system's capabilities indicated to us and to Mead representatives that LEXIS was not appropriate to the task at hand. Key words could not be found within the LEXIS system which could recall the relevant legislation from the U.S. Code.

The Office of Management and Budget maintains a file of legislation names and expiration dates. We were not permitted to examine this file, but OMB personnel made available to us a listing of legislative titles. This list did not prove useful because it did not specify programs within legislative titles. It was impossible to decipher whether or not an education program might be authorized as a part of a law which was directed basically to other purposes.

Upon consultation with representatives from NCES about these difficulties in compiling a list of nonoperative programs outside the Office of Education, the College Board and NCES agreed not to pursue these efforts further. It should be noted that the Compilation of Postsecondary Education Programs, completed as part of this study, includes the legislative references for all operating programs in all Federal agencies. This compilation also includes (in appendix A) a list of those programs which have ceased operation since fiscal year 1972 for various reasons. As noted earlier, a list of nonoperative programs within the Office of Education was prepared. It is presented below.

Nonoperative Postsecondary Education Programs in the Office of Education

Community Service and Continuing Education Programs--Special Programs and Projects Relating to Problems of the Elderly.

Cost of Education Payments to Institutions of Higher Education.

Work-Study for Community Service Learning Program.

Grants for Construction of Graduate Academic Facilities.

Direct Loans for Construction of Academic Facilities.

Networks for Knowledge.

Graduate Program Grants to Institutions of Higher Education.

Public Service Fellowships.

General Assistance to Graduate Schools.

State Plans for Establishment and Expansion of Community Colleges.

Establishment and Expansion of Community Colleges.

Occupational Education Programs.

Emergency Assistance for Institutions of Higher Education.

Special Adult Education Project for the Elderly.

Grants Programs for Advanced and Undergraduate International Studies.

Law School Clinical Experience Programs.
